In recent years, more people from other States and more people from foreign nations have become acquainted with the physical plant of William and Mary and the wonderful restoration of Colonial Williamsburg than any other historic spot in our State. And in the celebration next year of the first settlement in nearby Jamestown, hundreds of thousands will come to Williamsburg to visit that spot which, as Daniel Webster said "cradled and defended the infancy of our Republic." Some of these visitors may learn that William and Mary was the first institution of higher learning projected for American and the second actually to be established; that William and Mary is unique in receiving a charter directly from the crown of England and a Coat of Arms from the College of Heralds in London; that this college was the first in the United States to have a full faculty of professors, first to adopt the lecture system and the elective and honor systems, first to widen its scope to that of a university, first to establish courses in municipal and constitutional law, modern languages, political economy and history and first to organize a Greek letter Intercollegiate Fraternity, the Phi Beta Kappa Society, a membership in which I highly cherish.

Some of them may also learn that men trained at William and Mary in the latter part of the 17th century and the early part of the 18th century accounted for 7 out of 11 members of the Committee on Intercolonial Correspondence, 6 out of 11 members of the Virginia Committee of Safety which was the real governing body of Virginia after the iniquitous Lord Dunmore took refuge on a British gunboat, 4 of the 7 Virginia signers of the Declaration of Independence including its author, Thomas Jefferson, 15 of the 33 Virginia members of the Continental Congress, including Peyton Randolph, the first President of that Congress, 2 of the 3 Virginia members of the Annapolis Convention of 1786 to frame a new Constitution and 4 of the 7 Virginia members of the Philadelphia Constitutional Convention of 1787, including Edmund Randolph who opened the proceedings by presenting the Virginia plan on which so much of our charter of American liberty was framed. We could also tell them about one-half of the Governors of Virginia from 1776 to 1800, 6 of 8 United States Senators from Virginia and 3 of the 7 Virginia-born Presidents being trained at William and Mary.

All those things would fall in the realm of the tangible but it is more important for the members of this graduating class and for the thousands of visitors who annually come here, to have a clear conception of the intangible influence of William and Mary not only upon 18th century America, which is my primary topic, but upon more than 300 years of our history.

William Wirt Henry wrote in 1891 that William and Mary "trained and gave to the world during the Revolutionary period a host of statesmen whose names are indelibly impressed on the pages of American history." It was that type of training that caused Thomas Jefferson to say that his beloved science teacher, Dr. William Small, had probably fixed the destinies of his life.

Woodrow Wilson said in a commencement address shortly after he left the University of Virginia that those who are leaders must lead their own generation. William and Mary had an important influence on 18th century America because the college was adapted to the needs of its day.

Historians have pointed out that two great movements were born and flowered in the

18th century. One was the movement among the intellectual classes referred to as "The enlightenment," which meant self-emancipation from prejudice, conversion and tradition and assertion of the right of individuals to give their intellects free rein rather than be curbed by established dogmas. The other 18th century movement was the democratic revolution among the middle and lower classes, involving all human activities, and leading to development of two of our most cherished political principles. One of these was that all men are born equal, meaning, as John Adams explained to his wife, Abigail, when she wrote that he knew this could not be true, that the phrase in the Declaration of Independence meant all men were born men and not some men and some whales. The second principle was that there were certain cherished rights which were not derived from kings or potentates but were inherited by man from his Creator and could, therefore, be designated as inalienable rights of which he could not justly be deprived by any form of government. How well these principles were absorbed by Thomas Jefferson and others of his generation who attended William and Mary is suggested by the epitaph Jefferson selected for his tomb indicating the three forms of freedom he had championed: Freedom of the body, as spelled out in his Declaration of Independence, freedom of religion, as spelled out in Virginia's Statute of Religious Freedom and embraced in the first amendment to the Federal Constitution, and freedom of the mind, as exemplified by a system of public education capped by the university at Charlottesville which he sponsored.

Jefferson once wrote that all the manna in heaven could not make a mammoth out of a mouse. He obviously was of superior clay to start with, but there is much evidence to show that the training he received at William and Mary increased his stature enormously.

Looking back 60 years after leaving the college, Jefferson vividly remembered his teacher of natural philosophy, William Small. He spoke of Dr. Small's enlarged and liberal mind and said, "Most happily for me," he became "attached to me and made me his daily companion, * * *and from his conversation I got my first views of the expansion of science and of the system of things in which we are placed."

It was through Small that Jefferson met George Wythe, with whom he studied law and whom Jefferson later had appointed as the first teacher of law in the college, and this friendship continued throughout his life.

Recently I asked Dr. Julian P. Boyd, the distinguished editor of Jefferson's papers, for his comment on what William and Mary did for Jefferson, and he told me this: "Jefferson was a man of clearly defined aims and a practical sense of what was possible as well as what was proper. One thing we can be sure of is that his teachers did not try to instill in him the idea that this was the best of all possible worlds, or that colonial Virginia was a stable, orderly society incapable of improvement. William and Mary prepared him for a world of change. Small and Wythe gave Jefferson a sense of man's endless possibilities. They showed what man might become if he went on improving himself and his institutions under the general reign of reason and justice. They helped to prepare him to be both a revolutionary and a founder."

We can trace these influences through Jefferson's career. He assumed changes were natural and inevitable but accepted this as a challenge and an obligation to control the change rather than be controlled by it. He believed in an aristocracy not of wealth or power but of character, intelligence and accomplishment. He believed it was the duty of this aristocracy to make issues clear but that the ultimate power of choice and decision must lie with the whole people.

But the system of things that Jefferson and his contemporaries learned at William and Mary did not include the belief that the people were automatically right. What he learned, and what his whole life teaches, is that the citizen in a free society faces an exacting and heavy responsibility. Free enterprise to Jefferson meant freedom of opportunity and equality before the law, but it did not mean freedom from responsibility.

Applying his principles to his own life, Jefferson confessed that music was his great passion, science was his delight, agriculture his cherished occupation and the beloved Monticello the end of all his private dreams. But these things he subordinated whenever the higher duty demanded. These things he laid aside when his obligations as a citizen required him to do so.

On the 200th anniversary of the establishment of William and Mary a brilliant alumnus, J. Allen Watts, of Roanoke, after discussing the contribution of William and Mary's alumni to the birth of a new nation, said of those priceless principles of political and economic freedom that were born of the brain and purchased with the blood of the Founding Fathers: "The chief danger that menaces this country of ours is the danger that these principles may be forgotten, or may be cast aside as antiquated and of no value in these latter days. Hoping and believing as I do in the great destiny of this country, I feel that our safety depends upon our keeping before us for emulation the names and deeds of our colonial and revolutionary sires, whose lofty intellects, dauntless wills, and unquestionable love of true liberty—liberty regulated by law—enabled them to gain a foothold in this country, wrest it first from the savage and then from England, and found the first true republic the world has ever seen, and under whose care the common property, the common liberty, and the common future of all were to be protected."

Many of you will recall that William and Mary was established as a church school and while the first instructors in theology did not teach separation of church and state they did teach many fundamental principles of the Bible as found in the King James version and the Bible is filled with references to property ownership. "Thou shalt not steal"; "the Lord loveth a cheerful giver"; King Ahab coveted Naboth's vineyard; the good and faithful servant was he who prudently invested the funds left in his care by the master. And how little meaning would there be in the words "pursuit of happiness" if they did not include the right to own and enjoy property, the fruit of one's own labor. William and Mary had a part in teaching the framers of a unique experiment in self-government that it must rest upon the teachings of the Bible.

It is the fundamental principles of our democracy for which William and Mary trained the leaders of the 18th century which are being challenged today by the anti-God ideology of communism. In recent years it has been my privilege to visit most of the countries in Europe that are not behind the Iron Curtain and some of the countries in the Orient, and the more I see of the spread of socialism in other parts of the world, to say nothing of communism, the more convinced I am that it is folly to assume that there can be a separation of property rights from personal rights. They are the root and branch of the same tree, and when you kill one, both will die. Yet that vital principle is being challenged by sponsors of the welfare state as well as Communists who would overthrow our Government by force. On neither front can we afford to let down our guard.

On the home front a willingness to take some hard knocks is implicit in any system of private enterprise. Who carried an ax in one hand and a rifle in the other? Those who carved an empire out of a wilderness. And one hundred and sixty-eight years after the first humble start at Jamestown those settlers were willing to fight a world power to protect their property and political rights. They believed those rights stemmed from the teachings of the Bible and that God would be on their side. "And if a sparrow cannot fall to the ground without His notice," said Franklin at the Constitutional Convention, "is it probable that an empire can rise without His aid?"

Russian leaders have repudiated Stalin but not Lenin who dedicated his revolution to the destruction of all capitalist countries. We cannot afford to accept words in lieu of deeds as proof of the fact that the present leaders of the Politburo have abandoned Lenin's plan for world conquest. As a member of the Appropriations Subcommittee on Defense, I have had access to confidential information concerning the relative military power of Russia as compared with our own and it is disturbing.

Since the end of World War II we have invested $60 billion of gifts and loans in a program intended to strengthen our allies and stop the march of communism. While the purpose of that program was sound, it was organized on too lavish a scale and the results have been disappointing. The European Defense Community failed, and international military organization called NATO is only a skeleton of what it was supposed to be and European politicians have invested our funds in socialistic schemes helpful to themselves.

In August of last year when I met with representatives of some 35 nations attending a meeting of the Interparliamentary Union in Helsinki I was impressed by the obvious lack of appreciation of our efforts and the fact that other free nations receiving our aid were taking at face value Russia's assurances of peaceful coexistence and using it as an excuse to ease their own tax burden for military spending.

I was shocked, therefore, to read in the press when I returned to Washington that some unidentified spokesman for the administration had predicted we would cut appropriations for our Air Force by a billion dollars and I wrote a strong letter of protest to the President, urging him not to reduce our capacity for defense while Russia was continuing to increase her offensive power with hydrogen bombs and other weapons of mass destruction.

Fortunately the President decided to put adequate defense above a balanced budget and a tax cut and the suggested cut in the Air Force was not proposed. My position as to our defense needs was further supported this year when the President, after sending us the defense budget, sent a supplemental estimate of $500 million to speed our production of strategic bombers and guided missiles. But there still are doubts among those of us who daily hear testimony from top military experts as to whether our projected defense program will give us a superiority in the air which the Russian leaders can both understand and respect.

I believe defense spending must be geared to a sound economy in the United States but we must have an Air Force commensurate with our needs. Therefore, if a choice must be made as to allocation of funds, and there is not enough money for both, I shall vote to cut foreign aid to allies of uncertain dependability and to step up our production of strategic bombers and guided missiles. The time may come when the rank and file of the Russian people will recognize our viewpoint and our superior manner of life. The time may come when they will listen again to the sound of bells coming across the fields and comprehend and reverence the symbolism of the cross.

But until such time as God in his omnipotence and loving kindness sees fit to change the hearts of men and teach us how to

build a temple of peace dedicated to the victory of moral force, the duty of every young American should be crystal clear. He must be willing to support at home American constitutional liberty which includes, of course, the American system of free competitive enterprise and he must be ready, able, and willing to defend it with his life if need be against any foreign aggressor.

In this behalf there is a job for all to do. "If we go out into a cloudless night and glance skyward, we observe the eternal stars and constellations; we call some of them by their name—Venus, Mars, Saturn, Jupiter, Neptune, the Pleiades, and the Milky Way. If there be no moon, we believe that the visible stars shed the light upon our pathway, and indeed they do, but astronomers who peer through remote spaces of the universe tell us that more than one-half of all of the blended radiance of the skies that falls upon our pathway comes from stars we never see. They are invisible; they have no name on earth; they seem to have no place in heaven; yet they light us on our way. Thus it is with human life and human destiny; a few persons may become bright particular stars in the political, financial, social, or economic sky, but we all may be, if we will, a part of that invisible host of stars that serenely shed their kindly lights on the paths of all mankind.

Future Business Leaders of America Meet in Washington

EXTENSION OF REMARKS
OF
HON. EDWIN E. WILLIS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. WILLIS. Mr. Speaker, I appreciated and enjoyed very much a visit made to my office by a number of young folks from Louisiana and their sponsors who are in Washington for a convention of the Future Business Leaders of America. This organization is sponsored by the United Business Education Association, a department of the National Education Association, and is made up of students who are specializing in business subjects, particularly secretarial science and bookkeeping. Its purpose is to sponsor activities that provide opportunity for development of the proper attitudes and leadership among boys and girls interested in the field of business.

Louisiana leads the Nation in the number of chapters of the Future Business Leaders of America and in participation in the national conventions. The program in Louisiana is incorporated in the State department of education, under the supervision of Superintendent Shelby M. Jackson.

The group which I had the pleasure of greeting included: L. C. Cambre, Paula Mackey, Janelle Savoy, Dolores Hebert, Betty LeBlanc, Tracy Trahan and Susan Phillips, from Lafayette Senior High School and their sponsor, Mrs. F. J. Nugent; Jerry Meaux, Ruth Pellerin, Geraldine Duhon, Jane LeBlanc and Amos Trahan, sponsor, Judice High School; Jeannette Smith, Annette Smith, Lucille Breaux, Madeline Brewer, Paul Steve Benoit, Sue Ann Broussard, Dolores Breaux, Carline Prejean, Sylvia Brasseaux, Nina Breaux, Velver Roger, Thomas Hutchinson, Judy Hutchinson, Tyrona Devalcourt, Carencro High School, accompanied by Mrs. Russel Hutchinson, chaperon, and Mr. and Mrs. W. W. Devalcourt, the latter being sponsor for the group from Carencro; James Wilkins, Washington; Paul Blanchard, University High School, Baton Rouge, with his sponsor, Mrs. Louise H. Beard; Eloise Allen, Janelle Brussard, Istrouma High School, Baton Rouge, and their sponsor, Mrs. E. W. Graves.

Statement By Hon. John E. Henderson, of Ohio, in Opposition to H. R. 5550, Before the Ways and Means Committee of the House of Representatives on March 7, 1956

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 6, 1956

Mr. JENKINS. Mr. Speaker, on March 7, when the Ways and Means Committee, of which I am a member, was considering H. R. 5550, Congressman JOHN E. HENDERSON, of Ohio's 15th District, appeared before the committee to express his vigorous opposition to this measure. H. R. 5550 would authorize the United States to join an international organization known as the Organization of Trade Cooperation. The OTC would, in turn, have as its principal function the administration of the General Agreement on Tariffs and Trade.

The seven counties of Representative HENDERSON's district in southeastern Ohio have suffered seriously for many years as a result of policies which have lowered tariffs on those products which they and adjacent areas of our State produce. Although H. R. 5550 would not, in itself, authorize further tariff reductions, it would, in my opinion, authorize participation in an organization whose actions and policies would soon accomplish this end.

I believe Mr. HENDERSON's testimony before the committee is an excellent treatment of this complex subject. It is as follows:

My purpose in appearing before your committee during the hearings on H. R. 5550 is to urge that the committee and the Congress act with extreme caution in consideration of this legislation.

The bill before you would, if enacted, authorize the United States to be a party to the Organization for Trade Cooperation among whose duties are the administration of the General Agreement on Tariffs and Trade.

I should like to point out at the very beginning of my remarks that the average citizen looks to Congress as the responsible agency for those things which control his commercial activities. He feels that if remedial action is needed in any phase of Government he can look to Congress for that action. Especially does he feel that the question of the regulation of trade rests within the purview of the Congress for he knows that the Constitution of the United States, brief as it is, has specifically enumerated the question of tariffs for especial treatment when it says in article 1, section 8:

"The Congress shall have the power to lay and collect taxes, duties, imports, and excises * * * to regulate commerce with foreign nations."

This is a definite assertion of congressional responsibility for the regulation of duties and commerce with foreign nations.

The average citizen is somewhat bewildered to learn that the economic pinch that he feels because of a reduction of protective tariffs on the goods he manufactures has not been brought about by action of the Congress but by an international agreement which the Congress has not ratified.

The average citizen remembers that the courts at one time had declared that there were some powers which Congress could not delegate. He is confused to learn that today he is faced, not with a simple delegation of authority, but a complex delegation from the Congress to the Executive and, thence, from the Executive to an international entity known as GATT—to the end that even the executive branch, in becoming a party to the agreement, has lost some of the authority that had been delegated to it.

That is the state of affairs prior to the enactment of the legislation which is now before us.

At the time that H. R. 1, the Reciprocal Trade Act extension, was under consideration in the first session of the 84th Congress, many of us expressed ourselves on the subject of the General Agreement on Tariffs and Trade and what it had done to weaken the economic position of the United States.

In the first place, it was pointed out that the entire GATT program had been directed toward the reduction of United States tariffs and toward the establishment of economic advantages of one sort or another for many of the nations who were parties to GATT. Seldom, if ever, has this organization worked to the economic advantage of the United States.

Parenthetically, I would like to endorse the statements which have been made by the two speakers who immediately preceded me that these agreements have worked more specifically for the advantage of other nations.

We have progressed to the point now where our tariff rates are among the lowest throughout the world.

Those who advocate low tariffs will say that the benefits lie in three categories. First, that it encourages world trade. To this some of us must answer that our exports as related to our national productivity have reached such a low ratio that the benefits cannot outweigh the detrimental effects of wrecking home industries and rendering jobless the pottery worker, the glass worker, the worker in our clay tile industry, and the coal miner. In other words, the price we pay for world trade places a great and unequal burden on many of the important industries of our Nation.

Secondly, it is argued that by giving economic advantages to other countries, we are helping them without expense to our own taxpayers. To this must be given the answer that such economic concessions will cost us far more in terms of lost income to American industry and ultimately in the tax revenues our Nation receives.

Let us not forget that every dollar of corporate profit in the United States means at least 50 cents in tax revenues. Where our tariff practices have reduced the profits of the American pottery, tile, and glass industries by a certain figure, those same practices have reduced the taxes paid by those industries by at least one-half.

Thirdly, the advocates of low tariffs will say that American industry is more prosperous than ever and shows no signs (except in certain specific industries such as pottery,

glass, coal, bicycles, textiles, wool, etc.) of being hurt by the program. To this we must answer that we are enjoying prosperity not because of but in spite of our trade practices. The ill effects are slow to show themselves. In spite of our dollar export figures our quantity export figures have not kept pace.

All of which leads me to the point of saying simply that the GATT and the concomitant low tariff policy has done nothing to help the American economy and that GATT and its international attitudes has done several things which may only be interpreted as harmful to notable segments of our industry and the men and women who depend upon these industries for their livelihood.

First, it has reduced America's bargaining position to something less than its wealth and prestige would reserve for it at diplomatic level. Though our world position as a nation among nations is one of great influence, as a signatory to the GATT it approaches the same degree of influence as the weakest member. Secondly, it has weakened the constitutionally granted authority of the Congress to regulate foreign commerce. You and I know, Mr. Chairman, that in recent years the Congress has been repeatedly cautioned that it must follow certain selected paths and that failure to do so would lead to embarrassment because of concessions which our Nation had granted through GATT. To say that GATT has no power to work its will upon congressional policy is ignoring reality. Each time that a cautious Congress attempts to look under the covers of a trade policy all sorts of taboos, both large and small, are raised.

Yes; it is literally true that Congress has not ratified or officially recognized the GATT; that Congress can yet act in matters of foreign trade. But will it be true if H. R. 5550 is enacted?

In enacting this bill Congress will be authorizing membership in an agency that will have as its chief duty the administration of the GATT. The bill clearly states that purpose. Since it has this as its chief function, do we not at the same time ratify the contract which it administers? True, the organization has other duties, but they are lesser duties and they are ones which can be ably performed in some other manner.

Let us ask ourselves several questions before we act upon this measure. First, do we want to continue down this pathway to ever-lower trade restriction? As we answered the rollcall on H. R. 1, many of us said we did not. Our industries, particularly those which produce our handmade products, our pottery and clay tile, our glass, and the industries which prepare our natural resources, coal and oil, and the thousands of American workmen engaged, or until recently engaged, in such production say that we do not. Secondly, do we want our trade practices so completely divorced from congressional authority through this process of double delegation to the point that we relinquish our prominence in the world today by being out-voted in a contractural arrangement such as the GATT? As I see it, if we want an agreement, do we want this one? The Congress has never had an opportunity to express itself directly on this point. Thirdly, do we want to join this specific club, this organization, the OTC?

Perhaps we have reached the point in civilization's march when we should direct more of our attitudes to internationalism—a march which has been fraught with disappointment in the past. But if we concede that we must now express ourselves as one unit of an international confederation, and must not only join, but, in return for some advantages must surrender sovereignty in some degree or other—if that is so, aren't we still privileged to carefully investigate the club we will join? Perhaps this organization which seems so bent upon bringing advantages to other nations is not the one for us. Possibly one can be fashioned which will meet our needs far better—one which will not reduce this Nation of ours to the voting position of a second or third rate power. For as surely as we concur in OTC, and indirectly in the activities of GATT, we will be reduced to that positon in other things.

Mr. Chairman, the day has not yet come when American industry cannot find markets within our borders and among our growing population. The day has not yet come when other nations will not procure our goods just as we will buy that which we must have from other nations. The day has not yet come in America when we would, as a measure of national policy, say to coal miners and pottery workers that you will be deprived of your jobs and you must sell your homes and leave your established communities to find new fields of work, forgetting your skills and accomplishments, because of the decisions of an international organization to which your elected Representatives in the Congress gave such authority.

The people of the 15th Congressional District in southeastern Ohio, which I have the honor to represent, have suffered grievous economic hardship because of the tariff policies of the past several decades.

My constituents have written and called on me to urge that your committee proceed on this legislation with extreme caution. Mr. Chairman, in appearing here today, I am speaking for them.

Possible Congressional Investigation of Labor Racketeering

EXTENSION OF REMARKS
OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, last Sunday, June 3, Victor Riesel, labor columnist for the New York Mirror, was guest on the NBC television program, Meet the Press. Panel members were Lawrence E. Spivak; Murray Davis, New York Telegram and Sun; Abe Raskin, New York Times; and Ernest Lindley, Newsweek. Members of the House will recall that Victor Riesel was permanently blinded last April when an unknown assailant threw acid in his face.

Much of the program centered about the possibility of need for a congressional investigation of labor racketeering.

Under leave to extend my remarks, I should like to include excerpts from the transcript of last Sunday's Meet the Press program:

Mr. LINDLEY. Vic, I'd like to ask you about some of the larger implications of this terrible assault on you. You've already said I believe that you favor a congressional inquiry into labor racketeering; is that right?

Mr. RIESEL. I favor it; I think Congress has ducked it. There have been statements by counsellors to congressional committees that congressional committees have been stopped dead in their tracks, and if you go back you will find that in a situation of rising crime there has been practically no real investigation; there has been no investigation of consequence by either House. One more thing, the Paul Douglas committee which investigated these multibillion dollar welfare funds, died for lack of funds some 2 months or 3 months ago. That's the Senate committee. Why did it die?

Mr. LINDLEY. Now Representative PETER FRELINGHUYSEN of New Jersey has introduced two resolutions calling for congressional investigations, one by the House Education and Labor Committee, one by the House Judiciary Committee. Since he's done that and since you've spoken out on this has any party leader in Congress on either side indicated to you that he would support a congressional inquiry into labor racketeering in this country?

Mr. RIESEL. No, they are ducking it. As a matter of fact one Member of the House said, "Oh, well, this is not in our jurisdiction." He said, "Let somebody else do it." Well, nobody is doing it. And nobody is investigating it.

* * * * *

Mr. DAVIS. Vic, I noticed in some of your answers there was a strong tone of resentment against some political group; you've mentioned Congress. Is there any police or prosecuting group in this resentment area of yours that you think aren't carrying on the proper investigation of your case?

Mr. RIESEL. No, sir.

Mr. DAVIS. It's all in the congressional area?

Mr. RIESEL. I think they've ducked it, Murray. There's widespread crime not only in New York; I mean there have been indictments all over the place, Pittsburgh, St. Louis, Chicago, Detroit, I mean all the way through.

Mr. DAVIS. But not in New York; is that what you mean?

Mr. RIESEL. No; what I mean is that if, for example, District Attorney Hogan says that there's a rise of crime in New York but he doesn't have the power to fight it; that was in that famous five-page statement; that was a statement on the record by an honest man. O. K., then if he doesn't have the power, what about the glare of publicity? Here's the district attorney of Manhattan saying that there is a rise in crime but he doesn't have the power, the legal right to go after these people, and he shows it in a five-page statement and nobody in Congress moves.

* * * * *

Mr. SPIVAK. Vic, I want to get to that. W do you think that Congress has ducked th investigation? Why do you think they haven't had an all-out investigation with a watchdog committee that kept it going once they exposed this thing?

Mr. RIESEL. First, I'd like to say, Larry, there ought to be a watchdog committee. We have a Committee on Internal Security which goes after the commies, why not a committee on this kind of corruption? Is there less a danger in this underworld second government to the rank and people, to the public, to the man on the street? If this can happen to me, does anybody think it couldn't happen to anybody else? Why not another committee, standing committee?

Mr. SPIVAK. Vic, why do you think Congress has ducked this thing?

Mr. RIESEL. I think they've ducked it for several reasons. First they feel that all labor would feel that they are attacking labor if they go after some lot, and I know from personal experience—well let me go back. Four or five years ago there was a five-man committee here in New York that investigated the waterfront and came up with the report—and it is on the record—there is no crime. I think the candidates for office who now need labor support, the precinct workers, the support, feel that they will alienate labor if they investigate that sleazy section of the labor movement which is crooked, and I want to say on the record that labor consists and is led by men of many kinds. There are crusaders, men who come and do their business and go home, and there are crooks. There are some Communists.

* * * * *

Mr. LINDLEY. Has any of these reputable leaders of organized labor indicated to you he would really favor such an investigation if conducted by the type of person you mentioned, Senator PAUL DOUGLAS, or some other friend of the labor union?

Mr. RIESEL. Yes. I got specific word from the highest leaders of the AFL–CIO that they would go along—how this, of course, was in words to me and I can't speak for them, but that they would go along with an investigation by such men as PAUL DOUGLAS or Senator IVES, who they know as friends not because they feel they would be whitewashed but because they also know these men as honest men, or even they would go along with critics of the labor movement if these were men of unimpeachable and objective principles.

Mr. LINDLEY. Don't you think that an investigation of that sort would be a tremendous benefit to organized labor?

Mr. RIESEL. Well, I do. You don't think this kind of assault on me has done the labor movement any good?

At It Again

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. VAN ZANDT. Mr. Speaker, amidst all the confusion that surrounds our national security as a result of charges and countercharges in this political year, the Wall Street Journal, on May 22, 1956, carried the following editorial which is very sobering.

This aditorial, titled "At It Again," warrants reading by every thoughtful American because it reveals that bickering, while harmful at times, has the end result of assisting in the development of a stronger national defense.

As a member of the House Committee on the Armed Services and the Congressional Joint Committee on Atomic Energy and being briefed from time to time on world conditions, I agree with the substance of the editorial that honest criticism is always constructive if we accept it in that spirit and keep our feet on the ground in the building of an adequate national defense.

The editorial follows:

AT IT AGAIN

A few years ago there was a great row between the Air Force advocates of the B–36 bomber and the Navy advocates of the supercarrier. Today the United States has both the carriers and far more advanced intercontinental bombers than the B–36.

We recall this bit of history not to suggest that that protracted and public argument accomplished nothing. To the extent that interservice rivalry sharpens our defenses and gives people a better grasp of military problems, it is probably a good thing. The point, however, is that the B–36-carrier debate did not result in the scuttling of either type of weapon or of any of the three services.

It is in that context that the new outbreak of Pentagon bickering ought to be viewed. The Air Force, in studies leaked to the press, contends that the strategic-bombing capacities of aircraft carriers are being exaggerated by the Navy. The Air Force also suggests that the Army's Nike missile is a far less useful antiaircraft weapon than the Army claims. The Army, for its part, has long felt that it is being squeezed by the new emphasis on airborne nuclear weapons and the aircraft to deliver them.

Now, if it were true that a particular type of weapon and a particular service were being built up to the exclusion of other weapons and other services, it would indeed be a matter of serious concern. The reason is that the United States faces all kinds of military threats, from full-scale war in which aircraft might play a dominant role, to "little" wars which might depend mainly on ground troops.

But there is no evidence that one-weapon-one-service thinking is in fact winning out. The Army has been reduced in size for a number of military reasons, but it is still the biggest Army this country has maintained in peacetime. The Navy, with its atomic submarines and mammoth supercarriers, is hardly being slighted; it is the strongest navy in the world. The common-sense emphasis on air-atomic power has not put anybody else out of commission.

That being so, the quarreling among the services turns largely on details. Perhaps, for example, the Nike is being outmoded. In a sense all weapons are in a constant state of flux. If the arguments produce any good ideas for improvement, that will be fine. Meantime the charges so far made are hardly anything to get unduly worried about.

The time to worry is not when the services are simply making their normal claims to superiority. It will be when one or another of them should succeed in selling the notion that it alone is the answer to military preparedness.

Bill for $600 Increase for Postal Workers

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. ANFUSO. Mr. Speaker, I am introducing today a bill to provide an increase of $600 for all postal employees. Last year when we passed Public Law 68 the increase provided was too little and too late. The simple truth of the matter is that the pay increases we have given to our postal employees have not kept pace with the increases prevalent in America today. Our American standard of living is constantly improving.

Business Week, under date of June 2, announces that all United States incomes are up 6.5 percent from last year. Public Law 68, which was intended to bring up the standard of living of postal employees in keeping with that of other people in the American economy, provided increases for some postal employees amounting to as little as 6.1 percent. In some areas, according to Business Week, United States incomes have increased in the last year as much as 11.7 percent.

I also read in the same issue of Business Week that Harlow H. Curtice, General Motors Corp. president, had a salary of $776,400 in 1955; Eugene G. Grace of Bethlehem Steel Corp. had a salary of $705,923; and Albert Bradley, chairman of the General Motors board, received a salarly of $701,525. The salaries plus bonuses of all business executives were higher in 1955 than ever before in history. The increases that these executives have received since 1939 run on the average about 300 percent and in some instances probably run 500 or 600 percent.

The average salary increase since 1939 granted to those who work is around 200 percent; the increases received by postal employees are a mere 120 percent. The increases granted to these good people have not kept pace with the improved standard of living in America and I urge my colleagues in the House of Representatives to give serious consideration to the legislation I have introduced today.

The Mental Health Bill

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. BURDICK. Mr. Speaker, it is my understanding that there were only about 15 members present in the Senate the other day for the vote on H. R. 6376. Before that vote a great deal was said to indicate that this is really an innocent piece of legislation. Just to make sure the facts are all in, I would like to insert the following report in the CONGRESSIONAL RECORD. It was prepared by George C. Finn and Charles C. Finn, the famous "Finn Twins," and I commend it to the attention of the House. The report follows:

REPORT ON ALASKA MENTAL HEALTH BILL, H. R. 6376

The Alaska mental health bill, H. R. 6376, was fashioned after the Teapot Dome oil deal of the early twenties. At that time, the Secretary of the Interior made a private arrangement in cooperation with the Secretary of the Navy to lease the Teapot Dome Naval oil reserve to a subsidiary of the Standard Oil Co. In that case the land belonged to the Navy, was explored by the Navy and was for the purpose of keeping the oil in underground storage in reserve for future wartime needs. However, under the pretext that the oil was being drained away by wells operating outside the reserve it was decided to lease the reserve and store the oil above ground. The crude oil was withdrawn by private interests and the Navy was given refined oil in exchange with a tremendous profit going to the private oil company. The private oil company was selected by the Secretary of the Interior who excluded public bidding and received a large sum of money for the deal. Top Government officials of unquestioned reputation made the arrangements and sent a detachment of Marines to protect the oil company's contract when private citizens intervened. Subsequent congressional investigations exposed high level corruption, bribery and fraud. Later a court rescinded the contract and the lands were ordered returned to the United States Government. Some of the responsible officials went to jail.

Now, in 1956, private oil interests wish to procure the Navy oil reserves in Alaska withdrawn from private entry under Public Land Order 82, this time under the pretext that Alaska needs a comprehensive mental health program.

Federal law prohibits the sale and passage of title to known Federal oil and gas lands.

In order to circumvent this law, one million acres of Federal oil and gas lands will be given to Alaska by the Alaska mental health bill, H. R. 5376, to be sold on conditional sales by Alaska to private oil interests even before Alaska gets title. Alaska has at least 90 days to negotiate a deal with a preferred oil company before the land is open to others.

Arrangements have already been made to sell the land and the Navy's oil drilling and exploring equipment to private interests. Passage of the Alaska Mental Health bill is all that is required.

The land grant sections of the bill provide in part:

"SEC. 202. (a) The Territory of Alaska is hereby granted and shall be entitled to select, within 10 years from the effective date of this act, not to exceed 1 million acres from the public lands of the United States in Alaska which are vacant, unappropriated, and unreserved at the time of their selection. * * * All lands duly selected by the Territory of Alaska pursuant to this section shall be patented to the Territory by the Secretary of the Interior.

"(b) * * * Upon the revocation of any order of withdrawal in Alaska, the order of revocation shall provide for a period of not less than 90 days before the date on which it otherwise becomes effective during which period the Territory of Alaska shall have a preferred right of selection, * * *.

"(c) All grants made or confirmed under this section shall include mineral deposits.

"(d) Following the selection of lands by the Territory pursuant to subsection (b), but prior to the issuance of final patent, the Territory shall be authorized to lease and to make conditional sales of such selected lands."

Governor Heintzleman, presently Governor of Alaska, is on record proposing the circumventing of the Federal law prohibiting the sale of Federally owned oil and gas lands to private capital. He urges the transfer of Federally owned oil and gas lands to the Territory so that it may be sold to private buyers (hearings before the Subcommittee on Interior and Insular Affairs, September 15, 1955, Fairbanks, pt. I, pp. 108–110):

"STATEMENT OF HON. B. FRANK HEINTZLEMAN, GOVERNOR OF ALASKA

"Governor HEINTZLEMAN. My name is B. Frank Heintzleman, Governor of Alaska.

"I have a written statement here and I think it will save time if I read it, because it is just about the way I would like to see it go into the record.

"*4. Land grants to the Territory*

"Those who have worked on any phase of Alaska development have all recognized that more rapid economic growth requires greater local control over our public lands and resources. Consequently, all of the various statehood bills have proposed grants of varying but substantial areas of Federal public lands to the proposed State of Alaska. If the granting of such lands is recognized to be good for the possible future State, it should be equally good for the strengthening of the Territory in its course toward statehood status.

"I strongly urge the establishment of a program of substantial land grants to the Territory of Alaska. These should be outright grants with full title going to the Territory, including the rights to all minerals and other resources on or under the surface. The Territory should be permitted to select these lands, not only from the unreserved public domain, but also from those areas presently reserved if and when they are released.

"I suggest that the grants be fairly modest as to size, say 500,000 to 500,000 acres, and be repeated as the earlier grants are used up in sales and leases of lands to settlers and other users. When statehood is acquired, the entire remainder of the land the Congress intends to grant to the new State would then become immediately available.

"The territorial department of lands, recently established by the legislature, has the authority to undertake the initial job of making selections and accepting land grants. I am confident that Alaska can make such transferred lands more readily available for development by private enterprise than is now possible or is likely to be made possible under Federal administration."

Referring to the need to reduce Federal reserves in Alaska, Governor Heintzleman stated (hearings before the Subcommittee on Territorial and Insular Affairs, September 15, 1955, pt. I, pp. 109–110):

"In this connection, you will learn of public requests to open to private development certain oil lands in northern Alaska presently reserved by the Department of the Interior under Public Land Order 82. This order, which withdrew three separate areas from entry under the public land laws, was a wartime measure of 1943. These tracts were located on the Alaska Peninsula, the northeast shore of the Gulf of Alaska and on the Arctic slope. The lands on the first two areas mentioned have been released from reserved status and extensive oil and gas prospecting by private firms is now being conducted in both areas. The Arctic slope area, still withdrawn, contains some 48.8 million acres, including about 28 million acres in Naval Petroleum Reserve No. 4. The exploration which was carried on there by the Navy showed good prospects for development—particularly an oil field in the Umiat area and a gas field at Gubik. These, along with some other withdrawn oil and gas lands in the Territory, should be restored to the public domain to permit of private entry and development under the Federal oil and gas leasing laws."

The above statement that "particularly an oil field in the Umiat area and a gas field at Gubik * * * along with some other withdrawn oil and gas lands in the Territory, should be restored to public domain to permit of private entry and development under the Federal oil and gas leasing laws," is deceiving under the provisions in the Alaska mental health bill that permits Alaska to acquire 1 million acres of this land and sell it to any private oil interest and thus circumvent the Federal oil and gas leasing laws.

Governor Heintzleman's statement points out the development of Federal oil and gas reserves in Alaska by Navy exploration both in Naval Petroleum Reserve No. 4 and outside the Navy reserve. This exploration was carried on for the benefit of the Navy by a private concern known as the Arctic Contractors. (It is still undetermined how the Navy was to benefit by drilling outside its reserve.) This company was formed by Herbert Hoover, Jr., president in 1945. It received a negotiated contract, No. y 13360 on a cost plus fixed fee basis for oil exploration of Navy Petroleum Reserve No. 4 in Alaska and by 1953 had spent over $50 million of Navy funds.

The project discovered oil in the naval reserve, petroleum 4, called the Umiat structure, estimated at between 20 million and 150 million barrels. Outside the naval reserve, a giant gas field, the Gubik field, was discovered, estimated at a trillion cubic feet of gas under high pressure. A land survey was made for laying a pipeline from these fields to Fairbanks 500 miles distant and thence to Anchorage another 300 miles distant. This pipeline could join a 650-mile pipeline now connecting Fairbanks with the seaport town of Haines, Alaska.

[Map omitted in RECORD.]

The Arctic Contractors, formed by Herbert Hoover, Jr., president, explored both inside and outside Navy Petroleum Reserve No. 4 for 7 years and spent over $50 million of Navy funds to determine the potential oil and gas resources of the area. A 10-year program was established, beginning in 1945. In 1951, after a personal visit to the area by the then Assistant Secretary of the Navy, John T. Koehler, Koehler recommended that the project continue.

Early in 1953, oilman Earnest O. Thompson, chairman, Texas Railroad Commission and a group of Texas oil men visited the Alaska project. Oilman Robert Anderson, the newly appointed Secretary of the Navy, halted the project 1 month after he assumed office on February 4, 1953. It appears that a personal letter in 1953 from Earnest O. Thompson to his friend Navy Secretary Anderson influenced Anderson to reverse Assistant Secretary Koehler's recommendation to continue the project. The project was halted just when the drilling rig was being moved into place to drill the most promising site discovered in the past 7 years (hearings before the Subcommittee on Territorial and Insular Affairs, Sept. 20, 1955, pt. I, p. 306):

"Mr. BARTLETT. The program was not ended because it had been completed?

"Mr. REED. No; I tried to make that plain a little while ago.

"Now the final drilling for the 1954 and 1955 program was centering around some of the lower sequences of the rocks, the base that I have described, and in most places over the basin those particular rocks are too deep to be reached readily by a drill. You would have to go to very deep drilling, and that was out of the question in the program because of the expense, and we therefore had moved back closer to the range and farther east.

"You recall I said the porosity and the permeability got better as you went farther east, and the closer you get to the range the nearer to the surface those lower rocks are, and there is a very fine structure in there underlain by what we believe to be the best potential reservoir rock that was known.

"The geology of the structure has been mapped in detail. The geophysics (seismic exploration) of that structure has been completed, and they were in the process of bringing in the drill when the program terminated. We don't know that that would be an oil field. A professional man would be foolhardy to say it is likely to be, but it was believed, and I believe it to be a very good bet.

"Now let me recall, as George has made plain, that the record of this whole program is available publicly. There is no doubt whatever in my mind that the major oil companies know of that particular structure that would have been drilled if the program had gone on. This has not gotten much to your committee's attention because there has been so much talk about Gubik, the gas structure, but I believe it is that structure we were about to drill that will be of real interest to the oil companies, plus many others we haven't had a chance to take a look at."

At this point private oil interests took over; as in the Teapot Dome deal, arrangements were made to coordinate the actions of the Secretary of the Navy with the Secretary of the Interior. Transporting drilling equipment, pipe and camp sites to Alaska was costly, so further arrangements were made to dispose of the Navy's drilling and exploring equipment carefully stored at Point Barrow, Alaska; along with the Navy oil and gas reserves. Authority for the Secretary of the Interior to dispose of the oil and gas reserves was written into the land grant section of the Alaska mental health bill (hearings before the Subcommittee on Territorial and Insular Affairs, September 14, 1955, part I, pp. 9, 10):

"Frankly, I do not know. I do not think there is any interest in anything except oil and gas, as far as I know.

"Mr. ABBOTT. Would it be possible, Mr. Chairman, to suggest that letter might be placed in the record at this point since reference has been made to it?

"Mr. O'BRIEN. Without objection, it is so ordered.

(The letter referred to follows:)

DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D. C., June 4, 1955.

Hon. CLAIR ENGLE,
Chairman, House Committee on Interior and Insular Affairs,
House of Representatives,
Washington, D. C.

MY DEAR MR. ENGLE: The Department of the Interior has received several requests from officials of the Territorial Government of Alaska, the Delegate to the Congress from Alaska, and numerous private citizens to open to private development certain lands on the Arctic slope of the Territory presently reserved under Public Land Order 82.

Public Land Order 82, a wartime measure, was signed on January 22, 1943, and withdrew three separate areas from entry under the public land laws, including the mining and mineral leasing laws. These tracts were located on the Alaska Peninsula, the Gulf of Alaska, and the Arctic slope. The minerals on these lands were reserved under the jurisdiction of the Secretary of the Interior for use in connection with the prosecution of the war.

In 1946, Public Land Order 82 was revoked insofar as the lands on the Alaska Peninsula and the Gulf of Alaska were concerned. Oil and gas prospecting is now being carried out in both areas by private firms.

The northern Alaska withdrawal created by order 82 includes within its boundaries Naval Petroleum Reserve No. 4 established by Executive order on February 27, 1923. At the time the reserve was created, oil had been reported at a few places near the coast, but practically nothing was known of the inland area. Beginning in 1944 the Navy instituted a petroleum exploration program in the naval reserve and on adjacent lands withdrawn by order 82. This program was suspended in March 1953.

With the suspension of the Navy exploration program, Alaskans began to express an interest in having the lands outside the boundaries of Naval Petroleum Reserve No. 4 restored to entry under the public land laws and the mining and mineral leasing laws. It is believed in the Territory that private exploration will lead to the development of oil and gas deposits in commercial quantities and the establishment of new industries in interior Alaska.

The Alaska Development Board, an agency of the Territory, in mid-1954 published a study of the possibility of commercial development of the area and the use of natural gas as a source of energy. This study concluded in part that

"The availability of cheap fuel (natural gas from the Arctic slope) will promote the industrial development of Alaska by significant reduction in the cost of utilization of natural resources. Ensuing economic growth will enable the Territory to become less dependent upon imported products and promote general stability at a time when a tapering off of military construction expenditures threatens to upset the economy of the railbelt area."

The Congress has taken a deep interest in Naval Petroleum Reserve No. 4 and the now discontinued exploration program of the Navy. On March 6, 1954, Senator Leverett Saltonstall, former chairman of the Armed Services Committee, wrote to the President concerning the future of Petroleum Reserve No. 4. Senator SALTONSTALL'S letter was brought to the attention of the Defense Mobilization Board which unanimously agreed that disposition of the naval petroleum reserve at this time would not be in the national interest. Senator Saltonstall was so advised on July 19, 1954, by Mr. Arthur S. Flemming, Director of the Office of Defense Mobilization.

Likewise the Department of the Navy desires to maintain the present status of the Naval Petroleum Reserve No. 4. However, the Department of the Navy has advised us through an exchange of correspondence that it would raise no objection to revoking Public Land Order No. 82 provided that the proposed revocation would in no way affect the present status of the lands in Naval Petroleum Reserve No. 4. The oil and gas deposits of primary interest to Alaskanas for private development lie for the most part outside the boundaries of the Naval Petroleum Reserve No. 4. Additionally, it is understood that the Department of Defense plans to recommend that certain other lands within the area covered by Public Land Order No. 82 be reserved for defense purposes.

There is vested in the Secretary of the Interior authority to revoke or modify Public Land Order 82. In the event that such action is taken by the Department, it would relate only to those lands lying outside the boundaries of the Naval Petroleum Reserve No. 4. The oil and gas deposits in the restored area would be subject to the mineral leasing law of the United States which requires that lands and leasable minerals within a known geologic structure of a producing oil and gas field be leased by competitive bidding. Other areas may be leased to the first qualified applicant. In view, however, of the interest of the Congress in the oil reserves of northern Alaska, we wish to have the views of your committee before issuing an order which would change in any appreciable degree the status of the lands on the Alaska Arctic slope withdrawn by Public Land Order 82.

There is a related matter which should also be brought to your attention, the disposal of the naval oil-well drilling equipment. This equipment has been declared surplus by the Navy and is subject to disposition by public sale. It is understood that the Department of Defense believes that it would be in the best financial interest of the Government to withhold sale of this equipment until after the revocation of Public Land Order 82.

The limited transportation facilities and harsh climatic conditions of northern Alaska would make the shipment of new equipment to the drilling site extremely costly to a private developer. This high cost might well spell the difference between success and failure in bringing in a producing field.. The holders of the surplus oil-well drilling equipment, conversely, would have a competitive advantage in bidding for any oil and gas leases which may be offered. This Department will, therefore, work closely with the Department of the Navy in order that disposal of the surplus property may be properly coordinated with any mineral leasing in the area.

I should appreciate having your views and comments on possible revocation of Public Land Order 82. I shall be pleased at any time to supply any additional information which you may require. A letter has also been sent to each of the Chairmen of the Senate Armed Services Committee and the House and Senate Interior and Insular Affairs Committees asking their views and comments on this subject.

Sincerely yours,

CLARENCE A. DAVIS,
Acting Secretary of the Interior.

(Identical letters to: Hon. RICHARD B. RUSSELL, chairman, Senate Armed Services Committee, United States Senate; Hon. CARL VINSON, chairman, House Armed Services Committee, House of Representatives; Hon. JAMES E. MURRAY, chairman, Senate Interior and Insular Affairs Committee, United States Senate.)

In the Teapot Dome fraud, Congress was told that the Navy was losing oil from its underground storage by wells operating outside the reservoir draining it away, consequently the Secretary of the Interior was compelled to lease the Navy oil lands to a private interest and bring the oil to the surface for storage above ground in order to conserve it. This proved to be a hoax.

Likewise, the hoax that Alaska has a mental health problem and needs a million acres of land to solve it was conceived to provide a mental health bill that will allow the Secretary of the Interior, through Alaska to sell the Navy oil and gas reserves to private interests.

That there is no problem for the 360 mental cases of Alaska is adequately expressed by Congressman WILLIAM A. DAWSON and by Mr. Parsons of the Alaska Department of Public Health (hearings before the Subcommittee on Territorial and Insular Affairs, Sept. 22, 1955, pt. II, p. 251 and p. 254):

"Congressman DAWSON. We are all supporting the mental health bill and want to see it get through, but I think you are going to have to be very practical about this thing and, after the bill is passed, not try to go all the way and expect to have set up here a big hospital for the care of mentally ill, with 5 psychiatrists and a lot of expense for 360 mental patients, which is the total for the whole Territory. In my State we have 1,400 patients in a mental hospital which is designed for about 800, and I think we have 2 psychiatrists on the staff. And back in Washington they would like to work out what they call an ideal situation where they would have one psychiatrist for every dozen people, I suppose, or something like that, and they would be around looking at all of us wondering if anything was wrong with us.

"I have overexaggerated that, of course, but what I am trying to say is that you have got a hospital here, a Government hospital that is half filled; there is no reason in the world why that hospital should not be used to its capacity and one of those wings is set up and could be used to take care of these mental patients and do a very good job, without going down and building a new hospital somewhere. I think you have got the facilities, and with a little good, practical judgment up here on the local level you could work this thing out.

"Mr. MORAN. If we had access to that hospital, I think one of the immediate problems of our court would be solved.

"Now the marshal's office here is very diligent, and we cooperate completely by holding, as a matter of fact, our hearings at such times as to expedite the transportation of these people to Morningside, if they are committed, so as not to require their detaining in jail. I think we go to every possible extreme and get a lot of cooperation from all of these people immediately involved in this procedure. But for some reason or other we cannot disabuse those in charge of the Anchorage hospital, and perhaps this goes all the way back to Washington, from the idea that our immediate problem is not to staff that facility there with psychiatrists and psychiatric nurses and clinical psychologists. But let us get our people in there with custodial help who are qualified to look after the mentally ill, as our jailers are not, and at least we would have the improvement of using the facility which is suitable for the purpose."

Mr. PARSONS. For 2 years and when Dr. Anderson came up as chief of section, he was promised 18 beds and 10 rooms over at the Anchorage Medical Center, specifically constructed for the care of the mentally ill. These have lain vacant gathering dust be-

cause of redtape, lack of coordination, and firm policy on the Federal Government level. We urge that congressional impetus and financing be given to enable the opening of this unit. Even Morningside administrators with whom we sometimes disagree state that this facility should be activated.

In view of the fact that in 1920 high placed Government officials disposed of known Navy oil reserves to a private interest and—

1. That Federal law prohibits the disposal of known oil and gas lands to private interests.

2. That the Alaska Mental Health bill provides conditions that circumvent this law.

3. That these conditions allow Alaska at least 90 days to select known Navy oil and gas reserves and to pass title by conditional sales to private interests.

4. That Alaska is ready, willing, and able to sell Navy oil and gas reserves to private interests.

5. That valuable oil and gas structures were discovered both inside and outside the Navy reserve and a pipeline was surveyed for the Navy by Arctic Contractors.

6. That the project was halted at its most promising stage.

7. That the Navy oil exploration and drilling equipment is being sold.

8. That the sale of the Navy equipment is coordinated with the disposal of the Navy oil and gas reserve to private interests through Alaska.

9. That some oilmen are in top executive positions and the Alaska Mental Health bill originated with the executive branch of the Government.

10. That the Alaska Mental Health problem is a hoax comparable to the oil drainage hoax of the Teapot Dome fraud.

Of Senators, Supreme Court Justices, and Prior Judicial Experience

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. ROOSEVELT. Mr. Speaker, a distinguished member of the judiciary of my State, Judge Stanley Mosk, of Los Angeles, has sent me an article by an equally distinguished member of the California State bar, the Honorable Loren Miller, which I think deserves to be called to the attention of the country.

Mr. Miller takes as his thesis the proposition that the strength of the American judiciary lies in its independence and that any attempt to "foreordain their decisions" is foredoomed to failure. I think he proves his point in a novel and convincing manner.

The article originally appeared in the Daily Journal, a legal publication of Los Angeles, and reads as follows:

OF SENATORS, SUPREME COURT JUSTICES, AND PRIOR JUDICIAL EXPERIENCE

(By Loren Miller)

Every Supreme Court controversy breeds its own myths. Time was when the insurgent agrarians blamed their lack of judicial success on the railroad lawyers who were said to have infested the Court at the turn of the century. A few years later, social reformers raised the spector of "The Nine Old Men" and laid invalidation of progressive legislation to the senility of the judges. Current mythology, welling up out of the South, has it that something is dreadfully wrong with the Court due to the lack of prior judicial experience by the judges.

Senator SMATHERS, of Florida, authored a bill requiring 5 years judicial experience as a prerequisite to Supreme Court appointment while Senator STENNIS, of Mississippi, would stretch the requirement to 10 years. Both Senators were outraged by the Court's school desegregation decision. Opposition runs a little deeper in Mississippi than in Florida which may account for the more stringent provisions of the Stennis bill. In any event, it will be interesting to see just how much correlation, if any, there is between liberalism or conservatism on the one hand and prior judicial experience on the other.

During its 167 years of existence, 87 men have sat on the Supreme Court, as Chief Justices and associates. Four have served in both capacities: Oliver Ellsworth, Edward D. White, Charles Evans Hughes, and Harlan F. Stone.

Let's take the Chief Justices first. There have been 13 Chiefs, excluding John Rutledge who presided for a short period but who was never confirmed. John Marshall, Roger Taney, Salmon P. Chase, Morrison Waite, Melville Fuller, and Earl Warren assumed the position without a day's judicial experience behind them. None could have qualified under either senatorial plan. John Jay, Oliver Ellsworth, Edward D. White, William Howard Taft, Charles Evans Hughes, Harlan F. Stone, and Fred M. Vinson had varying degrees of judicial experience when appointed. The count is 7 to 6 in favor of experience but the record also shows that the Court has been headed by men without prior experience for 112 of its 167 years. A comparision, on any count, of the quality of service rendered as between the experienced and the inexperienced lends little luster to the hue and cry for service on the bench as a prerequisite to appointment as Chief Justice, to say the least.

We have already excluded the six inexperienced Chiefs as disqualified to serve under either the Smathers or the Stennis scheme. What of the other seven? Chief Justices Hughes and Stone got their only judicial experience on the Court itself before promotions. Since neither could have got on the Court had either SMATHERS or STENNIS had his way when they were appointed, we'll have to rule both out. Jay had 2 years experience on the bench before he became Chief Justice; Ellsworth, 4, and Vinson, 3 months less than 5 years. They're out. White had 2 years experience before he went to the Court as an Associate Justice. He is out. That leaves Taft who became Chief with 11 years prior service on State and Federal courts. It is comforting to know, as the advertisements say, that we have salvaged 1 Chief Justice out of 13 for Senators SMATHERS and STENNIS—even if he did fill the post for only 9 of the Court's 167 years. But let's get on. Deducting the 12 Chief Justices we have disqualified we still have 75 Justices who may, or may not, qualify under the proposed plans.

We run into trouble right off the bat. Associate Justices who went to the Court without prior service on the bench (excluding Hughes and Stone with whom we have already dealt) include: William Paterson, Bushrod Washington, Joseph Story, Henry Baldwin, John McKinley, Benjamin Curtis, John Campbell, Noah Swayne, Samuel Miller, Joseph Bradley, L. Q. C. La Mar, George Shiras, William Moody, James McReynolds, Louis Brandeis, Pierce Butler, George Sutherland, Owen Roberts, Robert Jackson, James Byrnes, Stanley Reed, Felix Frankfurter, William O. Douglas, Tom Clark, and Harold Burton. Now we've disqualified 25 more for both Senators. Almost any lawyer would be willing to take a chance on the $64,000 question by answering that some of these lawyers made important contributions to constitutional law and the Nation and that men of all shades of opinion are included in their ranks. Come to think of it, the list includes some mighty hard bitten exponents of the separate but equal doctrine so dear to the embattled Senators—like, say Byrnes, McReynolds, or La Mar—But SMATHERS and STENNIS will just have to take the bitter with the sweet. Subtract these 25 from the 75 Justices we have left after elimination of the 12 Chief Justices and we have only 50 Justices left out of the 87 with which we started.

This thing seems to be getting out of hand but we can't turn back now. Associate Justices who went to the Court with less than 5 years' judicial experience (excluding White and Ellsworth, who have already been accounted for) include: James Iredell, Thomas Johnson, Brockholst Livingston, Alfred Moore, John Rutledge, Peter Daniel, Stanley Matthews, John Clarke, Hugo Black, John Harlan I, J. R. La Mar, Wiley Rutledge, and John Harlan II. That's a total of 13 whose less than 5 years' service on the bench before their appointments disqualifies them under both proposed senatorial dispensations. This list, like our prior lists, includes men of varying degrees of competence, brilliance, and social, economic, and political beliefs. Some were, and some were not, supporters of the Smathers-Stennis view of the 14th amendment.

Well, anyhow, Senator SMATHERS last left us with 37 qualified justices according to his lights. They fall into two groups. Group 1, consisting of Justices with 5 or more but less than 10 years experience, includes: Samuel Chase, Gabriel Duval, William Johnson, William Todd, John McLean, Thomas Barbour, Levi Woodbury, Stephen Field, James Wayne, Ward Hunt, Howell Jackson, William Day, Joseph McKenna, Willis Van Devanter, Frank Murphy, and Sherman Minton, a total of 16. Group 2 consists of Justices with 10 or more years of prior judicial experience and includes: John Blair, William Cushing, Smith Thompson, Robert Trimble, John Catron, Robert Grier, Samuel Nelson, Samuel Blatchford, David Brewer, Henry Brown, David Davis, Horace Gray, William B. Woods, Rufus Peckham, William Strong, Benjamin Cardozo, Oliver Wendell Holmes, Horace Lurton, Edward Stanford, and Mahlon Pitney, associate Justices, and Chief Justice Taft, a total of 21. Senator SMATHERS' 37 Justices include liberals, not-so-liberals, and conservatives. Obviously, he hasn't solved his problem.

Senator STENNIS hasn't done much better. He has wound up with a hodgepodge of 21 Justices (those in group 2) representing all of the various shades of opinion that have bobbed up on the Court since it was established. By playing games with combinations or mutations of the 21 whose experience accords with the Mississippi Senator's notions of Supreme Court qualification you could get almost any kind of an opinion you wanted on the racial reach of the 14th amendment or on child-labor legislation.

At this point the Senators may tax me with lumping the post-1937 Court personnel in with its pre-1937 composition and they may protest that they want none of the judicial shenanigans that came with the New Deal-Fair Deal middle of the road appointments of our last three Presidents. Let's take that position for a moment. The Senators would still have only one Chief Justice, Taft, left. Of the 73 Justices who served prior to 1937 Smathers would have only 35 (we would have to drop Murphy and Minton off his list) while Stennis would be left with his same 21. Either plan would play havoc with the *Plessy* v. *Ferguson* Court which enunciated the separate-but-equal doctrine. Smathers

would lose Chief Justice Fuller and Associates White and Shiras which would leave him in a bad way since Brewer didn't participate and Harlan (who would have been eliminated anyhow) took a dissenting position. Stennis would have eliminated those four plus Justice Field and would have been left with only Justices Gray, Brown, and Peckham as having had the requisite more than 10 years prior experience. And, finally, the 1937 Court, intact for a considerable period and conservative enough to meet the most fastidious taste, was composed of Stone, Cardozo, Hughes, Van Devanter, McReynolds Brandeis, Sutherland, Roberts, and Butler. As we have seen, only Cardozo and Van Devanter could have met the qualifications Smathers would impose while only Cardozo could have served if the Founding Fathers had had the same vision that has come to Senator Stennis.

Confidently, I know the answer to the Senators' problem. Ponder, for a moment, the given names of the Judges who banned segregated schools: Earl Warren, Hugo Black, Stanley Reed, Felix Frankfurter, Sherman Minton, Harold Burton, Tom (not Thomas) Clark, Robert Jackson, and William O. Douglas—get it? Only one good, earthy William in the lot and he a renegade and only one good solid Robert, and he unpredictable. What about the rest of those given names heretofore unknown to Supreme Court history? Gone are the Johns, the Samuels, the James', the Davids, the Henrys who made our Nation great. But, whoops, wait a minute, I had forgotten Bushrod Washington, Brockholst Livingston, Lucius Q. C. La Mar, Morrison Waite. Oh, well, forget the whole thing. Maybe my plan has its defects, too.

Quite seriously, there is no mechanical method of selecting Supreme Court Justices that will guarantee a desired construction or interpretation of the 14th amendment or any other section of the Constitution. On reflection it will be apparent to any lawyer that a liberal Court or a conservative Court could be appointed from present members of the courts of appeal, the district courts, State supreme courts or from our own Superior Court, for that matter, under either the Smathers or the Stennis plan. The same thing goes for appointments from the ranks of practicing lawyers or law school professors. Prior judicial experience, or the lack of it, did not foreordain or even forecast the decisions in *Marbury* v. *Madison*, the Dartmouth College case, income tax cases, *Plessy* v. *Ferguson* or *Brown* v. *Board of Education*. Those decisions, and other landmark cases, are the end-products of far deeper experience, shared with the American people by the judges. It is undoubtedly true that the selectivity by our Presidents who appoint Supreme Court Justices plays an important role in the timing of various constitutional interpretations and that such timing may delay or retard, on the one hand, or accelerate, on the other, the processes of growth and change that are hallmarks of a free society. Even the presidential factor can be overemphasized; judges have disappointed, even enraged, those who appointed them.

The strength and the greatness of the American judiciary, no matter what its shortcomings and lapses, lies in its independence. Our Supreme Court Justices have been charged with the responsibility of interpreting a Constitution designed to protect the rights and regulate the relationships of individuals in an ever-changing and evermore complex world. They must perform that task in the hurly-burly of the pulling and hauling and the backing and filling and the sometimes inching forward and the sometimes leaping-forward moods that are at once the strength and the weakness of the democratic system. Any scheme designed to destroy their independence and foreordain their decisions is freighted with the promise of stultifying the very Constitution that is their guide.

Address of Congressman Philip J. Philbin at Graduation Exercises, Cushing Academy, Ashburnham, Sunday, June 10, 1956

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include therein a speech which I delivered yesterday at the graduation exercises of the class of 1956 in the 81st year of Cushing Academy at Ashburnham, Mass.

These exercises, which were held at Cowell chapel of Cushing, were largely attended and most impressive.

This commencement marked the final official appearance of the outstanding headmaster of the school, Mr. Clarence P. Quimby, who is retiring this year after 23 years of most conspicuous service.

During his administration, Cushing had made great progress. Its physical plant, its enrollment, and its curriculum had all been extended and greatly improved. Under his direction, the school achieved highest ranking among the secondary schools of the Nation.

Mr. Quimby leaves a tremendously vital, incomparable legacy, which would be impossible to excel. He has profoundly influenced the educational processes of his time and our generation, and his contributions, not only to Cushing, but to the cause of improved, progressive education will certainly be difficult to equal, if not impossible to excel.

The popular and famous headmaster retires at a time when he is virtually in the prime of his intellectual powers and professional fitness, and it is ardently to be hoped that he may be persuaded to pursue his activities in some broad educational field commensurate with his great ability, long experience, and inspired zeal. Cushing Academy and its many friends may not only be proud, but exceedingly grateful to this illustrious headmaster, who, out of the goodness of his heart, tenacity of his purpose, integrity of his dedication, and exceptional talents has forged such a remarkable record in the educational world.

The address follows:

Doctor Quimby, distinguished guests, members of the board of trustees, members of the faculty, members of the graduating class, parents, and friends:

This is indeed a day of fulfillment, a day of vital tasks successfully finished, a day mingled with feelings of joy of achievement and the sorrow of parting. I am greatly honored to be with you. I come, not only as Congressman of this great district, but a genuine admirer of Cushing and its outstanding headmaster, Dr. Quimby. And I come as a friend who has, for the past 3 years, had an excellent opportunity to observe the class which we honor today and as a proud parent with a lovely daughter just completing her junior year at this fine institution.

First of all, let me heartily congratulate each and every one of you, your parents, and teachers, on your graduation. I am exceedingly pleased with the splendid record which the members of this class have made at Cushing. The completion of your course here marks an important step in your personal advancement. It is an accomplishment of which you can be justly proud. If you had not worked sincerely and intelligently, you would not have been able to reach the cherished goal which we all take joy in celebrating in these impressive exercises, and which bring to this happy ending your secondary school careers. But actually, it is just the beginning. The wide world opens before you. Boundless opportunities of a promising and successful future await each and every one of you—await the impact of your aspirations, energy, and ability.

In every sense of the word, you are the beneficiaries of a noble tradition. You were blessed by providence with the favored destiny of being raised and educated in this great free country of ours—the most powerful, the richest, the most prosperous, and the happiest democracy the sun has ever shone upon. It has been your happy privilege and good fortune to be educated here in the atmosphere of a beautiful historic New England town, in a select institution of learning typified by an abundance of patriotism, idealism, constructively balanced living and genuine American culture. You have been fortunate enough to live in an atmosphere of tolerance where men and women are judged for what they are, what they achieve, and what they strive for, and not alone for their success, for the circumstance of their birth, their race, their religion, or their national origin. It would be difficult for me, indeed, in this brief talk, to recite the merits, the virtues, the reputation, and the immeasurable contributions of Cushing Academy, its great leaders and its able teachers. The vital thing to recall here and to remember henceforth is the wonderful atmosphere of opportunity, tolerance, pride in accomplishment, incentive, scholarship, and inspiration which has been engendered in this place and which you have been so fortunate to share.

We must remember that it has taken well nigh a century to fuse the basic elements of our American culture, outlook, and institutions into the comprehensive traditions of learning and useful citizenship that rightfully belong to Cushing and its graduates.

We must take note of the fact that the deep spirituality of the early American founders combining with their practical vision and love of freedom, merging with the enthusiasm, unbounded energy, and willingness to sacrifice for advancement under personal liberty which characterizes the many people who comprise this Nation, is mainly responsible for the dynamic, stimulating atmosphere of the school of which you may be so proud to be graduates today.

As years go by, you will place higher and higher value upon the advantage given you of living here during your formative years and you will come increasingly to appreciate the broad, spiritual, God-fearing patterns which have formed the secure foundation for so many of its other favorable characteristics.

You have been fortunate also in the extreme of being educated under such high minded, able leadership by such devoted capable and conscientious teachers. There is background and patient development and rich traditions associated with your school. Its contemporary leaders and teachers are admirably carrying out and implanting the ideals of the great leaders and teachers of the past and when history is written, the names of men like Clarence Quimby as well as individual members of the faculty will be ranked with those of past generations whose devoted and unselfish work has helped so immeasurably in laying the groundwork and advancing the high aims of Cushing Academy.

In this connection there is a special sadness associated with this occasion in that it marks the last official commencement appearance of Headmaster Quimby, whose rugged character, high ideals and unflagging devotion have been indelibly impressed upon

this institution and the educational history of our times. Please bear with me a moment while I recount for you a brief excerpt appearing in the CONGRESSIONAL RECORD of recent date concerning the service of your beloved and unxcelled headmaster. I quote:

"It would be a happy circumstance indeed, if every institution in the land could be infused with the spirit of patriotism, love of humanity, enthusiasm for work, unselfish devotion to students, school, and Nation, which Clarence Quimby has exemplified at Cushing.

"A true patriot in thought, word, and action, he is never given to narrow provincialism, hysterical fanfare or eccentric theory. His powerful influence for good will long be felt in the field in which he worked.

"The Nation that has men like Clarence Quimby among its leaders, working for the enlightenment and advancement of its youth, need have no fears for the future.

"I extend to him and to his devoted helpmate, Mrs. Quimby, who has been loyally and magnificently by his side in all his endeavors, my heartiest congratulations for their very many contributions to the educational, cultural and business and civic life of my district and State and wish them both many years of continued constructive effort and happiness."

And I tender to the new and able head master every wish for a most successful administration. He is well equipped for his tasks and will have the wholehearted cooperation of all.

I know that this afternoon as you meet officially with your teachers for the last time that your hearts are filled with deepest gratitude for all they have done for you. Future years, let me assure you, will serve only to heighten your feelings of appreciation for their labors in your behalf, and they will serve to bring into focus as an inspiring force in your lives the many unparalleled advantages and benefits that you have enjoyed under their leadership as students of this school.

There is another group this afternoon to whom you owe an indefinable debt for your present success. I know you will recognize that as a parent myself I speak in a very personal sense and, like all the other parents here, I am exceedingly proud at this time for the events which transpire here in which you play the principal role as graduates.

For I am sure that you are even more anxious than I am to emphasize in your own hearts and minds and in every fiber of your being the truly infinite value of the love, devotion, loyalty, and in all so many instances, the real sacrifice, which your loving parents have displayed in furthering your interests and welfare without which this happy result we all rejoice in would never have materialized.

Your parents seek no encomiums. They are patient and long suffering, let me assure you as one who knows. But I think I can speak for all the parents when I say that what they have done, they have done gladly and willingly, yes, with the eagerness born of true affection—and they seek no reward or commendation of any sort, save that which is worth more than anything else—continued goodness of character, renewed devotion to duty and future contributions in the form of good living, good works, and constructive activity by all our graduates for and in behalf of their families, their commmunity, their Nation, and their Creator.

In brief, parents ask nothing more of you than that you adhere to the ideals which you have been taught in your homes, your churches, and your school; that you continue honestly and wholeheartedy to do the best you can in whatever work you undertake; that you recognize your responsibilities to yourselves, to your families, to the people as a whole and to the country; that you work, live and strive as good industrious, God-fearing, self-respecting Americans contributing in every way you can to the building of good citizenship, wholesome family life, loyal friendships and the building of a better America and a peaceful world.

For parents this afternoon, there is a real pride and happiness for your success up to this time. But this occasion also brings rememberance and reminescence. Parents, too, have come this very path years ago. They know the joys and sorrows of life, the trials, adversities, and problems.

From personal experience we parents know the obstacles, the pitfalls, the difficulties which you will have to face. Yes, my friends, we came this way ourselves. And if we were to close our eyes today we would find ourselves again in the bright sunlight and flower-decked fields of other years.

We would see before us the smiling faces of dear loved ones who made our way easier, who made our progress possible. We would feel again the affectionate touch of their hand upon our shoulder, we would hear their words of counsel, advice, and courage.

We would recall the love and help they so unselfishly gave us; their look of disappointment when we lost; their unrestrained joy when we won; their never ending concern for us; their loyalty and steadfastness. These are precious memories which will always live in our minds. Because those were days when family ties bound us together like hoops of steel, more tightly perhaps than in this modern day.

And now the vision dims, the bright sunlight of those happy years fades, the faces of those dear ones disappear and we are back again in the prosaic world of the present.

And so it will be with you, my young friends. Opportunity is beckoning. It knocks on your door. It may knock but once. It is up to you to embrace it. It is up to you to remember your noble heritage, to treasure and sustain your high ideals and let nothing swerve you from them. We will all be pulling for you in your every undertaking.

Many of you will go out into the realistic, practical, everyday world of work. Some of you will go to higher institutions of learning to seek further training for higher fields of endeavor. But all of you will have to face the same essential problems—how can you fulfill your highest destiny—how can you meet the responsibilities you have as educated men and women living in this fast-moving rapidly changing atomic and hydrogen age with its quantum mechanics, nuclear physics, and theory of relativity.

You are finishing the happiest but at once a most vital and important period of your lives. You have made a fine start. As a class and as individuals you have made a great record here. Your class has distinguished itself in the classroom, on the athletic field and in every other school activity. You have all recorded a significant accomplishment in your school work. By your training and your character, you are well equipped for the future. If you have the will, ambition and determination, you can go on to finer achievements.

You can go on to service to your own aims, and service also to the Nation and humanity, to the task which faces every one of us today more than ever before of protecting, preserving, maintaining, enriching and perfecting the great institutions of our country which have given you, and so many others, priceless, incomparable advantages of "life, liberty, and the pursuit of happiness."

If you but will it, if you courageously persevere in your aims, you can reach your goal and you can make your contribution worthwhile. Whatever that contribution is, make sure that it is your very best. Make sure that it represents the very best effort of which you are capable. Make sure that it is sincere, earnest and conscientious. Make sure that you work diligently at the tasks at hand. But no matter what your gains in material wealth and position, never take yourself too seriously.

Remember that you are human and finite. Never let failure deter you from another and still another try. Remember the words of a great philosopher, "There is no such word as failure in the lexicon of a bright youth." Keep your courage high, because you may score a touchdown on the next play. Be humble of your talents and accomplishments, and never gloat over the reverses of misfortunes of others. Tomorrow they may rise to success.

Distinguish between confidence in yourself and vainglory. Keep it in mind that "pride goeth before a fall," and that vanity casts doubt upon your real worth. Be generous, kindly and just—always ready to lend a helping hand, particularly to your less favored brethren. Respect the judgment of your elders because their experience can guide you safely away from the shoals. One is wise who learns from his own mistakes. One is a genius who learns from the mistakes of others.

Be interested in the civic and political affairs of your town, your State and your Government. Democracy can be destroyed by nonparticipation of the average citizen and the activity of minority pressure groups. The Nation and the world are faced by many grave problems. Your generation will necessarily have to play a large part in solving them. They cannot be solved without your active help.

You and those who will work with you will be the leaders of the future. What kind of a future—slave or free? Upon you the Nation will depend for its freedom and security. To you and other young Americans the whole world will one day look for guidance and inspiration in the struggle for peace and democracy. It will be your major task and duty to defend our liberty and save it from destruction by tyrants who are, if the facts were known, case problems for the psychologists, but who are preaching poisonous class hatred and intolerance and seeking by force or stealth the destruction of individual liberty and the enslavement of mankind.

My friends, there is no magic formula to prepare you for these great tasks, no open sesame to success. But there are some guides and signposts you can follow. First, remember that there is no substitute for hard work in the life of an individual or a nation. The able-bodied individual who strives to avoid or evade his responsibility, who turns to the government at some level to solve his personal problems, or to provide him with a means of livelihood, is foredoomed to failure. Similarly, that nation which turns its back on the dignity and worth of the individual and pursues the wraith of collectivism and socialism will soon suffer the same fate as all the other nations throughout history which have departed from the basic values of life ordained to us by the Almighty and exemplified so brilliantly by the unmatched glories and achievements of our Nation.

Remember that this Nation is not a static organism. To stand still is to retrogress. We must work for a dynamic, forward-looking, forward-moving democracy. But at the same time we cannot ignore or discard the solid, constructive values of the past. Industry, thrift, preparation for rainy days, above all, the deep spiritual values, and wholesome home and family life are the enduring basis of any worthwhile, well ordered government.

Do not be led astray or swerved from your chosen course by current despotic doctrines as old as Methuselah or the Corn laws of Rome that there is any easy road to personal success, governmental stability or national prosperity. A nation, like an individual, must zealously protect its freedom, or it will crumble through soft living, inertia, moral decay and spiritual degeneration, like so many other nations of the past, into the dust of oblivion. All the experience of mankind

and all the lessons of recorded history indisputably prove that fact.

Let me reemphasize: Be true to yourselves and the ideals you have learned in your own homes, your churches and this school. Be confident of your abilities and aim high. Remember the words of the poet "Not failure, but low aim, is crime." Be proud of your heritage and never betray it. Stand by your principles and your convictions. Respect yourselves and others will respect you.

Live like your fathers and mothers have tried to live—loyal to God and country, loyal to every worthy institution, loyal to your friends. Strive to advance yourself, and live, not by selfishness or vanity or materialism. "To thine own self be true and it must follow as the night the day thou canst not then be false to any man," is something to remember, if you place beside it "Love thy neighbor as thyself" and the injunction of the Golden Rule, "Do unto others as you would have others do unto you." And when you are right, fear no one but God, because the truth will make you free and freedom will make you strong.

It always tugs at the heart to leave dear friends—the young and the old. But time waits for no one. Like all those who have gone before you, now you must move forward—always forward—to the broader opportunities and achievements of the future. You part today but you will be together again, I know, together in these fine warm friendships you have formed here, together in the spirit of these noble teachings and ideals, together in the company of all those who strive to keep our high faith in America and all she stands for, the eternal faith which by the blood and sacrifice of her sons we have sworn to uphold to the end.

Years ago in a similar setting as this I had the high privilege of rendering my own class ode and the closing lines of it went something like this:

"But now as we start on life's battle, let us be brave and heed, the words of our own class motto, 'Every day some noble deed.'"

And I think today, my friends, that the last line of that song may well be kept in mind by all of us, young and old: "Every day some nobler deed."

Let me again congrateulate you, your parents and teachers, upon this great memorable, unforgettable day in your lives, so full of deep meaning for them and for you.

And let me wish you all, and let me wish for my dear friend, Clarence Quimby, your great headmaster, all the very best of health, success, prosperity and happiness in the future, whatever may be your chosen way of life.

May the good Lord of hosts continue to shower his richest, choicest blessings upon all of you.

God love you.

The Overton Waterway

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present a resolution adopted by the Louisiana State Labor Council, AFL–CIO, which confirms the support of this organization for construction of the Overton-Red River Waterway in Louisiana. I feel this waterway will render great benefits to all the people of northwest Louisiana.

The resolution follows:

Whereas the Overton-Red River Waterway, a $300 million project planned for the entire southwest area, will offer great conveniences for our citizens and will result in widespread employment for labor's people throughout the entire area covered by the project; and

Whereas such projects bring unlimited advantages to Louisiana, adding to the already significant development of our State, and contributing to a better and a more abundant way of life for all of our people; Now, therefore, be it

Resolved, That the Louisiana State Labor Council, AFL–CIO, go on record as approving this project as one of the immeasurable benefits to Louisiana, and that we urge upon our people the importance of letting their United States Senators and Representatives know that they are in favor of the Overton-Red River Waterway for Louisiana.

The President's Illness

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. MULTER. Mr. Speaker, I direct the attention of our colleagues, to the following item, which appeared in the New York Herald Tribune of June 11, 1956:

MATTER OF FACT

(By Stewart Alsop)

THE PRESIDENT'S ILLNESS

WASHINGTON.—It is good to know that the President's operation was a brilliant success, that his recovery should be complete within 6 weeks, and that his doctors agree that his illness need not bar him from a second term. Even so, there is no ducking the fact that the President and the country are again squarely faced with a familiar question: Whether a man in his condition should attempt to carry the crushing burden of the Presidency for 4 more years. The question can only be intelligently decided by a frank and careful weighing of the medical factors, and of other more intangible but equally important factors as well.

The world's greatest medical authority on the President's disease, ileitis, is Dr. Burrill Crohn, who first diagnosed the disease as benign and operable in 1932—before that, the patient usually died. Since 1932 Dr. Crohn has treated some 700 cases of the disease.

Dr. Crohn agrees, on the basis of this experience, that the President should have recovered fully in 6 weeks. Moreover, Dr. Crohn points out that there is virtually no chance of malignancy developing, since the small intestine is almost immune to malignancy. It is thus quite reasonable to hope that the President has many years of active and happy life ahead of him.

But there is a minus side to the medical picture as well. As Dr. Crohn points out, the President's operation, involving the elimination of several inches of intestine, is most distinctly a major operation. Although the heart is not directly involved, the President's heart attack and his age are unquestionably complicating factors. Finally, based on Dr. Cohn's experience, there is a 35-percent chance of recurrence of ileitis.

There is, of course, a somewhat similar chance of recurrence of coronary thrombosis. In sum, like his heart attack, the President's operation has been no minor indisposition. Even after his recovery, Dr. Crohn and other doctors consulted agreed, a physically vigorous campaign by the President must be ruled out.

So much for the medical factors. The President's personal prestige is perhaps the most important of the intangible factors to be weighed. In a speech some days ago, the President said: "Certainly the prestige of the United States since the last World War has never been as high as it is this day." The statement is open to dispute. But hardly anyone will dispute that the prestige of Dwight D. Eisenhower has never been higher, all over the world.

Almost single handed, the President has removed the false face of the United States as an unstable and warlike power. This has been, perhaps, his single greatest service to his country. His second greatest service has been to restore a large measure of the national unity which was so sadly lacking only a few years ago.

If the President decides to withdraw, the irreplaceable national asset of his world prestige will be lost. A period of extreme political confusion will also be ushered in, in which the violent partisanship which the President has done so much to still will again be loudly heard.

Yet, as in the case of the medical picture, there is another side of the picture which must also be considered. Ever since his heart attack, there has been a tendency among his subordinates to shield Mr. Eisenhower from the unpleasant responsibilities of his office. A case in point was the urgent message on the Middle Eastern crisis from British Prime Minister, Sir Anthony Eden, which was apparently concealed from the President.

Military leaders, appalled by the accelerating shift in the world power balance to the Communist bloc, complain that the President is so protected that they have not been able to make known to him the real case for a sharply stepped up defense effort. Again, there is heavy pressure on the National Security Council to avoid troubling the President with split papers. The result has been largely to transform the NSC into a mechanism for reaching the lowest common denominator of indecision.

Since the President's latest trouble, the tendency to overprotect him is sure to grow. Perhaps this is not too great a price to pay for his prestige abroad and his leadership at home. But it is silly to pretend that there is no price to pay; or to disregard the risks involved in a second term for a man of 65 who has had a coronary thrombosis and a major abdominal operation within less than 8 months.

As before, the final decision will rest with the President himself. But it is not only legitimate, but right and needful, that the matter be fully and frankly debated by the country.

Panama Canal Problems: Issues Stated

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the forthcoming meeting of Presidents of the American States at Panama in late June has attracted world attention to the problems of the Americas. Among the foremost of these under current consideration by the Congress is am-

plification of interoceanic transit facilities.

The most recent contribution to the literature on this subject is a paper by Earl Harding, vice president of the National Economic Council of New York, published in Economic Council Papers, volume XI, No. 2, of June 1, 1956. In this he brings the principal canal issues into focus.

The paper carries the following biographical note of its author written by Vice Adm. Charles S. Freeman, United States Navy, retired:

Mr. Harding's continuing interest in the Panama Canal stems from his earlier background in journalism, to which he was diverted from engineering. As news editor of Joseph Pulitzer's New York World he was thrust in 1908 into an intensive investigation of the Panama revolution of 1903. This took him to Europe, and many times to Panama and Colombia. Later, in industry and finance, his interest was extended to other Latin American countries. He has been a member of the Pan American Society of the United States since 1919.

Articles on the Panama Canal problems over the past 10 years have been numerous. The attention of the Congress is invited to the excellent documentation on Isthmian Canal Policy of the United States, prepared by Representative CLARK W. THOMPSON, of Texas, and published in the Appendix of the CONGRESSIONAL RECORD of March 23, 1955. Mr. Harding's paper is a highly meritorious addition to this documentation, and is commended for reading by every Member of Congress and its staff experts.

Under leave to extend my remarks, the text of the indicated paper is quoted:

WHAT MORE WILL AMERICA GIVE AWAY AT PANAMA?

(By Earl Harding)

President Eisenhower's announced venture this month into the diplomatic jungles of Panama to confer with the heads of the South and Central American Republics is certain to be of historic importance.

The big game of this safari will be you, the American taxpayer—your dollars, and eventually the sovereignty of your country. The pitfalls will be well camouflaged, but they will be there.

Besides the maneuvering of the other Latin American neighbors for benefits from rich Uncle Sam, there will be these problems affecting the lifeline of America's economic and military defense, the Panama Canal.

1. Agitation for eventual internationalization of the Panama Canal—after American taxpayers have footed the bills. Our original canal investment was close to $400 million. It could not be replaced for less than $1 billion today. And the canal rebuilt at sea level would cost 5 to 10 billions more.

2. Concentration of pressure on the United States Congress to pass legislation to make effective certain features of our vitally important giveaway treaty with Panama. This treaty was negotiated in secret for 16 months, ratified by our Senate, July 29, 1955, without adequate investigation or debate, and was almost completely overlooked by the American press.

3. Propaganda for constructing practically a new canal, at sea level—regardless of the billions it would cost, the engineering risks involved, and the certainty that Panama would again hold us up for the right to vary present Canal Zone boundaries for the sea-level relocation.

4. Complaint of American ship owners that Panama Canal tolls are prohibitively high, and the lawsuit now pending, brought by 12 American steamship companies for refund of $27 million in tolls collected since 1951 allegedly in excess of the amounts authorized in the law passed by Congress reorganizing the Panama Canal administration.

5. Decision of the Panama Canal authorities to abandon the American-owned Panama Railroad and replace it with an automobile and truck highway. Congressional investigation has stopped this one, at least temporarily.

THE THREAT OF INTERNATIONALIZATION

Internationalization of the Panama Canal is not a new idea with the Panamanian politicians. In Economic Council publications as far back as September 1, 1953, I forecast that "If Panama's desire for still further concessions is not satisfied, pressure in behalf of Panama such as Alger Hiss in 1946 brought to bear through the United Nations may take the form of demanding internationalization of the Panama Canal."

This warning was reemphasized in 1954 and 1955 in my urging that the future of the canal be not compromised in the then unratified giveaway treaty.

Representative FRANCIS E. DORN, Republican of Brooklyn, as one of the House Merchant Marine Subcommittee on the Panama Canal, while attending hearings in the Canal Zone last December, heard Panamanians talking about the time when the canal would be internationalized. Further, the Congressman told me recently, he found Panamanian politicians grumbling about our giveaway treaty—Uncle Sam hadn't given them enough.

How serious are the implications of this "internationalization" threat was evaluated in Washington on May 12 by the Honorable Maurice H. Thatcher, Governor of the Canal Zone 1910–13, later a Member of Congress from Kentucky. As toastmaster of the Panama Canal Society's meeting honoring the memory of John F. Stevens as the engineering architect of the canal, Governor Thatcher said:

"There are those who wish to see the Panama Canal internationalized; taken from the hands of the United States and turned over to an international or world organization, which would very likely team up with the world-at-large and use it in a way to greatly harm this Nation. * * *

"The work was effected under American treaty rights and arrangements which the world recognizes as valid. Speaking for myself, and voicing, I believe, the overwhelming sentiment of the American people, I would oppose the indicated suggestion, or movement, as one of monumental stupidity and evil. * * *

"There is no other country in all the earth which, if it had built the canal as we have built it, would surrender its right to own, control, and operate it.

"Yet there are those in our midst at this hour—at this time of grave danger to the freedom of the entire human race—who, through impractical idealism or sinister design, would yield up all these precious and dearly earned rights, which are ours. * * *

"The canal has enabled us to make the critical contribution to defeat in war the tyrannies of despotism, and in peace to serve the free shipping and commerce of the world. We have thus benefited not only ourselves but all mankind. Our abandonment of the control of this great waterway, beneficent and strategic, would be, indeed, an act of stupendous folly."

THE GIVEAWAY TREATY—WHAT IT MEANS

The extent of the surrender of America's vital interests through our latest giveaway treaty with Panama and the pressures to implement it are too little known. Who is responsible?

The Americas Daily, published in Miami Springs, Fla., in separate Spanish and English editions which are widely distributed in Latin America, stated in a front-page editorial on May 19, 1956:

"It is a historic fact that President Eisenhower was a decisive factor in the negotiation of the treaty recently signed by the United States and Panama. * * * The participation of President Eisenhower, at determining moments of the negotiation, was of great significance. * * *

"It is to be desired that before the President arrives in Panama, approval be given to the laws implementing the treaty, and which will put it in full force, since Eisenhower had so much to do with it * * *

"There is some fear that, for some reason, the Legislature of the United States may end its present session without approving the laws implementing the treaty."

Legislation to implement the treaty and it supplementary memorandum of understandings must be voted by our Congress before the administration can deliver title to the properties which the treaty donates to the Republic of Panama.

The estimated fair market value of the donated properties, as stated by our Government is $24,300,000. They include the Panaman Railroad yards and terminals at both ends of the canal; the Washington Hotel in Colon, worth $1,450,000; the Colon Hospital, market value now $1,400,000; and many other parcels.

But the $24,300,000 is not all. Cost to the United States of replacing or relocating properties affected by the treaty is stated officially to be $12,300,000.

Add to these items a bridge across the canal, as promised in 1942, to cost $20 million. (Other estimates, up to $27 million.)

And don't forget the $1,500,000 increase in our annuity to Panama for the privilege of operating our canal. Once it was $250,000; then $430,000. Now our giveaway treaty makes it $1,930,000 a year, in perpetuity, since the treaty cannot be reopened without mutual consent.

SQUANDERMANIA AT SEA LEVEL

On the day of the announcement that Panama was inviting President Eisenhower and heads of the 20 other American Republics to celebrate together the Bolivar anniversary, June 25 and 26, agitation for a sea-level reconstruction of the Panama Canal was revived in 8-column headlines in the Panama press.

Brig. Gen. John S. Seybold, ending his term as Governor of the Canal Zone and President of the Government-owned Panama Canal Company, announced that he has reached the unqualified conclusion that the proposed sea-level canal "is both feasible and desirable and, in fact, inevitable."

Thus the old controversy between sea-level and high-level-lake-and-locks type of canal again becomes a threat to every American taxpayer's pocketbook.

Sooner or later, perhaps not before this summer's adjournment, Congress will discover that voters have a vital interest in a money-conserving, defense-sound solution at Panama.

Reduced to laymen's language, the question is: Should the existing canal be modernized, at a cost estimated at around $700 million; or should, in effect, a new canal be constructed at sea level, at a cost estimated by the sea-level advocates at $4,500,000,000; but likely, say civilian engineers, to be at least double that amount.

An alert, informed Republican Senator wrote last year to an economy-minded Democratic Senator: "It is notorious that Government engineers habitually underestimate the cost of projects in which they are particularly interested." (The strategy of spenders is to get a project started, and then trust Congress to meet the deficits.)

Still pending are the Martin and Thompson bills for creation of an independent commission of qualified experts to determine what is the logical solution of the engineer-

ing problems. Also pending is the bill of Senator MAGNUSON to transfer the canal from the Secretary of the Army to civilian management under the Department of Commerce.

New light on the sea-level controversy will be found if Congress digs deeper. For instance, there was recently declassified a preliminary report dated January 17, 1944 by the then governor of the canal, Gen. Glen E. Edgerton. He recommended a thorough investigation of the possibilities for modification of the existing canal, extension of Gatun Lake and abandonment of the Pedro report approved in principle the suggested modification of the existing canal.

The Edgerton report also warned that sea-level advocates would "oppose unjustifiably" any move that would delay their sea-level dream.

Now the outgoing governor, General Seybold, says the investigation projected in the Martin and Thompson bills to evaluate both plans would be a waste of money. But that is for the Congress, not the administration,, to decide.

One sentence in the long-unavailable Edgerton report is of special interest now, in view of current evaluation of the work of John F. Stevens, Chief Engineer of the canal during its creative period, 1905–07. It reads: "* * * the wisdom of the adoption of the high-level plan in the original construction of the canal is completely established."

Congressman DANIEL J. FLOOD, Democrat, of Pennsylvania, in a carefully documented address to the Panama Canal Society of Washington on May 12, 1956, placed Mr. Stevens in "historical perspective" as "the basic architect" of the canal. Mr. FLOOD's studies show that Mr. Stevens saw the advantages of consolidating the locks at the Pacific end of the canal, but was compelled to compromise on one lock step at Pedro Miguel and two at Miraflores. This created, against the chief engineer's better judgment, a transportation bottleneck at Pedro Miguel.

The alternative to the sea-level proposal, known as the Terminal Lake plan, would extend Gatun Lake to new, giant triple locks near the present Miraflores site. Then, with new triple locks at the Atlantic end of Gatun Lake large enough to accommodate any giant craft of the future, there would be uninterrupted navigation through the enlarged lake.

Navy men and merchant seamen recognize the navigational advantages of such a high-level lake channel over the deep, and necessarily narrow, channel dug to sea level and menaced by slides.

The sea-level side of the argument is that a sea-level channel, with tidal locks, would be safer under atomic or thermonuclear attack.

The answer of the advocates of a modernized high-level canal—the Terminal Lake Plan—is to quote such authorities as Maj. Gen. Thomas F. Farrell, who has been inside the atomic and thermonuclear developments since their beginning. General Farrell wrote on April 5, 1956, to Senator MARTIN:

"Atomic and thermonuclear weapons—if delivered on the target—will put a sea-level canal out of service as effectively as they would a lock canal."

Governor Thatcher has stated that not one of the engineers, still living, who had experience in building or operating the canal, approves the sea-level idea.

Mr. E. S. Randolph, of Baton Rouge, La., spent 35 years on the canal and is recognized as the greatest repository of Panama Canal engineering knowledge and experience living today. Mr. Randolph's evaluation of present canal problems was placed in the CONGRESSIONAL RECORD of April 18, 1956, by Congressman DORN, of Brooklyn. The following is quoted from the Randolph statement:

"The sea-level plan contains engineering and constructional features which are grossly without precedent in the Isthmian area. * * * The oversize dredging equipment required for deepening the cut before lowering the water level would necessitate a program of development involving unforeseeable risks, delays, and costs. Without experience, there is no solid basis for the evaluation of the action of the materials under the new order of pressures which would be developed [by cutting the channel 108 feet below its present level]. The problem of landslides would be greatly accentuated. * * *

"The interoceanic canal problem includes, besides engineering and geology, grave questions of diplomatic relationships, economics, and marine operations. The issues must be decided on their merit at the highest plane of wise and experienced judgment and statesmanship. This I firmly believe can be best accomplished by an independent and broadly constituted commission as provided in the Martin-Thompson bill now pending."

Every American taxpayer's pocketbook will be affected by the decisions President Eisenhower may be asked to make in Panama, and by the action that the Congress must take in Washington, now or later.

The outcome can be influenced by what is heard from the people back home within the next fortnight.

Possible Congressional Investigation of Racketeering

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, in this morning's mail I received the following letter with enclosures which I received from Thomas Jefferson Miley, Executive Vice President of the Commerce & Security Association of New York. I feel sure it will be of interest to our colleagues:

COMMERCE AND INDUSTRY
ASSOCIATION OF NEW YORK,
New York, N. Y., June 8, 1955.

Hon. PETER FRELINHUYSEN, Jr.
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN FRELINGHUYSEN: I would like to take this opportunity to commend you for introducing House Resolution 512, which would authorize a congressional investigation of labor union activities designed to extort money or other advantage by means of violence, intimidation or other improper interference with normal business operations.

As the representative of approximately 3,500 employers in the New York metropolitan area, this association feels the time has come for the Federal Government to act in a comprehensive way on this pressing national problem.

While local enforcement officials are attacking this growing problem conscientiously, frequently they are stymied by a number of factors beyond their control.

Today, we sent the enclosed letter and telegram, urging a Federal investigation of labor union racketeering, to each member of the United States Congress, and to the President of the United States, the Attorney General and the Secretary of Labor. We have specifically mentioned, and endorsed, your resolution as one possible approach to the problem.

I hope that you will actively encourage approval of your proposal. Rest assured we are entirely in sympathy with it; and you have our enthusiastic support.

T. J. MILEY,
Executive Vice President.

COMMERCE AND INDUSTRY
ASSOCIATION OF NEW YORK, INC.,
New York, N. Y., June 8, 1956.

To Members of Committee on Rules and Committee on Education and Labor, House of Representatives, Washington, D. C.:

As the representative of approximately 3,500 employers in the New York metropolitan area, this association feels the time has come to act on the pressing national problem of labor racketeering and extortion.

Here in New York City we are especially conscious of this increasingly serious problem posed by unscrupulous individuals who attach themselves to the labor movement. At the moment, there are separate investigations being conducted here by the New York County district attorney, the New York State attorney general, and the United States attorney for the southern district of New York. We are convinced that they are working as assiduously as possible on this grave issue.

Unfortunately, there are many obstacles in the paths of these agencies:

1. Employers and others who suffer from the predatory practices of those who pervert the labor unions for personal gain by whatever means, are frequently too frightened to bring their complaints to existing local authorities.

2. While we are particularly aware of the situation here in New York City, clearly the total problem of labor racketeering goes beyond State boundaries and is national in scope; yet, existing investigatory facilities are essentially local in character.

3. There is a substantial possibility that a Federal probe could provide the basis for Federal legislation to prevent many of these vicious practices in the future.

4. Perhaps the most effective way to eradicate labor racketeering is to marshal an informed, outraged, nationwide public opinion.

Each of these factors calls for a thorough and fairly conducted investigation at the Federal level. Such a study could provide a vital service by focusing the publicity spotlight on those who would blemish the legitimate trade union movement, and who would prey upon employers, employees and the public. House Resolution 512, introduced by Congressman PETER FRELINGHUYSEN, JR., which would authorize a congressional investigation of labor union racketeering activities, is one possible approach to the problem.

We are heartened by newspaper reports this week that President Eisenhower also favors some kind of comprehensive Federal action against union racketeering.

In an economy such as ours, trade unions must occupy a position of high public trust. It is their clear and unequivocal duty to represent employees, in their relations with emyloyers, in accordance with the enlightened best interests of those employees. Many unions fill this role effectively and with honor. However, where individuals succeed in taking over unions for improper malicious motives, the fundamental public policy of free collective bargaining in a free economy is jeopardized. Such individuals must be exposed.

Sincerely yours,

T. J. MILEY,
Executive Vice President.

COMMERCE AND INDUSTRY
ASSOCIATION OF NEW YORK, INC.,
June 8, 1956.

Hon. DWIGHT D. EISENHOWER,
President of the United States,
The White House,
Washington, D. C.:

Commerce and Industry Association of New York, Inc., representing approximately 3,500 employers in the New York City area, highly gratified by newspaper reports this week that you favor new comprehensive approach on Federal level against union racketeering and infiltration criminal elements in union movement.

New York City especially conscious increasingly serious problem posed by unscrupulous individuals perverting trade unions for personal gain, through violence, intimidation, extortion.

Local Government agencies working assiduously on problem but many obstacles in their paths: Victims of predatory practices frequently too frightened to complain to local authorities. Labor gangsterism goes beyond State boundaries. Substantial possibility new Federal legislation needed to prevent vicious practices in future. Informed, outraged, nationwide public opinion most effective in eradicating labor racketeering.

These factors call for thorough fairly conducted investigation at Federal level. House Resolution 512, by FRELINGHUYSEN one possible approach.

In free, democratic society unions must be true to their high public trust. Most unions represent employees effectively and with honor. Where individuals take over unions for malicious purposes, fundamental public policy jeopardized. Such individuals must be exposed.

THOMAS JEFFERSON MILEY,
Executive Vice President.

American-Italian Educational Relations

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. ANFUSO. Mr. Speaker, on June 1, 1956, it was my privilege to deliver a lecture under the auspices of the Institute of Italian Culture in the United States on the theme American-Italian Educational Relations. In the course of my address, I offered a 10-point program calling for the improvement and expansion of the cultural and educational relations between America and Italy.

In recent days I have been informed by the institute that my address has been received with considerable interest in American and Italian educational and cultural circles. The institute is now arranging for a translation of the address into the Italian language and copies will subsequently be submitted to authorities in the Italian Ministry of Education, to the foreign minister, and other leading officials of the government, to Members of Parliament, to the heads of universities, technical schools and normal schools, and others interested in the field of education or in American-Italian relations.

Mr. Speaker, in view of this wide interest and for the benefit of further improving American-Italian relations, I am inserting the text of my address into the CONGRESSIONAL RECORD so that the Members of both houses of Congress and the American public generally may have the opportunity to learn of my proposals.

The text of the address is as follows:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO ON AMERICAN-ITALIAN EDUCATIONAL RELATIONS, INSTITUTE OF ITALIAN CULTURE IN THE UNITED STATES, FRIDAY, JUNE 1, 1956, AT INSTITUTE OF DESIGN AND CONSTRUCTION, BROOKLYN, N. Y.

Mr. Chairman, Professor Gerig, my good friend Ugo Cecchini, ladies and gentlemen, it is with considerable trepidation that I have accepted your kind invitation to speak to you this evening, under the auspices of the Institute of Italian Culture in the United States. May I say at the outset that the objectives of the institute are most praiseworthy. The dissemination of Italian culture in America and the intercultural relationship between the people of Italy and the people of America can in time, if properly developed, form the basis of a great cultural partnership of tremendous importance. The mingling of our two cultures holds vast promise for the future, and for this reason I want to extend my congratulations to all who are laboring in this vineyard of civilization.

I am very happy to be here with you and to have this opportunity to share some thoughts with you. My topic for discussion is "American-Italian Educational Relations." I am not an educator or pedagogue as are some of my distinguished listeners here this evening, but education is a field in which I have always found a great deal of interest as a parent, as a jurist on the bench, and as a legislator in the Halls of Congress. The educational relationship between the land of my forefathers and the land of my adoption is of particular interest to me because of very obvious reasons.

At this stage, however, I must ask you to bear in mind that what I am going to say to you tonight are the thoughts and views of one who is trained primarily in the fields of law and politics. Above all, do not regard this as political oratory.

The story is told in Washington about a Congressman whom a constituent of his was trying to reach. An important debate was going on then on the House floor, but the constituent nevertheless sent in a page boy to call the Congressman off the floor. When the Congressman came into the cloakroom, the constituent started to apologize for taking him away from the debate.

"Oh, that's all right," said the Congressman. "I am glad to have an excuse to come out here. This cloakroom is the best shelter we have from oratorical fallout."

Well, I don't know about the oratorical part of my effort here, but I am hoping that there will be a fallout of ideas which might prove stimulating as far as the educational and cultural relations of Italy and America are concerned. This is a field of endeavor which requires more than mere stimulation—it requires inspiration.

You have heard the story of Michelangelo and the piece of marble. He was strolling one day with a friend of his in Florence and came upon this block of marble half buried with dirt and rubbish. He cleared away the debris and lifted it from the mire. His friend, in surprise, asked what he wanted with such a worthless piece of rock anyway, whereupon Michelangelo replied.

"Oh, there is an angel in that stone and I must bring it out."

He brought the piece of marble to his studio. There, he worked on it patiently, lovingly, and finally brought out the hidden glory that was to inspire others for generations to come.

Not many of us can have the talents and the inspiration of a Michelangelo. But all of us, I dare say, can do our share in bringing out that which is true, and good and inspiring in human nature. And I know of no field where this can be done at its best than the educational and cultural relations of Italy and the United States.

Back in March of this year, you will recall, the President of Italy, the Honorable Giovanni Gronchi, came to these friendly shores on an official visit to the United States. It was an appropriate occasion for the highest representatives of both countries to acknowledge again the strong links between our 2 cultures, the bond between our 2 nations. Today, perhaps as never before in our relationships, the United States and Italy recognize that the bonds joining our two countries are much stronger and deeper than the ones resulting from a military pact, of an economic-aid program, or a program of student exchange. The bonds are those of continuous reciprocal contributions, of mutual respect between 2 great peoples, of genuine friendship for one another, and the desire to bring out the hidden glory of our 2 cultures—as Michelangelo did with that block of marble several centuries ago.

My friends, the bridge of understanding between Italy and the United States was not constructed overnight. It is a process which is at least as old as the United States, and in fact goes back to colonial days. I do not wish to go into a discourse on Italian American history or the contributions of Italian Americans toward the growth and progress of this country. That is not my purpose tonight. But I do want to make a few references in order to point up my general subject.

During the colonial period of United States history, small but significant numbers of Italians joined the waves of early explorers and settlers that came to these shores. These Italians fitted themselves comfortably into the American social structure of that era, but interestingly enough they always retained a part of that color and sparkle which personifies the Italian. You know their names as well as I, beginning with Columbus, Giovanni Caboto (John Cabot) and his son Sebastian from Genoa, the Florentine Giovanni Verrazano, who discovered the harbor of New York, and Amerigo Vespucci after whom America was named.

But let me mention a few names, perhaps not so well known, but no less significant from a cultural standpoint. There was Philip Mazzei, who settled in Virginia and became an intimate friend of Thomas Jefferson. According to historians, Mazzei's letters had a tremendous impact on Jefferson's political philosophy.

There was Philip Tragetta, a musician and composer from Venice, who later became a friend of Presidents James Madison and James Monroe. Tragetta established the American Conservatorio in Philadelphia, probably the first institution of its kind in the New Yorld.

There was Father Gregorio Mengarini, a missionary and educator from Rome, who established the first collegiate institution on the Pacific coast, the College of Santa Clara.

There was Father Benedict Sistini, who pioneered the teaching of algebra, geometry, and trigonometry in this country with his outstanding treatises on these subjects.

There was Prof. Vincenzo Botto, who taught Italian and literature at the University of the City of New York and was a friend of such literary luminaries as Horace Greeley, William Cullen Bryant, and Edgar Allan Poe. Professor Botto established the first important literary salon in the history of American letters.

These and many others too numerous to mention have made lasting contributions to our American heritage over the many and long years. The imprint of their contribu-

tion to American life and culture is visible all over our land.

Coming down closer to our own times, in the period after 1880 when large numbers of Italians immigrated to the United States, we find that they became a vibrant and meaningful asset to American democracy. We must not forget that the Italian immigrant came to this country through choice and with a burning determination to improve his lot. He believed in the "American dream" long before he left his native land. Political unrest and religious persecution played no effective role in the mass immigration of Italians, as it did in the case of immigrants from other parts of Europe. The Italians came to America in order to improve his human desire for advancement, for a better life for himself and his family, for opportunities which he did not have in his native land because it lacked the material resources.

The optimism with which the Italian immigrant greeted his newly adopted land was reflected in all his endeavors and throughout all his pursuits in this country. In the field of culture the contributions are practically inexhaustible. In art, for example, the works of Cappellano, Persico, Valperti and, of course, Brumidi, all exude the warmth and depth of meaning with which the Italian artist is known to imbue his art.

Over the years the bonds of blood, understanding and admiration between the two countries continued to grow. Academies and cultural institutes—and I want to single out this fine institute under whose auspices I am speaking here this evening—have become familiar phenomena in American life. In Italy, of course, these institutes contributed to the spread of culture and they helped to disseminate knowledge abroad of Italian intellectual life.

During World War II, America "rediscovered" Italy. In the inter-war period between the two World Wars, the attraction of Italy to the American tourist and the connoisseur never lessened, but somehow those visitors did not always have the proper appreciation for the more subtle and sophisticated phases of Italian life and ways. With World War II, however, there was almost a rediscovery of the finer facets of Italian culture. Since then this movement has been gaining momentum.

What has brought about this increased interest? Cultural exchange and development programs have accentuated the community of interests between Italy and the United States. Under the Fulbright Act, for example, good will and understanding between the two countries have been furthered through the exchange of students, teachers, university lecturers, and research scholars. The resounding ovation given recently in Italy to American performers with the opera troupe of Porgy and Bess, demonstrated the basic pool of good will and appreciation for the finer things produced in America. Italians and Americans accord each other's motion pictures a high degree of prestige and recognition. Italy, the universally recognized birthplace of the melodrama, spontaneously acclaimed the popular music and the artists of America.

This common link between the cultures of the two nations was recently emphasized by David E. Finley, the director of the National Gallery of Art, in Washington, D. C., when he said: "We owe much that is best in our culture and our ideas of freedom * * * to such nations as Italy." The cultural interchange in art, music, education, and other facets of life, has forged links in a chain of understanding that must stay strong and untarnished.

Turning now more specifically to American-Italian educational relations, you will remember that during World War II many educational institutions in Italy were severely damaged. The universities of Bologna, Cagliari, Florence, Genoa, Milan, Naples, Pisa, Turin, and the Catholic University of Milan were so badly damaged that for a time it seemed the damage was irreparable. Whole buildings were destroyed, others were sacked of valuable equipment by the Nazis; some were requisitioned as hospitals or troop quarters, and some were even used as defense points in battle. There was also widespread destruction or deterioration of scientific equipment and libraries.

After the war, the Government was faced not only with the problem of rebuilding and reequipping the universities, but also how to cope with the large number of war veterans who sought to gain admittance to the universities. It was at this time that the United States stepped in with aid from Marshall plan funds and also from private contributions, which were used for the restoration of buildings and equipment. Of course, the Italian Government also allocated funds for these purposes and, in addition, provided assistance to many students (former partisans, prisoners of war, etc.). It is now a matter of record that this Marshall plan aid was most efficiently used, and today we find that Italy's universities—at least in their physical aspects—have made a complete recovery, thanks to this generous aid from America.

At this point, I want to make brief reference to the School Reform which was decreed in 1949. It do not want to go into a detailed discussion of this reform, other than to say that it is based fundamentally on Article 33 of the Italian Constitution which states emphatically: "The arts and the sciences are free and free must be the teaching of them." The reforms, though gradual and experimental, also underscored the principle of education for all. This is a relatively new concept in Italy, where for generations both secondary and higher education were a privilege enjoyed only by the few, rather than by the masses as in this country. Make no mistake about it: the distinction between popular education and education for the elite has not yet been eliminated, but progress in that direction is being made. Today, the literacy rate in Italy stands at 92 percent, compared with 97 percent in the United States, 99 percent in Britain, 93 percent in France, and only 54 percent in Spain.

One of the achievements in this country which has a great impact on the people of Italy is the belief that "everyone in the United States goes to college." Such sweeping generalizations are always a bit exaggerated, just as is that other mythical assumption that "in America everyone has a car." But if this American impact helps to raise the goals of the Italian people in their educational endeavors and it encourages them to broaden their educational scope, then I feel it constitutes an influence for the good.

More and more one finds that educational circles in Italy, particularly the more progressive and more democratic elements, look to the United States for guidance and contact and specialization in every field of endeavor. Scholars and students in Italy manifest an ever-increasing desire to avail themselves of the vast educational resources of American universities, especially in science and technology. However, to date this thirst for knowledge and experience has not been fully utilized. It should be vastly expanded on a scale to benefit our two countries.

The questions remain: What is to be done? How is it to be done? And by whom? This is where I want to inject a few ideas and proposals. In full modesty, I urge you not to look upon this as a blueprint or even a specific plan. I prefer to regard it more in the nature of a set of ideas and suggestions toward the improvement and expansion of the cultural and educational relationship between America and Italy. These ideas should be weighed by experts, and those which are practicable and capable of realization should be developed fully. I can only indicate an outline for a plan.

First, I should like to suggest the establishment of an American House in Rome. This is not a novel idea. Our good friend, Prof. Vincenza Rivera, is the head of an organization of scholars at the University of Rome which aims to establish such a house. It is visualized as an educational link or as a clearinghouse between the universities in Italy and the universities in this country. In its beginnings, however, it would of necessity have to be on a very modest scale and on an experimental basis.

In this respect, we can perhaps learn from the experience of our fellow Americans of Scandinavian extraction, who maintain a foundation which over the years has proved itself to be of exceptional character and achievement. Suffice it to say that more than 500 American students attend institutions of higher learning in Sweden each year. This is an achievement of which Scandinavian-Americans can be justly proud, for it is one of the best and wisest methods in cementing the ties between two cultures.

Surely, we can do as well. We have the human resources in this country for a project of this kind. An American House in Rome would channel the placement of American students in every university in Italy, in every faculty of instruction, in every field of endeavor. One thousand American students in Italian universities each year would be a thousand American ambassadors of good will there, and a thousand ambassadors of friendship for Italy after their return to this country. Repeated year after year, you can visualize for yourself the enormous possibilities for close cultural and educational cooperation between the two countries. Its scope is unlimited. I am sure of that, with millions of Americans of Italian descent and many fine Italian-American organizations in this country, it would be possible to underwrite the establishment of an American House. It would be an act of patriotism in the interests of both countries. As you can see, I am interested in an American House that will help American-Italian relations, not one that will exploit either country.

Second, I suggest the establishment of several cultural agencies in this country whose purpose it shall be to maintain and develop intellectual relations with Italy. These agencies are to be set up in various geographical localities throughout the country, perhaps a half dozen at the start. Where possible, they should be established in conjunction with a leading university, preferably on or near the campus. They are to serve as a clearinghouse for Italian students studying in this country, for Italian educators and intellectuals visiting here; they are to be centers for the dissemination of Italian culture, for the study of the Italian language, for lectures on every phase on Italian creativity of the past and the present. They are to be a center of attraction for young Americans, who are to be encouraged to familiarize themselves with Italy, its people, and its great cultural heritage.

Third, I should like to see a much larger educational exchange program than the one we have now. Educational exchange projects offer an effective way to enlarge the areas of common interests between two nations. By bringing together people of different countries and enabling them to share their knowledge and skills, to learn from each other, and to study common problems, we are helping to develop mutual understanding and respect.

How big has been this educational exchange in recent years? Let me cite to you some figures for the year 1954. In that year the State Department's exchange program, which applies to students, teachers, research scholars, and certain specialists, records a total of 419 persons, 232 coming from Italy

to the United States and 187 Americans going there. It may interest you to know that in the same year the exchange program with Germany involved 1,338 persons (more than three times the size of the Italian exchange program), for England it was 762, and for France 643.

I should like to see this program considerably expanded, both in an official and private capacity. I think, for example, that trips to Italy should be arranged for Members of Congress and also for legislators and administrators in our State and municipal governments. It is important that as many American newspapermen as possible visit Italy, and that Italian newspapermen have an opportunity to work for a while on American newspapers. There should be an organized program of exchanges to include such groups as industrial leaders, professionals, people who are active in communal affairs, labor leaders, the heads of women's organizations, and other groups. But, above all, the exchange of students, teachers, and scholars should be increased to much larger proportions.

This exchange program should be established on a basis of mutuality of interests. It should be planned and developed to broaden and deepen the community of interests between the United States and Italy, if we are earnest in achieving greater understanding and solidarity between the two nations. When people of different countries have the opportunity to live and work together and to be in daily contact, they must develop feelings of friendliness and respect for each other, just as they are sure to lose the feelings of fear and suspicion of each other.

Fourth, I propose the establishment of more Chairs in American Studies in Italian universities, and Chairs of Italian Studies in American universities. Such studies should become a part of the regular curricula of the universities in both countries. Here, too, something has been done, but not quite enough. I visualize not only chairs which offer courses in the Italian language in our universities, but full educational programs which are to stress Italian civilization and culture, of the past and contemporary period, in American universities; simultaneously, such chairs in Italian universities should present courses in American history and contemporary life in this country in all its aspects, including the political, the economic, the social, and the cultural.

Fifth, I want to impress upon you the urgent need for adequate library facilities in Italy on all levels, from the university on down to the elementary schools in the villages. Let me read to you a few lines from an article by an American scholar who was in Italy on a Fulbright scholarship in 1954. This is what he says:

"Library facilities in Italian universities are shocking to the American observer. Not only are resources poor, especially in current acquisitions, but they are also inaccessible because of archaic cataloging and inefficient systems of circulation. Some libraries are rich in manuscripts, incunabula, and periodicals, but these are very difficult for the student to get at and study efficiently. There is little concept of library services in Italy; comfortable and well-lighted reading rooms, the so-called 'tools' of library research, open shelves, and well-trained and available librarians familiar to even the smallest college libraries in the United States are virtually unknown in Italy."

Now, if this is the situation in the university libraries, how much different or how better could it be in the relatively few existing public libraries? The fact is that existing library facilities are not generally used effectively or to capacity. The universities spend very little for the acquisition of new books, and if this attitude is pursued for another decade or two the libraries of Italy will eventually lose their value as centers of research. It will hurt the universities and the entire educational system of Italy, and indirectly affect every aspect of Italian life and activity.

Here, then, is a field where a real job can be done—and it should be done fast. A project can be undertaken in this country to build up the libraries of Italian universities through acquisitions of books and manuscripts from this country, or making funds available to them for their own purchases. Let each large community of Italian-Americans in this country sponsor the rehabilitation of a library at some Italian university. But that is not all. I should like to see the establishment of an American library in every major city in Italy. These are to contain books for adults and children on every manifestation of life in America and Italy, from adventure to zoology.

At the same time, I believe that in many parts of this country it would be logical to approach public libraries to set up special sections, rooms or even shelves on Italian culture and civilization. Both in Italy and here, these library projects could serve as a profitable educational accomplishment.

Sixth, I should like to see an exchange program to include all phases of the arts, music, the theater, opera, radio and television, and of course, the painters and the sculptors, etc. Sponsorship could be for individuals, groups or whole companies. It could be under public or private auspices. But it must be the best and the finest in the arts and artistry of both countries. It must be an exchange on the highest artistic level which will be to the credit of both countries and to the benefit of both nations.

An American artist from Virginia, who studied painting at the Academy of Fine Arts in Rome on a Fulbright scholarship, had this to say of what he called his "Italian experience":

"The American artist who comes to Italy for a period of study and work has much to gain from many sources. The variety and richness of the Italian landscape, the ruins of ancient cities and temples, the warmth of the Italian people themselves, and constant contact with the Italian artists, all fuse into an experience, vivid and inspiring. Italian artists have been eager to communicate their ideas and have taken a great interest in the work and ideas of the visiting American artist. This healthy interchange has provided a stimulus which, together with the richness of other impressions, forms an integral part of the Italian experience."

What has been done in this single instance, I am sure, can be done in thousands of other instances to stimulate the cultural interchange of ideas and experiences between America and Italy.

Seventh, I should like to recommend an exchange, not of people, but of documents. I have in mind particularly the translation of important American documents into the Italian language and made available to the Italian people through their universities, schools, libraries, etc. This is a field which has been almost completely neglected. Do you know, for example, that the first Italian translation of the famous Federalist Papers of Hamilton, Jay, and Madison, which have played such a significant part in American history, was published only a few months ago, in October 1955? Here is what an Italian scholar who read these early American essays had to say:

"Many reviewers are astonished that American thought of the 18th century could be so alive, original, and profound."

I believe that scholars in this country and in Italy could be interested in the participation of similar projects for the translation of other worthwhile documents, manuscripts, literary works of the past and the present of the two countries. This, in itself, could be a wonderful way for the promotion of educational and cultural relations between the two countries.

Eighth, I must express utter surprise that to this day there is no American University in Rome. American universities are functioning in Istanbul, in Beirut, in Cairo, and in other places. Why is it that no such institution has ever been established in Rome, which has so much to offer to American students and scholars?

I should like to see such an educational institution established, but on the basis of American standards and the American system of instruction, rather than the European system of university instruction. This is to be an American institution aiming to diffuse American culture and an appreciation of the American way of life and democratic ideals. I am sure that many Italian-American groups in this country would gladly underwrite scholarships for deserving students in Italy to attend this university.

Ninth, another field which should come under consideration, though it is indirectly related to education, is social welfare. I am thinking particularly of social-welfare institutions designed to aid children, such as nurseries, clinics, homes and schools for handicapped and delinquent children, and the like. This is another field where considerable work could be done, and should be done as soon as possible.

About 3 or 4 years ago, an Italian woman came to this country on a Smith-Mundt grant to study public health, juvenile delinquency, and other rehabilitation problems in this country. What were the things that impressed her most? Not the skyscrapers, the slick cars, or the numerous gadgets which have become indispensable to our daily living. She was impressed by the fact (and I quote) "that the streets of the United States were not swarming with ragged and begging children, that school buildings were adequately lighted, heated, and stocked with books."

I believe that with the aid of certain specialized agencies of the United Nations, church groups, women's organizations, and other voluntary groups in this country various institutions could be set up to aid such children through programs for health and education, to keep them off the streets and prevent them from becoming chronic beggars, to help them avoid the degradation of illiteracy and moral delinquency. There is much that we can offer in the form of advice and material assistance in helping the people of Italy to alleviate the conditions of these underprivileged children and give them new hope and a new lease on life.

My tenth and final proposal concerns the expansion of tourism between the United States and Italy. I would like to see tourism established on a large and organized scale, to encourage Americans of all walks of life to visit Italy. Perhaps courses could be set up in various parts of the country to acquaint Americans with Italy, its people and climate, its cultural heritage and its historical significance. Groups in larger and smaller number could be organized for a visit to Italy. Italian-Americans should be among the first to participate on a large scale. Perhaps we should undertake a campaign where every American of Italian descent should at least once in his lifetime visit the land of his ancestors. This would be a great educational experience for them and for the people in Italy, too. Incidentally, it would also be of tremendous economic importance to Italy.

Some 200 years ago, the sagacious Dr. Samuel Johnson once remarked that "A man who has not been in Italy is always conscious of an inferiority." For many centuries people from many lands found that Italy was a source of inspiration because of its treasure house of past glories and the vitality of the genius of the Italian people. It can truly be said that the creative spirits of almost the entire world have turned to Italy, and in every instance the contact has been rewarding. I have no doubt that it would be

equally rewarding to many Americans who would go to Italy, and that is why tourism should be an important part of American-Italian educational relations.

Such is the program I am proposing to you today. It is in a sense an educational point 4 program, aimed as a two-way avenue of educational and cultural relationship between two great nations of the Western World. A combination of this sort would be unparalleled in the sphere of cultural relations, perhaps unequaled in the annals of human affairs of all time because of the vast and unlimited possibilities it entails for intellectual creativity and educational accomplishments.

It has been said that "economic cooperation, political cooperation and military cooperation may break down under the strain of crisis, unless there is much more than superficial understanding of one another's cultures, problems and aspirations." That is very true, and that is the very purpose of my 10-point program. It is designed to bring about closer unity and fuller understanding of the cultures of our two peoples.

At the beginning of my address I stated that the bridge of understanding between Italy and the United States was not constructed overnight. I am not so naive as to believe that the program I have just outlined to you can be realized overnight. It is not a project for a year or two, but a painstaking endeavor which may require a decade or a whole generation. But it is practicable. It is realizable. Some of those points could be started immediately, others would require study and preparation.

This much I want to tell you: It is imperative that our cultural and educational relations with Italy be strengthened and extended. It is true, there are problems of an economic and military nature to be solved, but the cultural relations are no less important for both nations. A great American scholar has observed that "you can subtract Italian culture from civilization only by destroying that civilization." The future progress of democratic America depends, in a large measure, on reinforcing the cultural and other bonds with nations like Italy.

I can visualize the coming years as the period in which this cultural partnership may reach full fruition, a partnership which has so much to offer to the progress of mankind. Perhaps it may some day become known as the "Golden Era of American-Italian Relations." We can initiate that era. We can help to create it and to build it through bold action, and thus gain the everlasting appreciation of future generations in this country and in Italy.

Nearly a century ago, the English essayist John Ruskin said:

"When we build, let us think that we build forever. Let it not be for present delight, nor for present use alone; let it be such work as our descendants will thank us for, and let us think, as we lay stone on stone, that a time is come when these stones will be held sacred because our hands have touched them, and that men will say as they look upon the labor and wrought substance of them: 'See this our fathers did for us.'"

Matthew Woll

EXTENSION OF REMARKS

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. O'HARA of Illinois. Mr. Speaker, in the passing of Matthew Woll labor has lost one of its greatest champions and our country and the world one of the really great men of our times.

In the building days of the Chicago Federation of Labor and in the struggle to maintain on the air the voice of labor in the early years of WCFL, the radio station of the Chicago Federation of Labor, Matthew Woll worked day and night tirelessly and devotedly with John Fitzpatrick and Ed Nockels, finding in each obstacle a new challenge and moving ever forward in the advancement of labor's cause. The names of Matthew Woll, John Fitzpatrick, and Ed Nockels are written imperishably in the history of the labor movement in Chicago and in the Nation.

Mr. Speaker, the passing of Matthew Woll has been remarked throughout the Nation in many editorials paying tribute to his memory. It is fitting that one of the very finest tributes should be that in the Federation News, the weekly newspaper of the Chicago Federation of Labor.

I am extending my remarks to include Editor Irwin E. Klass' moving tribute to Matthew Woll in the Federation News of June 9, 1956, as follows:

MATTHEW WOLL

The death of Matthew Woll at 76 takes from the American scene he last surviving link with Samuel Gompers in labor's top leadership. For Mr. Woll was perhaps the most ardent advocate of the Gompers tradition which recognized that the atmosphere of American freedom provided the best possible opportunities for working people. Hence, Mr. Woll—like Gompers—set the American labor movement on the path of resistance to government interference in the collective bargaining relationship.

Matthew Woll was truly the spiritual heir of Gompers. We can think of no man in organized labor whose life more exemplified Gompers' last message to the American Federation of Labor just before his death in 1924:

"Say to the organized workers of America that as I have kept the faith, I expect that they will keep the faith. They must carry on. Say to them that a union man carrying a union card is not a good citizen unless he upholds the institutions of our country and a poor citizen of our country if he upholds the institutions of our country and forgets the obligations of his trade association."

If all the words written by Mr. Woll or uttered at AFL conventions since 1909 were collected, we would have a veritable encyclopedia of information on American labor's unique history and its impact on the social, economic and political life of the Nation. A scholar familiar with the works of philosophers, Mr. Woll himself was a thinker in the tradition of the great minds of his lifetime. His vast knowledge of law, history, and economics was always at the service of the trade union movement.

Although his organization—the International Photo Engravers Union—is at its peak, it has only 15,300 members. It wasn't the numbers he represented that gave Matt Woll the laurels of leadership in many fields; his ability and eloquence, his calmness under stress of depressions and divisions of the labor movement, his supreme faith in the rightness of the American Federation of Labor helped give continuity and direction to the trade union movement of our country. Matt Woll's restless mind was always probing. Where freedom was threatened at home, he spoke out vigorously. He recognized tyrants in the infancy of their ideas of enslavement and shouted warnings where others were lulled to sleepy acceptance of Hitler, Mussolini and Stalin. AFL President George Meany has declared that the American Federation of Labor was proven right in every position it has taken on foreign policy. Matthew Woll was the architect of the AFL position on international affairs.

In 1940, he wrote of the Nazi dictatorship:

"With a totalitarian revolution sweeping across the world, with the very foundations of our western civilization threatened by irresponsible military dictatorship seeking to dominate the world by the strategy of terror and ruthless force, mankind faces the most critical hour since the fall of Rome."

Forecasting the agonies of the atomic age, Mr. Woll said 15 years ago:

"Today war is no longer the war of old; it is no longer the test of arms and armies; it is the indiscriminate death and destruction that comes with the earthquake, flood and fire. If man cannot put an end to the mad destruction of nihilistic war, war will veritably annihilate the human race."

Later, he predicted the gestures of amiability by the Soviet regime and warned:

"The free world must first of all avoid being entrapped by the present Soviet strategy which aims to get extensive material aid from the democracies in order to overcome the Communist orbit's political difficulties and economic weaknesses. To avoid such entrapment, the non-Communist countries must never forget that though Moscow's tactics may now and then change, these tactics are at all times bound together by a single purpose and directed toward the one goal the—promotion of Soviet power for domination of the world under totalitarian communism."

His activities in labor and related fields were of extensive variety, yet to each project he gave tirelessly of his energy and imagination. He was president of Labor's League for Human Rights, which helped rescue victims of totalitarian error during World War II. He long headed the AFL committees on education, social security, and international relations. He was president of the AFL Union Label and Service Trades Department, headed the International Labor Press of America for 42 years and was founder and chief executive officer of the Union Labor Life Insurance Co.

Mr. Woll was long identified with the Chicago labor movement, as an officer of Chicago Photo-Engravers Union Local 5. He called the meetings of the Chicago Federation of Labor the best possible training school for young trade unionists. Since WCFL was founded just 30 years ago, Mr. Woll served as a member of the station's board of governors.

That was Matt Woll's way—to help where he was needed most. The free labor movement everywhere is in his debt. When the story of American labor is written in the generations to come, the name of Matthew Woll will be inscribed among those whose wisdom, love of country, and power of expression helped shape the economic and social history of our times.

Postmen Muzzled

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a splendid editorial which appeared in the Boston Evening American on June 1, 1956, entitled "Postmen Muz-

zled." This editorial analyzes clearly the objections to section 744.442 of the Postal Manual of March 1956:

POSTMEN MUZZLED

No better example can be found of the widespread trend in Government bureaus to keep people in ignorance of their stewardship, than section 744.442 of the Postal Manual of March 1956.

The section claimps this muzzle on post-office employees:

"A. Information relating to the policies and decisions of the Post Office Department will be released only through official channels. Employees shall not engage in campaigns for or against changes in the service or furnish information to be used in such campaigns unless prior approval has been obtained from higher authority.

"B. If an employee has justifiable reasons for favoring or opposing changes in the postal service, he shall contact the proper officials and await specific instructions before engaging in local hearings or activities."

What's wrong with this?

That the postal service is a vitally essential public service and hence the people have the right to know what's right and what's wrong with it.

That bureaucrats in command will naturally tell only what is favorable to their regime.

That the best source of dependable public information about the service comes from the ranks of carriers and clerks, not from political appointees in command.

And finally, that a public service is the people's business, and no bureaucrat has the right to censor or suppress news about it.

Postal employees are noted for their devotion to their work and their desire to improve it.

They are notoriously underpaid and often overworked but nevertheless stick to their jobs in the hope that well-informed public opinion will help improve their lot.

Now they are told to shut up and keep their place; to let only their masters speak for them at their autocratic discretion.

The gag order has not been meekly accepted.

A resolution vigorously protesting it was unanimously adopted by the Government Employees' Council, comprising all Federal civil service workers, at Washington, D. C.

The same action was taken, also unanimously, by the recent convention of the California Association of Letter Carriers, a branch of the national association, at Long Beach, Calif.

Section 744.442 of the Postal Manual has no title nor justification to remain on the books. It should be rescinded—by congressional action if necessary.

Flag Day, June 14

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, of all the emblems of the United States, the most respected is our national flag. No one has expressed its significance more adequately, yet succinctly, than William Elliot Griffis, who, in 1890, wrote:

In the American flag are happily blended the symbols of the old and new, of history and prophecy, of conservatism and progress, of the stability of the unchanging past with the promise and potency of the future.

Despite its constitutional meaning to the people of the United States and its symbolism of liberty for many millions in other lands, the American flag, in recent years, has not been revered in our homeland as it should be. Thus, it is with gratification that I read, in the June 9, 1956 edition of the Tablet, an editorial urging a more general display of the United States flag on national holidays.

The Tablet is the well-known weekly newspaper of the Roman Catholic Diocese of Brooklyn, N. Y. Its vigorous presentations of important news and thoughtful editorials have made it an effective leader in the current renaissance of patriotic American thinking.

Under leave granted, I include the indicated editorial:

FLY THE FLAG

There was a time when national holidays were observed everywhere in this country with flying flags. It was the usual thing on such occasions to see our grand American flag draped from the windows of private homes as well as raised to the top of poles on public buildings. In fact, there was a time when there was a fairly general display of the Stars and Stripes on all days of good weather.

Flag Day, June 14, reminds us that we could use a little of that oldtime patriotism, symbolized by the flying of the flag.

Of late, there has been some noticeable thoughtlessness or downright neglect, especially on the national holidays, in this matter of putting out the flag. Surely, proper international-mindedness does not require that we must be ashamed to show off our own flag. Our pride in Old Glory cannot be called narrow isolationism.

On June 14, 1777, the Continental Congress passed the resolution, "That the flag of the 13 United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation." The new constellation has never faded. It has grown more brilliant, now with its 48 stars.

Next Thursday, as we commemorate that historical resolution, let us prominently display our glorious flag. Let it be seen all over town, on private homes, apartment houses, public buildings, skyscrapers, places of big business, small stores, schools, and churches. Even if it means a special effort, see to it that your flag is unfurled.

An Example of Community Action

EXTENSION OF REMARKS
OF
HON. IRWIN D. DAVIDSON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. DAVIDSON. Mr. Speaker, the United States Housing Act of 1954, Public Law 560, calls for citizen participation as a condition for approving any city's request for urban renewal subsidy. Such citizen participation was notably demonstrated in the conference on the Forward Look: The Rehabilitation of the West Side, on May 12, 1956, sponsored by the Riverside Neighborhood Assembly, a school-community council on the West Side of Manhattan, in cooperation with the League of West Side Organizations, the West Side News, and the chamber of commerce. More than 500 citizens and top officials joined hands and minds on the common problems of neighborhood blight to reach areas of agreement and action that will encourage all groups in the community to stay their flight and start to fight for total community improvement.

The principal conference speakers, Commissioner James Felt, Stanley Lowell, assistant to Mayor Wagner, Assemblyman Ludwig Teller, and myself, paid honor to the previous activity of this dynamic community and to its continuing interest and strong bonds of unity. More than 60 religious, civic, and business organizations, including every public school PTA—12—and 10 private schools, cosponsored the conference on the rehabilitation of the West Side. They represented thousands of other west siders who will have submitted to them a complete report of this conference.

The conference technique had been used three times previously by the Riverside Neighborhood Assembly to meet community challenges in other areas: The first, in January 1954, a conference on public education, had widespread influence in informing the public of the facts and philosophy underlying public education. The formation of a public school affairs committee, still alive and kicking, was only one of many healthy, tangible results. The second, in April 1954, Our New Neighbors—A Community in Transition, courageously faced the bewilderment and hostility engendered by rising tensions due to prejudice, before they could become dangerous. An intercultural committee embracing every school in the area and a youth ambassador to Puerto Rico project became positive factors of integration on the West Side. The third, called the U. N. at Our Door, in cosponsorship with the Foreign Policy Association, presented the community as a grassroots participant in the work of the United Nations.

The fourth and present conference has utilized all the former and added to its numbers and prestige because rehabilitation was everybody's business. The R. N. A. has clearly demonstrated the value of community action by this last, but by no means least, conference on the rehabilitation of the West Side.

Address by Mr. George Meany at 67th Annual Commencement of the Catholic University of America

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. McCORMACK. Mr. Speaker, on Sunday, June 10, 1956, the 67th annual commencement of the Catholic Univer-

sity of America took place in Washington, D. C. Among those who received honorary degrees from the Catholic University of America were Mr. Neil MacNeil, former editor of the New York Times; Mr. George Meany, president, American Federation of Labor and Congress of Industrial Organizations; the Very Reverend Edgar Schmiedeler, O. S. B., former director, National Conference on Family Life; and myself, all of us being the recipients of honorary degree doctor of laws; and Mr. Thomas W. Pangborn, president, Pangborn Corp.; and Professor Hugh Stott Taylor dean of the Graduate School, Princeton University, the recipients of honorary degree doctor of science.

Presiding over the commencement exercises was His Excellency, The Most Reverend Patrick Aloysius O'Boyle, D. D., LL. D., Archbishop of Washington, and chancellor of the Catholic University of America, and the introduction was made by His Excellency, The Most Reverend Bryan J. McEntegart, D. D., LL. D., rector of the Catholic University of America, and the recognition of the deans of the schools of the University, as well as the presentation of candidates for honorary degrees, was done by The Right Reverend (Msgr.) William J. McDonald, Ph.D., vice rector of the Catholic University of America.

On the occasion of the commencement exercises President Meany gave the commencement address. Mr. Meany gave one of the most powerful addresses that I have ever heard. With his profound knowledge and years of practical experience, and with the position of great responsibility that he occupies in the field of organized labor, there is no man better qualified to understand and appreciate the evil minds of the Communists and their destructive intents and purposes than he. His address should be read by as many persons as possible. His address was one of dynamic Americanism and was received with profound appreciation and enthusiasm by those who were present and had the honor to listen to him.

Mr. Speaker, under permission to extend my remarks I am pleased to include therein the timely and stirring address made by President George Meany:

I most sincerely appreciate the high honor which you have conferred upon me by this award of an honorary degree of doctor of laws. I appreciate it all the more because I feel, in reality, it symbolizes recognition by one of America's outstanding institutions of higher learning of the vital role American labor plays today in the life of our country.

To be given the privilege of addressing a group of young men and women at a moment in their lives that is so meaningful as this one must be to all of you, would, under any circumstances, be a real privilege. To have this privilege at Catholic University is—to me, as a life-long trade unionist—truly inspirational.

When we of the trade-union movement think of Catholic University and its early history, there immediately comes to mind the tremendous contribution made by the late Cardinal Gibbons to the moral and material welfare of labor in America by his stirring defense of the Knights of Labor in the early and trying days of the trade-union movement as well as his life-long championship of the rights of workers to maintain trade unions for their mutual aid and protection.

Then, too, in connection with this institution we invariably think of the contributions to the cause of labor and industrial peace made by men like Msgr. John A. Ryan, Bishop Francis Haas, Msgr. John T. Ellis, Father Henry J. Browne, and many others.

To you who are today leaving the classroom of learning to enter the school of life, may I say you have been doubly fortunate in your preparations for your entry into that school. You have had the opportunity of receiving not only a higher education but a higher education fortified by the highest moral precepts.

Remember, first of all, that your training is by no means completed—in reality it is just beginning. What you have learned is not to be put behind and forgotten. It is to be cherished and enriched and built upon in the larger school of practical experience which you are about to enter.

Do not look upon this graduation as a break between your academic past and your future of practical and unsheltered living. Look upon it rather as a bridge—a bridge over which you move on forward toward the fulfillment of your goals and aspirations.

Much has been given to you during the years of your attendance at this institution. Your most precious gain has been the understanding given to you of values, of spiritual values, of ethical values, of moral values in the relationship among men. It is this understanding and this knowledge which will give you confidence in making judgments and will help you in making right decisions at every step and every turn that lies ahead.

You are indeed fortunate that the society in which you will live and work here in America is a free society founded on the precious principles embodied in our Constitution and the Bill of Rights. In order to insure continued enjoyment of the privileges of a free society, you must of necessity be willing to bear the responsibilities that go hand in hand with those privileges.

Never before in the history of our Nation have we had the responsibilities that are ours today. It has been truly said that responsibilities naturally gravitate to the shoulders of those best able to bear them. If this be true of individuals, it is likewise true of nations—especially of nations dedicated to freedom and peace based on justice such as our Nation is dedicated. Whether or not it was the will or desire of the American people, the leadership of the free world rests today on the United States of America.

This means that great responsibilities rest on each and every citizen of our Nation. This means, in particular, great responsibilities for you who have been educated—prepared for life—trained for leadership in an outstanding institution of learning.

We are living at a moment when ideals and moral values, ideas and institutions, men and movements, whole nations and groups of nations are being tested very severely. Profound changes are stirring at the roots of humanity. Millions of men and women are gripped by insecurity, by fear about their place in our tense and tormented world, by uncertainty as to their relationship to the very soul of mankind.

Yet, the last thing in the world, I would say, is that the situation calls for pessimism. Mankind is not rudderless in the present world struggle which is, without doubt, the most significant ideological conflict in many centuries.

We have clear and definite moral values, human ideals, and ethical principles to guide us. Let our compass be the wisdom of the great British historian and moralist who never published a book but whose ideas can serve well as our guiding lines today. In his brilliant inaugural lecture at Cambridge, more than 75 years ago, Lord Acton declared that the first human concern is religion; the second is liberty; and the two are inseparably bound up with each other.

You who are now entering a new path of life are going to face many new tasks and complex responsibilities. Your first and most important task is to be aware of the world you live in, the world you worship in, and the world in which you work.

This is indeed a critical juncture in the life of mankind. First of all, the spirit of man—the dignity of man—all human freedoms are threatened by an inhuman totalitarian despotism.

Then, the very existence of the human race is menaced by the danger of nuclear war. It is harrowing to contemplate that a godless, ruthless dictatorship—not subject to the controls of public opinion as we know it in a democratic society—can plunge mankind into an atomic war when its irresponsible and paranoic top rulers decide to do so.

Remember, when we of the free world talk of peace, we talk of defending mankind against the danger of aggression and war. But when the Moscow-Peiping axis warlords talk of peace, their talk has but one purpose—to undermine our morale and our will to resist Communist despotism and Soviet domination.

Let us understand and not underrate the power of the enemy. Then we will not fear him. If the free world is really alert to the danger, it will not lose in the test of ideas or in a test of strength on any field of contest or conflict.

I do not presume that I can give you a full blueprint for success in meeting the Communist challenge and beating it back. I would, however, like to point to one danger that could prove our undoing. This is the danger of apathy—indifference.

It is rather paradoxial that our very way of life here in America tends to make us highly susceptible to this danger of indifference. We have a free economy and enjoy all the blessings of a free society. We have, as a Nation, without question an overwhelming desire for peace. We do not covet the testimony and possessions of any other nation. We have no aggressive ideas or intentions against any other people. We, therefore, naturally tend to believe that others likewise want peace—that they also have no designs for aggression or domination. In such a soil, with such an atmosphere—complacency and indifference can very easily develop.

Bear with me as I read to you from the prologue of an unfinished novel by Bruno Yasienski, a major Soviet novelist in the thirities.

He began his novel, the Plot of the Indifferent, in 1937, but he never finished it. In this prologue, the Soviet peoples were prophetically and ominously given the following warning:

"Do not be afraid of enemies; the worst they can do is to kill you. Do not be afraid of friends; the worst they can do is to betray you. Be afraid of the indifferent; they do not kill or betray. But only because of their silent agreement, betrayal and murder exist on earth."

For giving such advice to the Soviet peoples, Yasienski was purged. By heeding this advice, you graduates will live and help our Nation and the entire free world.

We cannot and dare not be indifferent to the pangs of hunger, to the perils of poverty, war and dictatorship anywhere, to the indefensible old colonialism under the red flag of communism in eastern, central, and southern Europe.

We cannot live in self respect and be indifferent to the shocking fact that the Communist regime of the big lie and brutal brainwashing terrorizes 600 million Chinese on the Asian mainland. Nor can we be indifferent when some of our allies or our own great captains of industry think it is perfectly sound policy to do business as usual with such a regime and to help it build a

modern economy and powerful military machine geared to the enslavement of the human soul and mind.

I pray that you graduates will do your share in overcoming such indifference, in preventing such numbness of our moral conscience.

A society in which there is no dignity or value of the individual, is a society in which there is no social dignity or social morality. In such a society, social behavior becomes inhuman.

The Communists have conceived the State as their tool with which to do all and get all. But the State has become their master. The dictatorship governs everything and rules everybody. In the Soviet slave system, the State runs every person as well as the means of production. The individual can no longer be the free owner of his conscience, his capacities, his talents or his working power. This holds true without regard to the degree of education that the individual has received.

We, of the trade union movement, have a great interest in education. The pioneers of our unions were among the early champions of America's free public school system. But we have learned that education is not an end in itself.

Modern industry requires the elimination of illiteracy. It demands engineers, chemists, physicists and scientists of sundry sorts. But even the highest education, under a totalitarian system, does not inspire faith in human values, dedication to human freedom or respect for the dignity of the individual.

Before the Nazis came to power, Germany had a very high level of literacy. Pre-Hitler Germany had very fine technical and scientific schools and trained personnel. But after Hitler seized power, the educators and the educated knew only one duty and one freedom. They were duty-bound and they were free to serve only the Nazi dictatorship. They were rewarded with many social and economic privileges for such service. Too many of them became indifferent to the fate of others. The cruel fate that befell them and their fatherland was inevitable.

This holds just as true for the educated men and women under the yoke of Communist totalitarianism. Let no one, therefore, feast on the illusion that because the Soviet Union is being rapidly industrialized and, therefore, needs more educated people, this process of modernization will of itself lead to the liberalization of communism and its regime. The latest Khrushchev revelations about the Stalin terror and his endorsement of terror as an indispensible weapon for the preservation of the Communist system should dispel all such illusions. This confession should once and for all end the fatal illusion of pro-Communist "Liberals" at home and abroad that there is a proliberal communism now developing in the Soviet Union.

Nor will technical progress in the economically underdeveloped countries, or even in highly industrialized lands like our own, in itself eliminate such ghastly evils as religious and racial discrimination, or the exploitation of man by man.

Humanity on both sides of the Iron Curtain needs human and moral engineering as well as chemical, electrical and industrial engineering. Higher education will be truly high only to the extent that it enhances higher human and moral values, higher spiritual and material well-being of the people—freedom, social justice and enduring world peace.

I would be telling you less than the truth if I were to give you the impression that as you enter your next stage of life, you will be facing only dangers and threats.

To us Americans, and to all other freedom-loving peoples, every danger, every threat, every challenge presents an opportunity. Our country, we of the labor movement and you who are now coming into the Nation's front ranks of responsibility and leadership, all have magnificent opportunities to render distinguished services in building a better America, in making our people ever better equipped to help mankind come out stronger from the deep-going moral crisis in which modern civilization finds itself.

The much-vaunted dynamism and infallibility of communism as an ideological system have recently been shown to be made of rather perishable and shoddy fiber. Communism has lost much of its power of attraction as an enchantment and even as an escape. There are many elements of disintegration in communism as an ideological system, and in its whole philosophical structure—though not yet in its political structure. The free world has a splendid opportunity to unmask and expose the fraud of communism as an "ideal" and the folly of communism as a system for human betterment.

Our Nation has the ideals and the ideas for removing from our body-politic—antimoral, antidemocratic, unjust and unpardonable practices like racialism and greed, poverty and insecurity. We can and we will make American democracy more healthy, more effective, more genuine. Despite all our imperfections and mistakes, we are a people who have shown the ability to transform many of our dreams of yesterday into the deeds of today.

Our Nation has the idealism and the great traditions, the moral and the material resources, to help the peoples of Africa and other economically underdeveloped regions to fulfill their aspirations to national freedom and human betterment.

Let the American oil corporations in the Middle East show an example worthy of the finest traditions of American free enterprise by setting aside annually a fixed proportion of their profits for establishing and maintaining universities and training centers for the awakening Arab peoples.

Let America take the lead in helping the peoples of Tunisia and Morocco rebuild their homelands and serve as generators of human freedom and social progress throughout the Arab world.

Let our country show the independence and initiative in policy worthy of a nation that is not only strong but great by bringing to bear the fullest moral pressure on our allies to break with every vestige of colonialism in Cyprus, Algeria, and everywhere else.

Let us welcome every move—no matter how small— away from inhumanity and savagery behind the Iron Curtain. But let us have no illusion that the democratic world can encourage human freedom, social justice, national independence, and peaceful policies in the Soviet orbit by keeping silent about the evils inherent in Communism—its monolithic one-party dictatorship, its denial of human liberties, its captive peoples and satellites. Appeasing aggression will never aid the cause of world peace.

Let us rather try with broadened vision and fresh vigor to develop a sound collective policy for the free world. This is the first requirement for collective security. We of the free world have the common ideal of human freedom and individual dignity. It is this ideal which binds us together. Let us translate our devotion to this ideal into deeds for unifying and strengthening the ranks of freedom and peace.

Here are great tasks. Here are great opportunities. Here is a great challenge. American labor will do its share to help our country meet this challenge. We are counting on you, the newly graduated men and women of our great institutions of higher learning, to help our Nation provide the inspiration, the determination, and the capacity for leadership at this crucial moment in the history of mankind.

Our conception of freedom and dignity is basic. It is moral. We hold that each individual is equally sovereign in his relationship with God. Our conception of political freedom is an extension and application of this idea.

We want every individual, without regard to race, region, or religion equally sovereign in his relationship to the state and the community. This is the hope of humanity. This is at once the great responsibility and opportunity for all of us. With God's help, we shall not fail to measure up to the challenge of our times.

Minority Views on the Foreign Aid Bill, H. R. 11356

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks, I am including the minority views of my colleagues MARGUERITE STITT CHURCH, E. ROSS ADAIR, and myself, that were filed to accompany H. R. 11356. The report follows:

In 3 previous years we have felt compelled to express our strong conviction that passage of a multibillion-dollar mutual security bill of this nature was not and could not be the answer to our basic national need for pecae and security.

In our minority report on the Mutual Security Act of 1953, 3 years ago, we asked the following questions:

"What magic formula is there in this program that is going to transform millions of insecure people throughout the world into valiant, invigorated, and dependable allies? Is it United States money? No. We have tried that one many times—with no success. Is it United States armed might? No. Our forces have been bearing the brunt of the fight in Korea on behalf of the principles of sovereignty, independence, and freedom—and still the peoples of Asia waver. * * *

"It would therefore seem to us particularly essential that we evaluate the present program in the light of what similar programs in the past have failed to accomplish; and from the point of view of whether or not it offers fulfillment of pledges made to the American people." (H. Rept. 569, 83d Cong., 1st sess., pt. 2, p. 8.)

In 1954, when the Mutual Security Act attempted to exchange the existing patchwork of foreign aid programs for a permanent form, we stated with equal emphasis:

"There exists in our minds a grave and fundamental question concerning the wisdom of enacting now what is considered permanent legislation. This is particularly so in view of the unsettled world conditions which become even more unsettled with each passing day and the widespread uncertainties in high plaecs as to our own foreign policy. The House Foreign Affairs Committee is a legislative committee, a policy committee. The sole purpose of the committee in reviewing past programs and proposed programs is to determine policy. To carry out that responsibility has been the function of the committee in bringing out this bill. But how can we determine legislative policy as a directive and framework of action for the executive branch without being fully apprised of executive branch policy to give root and substance to what, after all, amount only to the cold words of a statute?" (H. Rept. 1925, 83d Cong., 2d sess., pt. 3, p. 2.)

In 1955 we felt again constrained to speak these words:

"In the past we have urged what to us has semed natural and logical—a thorough

study, a reappraisal, a redefining of foreign policies, techniques, and statutes concerned with the goal of international peace and security, which we all seek. The executive branch has not seen fit to do this before submitting this bill to the Congress; nor has the Congress of the United States itself, which is directly responsible to the people who foot the bills, make the sacrifices, and fight the wars, undertaken such an analysis." (H. Rept. 912, 84th Cong., 1st sess., pt. 2, p. 2.)

And now in 1956, with still no reappraisal of the problems, of the policies, or of the programs, we are again asked to accept a multibillion dollar authorization based on a concept whose validity is outmoded, if, in fact—as we would deny—such validity ever existed. We could only wish that we had been wrong; that our fears of the inefficiency of the approach had been proven groundless. We would be the first to hope that this mutual security legislation might have proved to be the effective weapon for American security and world peace that it was advertised to be.

Events, statements by foreign officials and expressions by our own leaders in the executive branch and in the Congress confirm the fears which we expressed in our three previous minority reports.

Nothing that has happened has changed our conviction that mutual security legislation of this nature is not and cannot be an adequate or right answer to our need for national security and world peace. The program continues to reveal an inherent failure in basic philosophic intent, a failure in direction and approach, and a failure to interpret the shifting nature of world events and to combat successfully relentless Soviet policy. It is increasingly apparent that the policy and the programs to be authorized by this legislation have proved to be not only wanting but actually self-defeating.

It is not that we have failed to pour out money and pour it out generously. One glance at the following table, listing the money yet to be obligated and spent, indicates our unrestrained generosity and spending:

Estimated unobligated and unreserved balance June 30, 1956

	Estimate in March 1956	Estimate in May 1956
Military	$297,000,000	$195,500,000
Nonmilitary	106,600,000	190,000,000
Total	403,600,000	385,500,000

Estimated unexpended balance June 30, 1956

	Estimate in March 1956	Estimate in May 1956
Military	$4,765,100,000	$5,000,000,000
Nonmilitary	1,678,200,000	1,800,000,000
Total	6,443,300,000	6,800,000,000

Source: H. Rept. 2213, 84th Cong., 2d sess., p. 6.

A complete and detailed breakdown of United States generosity will be found in the appendix to this report.

This year, with mounting dissatisfaction and disillusionment with this policy among the people of the United States and their chosen Representatives in Congress, the program in this bill nevertheless plunges along, in its frustrated way, not knowing what its future course, size, or policies will be.

We feel that this bill is particularly objectionable in that the only certainty contained in it is its duration—"permanent." Those who approve this legislation have inserted into the program the mysterious, magical formula which they call "permanent legislation" as if "permanent" were synonymous with "sound." The philosophy contained in the statement of policy in section 7 of the bill is particularly objectionable in this regard. It puts the Congress of the United States on record and commits the United States to pursue programs of assistance as long as Communist danger to the peace of the world and the security of the United States persists. In other words, the United States is to take upon its shoulders, and the American people are to assume, the tax burden of supporting the free world indefinitely. No mention is made of what other nations are to do in order to keep the free world free. No clue is indicated as to our future course with respect to the nations who do not see fit to commit themselves with the free world.

The time is long overdue when the American people—and particularly the Congress, which carries a basic responsibility for the future of this country—must face hard facts with courage. Despite the outpouring of billions of dollars, an honest appraisal of the world situation and of our relationship to it should give ample warning, even at this late date. To continue the philosophy and policies so far provided in mutual security legislation at a greater sum and for a longer period of time, can only mean an ultimately disastrous continuation of the all too apparent failures of the program.

It is impossible to list in this brief report, either all inclusively or at sufficient length, the total reasons that call for serious questioning and opposition to House Resolution 11356, the Mutual Security Act of 1956, currently under consideration. Suffice it to say that even former strong proponents of the program—and certainly the American people—are now demanding a reappraisal and rescrutiny of the purpose and policy, based on the following disturbing record:

1. It has failed in its futile attempt to make an appropriation of money a solution for a problem.

2. It has failed to expand the area of the world which may be called free world. On the contrary, that area is being steadily constricted while the area of uncommitted or neutral nations is steadily expanding. "Neutralism" makes it easier for the Communists to increase their influence while the efforts of the free world are made more difficult.

3. Despite the mutual security program we have failed to convince peoples seeking their freedom and newly independent nations that we are sincere in opposing colonialism.

4. It has proved deficient in wise programing, sound fiscal practices, satisfactory presenation to the Congress, adequate implementation of congressional intent, and understanding execution in the field. This is amply indicated by the testimony of the Hon. Joseph Campbell, Comptroller General of the United States, before the Senate Foreign Relations Committee on the mutual security program on May 21, 1956.

Further, this bill reflects the increasing tendency to lump money, areas, and programs together, thus giving blank check authority to the Executive. Because of the diffusion of delegated power which this bill makes possible, both the President and the Congress are steadily losing control of the spending and operations of the program.

5. It has failed to achieve for the free world the expected defense against Soviet military power. The North Atlantic Treaty Organization was organized as a defense against Soviet military power. The North Atlantic Treaty Organization is losing power when it should be increasing it.

The Secretary of State, in a news conference on April 24, 1956, stated "Broadly speaking, it is our view, and I think has been our view, that an organization of this kind [NATO] either grows or tends to dry up." With each Soviet smile, another crack appears in the NATO armor.

6. It has failed to solve the problem of how to reach the peoples themselves in the underdeveloped nations.

7. It has intermingled the valuable technical cooperation program, which is a sharing of knowledge, skills, and know-how with the peoples of the underdeveloped countries, with a huge military program that deals with arms and the implements of war. These are two totally different programs in magnitude, in philosophy, in intent, and in approach.

Study should be made of how best to emphasize the importance and long-range character of the technical cooperation program. Some thought should be given to separating this vital program from the other phases of the mutual-security program. In fact, the advisability might be considered of setting it up as an independent agency.

8. It has failed to consider sufficiently the present importance and the potentialities of our Latin American neighbors. The peace and security of the Western Hemisphere is vital to the preservation of the entire free world.

9. Finally, it has failed to convey to the world, and even to our friends, the real meaning of American traditions, principles, and ideals—those attributes which have made us a great Nation and a great people.

In the face of this honest questioning even by former proponents of the program and by the public, and in the face, as well, of what seems to us also an undeniable failure in priciple, policy, and performance, we cannot go along with the proposal to appropriate more billions for a longer time for more extensive programs of the same nature. What is needed is a stern, realistic reappraisal. In fact, returning from a recent study mission around the world, the Subcommittee on the Far East and the Pacific of the House Committee on Foreign Affairs stated with sober emphasis in its report:

"If it is to succeed, the United States must do more than reappraise its programs; it must subject to minute rescrutiny its policy and its determination" (H. Rept. 2147, 84th Cong., 2d sess, p. 212).

There has been introduced in the Congress a concurrent resolution calling for a congressional committee, 6 members from the Senate and 6 from the House, to study, reevaluate, and give relentless judgment on the policies and programs that have been carried on under this mutual security legislation; and to produce, following such study, sound suggestions for better implementing our national desire for peace and security.

We urge the Congress to join with us in insisting upon a rescrutiny of our foreign policies and programs as the basic need of this hour. What is actually now at stake is not the mere continuation of programs or appropriations, but the very peace and safety of this country and the whole free world.

LAWRENCE H. SMITH.
MARGUERITE STITT CHURCH.
E. ROSS ADAIR.

The Dangers of Oil Importation

EXTENSION OF REMARKS
OF
HON. J. T. RUTHERFORD
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. RUTHERFORD. Mr. Speaker, for a number of years those of us ever mindful of the threat constituted by continued high importation of foreign oil have worked in various ways to curtail this dangerous practice. Although we

have worked long and hard, we have little to show for our labors. The Neely amendment, which would have curtailed such importation to an extent, was not adopted by the Congress. Although the President has authority under the provisions of H. R. 1 to curtail imports of any commodity which might threaten the security of the United States or endanger our domestic market in any given field, the law has not been properly applied to the importation of foreign oil.

It is my sincere opinion that every American should be warned of the dangers of continued high foreign oil import quotas. The President, his Advisory Cabinet Committee, the Congress of the United States and all persons in a position to do something about these excessive imports should combine their efforts to right the wrongs and eliminate the dangers brought about as a result of this folly.

Import quotas are provided on a large number of commodities including cattlefish, wheat, nuts, barley, sugar, tobacco and furs. Yet, there is no legal restriction on most foreign oil production and none whatever on foreign oil imports. Wells in the Middle East run as high as 6,000 barrels of oil daily, while the average well production in my own State of Texas is only 19 barrels. The foreign wells, owned mostly by a few major oil companies, produce oil every day while in Texas, largest producing State in our Nation, production is often shut down to 15 days per month.

I would like to ask the Members of this body, Mr. Speaker, if they know of any other industry that would not be severely crippled should it be forced to work on a part-time basis? Is there a man among us who could properly feed and clothe his family, and meet his other financial obligations, if he should be forced to restrict his earning capacity by working only 2 of every 4 weeks? Yet, this is the situation that has been thrust upon our domestic oil producers by foreign oil imports.

Since 1946, oil imports have increased almost 200 percent, or 5 times as rapidly, percentagewise, as domestic production. Before World War II, imports averaged about 5 percent of domestic demand. In 1946 to 1951 they averaged about 10 percent of consumption in this country. Today, foreign oil supplies more than 15 percent of our requirements.

The independents in this industry own little or no foreign oil. They have been damaged by excessive imports. Yet, the real threat lies not in what has happened, but what can happen in the future. Our own country, among the major free world powers, is alone blessed with ample oil resources and productive ability to assure fulfillment of our needs for both war and peace. We must guard that position at any and all costs. I believe that can be done without disrupting our trade relationships, and certainly without disturbing our friends in oil-producing countries in the Western Hemisphere. We want their trade and can use some of their oil, but it should bear a realistic relation to our domestic production and requirements.

The United States has today the heavy responsibility of leadership to maintain throughout the world. Never has there been a more urgent need to expand the Nation's productive facilities that insure our economic well-being and our military preparedness. No material is more essential to national welfare and security than petroleum. This Nation must have access at all times to sources of enough oil to meet the requirements of any emergency. This requires substantial and continuing expansion of the capacity to produce, process, transport, and distribute crude oil and its products.

Prior to World War II, the petroleum industry in the United States had developed a reserve-producing capacity that exceeded the then current level of oil consumption by about a million barrels per day. The importance of that reserve cannot be exaggerated. It meant the difference between victory and defeat.

Today, we are in a far less fortunate position in terms of petroleum productive capacity. Our ability to produce liquid fuels provides no margin of safety over present requirements.

The reason for this lack of reserve is all too obvious: it comes from idle wells in the United States, and from lack of speculation by many of our domestic producers. We cannot expect these producers to invest and risk their capital in extensive exploration and drilling, if they know any strike made will be restricted to half-time production while foreign oil continues to come into the country in increasing abundance. We cannot expect them to invest in ventures which only pay dividends on a part-time basis.

The petroleum industry in the United States is one of the greatest bulwarks to our general economy. All but 18 of our 48 States now produce oil or gas, or both. Others are being explored, and are hopeful of being added to the producing ledger. In 11 of our States including my own State of Texas, crude petroleum ranks first in value of all minerals produced. It is obvious that the health of the domestic oil-producing industry is of primary importance to these States. In Texas, for example, taxes on oil production amounts to 67 percent of all business and property taxes. Oil pays 45 percent of the cost of public education in Texas, and 44.9 percent of the cost of higher education. When production is slashed, our State budget is denied funds for schools, highways, colleges, and other essential public projects.

The Cabinet committee on oil imports has reached certain conclusions, with which I find fault. I think they should be reconsidered. The conclusions would permit total crude oil imports for the year 1956 to exceed their 1954 relationship to domestic oil production by an average of 234,000 barrels per day. The conclusions would permit increase in crude oil imports during 1956 over 1954 of 1,300 percent from Canada, 36 percent from the Middle and Far East and 26 percent from Venezuela, as compared with an increase of 10 percent in United States crude-oil production. The conclusions would permit the United States west coast to become increasingly dependent on Eastern Hemisphere crude oil. The conclusions would permit total imports of crude oil and refined products to take over 20 percent of the United States market in 1956 as compared with 18.3 percent in 1955 and 16.6 percent in 1954—the largest increase in this ratio since 1950, which would inevitably lead to inadequate domestic supplies and increasing dependency on foreign oil.

The Independent Petroleum Association of America, and other persons realizing the dangers to the oil industry and our Nation as a result of excessive imports, have asked for the Advisory Cabinet Committee and the Office of Defense Mobilization to take another look at the recommendations, and reach a more realistic conclusion; a conclusion which will be more in keeping with our national interests and with a strong sense of justice and fair play.

I pledge my efforts to aid in this fight, Mr. Speaker, and I urge each Member of this body to study the facts and join in the battle to curtail these dangerous, excessive, foreign oil imports.

Amendments to Mutual Security Act of 1956—Foreign Aid

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. ALGER. Mr. Speaker, seemingly endless debate, pro and con, drones on and on. At this writing, 3 days of debate have elapsed, with more to come. This lengthy debate is in itself unusual, perhaps demonstrating the nationwide controversy over United States money sent abroad. Many strong views are expressed, only a few Members are objective and dispassionate. Now, here's a ringside digest, brief necessarily—you weigh the arguments.

First the facts: The original $4.9 billion foreign-aid request was cut $1,109 million by the Foreign Affairs Committee. Even so the present bill provides $860 million more than last year. The Mutual Security Act includes 19 programs involving 54 countries of direct aid and 4 programs, through the U. N., affecting 79 nations. Actually, all this money is economic aid strengthening military defense. This huge sum is in addition to the amounts already appropriated this year; namely, $36 billion for defense and $2.9 billion in worldwide military public-works programs.

Arguments for: Foreign aid is needed for the preservation of peace, to combat communism, and must continue while communism is a threat. Foreign aid promotes our own security by giving other peoples the capacity to defend themselves. If other nations defend their own freedom they are at the same time protecting our freedom. Therefore, foreign aid is in our own enlightened self-interest. We need our allies more than they need us; the United States total cost will be greater for our defense if foreign aid is curtailed. Our past program obviously has been success-

ful since Russia has undertaken extending foreign aid. Also, criticism of United States aid could even be Communist inspired. Yugoslavia should receive our continued aid in order to provoke other satellites to break with Russia. India's economy should be bolstered by the United States to compete with Russia's development of China, India's neighbor. Otherwise India will turn to Russia.

Arguments against: The foreign aid program has become too complex. So there is no accurate accounting and bookkeeping. It is too big for thorough understanding. Most dangerous of all, some information is classified as secret, which prevents Congress even knowing the facts and in effect results in Congress being asked to sign a blank check. In United States policy, or lack of policy, in dispensing lavish material aid in the past, there is a failure to sell American ideals and beliefs abroad or to prevent a spread of communism. Our policy is negative, based on fear of communism. Also, in support of the free world we failed to stipulate what recipient nations are expected to do in order to keep the world free. We are bolstering certain governments we should not: Yugoslavia is not our friend and here we are supporting communism; India is not neutral but favors Russia and here we are supporting socialism. Are we arming future enemies under the guise of neutrality? The weakening of United States economy by huge financial expenditures is dangerous; our bankruptcy is the Communist' goal. Our program has failed to develop an adequate defense posture against Soviet military power and has failed to reach the people themselves in underdeveloped nations. Study of our past efforts uncover unwise programing, unsound fiscal practices and lack of understanding in our execution in foreign nations. For these reasons the Hoover Commission advised of the urgent need for a complete study of the program. At least 2 years of military aid money is still on hand unspent, "in the pipeline," without any further appropriation.

NOW, WHAT DO YOU THINK?

Here's what I think—again, necessarily stated too briefly in this space: The many conflicting statements and bookkeeping errors involving hundreds of millions prove the program now needs overhauling. It is high time to revalue this program. In addition to the $38.9 billion for defense here and abroad already voted this year, there is still enough money on hand for 2½ years expenditures in foreign aid at the current rate. I believe the time has come for the American people to make it plain to the world that we cannot support the world, nor help those who will not, or reluctantly, help themselves. I criticized Congress for debating for too long over how much aid rather than any aid, and the loss of congressional control now over our foreign aid expenditures. A highlight of debate was Chairman RICHARD'S denunciation of the joint stand by Speaker SAM RAYBURN and Minority Leader JOE MARTIN when they championed the full amount for foreign aid. Mr. RICHARDS said that they are repudiating the action of a House committee and surrendering to the executive department without facts and figures in a matter about which they do not know. India and Yugoslavia should not be given any aid it seems to me. Most important, it is impossible to cast a vote conscientiously for this program when for reasons of secrecy I, as your Congressman, have not even been given the facts. This reason alone would preclude my voting for this bill. Who could do otherwise?

All Men Are Not Equal

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 7, 1956

Mr. DAVIS of Georgia. Mr. Speaker, much drivel and nonsense has been peddled around in recent years by pseudoscientists and radical anthropologists that there is no difference between whites and blacks, and that all men are equal.

Hon. R. Carter Pittman, a lawyer of recognized ability, has recently written a thought-provoking article under the title "All Men Are Not Equal." Pursuant to unanimous consent previously granted, I insert his article herewith:

ALL MEN ARE NOT EQUAL

(By R. Carter Pittman)

Vehicles for the dissemination of news and information are now heavily laden with the thesis that America was founded on the proposition that "all men are equal." That statement may be found stated and restated a thousand times in the textbooks that our children study in school, in the newspapers, and throughout the writings of Marxists, sociologists, Communists, and of many unthinking people including hundreds of assorted doctors of this and that who often wear ceremonial gowns to enhance their sense of self-importance. No one questions the right of all men to equal justice under the law, but propagandists have carried the doctrine beyond equality of right to equality of things and men are heard to proclaim human equality who would revolt at the suggestion that all cattle, all dogs, or all racehorses are equal.

A specious falsehood, oft repeated, finally becomes a belief and at last a creed. The statement that "all men are equal" is not only the spurious basis and foundation of the racial integration decisions of the Supreme Court, but it has even been written into canned speeches read by late Presidents. Speech writers for Cabinet Members and Vice Presidents have done the same thing. A studied campaign originating in Moscow in 1928 and now directed from northern Europe is fruitful for those who sponsor it.

The civil rights program of President Eisenhower embraces a bill introduced by Mr. CELLER, of Brooklyn, N. Y., being "House Resolution 627," which proclaims that the whole civil-rights program is based upon "the American principle of * * * equality." Wherever we go and whatever we read we encounter repeatedly the same statement that America was founded upon the proposition that "all men are equal."

Many claim that the doctrine of human equality is in the Declaration of Independence. Some say the doctrine of human equality is to be found in the Constitution. Some say it is in the Bill of Rights. Others say it is in the Bible. Those who propagate falsehood are ashamed to admit where it came from, so they lie as to its source.

The doctrine of human equality is to be found neither in the Declaration of Independence, the Constitution, the Bill of Rights, nor the Bible. That doctrine is to be found in Das Kapital, which is the Bible of communism. All Communist-front organizations in America propagate the doctrine that all men are equal. It has been written into sociology textbooks and is being taught in practically all the schools and colleges of America. The doctrine that all men are equal is the scrubbrush that is used to brainwash the unstable intelligensia of America. The Supreme Court of the United States has been thoroughly brainwashed with that brush. It may be found in decisions of the Court and in magazine articles written by several individual judges.

In its decision of May 17, 1954, the Supreme Court struck down the law of this land as set forth in the Constitution and as affirmed by numerous decisions of the Supreme Court and attempted to make new law for this land based upon sociology. The principal work cited as "modern authority" in the decision was the American Dilemma, written by a Swedish Marxist, Gunnar Myrdal. In its decision the court held in effect that it could find no basis for integration in the Constitution or the law and therefore it turned to psychology and sociology. It cited Myrdal's American Dilemma as the "modern authority" for its decision. On page 4 of that book Myrdal obligingly defined what he called the "American creed." He said that the "American creed" is "the fundamental equality of all men." In the same sentence he said that the tenets of that creed "were written into the Declaration of Independence, the preamble of the Constitution, the Bill of Rights, and into the constitutions of the several States. The ideals of the American creed have thus become the highest law of the land."

Other sociological authorities cited by the Court maintain the same thesis that all men are equal.

Recently Thurgood Marshall explained it all. The current issue of the Phi Delta Phi Brief carries, on page 244, the report of a speech made by Thurgood Marshall to a group at Columbia University, one of my alma maters, on January 9 of this year. Here is a part of that report:

"The initial blueprint was to force equality on the separate but equal doctrine of *Plessy* v. *Ferguson*. Realizing the ineffectiveness of this approach, NAACP then decided on the concept of social science, of finding a basis on which it could meet the law in order to satisfy the court. Running concurrently was the need to reflect court changes in changes of tactics. Anthropologically, both races are of the same physical makeup, and of the same capabilities. The harming influence is the segregation acting on the young child's mind which impedes his education and throws him behind his white contemporaries. With acceptance of mental damage in a lower court, the issue was raised for the Supreme Court, with even stipulations of equality that did not exist in order to get the issue clearly before the court, since the lower court had no authority to overrule Plessy. The result, re education, was *Brown* v. *Board of Education*, this by a unanimous court that was by no means expected."

There you see that the "blueprint" of the NAACP was to brainwash the Court with "the concept of social science" as "a basis on which it could meet the law in order to satisfy the Court." The "concept of social science" to which Marshall referred was the bogus concept that "all men are equal."

There is not one word in the Declaration of Independence, or in the United States Consttitution, or Bill of Rights that says directly or indirectly, expressly or by implication, that "all men are equal." By a Marxist trick, Thurgood Marshall used Myrdal and others to seduce the inexperience Judges of the Supreme Court into believing that human equality is somehow imposed by our fundamental law and some of the weaker of the Judges of that court actually believe that their integration decision of May 17, 1594, vindicated an American doctrine.

The proposition that "all men are equal" is nowhere to be found in our history except as a perversion, repudiated in the Constitution itself. The Declaration of Independence is not a part of our fundamental laws. It never became living law in America. The Declaration of Independence proclaimed that "all men are created equal." We now address ourselves to the meaning and intent of those who used that phrase in July 1776. The Supreme Court goes strong for "the intent of the framers" of the Constitution which it now finds in the half-demented mind of an alien from Sweden. We go to the minds that made the words.

In late May 1776 the Colony of Virginia authorized its delegates to the Continental Congress to introduce a resolution calling for a Declaration of Independence. At the time it declared its own independence of the British Government. Since Virginia declared its independence of British government it became necessary for her to substitute a government made by its own people for that imposed by England. A few Virginians had already foreseen the necessity of having a plan of government immediately available to take the place of the British plan. As a matter of fact, the Continental Congress a few weeks before had recommended the adoption of temporary plans of government by the several colonies. Of the several plans offered in Virginia, Edmund Randolph, said that there was one plan that "swallowed up all the rest."

The plan to which Edmund Randolph was referring was written by a Virginia farmer—not a lawyer. He was a student of history and the greatest constitutionalist the world has ever known. He had prepared a declaration of rights for Virginia in 18 paragraphs. The preamble to that declaration stated it to be "the basis and foundation of government" in Virginia.

The first paragraph of it was as follows:

"Then all men are born equally free and independent and have certain inherent natural rights, of which they cannot, by any compact, deprive, or divest their posterity; among which are the enjoyment of life and liberty, with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety."

That original draft in 18 paragraphs was published in the Philadelphia newspapers of June 6, June 8, and June 12 and was published in nearly every other newspaper in America. A few days later Thomas Jefferson, John Adams, Benjamin Franklin, Robert Livingston, and Robert Sherman were named as a committee to write the Declaration of Independence. They found no difficulty in preparing the charges against George III, detailed in the Declaration of Independence, but it was late in June before they were able to put together a suitable preamble. Thomas Jefferson, to whom was assigned the task of writing a preamble, took the first three paragraphs of the Virginia Declaration of Rights and rearranged them to make a preamble for the Declaration of Independence. Before that time the Virginia convention had officially adopted the Virginia Declaration of Rights and had changed the first paragraph to read as follows:

"That all men are by nature equally free and independent and have certain inherent rights, or which when they enter into a state of society, they cannot, by any compact, deprive or divest their posterity; namely, the enjoyment of life and liberty with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety."

Jefferson rearranged and rephrased the first paragraph so as to make it say, "that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Thus we see that the "basis and foundation" of the first government in America was equality of freedom and independence. The Jeffersion perversion was equality at creation. The Declaration of Independence does not say that all men are equal. It says that they were created equal. There equality ended. Creation is over when life begins. The rich man makes no more dust than the poor man, and he makes no more noise. The same analogy applies as between the doctor of pseudo-socio-science and a Chinese laundryman, but no doctor will concede the Chinaman to be his equal in life. All leave equal residue in their graves as all were equal before life began. Racers are equally stanced before the start but it is inequality that makes the race. Equality at creation or in death does not mean equality in life. Nevertheless, the Declaration of Independence is constantly cited as authority for the proposition that human equality is the "American Creed."

Why did Jefferson, Franklin, and Adams adopt language for the Declaration that might be susceptible of misconstruction by Marxists, doctors, eggheads, screwballs, crackpots, fools, and others? The answer is not difficult. It is explained in the writings of John Adams. Prior to 1776 two half-demented philosophers of France, named Helvetius and Rousseau, had maintained that "all men are equal". That philosophy had caught on with the simple-minded peasants and pseudo-philosophers of France. Nothing appealed so powerfully to the ignorant French peasants as the doctrine that "all men are equal". To the peasant that meant that all men are kings. The slogan was echoed all over France: "Every man a king." The thought didn't occur to them that if all men are kings, then all might be peasants or slaves. The Declaration of Independence was written for the purpose of bringing France into the Revolution on the side of America. The war had been going on for a full year. America was in an unequal struggle for life over death. Washington had been at the head of America's armies a year before July 4, 1776. Washington's task looked hopeless. Jefferson's task was to win the case for America by writing a powerful preamble that would appeal to the hearts—not the minds—of the French people. Then, as now, the French acted on emotions—not reasons. Since the doctrine of human equality had become a popular creed in France and since Helvetius and Rousseau were the prophets of that creed, Jefferson directed the Declaration at the hearts of the French people by declaring that "all men are created equal" Jefferson won his case with the simple minds of France, but lost it with the simple minds of America's future.

In their old age Thomas Jefferson and John Adams became bosom friends. On the 13th day of July 1813, Adams' mind went back to July 4, 1776, when he and Jefferson labored together in Philadelphia. He wrote to Jefferson that day:

"Inequalities of mind and body are so established by God Almighty in his constitution of human nature, that no art or policy can ever plane them down to a level. I have never read reasoning more absurd, sophistry more gross, in proof of the Athanasian creed, or transubstantiation, than the subtle labors of Helvetius and Rousseau to demonstrate the natural equality of mankind. Jus cuique, the golden rule, do as you would be done by, is all the equality that can be supported or defended by reason or common sense."

About a year later, on the 15th day of April, 1814, the same John Adams who had helped Jefferson and Franklin write the Declaration of Independence wrote to John Taylor, of Virginia, in part, as follows:

"Inequalities are a part of the natural history of man. I believe that none but Helvetius will affirm, that all children are born with equal genius. * * *

"That all men are born to equal rights is true. Every being has a right to his own, as clear, as moral, as sacred, as any other being has. This is as indubitable as a moral government in the universe. But to teach that all men are born with equal powers and faculties, to equal influence in society, to equal property and advantages through life, is as gross a fraud, as glaring an imposition on the credulity of the people as ever was practiced * * * by the self-styled philosophers of the French Revolution. For honor's sake, Mr. Taylor, for truth and virtue's sake, let American philosophers and politicians despise it." All Americans thought alike on the subject in 1776. Benjamin Franklin, a few days after the Declaration was promulgated, helped to write a Declaration of Rights for the State of Pennsylvania. Franklin had been willing to deface the classic words of George Mason's Virginia Declaration of Rights to appeal to the simple-minded philosophers and peasants of France but he was unwilling to deface those lines and firmed for the ages the profound wisdom of the Cato of his country when he sat down to make a basis and foundation for government in Pennsylvania. He copied the Virginia Declaration of Rights almost verbatim. His first paragraph was as follows:

"That all men are born equally free and independent, and have certain natural, inherent, and inalienable rights, amongst which are, the enjoying and defending life and liberty, acquiring, possessing, and protecting property, and pursuing and obtaining happiness and safety."

The basis and foundation of Franklin's government was the same as that written by George Mason for Virginia. It was equality of freedom and independence. Two years later John Adams was named as chairman of a committee to prepare a declaration of rights for Massachusetts. While he too had been willing to deface the words of the Virginia declaration of rights in order to appeal to most of the 25 million people in France, only one-half million of whom could read, he was unwilling to perpetuate that defacement as living law in Massachusetts. The first paragraph of his original declaration of rights copies that of Virginia also and was:

"All men are born equally free and independent, and have certain natural, essential, and unalienable rights, among which may be reckoned the right of enjoying and defending their lives and liberties; that of acquiring, possessing, and protecting their property; in fine, that of seeking and obtaining their safety and happiness."

Given a choice between equality of freedom equality at creation, or equality of men, not one of the original 13 States wrote either equality at creation or equality of men into their fundamental laws.

When the United States Constitution was under discussion at the Philadelphia Convention in 1787 not one delegate from any of the 12 States represented suggested that "all men are equal" either at creation or in life.

On June 26, 1787, on the floor of that convention Alexander Hamilton said:

"Inequality will exist as long as liberty exists. It unavoidably results from that very liberty itself."

Every mind in the convention assented to that statement. Freedom, liberty and independence are the basis and foundation of government in America. Equality of men is the central theme of Marxism. Marxism cannot live in a land where men are free. Marxist equality is the scavenger that eats out the vitals of liberty and freedom. It is the "come-on" of communism and is the doctrinal basis for totalitarianism. Nothing in the writings of any of the fathers of freedom in America justifies the libelous assertion that one of them believed or urged the doctrine that "all men are equal". The doctrine of human equality is the reverse of the doctrines they espoused.

The Constitution proclaims in its preamble that it was established "to * * * insure domestic transquility * * * and secure the blessings of liberty". Nowhere does it hint a purpose to insure domestic strife or secure degrading equality.

The same Myrdal who defined the "American Creed" as the "fundamental equality of all men," say on page 9 of his attrocity that equality and liberty cannot co-exist—that there is an "inherent conflict" between them and "equality is slowly winning." He told the truth. For 200 years this Nation has been a land of liberty—a haven of freedom in the dismal history of man. Equality of freedom and independence became the American Creed at the Revolution. All States and the United States wrote them into their fundamental laws and rejected the specious and depraved doctrine of human equality.

Earl Warren, Chief Justice of the Supreme Court, is from California. The Declaration of Rights of his home State is almost a verbatim copy of the official Virginia Declaration of Rights. It says that "all men are by nature free and independent". There is not a word in the constitution or Bill of Rights of California sustaining the doctrine of the equality of men. It repudiates that doctrine.

Dwight D. Eisenhower, President of the United States, is from Kansas. If he will examine the Declaration of Rights of his home State he will find that its first paragraph is as follows:

"All men are by nature free and independent, and have certain inalienable rights, among which are those of enjoying and defending life and liberty, acquiring, possessing, and protecting property, and seeking and obtaining happiness and safety."

Not a word is to be found in the fundamental law of Kansas that says directly or indirectly that "all men are equal." It repudiates that doctrine.

On August 14, 1862, Abraham Lincoln, speaking to large groups of Negro delegates in Washington, said:

"You and we are different races. We have between us a broader difference than exists between almost any other two races.

Whether it be right or wrong I need not discuss; but this physical difference is a great disadvantage to us both, as I think.

Your race suffer very greatly, many of them by living among us, while ours suffer from your presence. In a word, we suffer on each side. If this is admitted, it affords a reason, at least, why we should be separated.

Even when you cease to be slaves, you are yet far removed from being placed on an equality with white people. On this broad continent not a single man of your race is made the equal of a single man of ours. Go where you are treated the best, and the ban is still upon you. I cannot alter it if I would. * * * See our present condition—the country engaged in war, our white men cutting one another's throats, and then consider what we know to be the truth. But for your race among us there would be no war, although many men engaged on either side do not care for you one way or the other. It is better for us both, therefore, to be separated."

On the battlefield of Gettysburg in 1864 Abraham Lincoln recited a political speech, the first sentence of which was:

"Four score and 7 years ago our forefathers brought forth upon this continent a new nation, conceived in liberty, and dedicated to the proposition that all men are created equal."

At the hour when Lincoln made that speech the Declaration of Rights of his home State of Illinois proclaimed "that all men are born equally free and independent, and have certain inherent and indefeasible rights, among which are those of enjoying and defending life and liberty, and of acquiring, possessing, and protecting property and reputation, and of pursuing their own happiness."

On and on we might go demonstrating that the doctrine of human equality is unknown in American Government and that the doctrine of equality of freedom and independence, first set forth in the Virginia Declaration of Rights, has been copied throughout America. The doctrine of the equality of all men never took root in America. It is living law nowhere. The nearest approach to human equality is in Russian slave camps where all men are equally poor and degraded. Three million party members rule 180 million slaves with an iron hand.

While Russia has partially succeeded in reducing most of her people to the level of degradation approaching "equality," she has been careful not to interfere with the segregation practices and racial mores of her people. Even Russian despots have more sense than to attempt to do a thing like that. That low mark was reserved for American despots sitting on judicial benches.

In the summer of 1955 Justice Douglas and Robert F. Kennedy, an Attorney for a Senate committee, toured Russia. Douglas found something he didn't want to tell. Kennedy spilled it in the New York Times magazine of Sunday, April 8, 1956. Here is a part:

"IV. SEGREGATION

"In every city that we visited there were two different school systems. There was one set of schools for the local children—those of a different color and race from the European Russian children. State and collective farms were operated by one group or the other, rarely by a mixture of both.

"Although work is supposedly being done to minimize the differences, many of the cities we visited were still split into two sections, with the finer residential areas being reserved for the European Russians. European Russians coming into the area receive a 30 percent wage preferential over local inhabitants doing the same jobs. The whole pattern of segregation and discrimination was as pronounced in this area as virtually anywhere else in the world."

A distinguishing feature of communism is that it never practices what it preaches. It says one thing and does another.

At the Eighth Congress of the Communist International held in Moscow in 1928, methods to be used to destroy true representatives governments by free people were fully discussed. It was revealed in the March issue 1956 of the National Republic Magazine published in Washington, D. C., that advocacy of "social equality" among the races was agreed upon there as the surest method for the destruction of free government in America. Since class hatred is the sure-fire communist weapon to bring about internal strift and finally revolution, Moscow adopted the slogan of "human equality", for the contest that has already done more harm to America than can ever be repaired. A proud nation of patriots has become a nation of fools.

After the War Between the States, "civil rights" or force bills were enacted by Congress and the prostrate and helpless southern people were put under rule by bayonets, as is again threatened. Under the protection of soldiers, illiterate negroes were commissioned to rule the white people throughout much of the South. They were put in charge of the legislative assemblies of the various southern states. The carpetbaggers of the late 1860's were the proponents of the insane doctrine that "all men are equal." While the white man was disfranchised for his loyalty to his race, his home and country and the negro and sociologists ruled them, the American doctrine of equality of freedom and independence was stricken from the bills of rights of Alabama, Arkansas, Louisiana, Maryland, North Carolina, and South Carolina, and either the carpetbag doctrine of the equality of men or the specious doctrine of equality at creation were written into all their bills of rights. As soon as the "carpetbaggers" and "scalawags" were run out of the South by the courageous white people, everyone of those states called constitutional conventions and struck from their fundamental laws every vestige of the foul doctrine that "all men are equal", with one exception. That exception was the State of North Carolina. The carpetbaggers were never run out of North Carolina. The white people ran them as far as her college campuses where they became "doctors", put on caps and gowns and began screaming "academic freedom"! There they and their descendants yet remain, crying "academic freedom"! and the grand old American doctrine of equality of freedom and independence that stood in North Carolina's Declaration of Rights from 1777 until 1868 is yet displaced by the senseless substitute.

The American doctrine of equality of freedom and independence was copied into the celebrated French Declaration of Rights of 1789. In the bath of blood we know as the French Revolution, the doctrine of human equality was substituted in the French Declaration of 1793. In the same bath of blood the French Revolutionary motto became: "Liberty, equality, and fraternity."

In 1940 France struck the doctrine of human equality from the motto upon the tomb of her liberty. That cluster of inconsistencies no longer tarnishes the tricolor of France. But France is dead. The doctrine that all men are equal reduced France to a pitiable position in the family of nations. In 1946 the doctrine of human equality was stricken from the French Declaration of Rights and the doctrine of equality of freedom and independence was reinserted just as it was copied from Virginia in 1789. But too late. When the spirit of a nation dies, when proud patriots become groveling internationalists, when pride of race is gone, the nation is dead. Where once was glory and grandeur, as in Rome and Greece, goats will browse among her moldering ruins and lizards sun upon her broken statuary. Equality made France a third-class nation. It will make us a fourth-class race. I believe it was Lord Acton who said that the reason why the French Revolution became so destructive to human liberty was the doctrine of human equality. Napoleon looked back from St. Helena with the observation that France wanted equality more than it wanted liberty; and since it couldn't have both, he gave them equality.

Flowing naturally from the doctrine of human equality is the equally specious doctrine of the "brotherhood of man." The men of the gowns sometimes put it as "the brotherhood of man under the fatherhood of God." Some preachers throw their voices into ministerial overdrive and exclaim, "All

men are brothers." Well, if they are, no two brothers are equal. Identical twins are never identical. Some of our ministerial friends who proclaim that all men are brothers say they found it in the Bible, yet not one has ever cited the book, chapter and verse. They, too, poor things, have been brainwashed.

If all men are brothers, then all children are brothers and sisters and are equally entitled to inherit from their collective papa (the state) all that every real daddy has worked to accumulate for his brood. That is socialism—far gone on the road to communism. "Every man a king" or "all men are brothers" may appeal to doctors and their demented minds; but if true, all are slaves to the state. If all men are equal, or are brothers, why did Jesus have such a hard time picking 12 men? Why did he pick 12 Jews? If all were equal, how is it that one was a traitor? Judas may be the equal brother of some men. Indeed, we have many in America today who would disgrace Judas and put Benedict Arnold to shame.

Liberty is always destroyed in the name of liberty. Free government is always destroyed in the name of freedom. Religion is always destroyed in the name of religion. If all men are equal and all men are brothers, why don't we all go to the same church? The Methodist bishop won't consent for his brood to become Baptists. Some Presbyterians want to integrate with Negroes, but they want to fight if one suggests that they integrate with Methodists. That is different. They have been brainwashed. If all men are equal and are brothers, why do we have a heaven and a hell? Those kingdoms are monuments of God's truth eternal, that all men are not equal, and that there is some sort of segregation in the life everlasting. The pearly gates and the streets of gold are for the good. Fire and brimstone are for the bad.

It is equality of freedom and independence that gives unto man his free choice to be good or to be bad. Equality of men leaves no choice, because if all men are equal by nature or inherently there can be no differences and no distinctions.

In Harvard's better days her Charles W. Elliot taught: "inequality, not equality * * * is the inevitable result of freedom." In Columbia's better days her Nicholas Murray Butler taught that equality is a "Shibboleth." Henry James described the doctrine of equality as "slander" by "the paid scribes of old-foggyism which no man who is not an ass can believe." Lord Acton, Edmund Burke, John Morley and hundreds of others have exposed the specious thing.

It is inequality that gives enlargement to religion, to intellect, to energy, to virtue, to love and to wealth. Equality of intellect stabilizes mediocrity. Equality of wealth makes every man poor. Equality of religion destroys all creeds. Equality of energy renders all men sluggards. Equality of virtue suspends all men without the gates of Heaven. Equality of love stultifies every manly passion, destroys every family altar and mongrelizes the races of men.

Equality of freedom and independence cannot exist without inequality in the rewards and earned fruits of that freedom and independence. It is inequality that makes "the pursuit of happiness" something more than a dry run or a futile chase. It is inequality that makes every game. Inequality results in heartaches for the loser, perhaps, but it is the father of every joy and every thrill.

Equality may be imposed only in a despotism. Equality beyond that range of legal rights is despotic restraint. It is nowhere sought to be imposed except in the communistic sewers of slavic slavery. As Francis Lieber pointed out in his great work on Civil Liberty (p. 334) 100 years ago: "Equality absolutely carried out leads to communism." The prophesy is now being realized in America. We are there.

Equality homogenizes so that cream no longer rises to the top. It puts the eagle in the hen house that he may no longer soar. More than 2,000 years ago Aristotle proclaimed that equality may exist only among slaves. Russia is proving the postulate.

The Ultra-High-Frequency Problem in Television

EXTENSION OF REMARKS
OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. KEARNS. Mr. Speaker, under permission to extend my remarks in the Appendix of the RECORD, I submit the following letter written by the Joint Council on Educational Television to the Honorable WARREN G. MAGNUSON, chairman of the Senate Interstate and Foreign Commerce Commitee:

JOINT COUNCIL ON
EDUCATIONAL TELEVISION,
Washington, D. C., May 22, 1596.

Hon. WARREN G. MAGNUSON,
Chairman, Senate Interstate and Foreign Commerce Committee, Senate Office Building, Washington, D. C.

DEAR MR. CHAIRMAN: Your committee has been studying current problems in the field of telecommnuications, including the obstacles that are being encountered in utilization of the ultra-high-frequency (UHF) channels allocated for television broadcasting. The Federal Communications Commission has likewise taken official cognizance of the UHF difficulties, and is presently engaged in a rulemaking proceeding to determine what action might be taken to improve the situation.

The Joint Council on Educational Television (JCET) is directly and deeply concerned with the UHF problem, and has participated both in the hearings conducted by your committee and in the proceedings before the Commission. Our most immediate interest, of course, lies in the channels that the Commission has reserved for noncommercial educational television, but we are fully aware that the future of educational television is dependent upon a sound allocations policy for the Nation as a whole.

Of the 258 channel assignments reserved for educational television, 86 are in the VHF and 172 in the UHF range. There are 21 noncommercial educational television stations now in operation. Sixteen of these are VHF and only five are UHF. In addition to the five communities where educational UHF stations are already on the air, UHF channels have been reserved in New York, Los Angeles, Philadelphia, Baltimore, Washington, Cleveland, Buffalo, Atlanta, Kansas City, and many other communities in which large universities or other important educational institution are located. It is apparent, therefore, that both the VHF and the UHF channels are of vital importance to educational television, and that its future development is seriously threatened by the adverse factors that have plagued and delayed the development of UHF television generally.

Accordingly, the JCET has followed with close attention the testimony before your committee and the comments that have been filed in the Commission's rulemaking proceeding. We believe that both inquiries are of great value, and in their light we have come to certain conclusions about the UHF problem, which are embodied in this letter.

Above all, we are convinced that the development of a satisfactory national television service, ample for the expanding and varied requirements of the American future, cannot possibly be achieved without vigorous and extensive exploitation of the UHF channels. Several proposals have been advanced which envisage the concentration of television broadcasting in the VHF channels, but these offer only a restricted and incomplete service wholly inadequate for our foreseeable needs.

The converse suggestion that the VHF channels should be abandoned in favor of a purely UHF allocations system, is perhaps closer to the mark. Nevertheless, it does not appear feasible or desirable in the present state of the art. Certain technical problems in the UHF field, and the enormous investment by the public in VHF receivers and by broadcasters in VHF transmitters, alike dictate caution before so radical a shift is settled upon. If, in the course of scientific advance, a purely UHF service should emerge as the best solution, still there would necessarily be a considerable period of transition and conversion, to minimize capital sacrifices and avoid the loss of service to millions of viewers.

But whether the ultimate allocations basis of television broadcasting be purely UHF or both VHF and UHF, it is plain that the UHF channels must be a stable and vigorous if not the dominant component. "There is no known alternative," Dr. E. W. Engstrom, of the Radio Corporation of America pointed out in the course of your hearings, "for we need the UHF channels in addition to the VHF channels for our still-growing black-and-white service and for the color service which is the newest of the mass communications media."

From the time of its inception as a broadcasting service in the Commission's 1952 television allocations plan, UHF television has confronted two primary obstacles: The existence of millions of receivers equipped only for VHF viewing, and slower technical development of UHF. These adverse factors have badly undermined UHF's ability to compete with VHF, and have tended to "snowball," so that UHF troubles are aggravated today far beyond what they were 2 years ago. The manufacture of all-channel receivers has declined, the viewing public has been slow to spend the money for conversion of VHF receivers to all-channel reception, networks have been reluctant to affiliate with UHF stations, and many UHF broadcasters have found it necessary to suspend operations.

If the present dangerous trend is to be checked, and UHF television put back on the road to health and growth, it appears to us that three basic steps must be taken:

(1) The manufacture of all-channel receivers must increase sharply, and substantially all receivers offered for purchase must be capable of all-channel reception;

(2) The competitive position of UHF must be bolstered by the creation and preservation of substantial geographical areas in which UHF is the sole or predominant television service; and

(3) The technical problems of UHF transmission and reception must be promptly and vigorously attacked, and the frontiers of the art pushed forward so that UHF will be as familiar as VHF to television engineers and servicemen.

It will be noted that the first of these measures is primarily the responsibility of the Congress, the second of the Commission, and the third of the telecommunications industry. In our opinion, each of the three is vital to the sound development of our national television system, and only by such a broad plan, and with the joint participa-

tion of Government and private industry, can a favorable resolution of this dangerous dilemma be achieved.

All-channel receivers: At the inception of the UHF television service, it was hoped and widely expected that its growth would be sufficiently rapid so that the manufacturers of television receivers would, as a matter of enlightened self-interest, "push" the sales of all-channel receivers. For reasons which are common knowledge in the industry, these expectations have not been fulfilled. It is our understanding that fewer than 15 percent of the receivers currently being manufactured are equipped for all-channel reception, as compared with about 30 percent 3 years ago.

Of all the threats to the survival of UHF television, this is by far the most serious, for it is making a bad situation constantly worse. Nevertheless, in a highly competitive field such as the manufacture and sale of television receivers, it is unrealistic to expect that all-channel receivers will be produced in quantity under present circumstances. The only possible solution appears to be some governmental act that will make it economically advantageous for the manufacturers to abandon VHF-only models, and thus insure the distribution of all-channel receivers. We believe that this will require action by the Congress.

It has been proposed, for example, that the 10 percent Federal excise tax should be lifted from all-channel television receivers, and left applicable to VHF-only sets. Budgetary objections to this course of action may be insuperable, and suggest that alternative of raising the rate of tax on VHF-only sets, perhaps to 20 percent. Obviously, there are many possible variants of the basic proposition. One which might warrant consideration is reduction of the rate on all-channel receivers to 5 percent, the same as is applicable to most other comparable commodities.

Objection may be raised to such proposals on the ground that they would involve a tax discrimination against the inhabitants of areas served only by VHF stations. As we understand it, the purpose of the differential would be simply to insure that purchasers of new television receivers would obtain an instrument capable of receiving the UHF transmissions which, as a matter of national policy, will be a major component of television service throughout the Nation. However, the same objective might be accomplished without altering the tax situation, by an outright statutory prohibition—based upon the Federal Government's constitutional powers in such fields as interstate commerce and national defense—of the manufacture for public sale and distribution of television receivers not equipped for all-channel reception.

We have been reluctant to reach the conclusion that Federal legislation is called for. Whether by tax differential or penal provisions, the effect of the proposal will be to furnish an economic subsidy or statutory monopoly for all-channel television receivers. Fortunately, and unlike the subsidies that have been granted in certain other fields, it may be reasonably expected that the need of preferential legislation for UHF television receivers would endure for only afew years.

Deintermixture: Under the Commission's 1952 allocation plans, the VHF and UHF channels are intermingled throughout the country, and both types are often assigned side by side within the same communities. From an engineering standpoint this is an efficient basis, for any zonal or regional limitations on the use of frequencies leads to waste through their nonuse in the areas from which they are excluded. From an economic standpoint, however, the intermingling of VHF and UHF has subjected UHF television everywhere to the direct competition of VHF stations, on terms extremely favorable to VHF, and customarily disadvantageous or even fatal to UHF.

We do not believe that it is necessary or would be desirable to tear up the present allocations scheme and substitute one based on complete geographical segregation of UHF and VHF stations. We do believe, however, that UHF must be given a certain amount of protection against the competitive incursions of VHF, in particular areas where VHF service can be dispensed with or limited in quantity, without detriment to the quality or variety of program service available to the public. Such protection can be given by an allocations policy commonly referred to as "selective deintermixture."

In communities where three or more VHF stations have already been established, there is little that can be done for the protection of competing UHF stations, and their main hope will lie in the distribution of all-channel receivers and technical progress in UHF transmission and reception. But where UHF stations have acquired a foothold, and are either free from the competition of VHF or have a chance to survive the competition of 1 or even 2 existing VHF stations, surely their prospects should not now be darkened by the establishment of additional VHF stations. So, too, there may well be particular areas in which a single existing VHF station could be required to shift to a UHF channel, without unreasonable hardship to the viewing public and with considerable benefit to UHF service as a whole.

The Federal Communications Commission, to which Congress has delegated the authority and responsibility for television allocations, now has this problem under consideration in its current rulemaking proceeding. We are aware that the Commission's task is a delicate and difficult one. But it seems to us that the facts and logic of the present situation, and the serious plight of the UHF stations that are now threatened with even more extensive competition from VHF rivals, must inevitably lead the Commission to adopt a limited policy of deintermixture. Such deintermixture, to be most effective, should provide adequate separation of UHF and VHF markets.

Technical research: In his recent address at the annual convention of the National Association of Radio and Television Broadcasters, the Chairman of the Federal Communications Commission proposed an immediate "crash research development program on UHF" to the furtherance of which all sections of the telecommunications industry would contribute. Chairman McConnaughey proposed a "twofold approach * * * concentrating on both the UHF receiver and the UHF transmitter" and gave voice to the hope that better UHF receivers could be designed.

We believe that an intensive and broad-scale UHF research program is vital to both the rapid amelioration and the long-term solution of the UHF problem. Fortunately, there are encouraging signs that the telecommunications industry is aware of its responsibilities in this respect. For example, the Radio-Electronics-Television Manufacturers' Association has informed the Commission of their availability to "organize a program of study which * * * might encompass, for example, (a) measurements to indicate the effective coverage of UHF broadcasting under various conditions of terrain and power; authoritative information of this kind has never been available; and (b) reliability and cost of receiving equipment in the UHF together with potentials for improvement."

Of course, such a research program, although the primary responsibility of the industry, should be undertaken in close consultation with the Commission and other interested Government agencies. Indeed, the entire UHF problem calls for cooperation between Congress, the executive branch, and the industry. To be sure, each of the three major steps that we have proposed is the primary concern of Congress, Commission, or the private companies as the case may be. Nevertheless each of the three likewise requires mutual support from all sides, if speedy and effective results are to be forthcoming.

We have mentioned, and wish to stress in conclusion, the need for prompt action. A critical situation has arisen, the resolution of which will inevitably be costly and, in some respects, painful. It would have been helpful if these or comparable steps had been taken earlier, but further delay will make the situation even more difficult.

A nation's capacity for growth and even for survival may be gaged by the vigor and resilience with which it treats its ailments and grasps its opportunities. How to achieve an ample and flexible system of television broadcasting is certainly not the smallest of the social challenges we face today. We strongly urge that your committee now take action on the basis of the useful inquiry that it is conducting, and we hope that our suggestions may be of assistance in the shaping of an effective program for the salvation and growth of UHF television.

On February 29, 1956, Ralph Steetle, executive director of the Joint Council on Educational Television, made an appearance before your committee in connection with the current proceedings relating to UHF. This statement is presented by the Joint Council on Educational Television as a supplement to the one presented by Mr. Steetle, and it is requested that it be incorporated as a part of the record of these proceedings.

Respectfully submitted.

JOINT COUNCIL ON EDUCATIONAL TELEVISION,
ALBERT N. JORGENSEN, *Chairman.*

Murder on the Highway

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christopher News Notes of June–July 1956, which graphically presents the continually mounting toll of highway deaths and outlines specific steps which everyone should take in order to reduce this massacre on our Nation's roads:

YOU CAN BE A CHRISTOPHER DRIVER

Do you realize that during the past year more people were killed by traffic accidents in the United States of America than by cancer, polio, and tuberculosis combined?

Many practical steps are being taken to curb "murder on the highway." But something more positive is needed to bring about safer driving than the mere fear of being killed one's self or of killing others. And you, personally and individually, can help bring about this change for the better.

I—A CHALLENGING OPPORTUNITY

Almight God expects each of us to act as responsible human beings—to do more than live for ourselves.

He has entrusted to you, whoever you are, a bit of His power. He expects you to use it not only for yourself, but also to apply it to the market place.

Certainly in our motorized society, the city street, country road, or superhighway is in the very heart of the market place. So as you drive along, you have countless opportunities to show the consideration, generosity, and restraint toward other motorists that you yourself would expect of anyone calling himself a Christian.

A real Christopher project

Since the one big aim of the Christopher movement is to stimulate the average individual, with God's help, to apply moral principles to the market place, it is only natural that we should encourage them to act like Christians when driving.

The fairest standard

The simple divine standard set down by Jesus Christ over 1900 years ago is still the best remedy of all for sanctifying human relations. "Whatsoever you would that men should do to you, do you also to them." (Matthew 7: 12).

Appealing to the nobler side of the individual to make his influence for good felt has a dynamic effect. Everyone can do something, however, slight, to raise the standards of such important spheres of influence as government, education labor relations, literature and entertainment. St. Paul stressed this positive approach when he said: "Be not overcome by evil, but overcome evil by good." (Romans 12: 21).

Merely complaining or criticizing is of little avail. To do something constructive to right what's wrong is far more practical and effective. The Christopher motto sums it up briefly: "Better to light one candle than to curse the darkness."

Many urgent reasons

These few facts may remind you why this higher sense of motivation upon the part of all is urgently needed:

1. In 1955, auto accidents in the United States killed 39,969 individuals, an all-time record for slaughter on the highways. One traffic expert said recently that auto deaths during the first quarter of this year were 10 percent ahead of last. He concluded: "If this rate continues, we will end 1956 with 42,130 deaths."

2. Besides this frightful loss of life, in 1955 there were 2,158,000 injuries from 9 million vehicle accidents. One hundred thousand of these resulted in permanent disabilities. Property damage ran over four billion dollars.

3. The latest official figures show 58,589,863 registered motor vehicles in this country.

4. In 1965, it is estimated that there will be 80 million motor cars and trucks on the streets, roads, and highways of the United States of America.

5. Licensed drivers now total more than 62 million. They may number as many as 90 million 10 years from now.

These significant facts should remind us all to pause, reflect, pray, and then do something constructive. Good driving is the business of one and all.

More than fear needed

Speed, traffic, and safety laws are necessary, to be sure, but mere legislation will never produce good drivers. Fear of what will happen to one's self or to others has some restraining value. But seldom does fear produce great or lasting results. Only love and consideration for the rights and well-being of others, based on a love of God, will motivate most individuals to drive in a sane, courteous fashion.

"Thou shalt not kill"

Consideration for the rights of others, as well as your own, should be the dominant motive in helping you to drive safely and courteously. But a conscientious remembrance that one of the Ten Commandments is "Thou shalt not kill" may bestir you, if you should tend to become negligent or take chances.

It is a sobering thought to keep ever mindful that you are accountable to God for the way you drive, as you are for everything else you think, say, or do.

II—PUTTING YOUR IDEALS TO WORK

You may have noticed the sign "We love our children. Drive carefully" in many residential areas. Sound and sensible as it is, more than love of self and one's family is needed to inspire an individual to be a considerate driver. What is required is that all-embracing love which Christ expects of each of us: "By this shall all men know that you are My desciples, if you have love one for another." (John 13: 35.)

Anyone who truly loves all men without exception is bound to show it in whatever he does at home, at work, at play as well as while driving.

It is easy to generalize in a vague way about good driving. But a real test of the sincerity of our love for God and others is seen in how we apply our convictions to the hundred and one details that constitute good driving.

Here are a few out of many ways in which you can translate Christian charity into practice while motoring:

1. Show a healthy respect for traffic laws. They are the result of long and often deadly experience. Their one big purpose is to protect you and everybody else. Study these traffic laws carefully and then conscientiously obey them.

2. Drive only when fit to do so. If you are over-fatigued, ill, angry, depressed, or too distracted, you cannot concentrate on the exacting job of controlling the power of an automobile. Some feel they have the right to drive any way they like. Far from it. An obligation accompanies every right.

3. Use good judgment about speed. Avoid driving so fast that you endanger others, or at such a snail's pace that you jeopardize and annoy them in another way.

4. Check your car at regular intervals. Make certain that your brakes are in good working order.

5. Be self-composed. When in heavy traffic, remain calm and patient. You will make it easier for others in the same predicament and save wear and tear on yourself.

6. Stay where you belong. Keep a safe distance behind the car ahead. Remain in your own lane until it is safe to pass. Weaving in and out of traffic is unfair to everyone.

7. Signal properly. Give other motorists a clear and correct signal in ample time before stopping or changing directions.

8. Respect pedestrians. Give them the benefit of any doubt, especially if they are children or older people.

9. Allow others to have their rights. For example, don't speed ahead just as another car is about to overtake you.

10. Reduce your speed at night. The average driver cannot see clearly over 200 feet at night * * * Incidentally, be the first to lower your headlights.

Dozens of other helpful recommendations might be added. But you will find them in abundance in manual for motorists. Our chief purpose is to encourage you to add a note of Christian charity to their application.

III—YOUNG DRIVERS COULD LEAD THE WAY

A New York City bus carrying 30 passengers was crossing a bridge connecting Manhattan and Queens when the driver fainted at the wheel. The passengers froze in fear—all except a 19-year-old-rider seated in the rear.

Bob Kozlowski raced up the aisle and grabbed the steering wheel before the bus had a chance to swerve into the railing or into another vehicle. He then braked it to a safe stop.

One alert young man saved all 30 passengers.

Time and again young people show their great power for good when motivated by a sense of responsibility.

These few considerations regarding young drivers may help deepen their responsibility to others:

1. One-fifth of all drivers are young people. One out of every five licensed drivers is under 25 years of age. Two million new teen-agers are eligible for drivers' licenses each year.

2. The family sets the standard. Martin Klein, of the Automobile Club of New York, said recently: "Teaching a young person to drive is a cinch, but teaching him to use a car skillfully and safely is a challenge. At least 85 percent of it is the youngster's attitude. Has he been brought up to know and respect the rights of others? Is he interested not only in the techniques of handling a vehicle but in the courtesies and principles of sportsmanlike behavior in a crowd? The answers go right back to the family."

3. Parents should set the example: Young people can best learn from their parents not only the techniques of good driving but especially how they can put their "love thy neighbor" convictions into practice while behind the wheel. But parents must do more than recommend self-discipline. Teen-agers show a sixth sense in detecting preaching without practicing when their father or mother speeds, fixes tickets, or acts unfairly or rudely to other motorists.

4. Teenagers and death: During the last 10 years, the teen-agers of America have caused 5 times as many traffic deaths as those in the 45 to 50 age group.

5. Lack of responsibility: Recklessness, speeding, and general disregard for traffic signs and signals on the part of teen-agers were listed as the chief causes for auto accidents in which they were involved.

6. Costly negligence: Since 1948, insurance companies have classified all drivers under 25 years of age as poor risks. As a result, parents have had to pay $125 million extra for insurance policies each year because their children drive their cars.

7. Contributions of high schools: Out of 21,621 high schools in the United States, 6,191 engage trained teachers to give regular courses in driving instruction. Records show that teen-agers who have been taught the rules and techniques of safe driving have only half as many accidents as the untrained.

8. Sense of responsibility needed: While fear of danger is a good foundation for the young driver, he becomes a more thoughtful and considerate one if he feels a special responsibility to God and his fellowman from the moment he starts to operate an automobile.

IV. AN INCENTIVE TO DO MORE

If every motorist, motivated by the love of God and respect for the rights of his fellowmen, would take it upon himself to drive as he would like to see others drive, what a refreshing change would soon take place on the highways of America.

The personal experience of making a contribution to safety may well stimulate drivers to reach out to wider horizons and do something to humanize and sanctify every facet of public and private life.

Even though too much cannot be expected overnight, we feel that after a period of time great headway can be made in encouraging individual drivers to participate in this unique apostolate. They would then be true Christophers or Christbearers in helping to restore the peace and order of Christ to the highways as well as to all other vital spheres of influence.

A Declaration of Principles of the Polish American Congress

EXTENSION OF REMARKS
OF

HON. THADDEUS M. MACHROWICZ
OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. MACHROWICZ. Mr. Speaker, on May 30 to June 1 inclusive, the Polish-American Congress, representing over 6 millions of Americans of Polish descent, met in Philadelphia, Pa., at its quadrennial national convention to discuss and consider action for the preservation and security of the United States and for the liberation of enslaved nations behind the Iron Curtain, particularly Poland.

A declaration of principles was adopted, which, under consent granted, I submit herewith.

The declaration follows:

Our convocation began on Memorial Day, a holiday that we are accustomed to observe by decorating the revered graves of those who have given their lives for the United States at home and abroad. We here assembled have in our hearts made pilgrimages to the resting places of our beloved dead to express our undying gratitude to them and to rededicate ourselves to the ideals for which they had given their all. We are resolved that our valiant dead shall not have died in vain, nor has death stilled their voices.

We Americans are in the midst of a Presidential election campaign in the course of which several parties are presenting their respective platforms on national and foreign policy. As an integral part of the American Nation, we feel that we, too, should be heard, and that due recognition be given to our voices. America to us epitomizes a glorious past and a brilliant future. It treasures tens of thousands of graves of our departed sons and it is proud of the many thousands of our kin who are now serving in the Armed Forces. It jealously guards the welfare of their wives and children at home, whose future is our hope and also our responsibility.

Our deep concern for the United States and for Poland, the land of our forefathers, is one and inseparable. We believe that the future of Poland directly and indirectly depends upon the present and future policies of the United States of America at home and in world affairs.

Today we plead for the inalienable right of Poland to independence and self-determination on the 100th anniversary of the birth of the late lamented President Woodrow Wilson, who, in the name of the United States, demanded and achieved independence for Poland, as a condition precedent to peace and justice in the world. In paying grateful homage to the memory of Woodrow Wilson, we simultaneously appeal to America to return to the noble ideals from which her invincible strength was born.

We realize the contemporaneous time is dominated by the relentless advance of Communism and the terroristic campaign of the Soviet Union as a state whose power and influence is consistently and alarmingly growing. This cancerous growth threatens our national and Christian culture. It aims at destroying the ideals of our lives and those of humanity in general. It is undermining the moral concepts which we cherish as our common heritage by reason of centuries of evolution in human relations. Communism cannot, it must not triumph. This, we here resolve under oath as Christians and as Americans of Polish origin.

We have asked ourselves, where should the place of the United States be, in these troubled times, in a sorely anxious world. The hearts and the sentiments of the American people have always been on the side of the oppressed and the enslaved. Throughout the period of our history, the Star-Spangled Banner has ever symbolized to the world our ideals of liberty, justice, and democracy for all. Under this banner America has marched during our Civil War and in the First and Second World Wars. Wars are justified only when fought for moral ideals. Our participation in all of our wars was motivated by the self-same ideals of liberty, justice, and democracy for all.

In the current times, when the destiny of mankind is threatened by an everchanging panorama of policy between the United States and the Soviet Union, we are more than ever conscious of our duties toward our country and mankind in general. We are in the midst of an irreconcilable conflict between democracy and communism; between Christianity and barbarian godlessness; between the dignity and the rights of free men against the tyranny of totalitarian states. It is to be deplored that during the past war, and in the course of the supervening years, our country has often vaccillated from its fixed orbit by compromising with communism, always with disastrous results. Whither go we now? We are engaged in a psychological war; in economic and international competition with Soviet Union. Yes, we are in a technological race. In this course, it is regrettable that our ideals have become obscured; nay, almost forgotten! No one dares mention the principles espoused by Atlantic Charter any more than those of the Four Freedoms. We have imprisoned ourselves within the illusory walls of imaginary limitations. We seem to be locked between bombs and dollars, still faintheartedly struggling between the implacable demands of hammer and sickle, and the throbbing, unyielding voice of our own destiny. We are seeking escape from a political entrapment in which we currently find ourselves beleaguered in Europe, in Asia and in Africa.

Our country is growing stronger internally but weaker abroad. We are consistently losing prestige and leadership everywhere. We have almost forfeited the faith and trust of millions of our friends throughout the universe. Our diplomats have acted under duress engendered by Moscow for many years, from Yalta to Geneva. They have seemingly discounted our own material and moral strength. An atomic war or dollar war are not the only avenues of escape from this dilemma. Our desire to avoid war is an understandable and thoroughly commendable aim. Yet, there are limits to the price which can honorably be paid for the avoidance of war. Avoiding war does not always guarantee peace. We recall Munich and its irrestible corrolary. We lamentably remember Yalta, too. We have suffered inevitable defeat whenever we had abandoned our fixed ideals. The birth of strength in the Soviet Union was the aftermath of Yalta. Its strength was energized by our spiritual weakness. We froze into a state of fumbling political inaction and lethargy. We were hypotized by imaginary exigencies and paralyzed by fear. We commenced a course of constantly changing our policy from threats of massive retaliation, to reappraisals, and then to a defeatist strategy of containment. We veered from the promises of liberation to the compromise of coexistence with gangsters. We have run the gamut from a conception of military strength to the wishful effort of purchasing loyalty with dollars. We have pressured our allies to accept coalition with bolshevism in Asia and Europe and have compelled China and Poland to compromise with communism. Wherever we went with our dollars and our wavering policies, fashioned to suit passing exigencies, we had consistently found ourselves on the wrong side. Why must this have been done? Is there no straight, no clear political concept to which the United States should unswervingly adhere? The policy of liberation is the only American policy which does away with doubt and error. This policy we have seemingly abandoned after sincerely and stridently proclaiming it to the world. We here and now appeal to our Government to return to its original policy of advancing the liberation of enslaved peoples everywhere, to proudly carry this message of the United States to a darkened and unhappy world.

We strongly object to the intemperate statement recently attributed to our Secretary of State, to the effect that Titoism opens great prospects to Poland and other enslaved nations. This pronunciation follows the spirit of Yalta. Titoism is communism. To tolerate Titoism means direct or oblique surrender. Its results would be analogous to those which arose from our blunders in China and Poland. We emphatically condemn a compromise that will be disastrous to freedom. Poland and all other enslaved countries want democracy and liberty not Titoism!

Titoism is the beginning of a new, perhaps more dangerous advance of the international conspiracy of Communism. It will not destroy Soviet imperialism. It will strengthen it by consolidation and by evoking a spirited new ideology.

The paradoxical idea that armed German divisions may be the sole guaranty of the survival of democracy in Europe is also a dangerous fallacy. German armed divisions mean the revival of an armed spirit. Our Government forced upon Europe German armies dearly bought by American dollars—aid. After the danger of military aggression of the Soviets has apparently receded and NATO has had to undergo a change of life, is this new threat to be foisted upon an already troubled world? What will Germany do with these divisions? How have we promoted our ideals by financing and foisting upon Europe—even on Germany—these renascent armed divisions?

This development, in our opinion, should arouse thorough reappraisal of our policy regarding the area bordering on the Oder and Niesse, which our diplomats have reactivated by rearming these German divisions. They seem to be decoying a reluctant Germany, with Polish soil as a bait.

The borders of Poland along the Oder and Niesse are the historical borders of Poland and should thus remain undisturbed. Our position gave the Soviet Union a psychological and political hold on Poland and on Germany. What have we gained by this expedient? We have convincingly made the Poles feel that, in a matter so vital to their future, the Soviets are their protectors and not the United States. Chancellor Adenauer now plans to bargain with Moscow, not with Washington, and Poland may be the pawn at stake.

The territory bordering on the Oder and Niesse should remain Poland's not as a compensation for the rape of half of Poland by the Soviet Union, a crime that was lamentably and obviously legalized and affirmed by Roosevelt at Yalta. This territory should remain Polish soil not as compensation for the unspeakable cruelty and damage inflicted upon Poland by Germany, but based

upon Poland's historic right, and the right of simple justice.

We earnestly and strongly urge our Government to modify its current attitude in the matter of Poland's boundaries along the Oder and Niesse.

Moreover, we firmly believe and affirm that the cities of Wilno and Lwow and the eastern lands which were seized from Poland, having been an integral part of Poland for many centuries, and having protected Europe against the Russo-Mongolian aggressors while the Polish nation, generation after generation, sacrificed lives and blood and property, defending these cities and these lands, that they, too, should be returned as parmanent parts of a free and independent Poland when peace commitments are finally drawn up betweeen the world powers concerned.

It is our belief that the aims of the United States to promote permanent peace and security could be more speedily and effectually realized by our return to a policy of liberation in Europe, Asia, and Africa. We can do so in Europe by extending our assistance in the creation of a bulwark between a red or white Russia and a black and yellow or brown Germany with a strong, prosperous, democratic Poland between these predatory countries and their Drang nach Osten and Drang nach Westen. The twain should never again be permitted to meet. They shall not meet as long as a strong community of nations exists between them.

We are in full accord and sympathy with those who hope to see in the United Nations a potent instrument of peace and humanity. It is our belief that the United States should use its influence to effectuate basic reforms in the makeup of the United Nations by giving a voice to the peoples enslaved and not to governments which oppress them.

We heartily endorse the recent resolution of the United States Congress that the documents gathered by a special committee on the Katyn massacre be brought to the attention of the United Nations by our delegation. Let the world pass deserving judgment on those who are guilty of the blackest crime of our times.

We express our gratitude to those who strive to effect changes in the present immigration and naturalization laws which should but now do not perpetuate our past traditions and ideals.

We warmly thank the Members of the United States Senate and the House of Representatives who paid tribute to Poland on her national holiday, May 3 last, by expressing the sentiments of our fellow Americans.

We petition our Government to champion the demand for the release of the many thousands of people now suffering in Soviet concentration camps and prisons.

We appeal to our Government to fully support the request heretofore voiced that due compensation be made to Polish victims of nazism, as they were our worthy and deserving allies.

We believe that financial and moral assistance should be offered to Poles outside of Poland, to keep their spirit of resistance alive. Their action of resistance to the wiles of communism fully falls within the scope of combating that self-same communism which we so execrably deplore.

We highly appreciate the efforts of the Voice of America and Radio Free Europe in behalf of world freedom, but we recommend that the voice of Americans of Polish descent be recognized to a greater degree. The trend of action of these agencies must be constantly adjusted by solicited cooperation of Americans of Polish descent. We know Poland and the Poles. We speak their language and suffer their pain. We are admirably equipped to tell them about America in a way which they will accept and believe.

We extend our hands of fellowship and solicitude to all enslaved nations, especially the neighbors of Poland, in a spirit of comraderies, friendship and common interest against a common enemy.

We pledge our allegiance to the flag of the United States, to the ideals and traditions of our beloved country and dedicate ourselves to a relentless combat of Christianity against the godlessness of communism. We consecrate ourselves to the achievement of victory of democracy over totalitarian tyranny. We believe in the glorious destiny of the United States and in the resurrection of a free, independent, democratic Poland. We reject any bait to compromise with evil. We reject a policy based on fear. We do not fear death for the attainment of our ideals. We have blessed our sons when they went to war to make the world safe for democracy. We have sent them to fight nazism, fascism, and communism and we shall not now be terrorized, intimidated, or induced to sell our souls for evanescent and putrid gain. The attainment of ideals requires sacrifice. The followers of Christ entered the arena of Nero's circus to be torn apart by lions—yet they were serene and died without fear. We do not expect to achieve peace and security from Moscow or from Belgrade. Nor shall we sell our birthright or that of our bretheren for a mess of pottage.

We are not frightened into submission, surrender, compromise, or defeat by appeasers or alarmists. On this memorable day, at the convention of the Polish American Congress, we raise the flag of the United States of America together with the flag of Poland's white eagle, inspired, encouraged and sustained by the realization that we nurture sentiments and principles that to us are more valuable than life itself.

Resolution Committee: Karol Piatkiewicz, Chairman; Charles Rozmarek, Kazimierz Kozskiewicz, Adela Lagodzinska, Frances Dymek, Alexander J. Laffey, Wilkes-Barre, Pa.; Judge Walter Bayer, Brooklyn, N. Y.; Peter Yolles, New York, N. Y.; Rev. Dr. S. Lisewski, Chicago, Ill; Helen Rozajewski Dworczak, Dickson City, Pa.; Frances Tesny, Cleveland, Ohio; Joseph Alecks, Dorchester, Mass.; Walter Urman, Washington, D. C.; Frank Kolaczewski, Shamokin, Pa.

Address of Hon. Daniel J. Flood, of Pennsylvania, at San Souis Park, Wilkes-Barre, Pa., Sunday, June 10, 1956, at 20th Anniversary Catholic Slovak Sokol

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered on June 10, 1956, at the 20th anniversary Catholic Slovak Sokol, in Wilkes-Barre, Pa.:

Members of the Slovak Catholic Sokols, I get a real thrill in addressing this fine gathering of members of group 7 of the Slovak Catholic Sokols, and particularly today, when you are celebrating your 20th anniversary. We are blessed with just the kind of day this splendid organization thrives on when it takes to the wide-open spaces. And the outstanding gymnastic exhibition put on today has shown the kind of mettle Slovak-American boys and girls are made of.

Fine physical condition has always been an important factor in Slovak life, whether in the United States of America or in the great historical richness of its European background. Building the body as well as the mind and spirit, comes before good, useful lives can be led. I have always admired the Sokol motto: "A healthy spirit in a healthy body." Let us not forget that he who has health has hope, and he who has hope has everything.

Certainly, such an attitude of optimism toward life, cannot be overestimated, in a day when the threat of war always hangs over our heads. Each day, the newspapers tell us about military plans to provide new defensive measures. We here in America, need more of what the Sokols stand for, optimism, hope for the future. But above all, we first need health. I believe it is the obligation of every American citizen both to himself and to his fellow citizens to keep his body so physically trim, that when he comes to the necessary tasks of making decisions about government, who to vote for, what civic programs to support, he will not be burdened by a tired body. He will not be handicapped with a rundown system. His mind, correspondingly, will not be taxed with longing for unnecessary stimulant.

History is full of great programs for physical fitness. The Nazis have their Hugend (youth movement), the Fascists also stress gymnastic work, and the Soviets too, have striven to impress the importance of physical culture on their young people, and similarly the Sokols aim to cultivate the benefits of excellent physical shape by developing its program on a group basis. But here the comparison ends, for the Slovak Catholic Sokol aims much higher than the creation of firm flesh for civil reasons. True to American ideals, a good Slovak Catholic Sokol does not hold that the state is the most important item in current affairs.

The Sokol, like the Declaration of Independence, advocates the right of each American to pursue happiness as he sees fit. But because it is a fraternal organization dedicated to principles of improving human relations—as well as man's relation with his God—the Sokol goes one step further. It wants to guide young Americans of Slovak Catholic heritage into a way of life which will bring them greater happiness because of their harmony with both God and Nation.

Mindful of the good the future can bring, the Sokol also wants its members to know the good given by its great traditions which found birth in that wonderful land of the Tatras in Europe.

I believe that an important aspect of the athletic program of the Sokols, is the cooperation taught. We Americans are proud of the spirit of assistance we frequently employ, particularly when it comes to someone in definite distress. Recall the constant flood of CARE packages sent by private citizens to starving and needy people all over the world. Your organization, as one of the outstanding fraternal societies in America, has always been in the vanguard of mutual help. And that should not be surprising when it is realized that the founders of the Slovak Catholic Sokols here in the United States sought to develop a better relationship with one's fellow man.

For over 50 years your organization has been instructing its youth on how to get along with one another. Your founders built exceedingly well when they insisted that tolerance and good will among men cannot be overemphasized.

If we are to meet the challenge of totalitarianism, we shall need this faith in this basic principle. For the real strength of America lies not in her present wealth, her luxuries, but in the spirit of the people who

produced them—the kind of spirit shown by the grandparents and great-grandparents of these fine boys and girls here this afternoon. These oldtimers had the indomitable courage and the longing for liberty, which easily enabled them to become an integral part of our great country. I count it as one of the great advantages of my life, to have been privileged to grow up with them back in North Wilkes-Barre, to have attended school with their children, and to count so many of them as personal friends. Who could not be but impressed after a 5-minute conversation with the late Msgr. John Sobota, who could not be but amazed at the versatility and genius of that great wireless inventor, Father Murgas, and who would not be stirred in reading the life stories of men like Father Jankola, Father Furdek, and a host of other great Slovak pioneers in the United States.

You boys and girls who have performed so magnificently here this afternoon have a great heritage. You have the stuff of great Americans. You are a final link of a great chain of an indomitable tradition. It is a pleasure for me, as a Member of the United States Congress to speak with you and salute you. You have been brought up in the high standards of the Slovak Catholic Sokols and you are blessed with the strength, the health, the educational opportunities, and the great heritage of freedom that will fit you for leadership in this age of great crisis. It is my earnest plea to you boys and girls this afternoon, that you realize the importance of continuing to remain faithful Sokols in this wonderful effort to fit yourselves for important service to God and country.

Never in history has there been so much opportunity available. One needs faith in both God and the future. Yours can be the faith to guarantee that while the America of tomorrow may be different from the America of today, it will remain a free and democratic America.

Zdar Boh—God bless you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Daily Digest

HIGHLIGHTS

Both Houses cleared State-Justice-Judiciary appropriations for President.

Senate passed 85 sundry measures.

House passed mutual security bill.

Senate

Chamber Action

Routine Proceedings, pages 8926–8949

Bills Introduced: 14 bills and 1 resolution were introduced, as follows: S. 4021–4034; and S. Res. 280.

Pages 8928–8929

Bills Reported: Reports were made as follows:

H. R. 11319, fiscal 1957 appropriations for public works, with amendments—reported under prior authority (S. Rept. 2169);

S. 3388, to provide for the conveyance of certain real property of the U. S. to the port of Port Townsend, Wash., with amendment (S. Rept. 2170);

S. 3866, to facilitate the making of lease-purchase agreements by GSA Administrator and Postmaster General (S. Rept. 2171);

S. J. Res. 110, directing Secretary of Interior to conduct a study and investigation of Indian education in the U. S., with amendments (S. Rept. 2172);

S. 1243, 2779, 2833, 2836, 3029, 3050, 3221, 3473, H. R. 6742, 6955, H. J. Res. 591, 609, S. 2849, 3166, H. R. 1156, S. 2863, H. J. Res. 606, 611, private bills (S. Repts. 2173–2190, respectively);

S. 3195, to authorize the Administrator of General Services to convey certain lands in the State of Rhode Island to town of North Kingston, R. I. (S. Rept. 2191);

S. 3768, to include the Department of HEW among the other executive departments under section 158 of the Revised Statutes, and provide for the appointment by the President of a General Counsel of the Department (S. Rept. 2192);

H. R. 7896, to convey certain land to city of Hogansville, Ga. (S. Rept. 2193);

H. R. 8404, to provide for the conveyance of a portion of the former prisoner-of-war camp near Douglas, Converse County, Wyo., to the State of Wyoming (S. Rept. 2194);

H. R. 9377, private bill (S. Rept. 2195);

H. R. 10417, to amend the Federal Register Act regarding public proclamations in a period following an attack upon the U. S. (S. Rept. 2196);

S. 2654, to authorize the Administrator of General Services to convey certain lands in the State of Wyoming to the city of Cheyenne, Wyo., with amendment (S. Rept. 2197);

S. 3843, to adjust the application of section 322 of the so-called Economy Act of 1932 to premises leased for Government purposes, with amendment (S. Rept. 2198);

H. R. 7855, extending temporary authority to GSA to dispose of surplus property by negotiation to July 31, 1958, with amendment (S. Rept. 2199);

S. 3316, authorizing the Administrator of General Services to convey certain property which has been declared surplus to the needs of the U. S. to the city of Roseburg, Oreg., with amendments (S. Rept. 2200);

H. R. 5382, 5453, 8867, 11205, 1963, private bills (S. Rept. 2201–2205, respectively); and

H. R. 9285, to extend for 2 additional years the authority of Federal Reserve banks to purchase U. S. obligations directly from the Treasury (S. Rept. 2206).

Pages 8925, 8928

Bill Referred: One House-passed bill was referred to appropriate committee. **Page 8949**

Veto Message—Yellowtail Dam: Message from President transmitting veto of S. J. Res. 135, providing for payment to Crow Indian Tribe for consent to transfer of right-of-way for Yellowtail Dam and Reservoir project, Montana and Wyoming, was read, ordered to be printed as S. Doc. 128, and referred to Committee on Interior and Insular Affairs. **Pages 8925–8926**

Private Bill: H. Con. Res. 247, requesting return for reenrollment by House of H. R. 1913, a private bill, was adopted. **Page 8953**

Call of Calendar: On call of calendar, 78 measures, of which 53 were private, were passed, as follows:

Without amendment and cleared for President:

Peace stamp: H. R. 692, authorizing a special canceling stamp or postmarking die bearing the words "Pray for Peace";

Tobacco: H. R. 9475, to amend the tobacco marketing quota provisions of the Agricultural Adjustment Act of 1938 (after Committee on Agriculture and Forestry had been discharged from its further consideration);

Waterfowl depredations: H. R. 7641, to authorize the Secretary of Interior to cooperate with Federal and non-Federal agencies in the prevention of waterfowl depredations (after Committee on Agriculture and Forestry had been discharged from its further consideration);

Missouri land: H. R. 7913, authorizing Administrator of General Services to effect the exchange of properties between U. S. and city of Cape Girardeau, Mo.;

Postal field clerks: H. R. 3744, to grant military leave of absence with pay to substitute employees in the postal field service;

Navy nurses: H. R. 9838, to authorize transfer of officers of the Nurse Corps of the Regular Navy and Naval Reserve to the Medical Service Corps of the Navy;

Military construction: H. R. 8709, to extend authority for defense production or mobilization activities of Secretaries of military departments; and

Private bills: Nine private bills, H. R. 1402, 5079, 2045, 1484, 7702, H. J. Res. 565, 581, 590, and H. R. 4873.

With amendment, to be sent back to House:

Wisconsin land: H. R. 2452, authorizing conveyance of La Crosse National Guard target range to Wisconsin; and

Private bills: 10 private bills, H. R. 909, H. J. Res. 534, 553, 554, 535, 555, 566, 472, 533, and H. R. 5590.

Without amendment and cleared for House:

D. C. narcotic addicts: S. 3907, extending for 2 years commitment of D. C. narcotic addicts to PHS hospitals;

Mentally retarded: S. 3620, to encourage expansion of teaching and research in the education of mentally retarded children through grants to institutions of higher learning and to State educational agencies;

Walruses: S. 3778, to amend the act for the protection of walruses;

Customs publications: S. J. Res. 178, authorizing appropriations to provide certain costs for participation by the U. S. in the International Bureau for Publications of Customs Tariffs;

Maine-Canada bridge: S. 3527, authorizing State Highway Commission of Maine to construct and operate a free highway bridge between Lubec, Maine, and Campobello Island, New Brunswick, Canada;

Dual employment: S. 3681, to modify certain restrictions with respect to holding more than one office under the U. S.;

Soil conservation: S. 3314, authorizing Secretary of Agriculture to pay expenses of an Advisory Committee on Soil and Water Conservation;

Soil conservation: S. 3120, to extend the power that Secretary of Agriculture may exercise for payments and grants-in-aid for conservation under the Soil Conservation and Domestic Allotment Act;

Agricultural research: S. 2585, to authorize an exchange of land at the Agricultural Research Center, Beltsville, Md.;

California land: S. 3723, authorizing Secretary of Navy to convey certain land in Alameda, Calif., and to accept other land in exchange therefor; and

Private bills: 22 private bills, S. 911, 1869, 2800, 2842, 1402, 1893, 1324, 1627, 2342, 2586, 3024, 40, 2959, 3000, 3009, 3100, 3208, 3402, 3579, 2864, 2827, and 3363.

With amendment and cleared for House:

Crow Indians: S. 3698, amending the act of June 4, 1920, to provide for allotment of lands of the Crow Indian Tribe;

Farm credit: S. 3559, to amend the act of August 31, 1954, so as to extend the availability of emergency credit to farmers and stockmen;

Farm Mortgage Corporation: S. 2530, to repeal the authority of the Federal Farm Mortgage Corporation to issue bonds;

Forest fire compact: S. 3032, granting consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact;

Alaska land: S. 3344, authorizing conveyance to Alaska of certain lands in Sitka known as Baranof Castle site;

CCC property: S. 3669, to amend the Commodity Credit Corporation Charter Act regarding removal of Corporation property;

Farm income data: S. 3145, to require Bureau of Census to develop farm income data by economic class of farm;

Livestock quarantine: S. 3046, to eliminate requirement that Secretary of Agriculture notify officials of carriers of livestock of existence of a contagion quarantine; and

Private bills: 12 private bills, S. 1104, 1921, 2229, 2999, 2069, 2793, 2805, 2943, 2294, 2954, 3212, and 3235.

Bills indefinitely postponed: S. 3261 and 2732.

Pages 8949–8950, 8953–8972

President Eisenhower: S. Res. 280, expressing Senate's hope for complete and speedy recovery of President Eisenhower from his recent surgery, was adopted.

Pages 8969–8971

Lighthouse Service Retired Pay: Senate passed, with committee amendments, S. 3581, to increase the retired pay of certain members of the former Lighthouse Service.

Pages 8972, 8975

Public Health Personnel: Senate passed, with a technical clarifying amendment by Senator Hill, S. 3958, to amend the Public Health Service and Vocational Education Acts by increasing number of professional public health personnel and assisting in care and treatment of mentally ill.

Pages 8977–8983, 8985–8988

State - Justice - Judiciary Appropriations: Senate adopted conference report on, and agreed to House amendment to, Senate amendment No. 19 (funds for study of sites for a maximum-custody penitentiary and a western youth guidance center). These actions cleared the bill for the White House.

Pages 8975–8977

National Library of Medicine: S. 3430, to create a National Library of Medicine located for administrative purposes in the U. S. Public Health Service of the

Department of HEW, was passed after adoption of committee amendments. The committee amendment in the nature of a substitute for the bill was, prior to adoption, amended by Senator Hill to include hospital administration among the fields from which 10 appointed members shall be selected. An amendment by Senator Douglas to locate the Library in Chicago rather than the D. C. metropolitan area was rejected.

Pages 8988–8996

War Orphans' Education: Senate passed, with committee amendments, H. R. 9824, War Orphans' Educational Assistance Act of 1956. Page 8996

Texas Tin Smelter: Senate passed without amendment and cleared for White House H. J. Res. 607, to authorize the disposal of Government-owned tin smelter at Texas City, Tex. Pages 8996–8999

Strategic Minerals: S. 3982, to provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the U. S., its Territories and possessions, was made Senate's unfinished business.

Page 8999

Program for Wednesday: Senate recessed at 6:30 p. m. until noon Wednesday, June 13, when it will consider H. R. 11319, public works appropriations, to be followed by H. R. 7225, social security amendments.

Committee Meetings

(*Committees not listed did not meet*)

FARM PROGRAMS

Committee on Agriculture and Forestry: Subcommittee held hearings with regard to the administration of farm programs by elected farmer committeemen, hearing testimony from the following witnesses: Under Secretary True D. Morse, Robert L. Farrington, General Counsel, Ralph F. Koebel, Office of General Counsel, Earl M. Hughes, Administrator, Commodity Stabilization Service, and H. Laurence Manwaring, Deputy Administrator for Production Adjustment, CSS, all of the Department of Agriculture; Lynn Drane, former chairman, and E. S. Wilcoxon, former member, both of Boone County, Mo., agricultural stabilization committee, Columbia, Mo.; and William Frazier Baker, counsel, Callaway County, Mo., agricultural stabilization committee, Fulton, Mo.

Hearings continue tomorrow.

APPROPRIATIONS—DEFENSE

Committee on Appropriations: Subcommittee continued, today in executive session, its hearings on H. R. 10986, fiscal 1957 appropriations for Defense Department, hearing testimony from Gen. Nathan F. Twining, Air Force Chief of Staff, Gen. Maxwell D. Taylor, Army Chief of Staff, Adm. Arleigh A. Burke, Chief of Naval Operations, and Gen. Curtis E. LeMay, commanding general, Strategic Air Command.

On Saturday, June 9, the subcommittee, in open session, heard testimony from Representative Aspinall regarding an oil shale plant at Rifle, Colo.; Capt. A. S. Miller, USN, Director, National Petroleum Oil and Shale Reserve; Maj. Gen. W. H. Harrison, adjutant general of Massachusetts, who was accompanied by several other State adjutants general, who discussed funds for the Army National Guard and Air National Guard; and Col. B. B. Leary, Office of the Assistant Secretary of Defense for Supply and Logistics. Testimony was also heard from several public witnesses.

Hearings continue tomorrow.

APPROPRIATIONS—LEGISLATIVE

Committee on Appropriations: Subcommittee began hearings today in executive session, on H. R. 11473, fiscal 1957 appropriations for legislative appropriations, with testimony from J. George Stewart, Architect of the Capitol, Quincy L. Mumford, Librarian of Congress, and Raymond Blattenberger, the Public Printer. Hearings continue tomorrow.

SURVIVORS' BENEFITS

Committee on Finance: Committee met in executive session for the consideration of H. R. 7089, to provide benefits for the survivors of servicemen and veterans, but made no announcements and will continue its consideration tomorrow.

TELEVISION

Committee on Interstate and Foreign Commerce: Committee continued its television investigation hearings, with testimony from Everett C. Parker, director, office of communications, the Congregational Christian Churches, who discussed network programing, and Leonard Marks, representing the FM Broadcasters, who testified with regard to TV allocations.

Hearings continue tomorrow.

NOMINATIONS AND PRIVATE BILLS

Committee on the Judiciary: Committee, in executive session, ordered favorably reported the following:

The nomination of Frederick O. Mercer to be U. S. district judge for the southern district of Illinois, and Frederick Van Pelt Bryan to be U. S. district judge for the southern district of New York; and

Eighteen private immigration bills (S. 1243, 2779, 2833, 2836, 2849, 2863, 3029, 3050, 3166, 3221, 3473, H. R. 1156, 6742, 6955, H. J. Res. 591, 606, 609, 611), and nine private claims bills (H. R. 1963, 3373, 5453, 5382, 6029, 7373, 8041, 8867, and 11205).

Committee indefinitely postponed further action on 13 private immigration bills (S. 579, 700, 830, 840, 2040, 2598, 2661, 2915, 3019, 3049, 3078, 3127, and 3160), and 7 private claims bills (S. 2653, 3244, 3070, H. R. 2524, 2746, 5591, 10191).

The committee also held open hearings on the nomination of Simon E. Sobeloff, to be U. S. circuit judge for

the fourth circuit, with testimony given by Senator Johnston (of South Carolina).

SOVIET ACTIVITIES

Committee on the Judiciary: Internal Security Subcommittee continued its hearings on the scope of Soviet activities in the U. S., with further testimony from Seweryn Bialer, who defected from Communist Poland in January of this year. The witness told the subcommittee that a Polish "neutral" inspection team in Korea was provided with money for payoffs and loans to members of other inspection teams for purposes of obtaining their collaboration. Mr. Bialer also stated that the defectors who have been induced to return to Poland have been used for propaganda purposes, and that the redefection of several Polish sailors last October was of high propaganda value.

Hearings continue tomorrow.

House of Representatives

Chamber Action

Bills Introduced: 9 public bills, H. R. 11695–11703; 4 private bills, H. R. 11704–11707; and 5 resolutions, H. Con. Res. 248–250, and H. Res. 534 and 535, were introduced. Page 9064

Bills Reported: Reports were filed as follows:

Report of Select Committee on Small Business entitled "Urban Renewal Projects and Slum Clearance" (H. Rept. 2303);

H. R. 6940, relating to additional contract with Yuma County Water Users' Association with respect to payment of construction charges on the Valley division, Yuma reclamation project, Arizona (H. Rept. 2304);

H. R. 7726, authorizing construction by the Secretary of the Interior of the Crooked River Federal reclamation project, Oregon, amended (H. Rept. 2305);

H. R. 10535, including the present area of Zion National Monument within Zion National Park in State of Utah (H. Rept. 2306);

H. R. 11558, to relinquish U. S. right, title, or interest to certain land in Forrest County, Miss., in order to clear title to such land (H. Rept. 2307);

H. R. 11683, to authorize permanent appointments in the Armed Forces of the United States (H. Rept. 2308); and

H. Con. Res. 246, a private resolution (H. Rept. 2309). Pages 9063–9064

Mutual Security: By a record vote of 275 yeas to 122 nays the House passed H. R. 11356, to amend further the Mutual Security Act of 1954, as amended. A recommittal motion was rejected by a division vote of 52 yeas to 147 nays. This bill provides a 1-year extension and would authorize an appropriation of $3,563,475,000 for the mutual security program, a figure $1,109 million below the President's request. Pages 9012–9013

Antitrust: By a record vote of 393 yeas to 3 nays the House passed H. R. 1804, to strengthen the Robinson-Patman Act and amend the antitrust law prohibiting price discrimination. Subsequent to its passage the bill's title was amended to contain a statement of policy. This amendment made the provisions of H. R. 1840 and H. R. 11 identical. H. Res. 521, the rule under which the legislation was considered, had been adopted earlier. Pages 9013–9041

Resolution Re-referred: The Committee on Interstate and Foreign Commerce was discharged from further consideration of H. J. Res. 643, to provide for an investigation of the need for a geophysical institute in the Territory of Hawaii, and the resolution was re-referred to the Committee on Interior and Insular Affairs. Page 9041

Private Calendar: Passed the following bills on the call of the Private Calendar:

Cleared for the President: S. 872, 910, 1067, and 1221.

Sent to the Senate without amendment: H. J. Res. 621, 626, H. R. 4993, 5041, 5868, 7888, 7890, and 11489.

Sent to the Senate, amended: S. 2984, H. J. Res. 615, 616, 617, 618, 620, 627, H. R. 4037, 7400, 7515, 8005, 8452, 10010, 10011, and 10199.

Objected to and recommitted: H. R. 5691. Pages 9041–9048

Private Bill: Disagreed to Senate amendments to H. R. 3957, a private bill; requested a conference with the Senate; and appointed as conferees Representatives Forrester, Donohue, and Miller of New York. Page 9048

D. C. Legislation: The consideration of bills pertaining to the District of Columbia was in order and the following bills were passed:

Judiciary: H. R. 8149, relating to transfer of actions from the U. S. District Court for the District of Columbia to the municipal court for the District of Columbia;

Unemployment coverage: H. R. 10670, to extend coverage of D. C. Unemployment Act to employees of District municipal government employed in D. C. institutions located in Maryland and Virginia;

Drug control: H. R. 11320, to amend certain laws effecting the control of narcotics in the District of Columbia;

Board members' compensation: S. 1739, to authorize D. C. Commissioners to fix rates of compensation of members of certain examining and licensing boards and commissions;

Motor-vehicle excise tax: H. R. 11488, to amend the D. C. Traffic Act of 1925 relative to motor-vehicle excise tax; and

Trailer license: H. R. 11487, to amend D. C. Revenue Act of 1937 relative to licensing of trailers.

H. R. 4993 and 11489 were passed on the call of the Private Calendar while the following bills were held over for the next District day:

S. 1275, authorizing D. C. Commissioners to designate employees to protect D. C. property;

H. R. 4697, to amend the D. C. Alcoholic Beverage Control Act relative to sale of beer in chain stores; and

H. R. 11062, to regulate and license pawnbrokers in the District of Columbia. Pages 9048–9059

State, Justice, and Judiciary Appropriations: Adopted the conference report on H. R. 10721, making appropriations for the Departments of State and Justice, the judiciary, and related agencies for fiscal year 1957, and sent the bill to the Senate. Amendments Nos. 8, 11, 19, and 26 were in disagreement. The House receded and concurred in amendments 8, 11, and 26. On amendment No. 19 the House receded and concurred with an amendment to reduce to $250,000 the funds for preparation of plans for construction of a maximum custody penitentiary and a western youth guidance center, also provides that no site shall be selected until there is further action by Congress: Pages 9059–9060

Program for Tuesday: Adjourned at 4:42 p. m. until Tuesday, June 12, at 12 o'clock noon, when the House will consider the conference report on H. R. 5881, to supplement Federal reclamation laws by providing for Federal cooperation in non-Federal projects and for participation by non-Federal agencies in Federad projects; H. R. 4090, to require the installation of an automatic radiotelegraph call selector on U. S. cargo ships carrying less than two radio operators; and H. R. 9952, providing readjustment pay for members of the Reserve components involuntarily released from active duty.

Committee Meetings

AGRICULTURE

Committee on Agriculture: Met in executive session and considered but took no final action on H. R. 11403 and H. R. 11443, to amend the Agricultural Trade Development and Assistance Act of 1954, as amended, so as to increase the amount authorized to be appropriated for purposes of title I of the act.

MILITARY—INSURANCE

Committee on Armed Services: Special Investigations Subcommittee concluded public hearings on the sale of commercial life insurance to military inductees. Lt. Col. R. B. Hall, Jr., chief, manpower, Texas State Headquarters for Selective Service, was heard.

RESERVE MIDSHIPMEN—CAP

Committee on Armed Services: Subcommittee No. 1 considered but took no final action on the following bills: S. 1748, to authorize the appointment of Reserve midshipmen in the U. S. Navy; S. 1135, to amend act establishing Civil Air Patrol as a civilian auxiliary of the U. S. Air Force; H. R. 7290, to authorize female Reserve officers of the Army or Air Force appointed as nurses or women medical specialists to be members of the Army National Guard of the United States or Air National Guard of the United States, as appropriate. Witnesses heard on S. 1135 were Representatives Hardy, Bates, Stephen D. Karnes, counsel, Select Committee on Survivors' Benefits, Lt. Col. A. W. Stephens, Office, Assistant Secretary of Defense, Manpower and Personnel, Lt. Col. Earl L. Franzen, Headquarters, CAP, Capt. Ralph R. Curry, U. S. Coast Guard; on S. 1748, Edgar Sturn, Milton G. Nottingham, Merchant Marine Alumni Association, Henry G. Doyle, Navy Reserve Association; on H. R. 7290, Col. Max Neimark, Department of the Army.

HOUSING

Committee on Banking and Currency: Continued executive markup on H. R. 11510, to extend and amend laws relating to the provision and improvement of housing and conservation and development of urban communities.

DAYLIGHT SAVING TIME—D. C. TAXIS

Committee on the District of Columbia: Subcommittee on Judiciary considered but took no action on S. 3295, relating to daylight-saving time in the District of Columbia; and H. R. 10685, to authorize the Public Utilities Commission to regulate the number of vehicles to be used as taxicabs in the District of Columbia. Witnesses heard on S. 3295 were Carlton Smith, National Broadcasting Co.; Phillip Welsh, Association of American Railroads; Ed Rodgers, Air Transport Association; William Press, Washington Board of Trade; Robert Kneipp, Corporation Counsel, District of Columbia; Charles R. Van Horn, Leo O. Drumwright, B. & O. Railroad Co. Witnesses heard on H. R. 10685 were the following independent taxi drivers, Ed L. Mooney, William A. Frye, Anvil Grillo, and John Housch.

LONGSHOREMEN

Committee on Education and Labor: Subcommittee on Longshoremen's and Harbor Workers' Compensation considered but took no final action on H. R. 11113, and related bills, amending the act so as to clarify employer liability. Witnesses heard were Albert E. Rice, American Merchant Marine Institute; Ralph Pittman, Texas Employers Insurance Association; Howard Starling, Association of Casualty & Surety Companies; Ralph B. Dewey, Pacific Steamship Association; Wallace Smith, American Mutual Alliance.

POST OFFICE

Committee on Government Operations: Subcommittee on Executive and Legislative Reorganization continued hearings on the employment of experts and consultants by Federal agencies. Testimony was received today from the following witnesses relative to the propriety of a public opinion poll conducted in behalf of the Post Office Department by a private firm regarding a proposed postal rate increase: Albert J. Robertson, Assistant Postmaster General; Abe McGregor Goff, Solicitor, Post Office Department; and R. E. Merriam, Assistant to the Director, Bureau of the Budget.

GOVERNMENT INFORMATION

Committee on Government Operations: Subcommittee on Government Information continued its hearings on the policies of Federal agencies in withholding information from the public. The following witnesses from the Department of Commerce discussed with members of the subcommittee certain information previously classified and the regulations affecting its declassification: Erwin Seago, Director, Office of Strategic Information; Robert Bowman, Assistant Director, OSI; and Allen Overton, Special Assistant to the General Counsel, Department of Commerce.

GOVERNMENT SHIPPING LOSSES

Committee on Government Operations: Legal and Monetary Affairs Subcommittee considered but took no final actio non H. R. 9504, relating to transfer of funds for payment of Government losses in shipment. The witness heard was Robert Maxwell, Commissioner of Accounts, Treasury Department.

PUBLIC LANDS

Committee on Interior and Insular Affairs: Considered but took no final action on H. R. 10371, and related bills, to provide that withdrawals or reservations of more than 5,000 acres of U. S. public lands for certain purposes shall not become effective until approved by act of Congress. Witnesses heard were Representatives Engle, Johnson of Wisconsin, Udall; Edward Woozley, Director, Harold R. Hochmuth, Lands Staff Officer, Bureau of Land Management; F. N. Ferguson, Office of Solicitor, Department of Interior; Rod Amundson, Chief, Educational Division, Wildlife Resources Commission; Michael Nadel, assistant executive secretary, Wilderness Society; Michael Hudoba, editor, Sports Afield, and representing also the Izaak Walton League of America; C. R. Gutermuth, vice president, Wildlife Management Institute.

NATIONAL LIBRARY OF MEDICINE

Committee on Interstate and Foreign Commerce: Subcommittee on Health and Science ordered favorably reported to the full committee H. R. 11524 (amended), to establish a National Library of Medicine. The following witnesses were heard: David E. Price, Assistant Surgeon General, Public Health Service; Frank B. Berry, Assistant Secretary of Defense (Health and Medical); Dr. L. Quincy Mumford, Librarian of Congress; Dr. Preston A. McLendon, American Medical Association, Washington, D. C.; Dr. Worth Daniels, representing the Society of Medical Consultants to the Armed Forces; a statement for the record was submitted by Dr. William S. Middleton, Chief Medical Director, Veterans' Administration.

CORRECTION—JUDICIARY

Committee on the Judiciary: On Friday, June 8, on page D596, the DAILY DIGEST erroneously reported that H. R. 6405 was approved by Subcommittee No. 3 of the Judiciary Committee. The bill actually reported in lieu thereof was H. R. 6805 (amended), to prohibit in any lawsuit or action for damages the use and admission as evidence of investigations by the military departments of aircraft accidents conducted in the interest of air safety.

MERCHANT SHIPPING

Committee on Merchant Marine and Fisheries: Subcommittee on Merchant Marine considered but took no action on H. R. 11122, to promote the development and rehabilitation of the coastwise trade, to encourage the construction of new vessels. Witnesses heard were M. P. McLean, chairman of the board, Pan-Atlantic Steamship Corp., accompanied by Sterling Stoudenmire; Clarence Morse, Maritime Administrator; Adm. Roscoe S. Good, Deputy Chief of Naval Operations (Logistics), accompanied by Adm. Francis Dennebrink, commander, MSTS; Odell Kominers, attorney, representing the Luckenbach Steamship Co.; and Albert Rice, counsel, American Merchant Marine Institute.

LEASE-PURCHASE PROJECTS

Committee on Public Works: Subcommittee on Public Buildings and Grounds met in executive session and approved two lease-purchase projects for Federal buildings in Greenville, Miss., and Oklahoma City, Okla., respectively.

Joint Committee Meetings

COMMUNITY DISPOSAL

Joint Committee on Atomic Energy: Subcommittee on Communities held hearings to receive testimony from citizens of Oak Ridge, Tenn., regarding community disposals in their area.

Representatives of the Bureau of the Budget, Defense Department, and other departmental witnesses will be heard, 10 a. m., 1501 New House Office Building.

Subcommittee on International Operations on aid to Iran inquiry, 10 a. m., 1435 New House Office Building.

Subcommittee on Military Operations, to hear representatives of Civil Defense Research Associates, New York, on civil defense, 10 a. m., G–53 Capitol Building.

Subcommittee on Legal and Monetary Affairs on post-office procurement. Post Office Department witnesses will be heard, 10 a. m., 1537 New House Office Building.

Committee on Interior and Insular Affairs, on H. R. 10371, providing that withdrawals or reservations of more than 5,000 acres of public lands of the United States for certain purposes shall not become effective until approved by act of Congress, and related bills. Department of Defense witnesses will be heard, 10 a. m., 1324 New House Office Building.

Committee on Interstate and Foreign Commerce, executive session, on pending bills, 10 a. m., 1334 New House Office Building.

Subcommittee on Transportation and Communications, on H. R. 6141, omnibus transportation bill, and related bills, 2 p. m., 1334 New House Office Building.

Committee on the Judiciary, executive session, regular meeting day, 10 a. m., 346 Old House Office Building.

Committee on Merchant Marine and Fisheries, Subcommittee on Merchant Marine on H. R. 11122, to promote the development and rehabilitation of the coastwise trade and to encourage the construction of new vessels. Industry witnesses will be heard, 10 a. m., 219 Old House Office Building.

Committee on Post Office and Civil Service, executive session, Robeson subcommittee on S. 65, relating to retirement for employees in hazardous positions in Federal prisons, and related bills, 10 a. m., 213 Old House Office Building.

Alexander subcommittee, executive session, on H. R. 4938, relating to contracts for the conduct of contract postal stations, 10 a. m., 213 (Anteroom) Old House Office Building.

Committee on Public Works, Subcommittee on Rivers and Harbors to complete consideration of pending projects eligible for consideration for inclusion in an omnibus river and harbor bill. Projects to be considered are: Houston Ship Channel, Tex.; Freeport Harbor, Tex.; Ohio River at Gallipolis, and Licking River, Ky., 10 a. m., 1302 New House Office Building.

Un-American Activities Committee, investigating the use of passports in the furtherance of the international Communist conspiracy, 10 a. m., 362 (Caucus Room) Old House Office Building.

Committee on Veterans' Affairs, Special Subcommittee on H. R. 10477, to prohibit the payment of pensions to persons confined in penal institutions for periods longer than 61 days, and H. R. 10478, to provide for the disposition of certain benefits which are unpaid at the death of the intended beneficiary, 10 a. m., 356 Old House Office Building.

Committee on Ways and Means, executive session, to consider report of the Joint Committee on Internal Revenue Taxation re-

lating to proposed extension for 2 years of the Renegotiation Act of 1951 as amended, 10 a. m., Committee Room, New House Office Building.

Joint Committees

Joint Committee on Atomic Energy, Subcommittee on Research and Development, executive, to consider what private industry is doing in development of atomic energy, to hear Arch M. Booth, U. S. Chamber of Commerce, 3 p. m., room F–88, Capitol.

Joint Committee on the Economic Report, Subcommittee on Economic Stabilization, on Federal Reserve-Treasury relationships, 10 a. m., room P–38, Capitol.

Conferees, executive, on title I of H. R. 10660, the Federal Highway and Highway Revenue Acts of 1956, 2 p. m., 412 Senate Office Building.

Conferees, executive, on H. R. 10899, Commerce Department appropriations, 10 a. m., room F–37, Capitol.

Conferees, executive, on H. R. 10003, D. C. appropriations, 2 p. m., room F–37, Capitol.

United States of America

Congressional Record

PROCEEDINGS AND DEBATES OF THE 84th CONGRESS, SECOND SESSION

Vol. 102 WASHINGTON, TUESDAY, JUNE 12, 1956 No. 97

Senate

The Senate was not in session today. Its next meeting will be held on Wednesday, June 13, 1956, at 12 o'clock meridian.

House of Representatives

TUESDAY, JUNE 12, 1956

The House met at 12 o'clock noon.

Rev. Vernon May, First Baptist Church, Tylertown, Miss., offered the following prayer:

Almighty God, our Father, Thou who hast made us for Thyself, as we come to Thee this day, we feel a deep sense of our need. We need Thee to help us become what You would have us be. May we find our example in Him who said, "I am come not to be ministered unto but to minister and to give My life a ransom for all. Pray for them which despitefully use you and persecute you. Be not afraid, little flock, for it is the Father's good pleasure to give you the kingdom."

Help us, our Father, to recognize our individual responsibility in hastening the day when the kingdoms of this world shall become the kingdoms of our Lord and His Christ and He shall reign forever and ever.

Bless, we pray, the labors of these Thy servants to the end that justice and righteousness will prevail throughout the earth. In the name of Jesus Christ our Saviour we pray. Amen.

THE JOURNAL

The Journal of the proceedings of yesterday was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate, by Mr. Carrell, one of its clerks, announced that the Senate had passed without amendment bills, joint resolutions and a concurrent resolution of the House of the following titles:

H. R. 692. An act to authorize the Postmaster General to provide for the use in first- and second-class post offices of a special canceling stamp or postmarking die bearing the words "Pray for peace";

H. R. 1402. An act for the relief of Santiago Gonzalez Trigo;

H. R. 1484. An act for the relief of Garrett Norman Soulen and Michael Harvey Soulen;

H. R. 2045. An act for the relief of Joe Bargas;

H. R. 3744. An act to amend an act of July 1, 1947, to grant military leave of absence with pay to substitute employees in the postal field service;

H. R. 4873. An act for the relief of Lt. Comdr. Mortimer T. Clement, Medical Corps, United States Navy, retired;

H. R. 5079. An act for the relief of Tom Wong (Foo Tai Nam);

H. R. 7702. An act for the relief of Mrs. Elizabeth Shenekji;

H. R. 7913. An act authorizing the Administrator of General Services to effect the exchange of properties between the United States and the city of Cape Girardeau, Mo.;

H. R. 8709. An act to continue the effectiveness of the act of July 17, 1953 (67 Stat. 177), as amended;

H. R. 9475. An act to amend the tobacco-marketing-quota provisions of the Agricultural Adjustment Act of 1938, as amended;

H. R. 9838. An act to authorize transfer of officers of the Nurse Corps of the Regular Navy and Naval Reserve to the Medical Service Corps of the Navy, and for other purposes;

H. J. Res. 565. Joint resolution for the relief of certain aliens;

H. J. Res. 581. Joint resolution to waive certain subsections of section 212 (a) of the Immigration and Nationality Act in behalf of certain aliens;

H. J. Res. 590. Joint resolution to waive certain provisions of section 212 (a) of the Immigration and Nationality Act in behalf of certain aliens;

H. J. Res. 607. Joint resolution to authorize the disposal of the Government-owned tin smelter at Texas City, Tex., and for other purposes; and

H. Con. Res. 247. Concurrent resolution requesting the return of enrolled bill H. R. 1913.

The message also announced that the Senate had passed, with amendments in which the concurrence of the House is requested, bills and joint resolutions of the House of the following titles:

H. R. 909. An act for the relief of Charles O. Ferry and other employees of the Alaska Railroad Commission;

H. R. 2452. An act to provide for the conveyance of certain lands by the United States to the State of Wisconsin;

H. R. 5590. An act to amend the act entitled "An act to recognize the high public service rendered by Maj. Walter Reed and those associated with him in the discovery of the cause and means of transmission of yellow fever," approved February 28, 1929, by including therein the name of Gustaf E. Lambert;

H. R. 7641. An act to authorize the Secretary of the Interior to cooperate with Federal agencies in the prevention of waterfowl depredations, and for such other purposes;

H. R. 9824. An act to establish an educational assistance program for children of servicemen who die as a result of a disability or disease incurred in line of duty during World War II or the Korean conflict;

H. J. Res. 472. Joint resolution for the relief of certain aliens;

H. J. Res. 533. Joint resolution to facilitate the admission into the United States of certain aliens;

H. J. Res. 534. Joint resolution to waive certain provisions of the Immigration and Nationality Act in behalf of certain aliens;

H. J. Res. 535. Joint resolution for the relief of certain aliens;

H. J. Res. 553. Joint resolution waiving certain subsections of section 212 (a) of the Immigration and Nationality Act in behalf of certain aliens;

H. J. Res. 554. Joint resolutions for the relief of certain aliens;

H. J. Res. 555. Joint resolution to facilitate the admission into the United States of certain aliens; and

H. J. Res. 566. Joint resolution to waive certain provisions of section 212 (a) of the Immigration and Nationality Act in behalf of certain aliens.

The message also announced that the Senate had passed bills and a joint reso-

lution of the following titles, in which the concurrence of the House is requested:

S. 40. An act for the relief of Mrs. William A. Curran;

S. 911. An act for the relief of Eftalia G. Stathis and Ariadni Vassiliki G. Stathis;

S. 1104. An act for the relief of Zoltan Klar and his wife, Vilma Hartmann Klar, and their minor son, Tibor Klar;

S. 1324. An act for the relief of Salvatore di Morello;

S. 1627. An act for the relief of Alexander Orlov and his wife, Maria Orlov;

S. 1869. An act for the relief of George Papoulias and Iren Papolias (nee Birbilis);

S. 1893. An act for the relief of Harold D. Robinson;

S. 1921. An act for the relief of Ilena Issarescu and her children, Maria Ileana Habsburg-Lothringen and Alexandra Habsburg-Lothringen;

S. 2069. An act for the relief of Hsu Jen-Yuan, also known as Joseph Jen-Yuan Hsu;

S. 2229. An act for the relief of Nina Greenberg;

S. 2294. An act for the relief of Oscar Beregi and Margareth Leiss von Laimburg;

S. 2342. An act for the relief of Yvonne Rohran (Tung) Feng;

S. 2530. An act to repeal the authority of the Federal Farm Mortgage Corporation to issue bonds, and for other purposes;

S. 2585. An act to authorize an exchange of land at the Agricultural Research Center;

S. 2586. An act for the relief of Annie Feig Hildebrand;

S. 2793. An act for the relief of Waclaw Tadeusz Nowosielski;

S. 2800. An act for the relief of David Chih-Wei Kwok;

S. 2895. An act for the relief of Harriet E. Van Tassel;

S. 2827. An act for the relief of Hazel Elizabeth Scott;

S. 2842. An act for the relief of Toini Margareta Heino;

S. 2864. An act for the relief of Waltraud Grete Schramm;

S. 2943. An act for the relief of Moses Rakocinski (Rakoczynski);

S. 2954. An act for the relief of Christina Arutjuenjan;

S. 2959. An act for the relief of Edith Johanna Augusta Kienest;

S. 2999. An act for the relief of Modesto Padilla-Ceja and his wife, Maria Toscano-Padilla;

S. 3000. An act for the relief of Francesco Zammuto;

S. 3009. An act for the relief of Kiyoshi Kinoshita;

S. 3024. An act for the relief of Donald Shang-Peh Kao;

S. 3032. An act granting the consent and approval of Congress to the Middle Atlantic Interstate Forest Fire Protection Compact.

S. 3100. An act for the relief of Marianne Eder Dunbar;

S. 3120. An act to amend the Soil Conservation and Domestic Allotment Act, as amended;

S. 3145. An act to require the Bureau of the Census to develop farm income data by economic class of farm;

S. 3208. An act for the relief of Moses Rosenberg;

S. 3212. An act for the relief of Sita Koppaka Rao and Vijayaalakshmi Koppaka Rao.

S. 3235. An act for the relief of Cloepatra Vasiliadis;

S. 3314. An act to authorize the Secretary of Agriculture to pay the expenses of an Advisory Committee on Soil and Water Conservation;

S. 3344. An act to authorize the Secretary of Agriculture to convey to the Territory of Alaska certain lands in the city of Sitka, known as Baranof Castle site;

S. 3402. An act for the relief of Roberto C. Bargas and Rosenda C. Bargas;

S. 3430. An act to amend title III of the Public Health Service Act, and for other purposes;

S. 3527. An act authorizing the State highway commission of the State of Maine to construct, maintain, and operate a free highway bridge between Lubec, Maine, and Campobello Island, New Brunswick, Canada.

S. 3559. An act to amend the act of August 31, 1954, as amended, so as to extend the availability of emergency credit to farmers and stockmen;

S. 3579. An act for the relief of Elizabeth M. A. de Cuevas Faure;

S. 3581. An act to increase the retired pay of certain members of the former Lighthouse Service;

S. 3620. An act to encourage expansion of teaching and research in the education of mentally retarded children through grants to institutions of higher learning and to State educational agencies;

S. 3681. An act to modify certain restrictions with respect to holding more than one office under the United States;

S. 3698. An act to amend the act of June 4, 1920, as amended, providing for allotment of lands of the Crow Tribe, and for other purposes;

S. 3723. An act to authorize the Secretary of the Navy to convey certain land in the county of Alameda, Calif., and to accept other land in exchange therefor;

S. 3778. An act to amend the act for the protection of walruses;

S. 3907. An act to amend section 345 of the Public Health Service Act;

S. 3958. An act to improve the health of the people by assisting in increasing the number of adequately trained professional and practical nurses and professional public-health personnel, assisting in the development of improved methods of care and treatment in the field of mental health, and for other purposes; and

S. J. Res. 178. Joint resolution to authorize an appropriation to provide for certain costs of United States participation in the International Bureau for the Publication of Customs Tariffs.

The message also announced that the Senate agrees to the report of the committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10721) entitled "An act making appropriations for the Departments of State and Justice, the judiciary, and related agencies for the fiscal year ending June 30, 1957, and for other purposes."

The message also announced that the Senate agrees to the amendment of the House to the amendment of the Senate No. 19 to the foregoing bill.

The message also announced that the Presiding Officer had appointed the Senator from Arkansas, Mr. McCLELLAN, as a member of the Joint Committee on Immigration and Nationality Policy in lieu of the Senator from West Virginia, Mr. Kilgore, deceased.

INCOME-TAX DEDUCTION FOR EMPLOYEES' PENSIONS

(Mr. KEOGH asked and was granted permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. KEOGH. Mr. Speaker, in his third semiannual report, the Small Business Administrator said among other things at page 27:

Another possible revision which is worth study concerns section 401 (formerly sec. 165) of the Internal Revenue Code. This section grants tax benefits to approved pension plans for employees, including executives, of corporations. There is no similar provision available for owners of approximately 3½ million small-business concerns which are not incorporated. Employees, including corporation executives, who participate in these plans do not have to include their employers' contribution in their individual gross income until pensions are received.

The serious problem of the owners of small businesses is not only their difficulty in providing adequately for their old age and their retirement, but also their difficulty in competing with large corporations. A young man may be more attracted by the greater security afforded by a large corporation through its pension plan than by the opportunity which he may have to become an owner or a partner in a small business.

PEACEFUL USES OF ATOMIC ENERGY

(Mr. PRICE asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. PRICE. Mr. Speaker, complete elimination of destructive screw-worm fly from a tropical island, promising new techniques for irradiating deep seated brain tumors, development of better meat and milk producing cattle resistant to high climatic temperatures, techniques for planting and harvesting fish from presently nonproductive fresh water lakes, new understanding of anemia, and extended storage life of uncooked poultry, were revealed during a progress report last week by scientists using radioisotopes. These were the highlights developed at a week-long series of hearings of the Research and Development Subcommittee of the Joint Committee on Atomic Energy, of which I have the honor to be chairman.

During last week's hearings outstanding scientists reported on their work in the fields of medicine, biology, agriculture, and food sterilization in which radioactive isotopes, the byproduct of our atomic energy program, are playing a key role.

It is a tremendously gratifying experience to listen to these men describe their work, the implication of their finding and to perceive their dedicated determination to put the atom to use in treating mankind's illnesses and to develop new means to protect his health. So accustomed have we in Congress and the public at large become to hearing about the enormity of the atom's destructive power, it is refreshing indeed to hear firsthand from these capable and devoted servants of mankind of the work going on in their little advertised laboratories.

All of this work is being carried on under contract with the Atomic Energy Commission and the benefits of the scientific discoveries being made are just beginning to come out of the laboratories at an increasing rate.

For example, it was reported that a road map has been drawn of the cycle by which plants convert sunlight and

carbon dioxide into the various constituents of green plant life such as sugar. With this clearer understanding of the process scientists have actually been able by the use of certain chemicals to almost treble the amount of sugar produced by a certain form of plant. From this, for example, it is apparent that great strides have been made in unlocking the secret of how nature produces chlorophyl.

The infestation of parts of Florida by the screw-worm fly is causing an estimated loss of $10 million worth of livestock a year. The application of the techniques used in the eradication of this pest from a badly infested island if they can be successfully applied on the mainland will offset the cost of doing it, and prevent the spread of this highly destructive insect.

The full transcript of last week's hearing will be made available to the public in the very near future and it is my hope that through the wide dissemination of this committee print people everywhere will become more aware of the great and invaluable contribution to mankind being made by the peaceful applications of atomic energy.

DISTRICT OF COLUMBIA APPROPRIATIONS, 1957

Mr. RABAUT. Mr. Speaker, I ask unanimous consent that the managers on the part of the House may have until midnight tonight to file a conference report on the bill (H. R. 10003) making appropriations for the government of the District of Columbia and other activities chargeable in whole or in part against the revenues of said District for the fiscal year ending June 3, 1957, and for other purposes.

The SPEAKER. Is there objection to the request of the gentleman from Michigan?

There was no objection.

FLAG DAY EXERCISES

(Mr. RABAUT asked and was given permission to address the House for 1 minute.)

Mr. RABAUT. Mr. Speaker, I would like to call the attention of my colleagues to the Flag Day ceremonies that will be held here in the well of the House on Thursday, June 14, in commemoration of Flag Day and the second anniversary of the inclusion of the words "Under God" in the Pledge of Allegiance to the Flag. We promise you an excellent program.

The House will recess for the presentation of an interservice choral group, an honor guard, and the colors. It is hoped that a full membership will be in attendance on Flag Day.

THE CIVIL RIGHTS BILL

(Mr. O'HARA asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. O'HARA. Mr. Speaker, there is talk in the air that we shall adjourn in mid-July. I think it is only fair that I should inform the House that I shall not vote to adjourn until the civil rights bill, now bottled up in the Rules Committee, is brought to the floor of the House. Furthermore, I shall demand a record rollcall on adjournment so that every Member of the House is put on record. Whatever the platform planks of the two great political parties may say about civil rights, it will be all hogwash if from both sides of the aisle of this House enough signatures cannot be obtained to the discharge petition to bring the issue squarely out in the open while the 84th Congress is in session.

Who is holding back? Now is the time for square talking and above-the-board dealing. I am informed that all the Democratic Members from Illinois have signed the discharge petition. Let someone speak with authority for the Republican Members from Illinois. Let others speak with authority for the State delegations, both Democratic and Republican, of the other States. This is a moral, not a partisan, issue. It would be violative of every tradition of this body and indeed of the very spirit of legislative representation if we should fold up shop and return home before we have faced on this floor the greatest moral issue of our generation.

SECRETARY OF STATE DULLES

(Mr. CELLER asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include an editorial.)

Mr. CELLER. Mr. Speaker, Mr. Dulles again exemplified his talent for improvident statements. He shocked neutral nations like India, Ireland, Sweden, and Indonesia by calling neutrality obsolete and immoral.

Now all the good President Sukarno's visit did was thus dissipated.

Nehru is due July 7 to visit with the President. I suggest Nehru's visit be postponed. The President probably could not see him then and Nehru should not be compelled to take a poor substitute and thus confront Mr. Dulles who labels Nehru's India as immoral. His visit would be abortive at its threshold.

As a friend of India, I say, "Come later, Mr. Nehru, if you cannot see the President. Postpone your visit."

The strange part of the situation is that Mr. Dulles had cleared his speech at the White House, despite its inconsistency with the President's views at his last press conference that he saw no real harm in neutrality.

Apparently the right hand does not know what the left hand is doing.

The President discards the unfair theory that if one is not with us he is against us.

Dulles still adheres to this unrealistic if not dangerous notion.

I include in the Appendix a statement by Walter Lippmann which appears in today's Post and Times Herald.

[The matter referred to appears in the Appendix.]

SAFE DRIVING

(Mrs. ROGERS of Massachusetts asked and was given permission to address the House for 1 minute, to revise and extend her remarks and to include an article from the Lowell Sun.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, the award of winners of Chrysler's four-star driver awards for safe taxicab driving were given a trip to Washington yesterday. The safety awards are made to the most outstanding taxicab drivers in the entire country.

The Chrysler four-star driver award was given to John L. Michael for safety, courtesy, citizenship, and service.

Mr. Speaker, I wish every school in the Nation could hear the story of a man named John L. Michael, from Lowell, Mass., in my own district, who has driven an automobile for 41 years and never has had a chargeable action against him in all that time. Mr. Michael is 57 years old, and 23 years he has spent driving a taxicab. Much of that time has been with the Diamond Yellow Cab Taxi Service at Lowell. He is known also for his extreme courtesy and efficiency. Lowell is very proud of him.

I wish that every child in every school in the country could be told this story, and that the story could be printed and placed in every school.

Only 2 days ago the son of one of our most valued employees was critically injured by a teen-age driver who was driving at 80 miles an hour. If the children could be told the story about John Michael—this outstanding taxicab driver—they might be careful and would want to live up to his record.

It is only thoughtlessness that makes them reckless drivers. They do not mean to hurt and kill.

CORRECTION OF ROLLCALL

Mr. DEROUNIAN. Mr. Speaker, on rollcall No. 65 I am recorded as being absent. I was present and voted "yea," and I ask unanimous consent that the permanent RECORD be corrected accordingly.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

DOING BUSINESS WITH COMMUNISTS

(Mr. SMITH of Wisconsin asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

[Mr. SMITH of Wisconsin addressed the House. His remarks will appear hereafter in the Appendix.]

WHY IS AMERICA DISLIKED?

(Mrs. ST. GEORGE asked and was given permission to address the House for 1 minute and to revise and extend her remarks.)

Mrs. ST. GEORGE. Mr. Speaker, I am placing in the Appendix of the RECORD an article by M. Raymond Cartier which is, literally translated, entitled "Why Americans Are Detested in the Entire

World." I trust that the Members of this House will read the article with care, as it has many very useful suggestions. It also brings to mind the truth of that great and old adage, "Lord, leave me to my enemies but defend me from my friends." I understand on good authority that M. Cartier claims to be a great friend as well as an understanding one of the United States.

SUBCOMMITTEE ON TERRITORIES

Mr. O'BRIEN of New York. Mr. Speaker, I ask unanimous consent that the Subcommittee on Territories of the House Interior Committee may meet this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

SUPPLEMENTING FEDERAL RECLAMATION LAWS

Mr. ENGLE. Mr. Speaker, I call up the conference report on the bill (H. R. 5881) to supplement the Federal reclamation laws by providing for Federal cooperation in non-Federal projects and for participation by non-Federal agencies in Federal projects, and ask unanimous consent that the statement of the managers on the part of the House be read in lieu of the report.

The Clerk read the title of the bill.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

CALL OF THE HOUSE

Mr. SAYLOR. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

Mr. McCORMACK. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 66]

Andersen, H. Carl	Fogarty	Machrowitz
Anfuso	Fulton	Mailliard
Ashmore	Gamble	Merrow
Barden	Garmatz	Miller, Calif.
Bell	George	Morrison
Boland	Gray	Nelson
Bolton, Oliver P.	Hale	O'Hara, Ill.
Brooks, Tex.	Halleck	O'Hara, Minn.
Byrne, Pa.	Hays, Ohio	Phillips
Cannon	Healey	Powell
Carnahan	Hoffman, Ill.	Prouty
Christopher	Hoffman, Mich.	Reed, N. Y.
Chudoff	Holtzman	Rhodes, Ariz.
Cooley	Hope	Richards
Coudert	Horan	Rivers
Curtis, Mass.	Hyde	Shelley
Dawson, Ill.	Jackson	Sisk
Diggs	Jensen	Thompson, La.
Donovan	Kee	Thornberry
Dorn, S. C.	Kelley, Pa.	Tumulty
Dowdy	King, Calif.	Velde
Eberharter	Lane	Wickersham
Fjare	McConnell	Williams, N. J.
Flood	McDowell	Willis
	McIntire	Wilson, Calif.
	McMillan	Zelenko

The SPEAKER. Three hundred and fifty-eight Members are present, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SUPPLEMENTING FEDERAL RECLAMATION LAWS

The SPEAKER. The Clerk will read the statement of the managers on the part of the House.

The Clerk read the statement.

(For conference report and statement, see proceedings of the House of May 23, 1956.)

The SPEAKER pro tempore (Mr. PRESTON). The gentleman from California [Mr. ENGLE] is recognized for 1 hour.

Mr. ENGLE. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, this is the conference report on the small-projects bill which passed the House on May 28, I believe, of last year.

The purpose of this bill is to provide Federal assistance to local irrigation districts, water districts, and other public agencies in the construction of small projects.

The effect of the bill would be to permit the local agencies to build the small projects themselves rather than the Bureau of Reclamation, using the same funds the Bureau could use for that purpose; but, in my opinion, less of those funds, because local agencies can build small projects more cheaply.

This legislation has twice passed the House of Representatives, having passed the House in the preceding Congress under the authorship of the distinguished gentleman from Nebraska, the then chairman of the House Committee on Interior, Dr. MILLER, where it failed of passage in the Senate in the last few days.

It again passed the House by a substantial vote in the spring of last year. When the bill was reported from our committee it applied the provisions for the benefit of small projects to all of the 48 States and was amended in the House to provide that with reference to those States, outside of the 17 Western reclamation States—that is, the 31 Southern and Eastern States—the act should be administered by the Department of Agriculture rather than the Department of the Interior.

The bill went over to the other side and the Senate struck out all of the provisions of the House bill and substituted a bill of its own containing two titles. The first title applied only to the 17 Western States and was substantially the bill which passed the House. Title II of the bill provided for operation of the law with reference to the 31 Eastern and Southern States under the Department of Agriculture, although by its terms it was applicable to the entire 48 States. In other words, in the other body the bill was rewritten. Title I applied to the 17 Western States, being in effect the measure passed by this House. The other States were then segregated and put in title II under the administration of the Department of Agriculture with substantially different terms and conditions relating to the type of projects which qualified for Federal assistance and the type of aid that would be given.

The House disagreed to the Senate amendments and asked for a conference during the latter part of the last session, but in the crowded situation that existed at that time we found it impossible to work out the differences between the two houses; therefore, the conference was adjourned over until this session.

In the interim, however, a request was sent to the various executive agencies to determine what their views were of the bill as written in two titles by the Senate and more particularly that portion which was included in title II and which applied to the 31 Eastern and Southern States. The various departments responded. The Department of Agriculture filed its report on January 9, 1956, as did the Department of the Interior on January 11, 1956, and the Bureau of the Budget on January 9, 1956. Each one of those agencies recommended that title II, relating to the operation of this small-project program under the Department of Agriculture, be stricken from the bill and be handled in separate legislation.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. Let me finish my statement.

Mr. GAVIN. I just wanted an explanation of why they disagreed.

Mr. ENGLE. I will be glad to elaborate on that part.

The Bureau of the Budget stated:

The Bureau also recommends that the Congress defer action on title II of the bill at this time and that the legislative authority to extend Federal assistance for irrigation development in the 31 Eastern States be enacted separately from H. R. 5881. The Secretary of Agriculture will recommend to the Congress the extent to which Federal assistance is required and the terms and conditions under which it should be extended.

The Department of Agriculture said:

The Department of Agriculture believes that the purposes sought in title II of H. R. 5881—

Which is the bill before you—

can most successfully be accomplished by amendment to Public Law 566, 83d Congress—

Which, by the way, is the Watershed Protection Act—

which will, if enacted, permit the Secretary of Agriculture to perform as an integral part of the agricultural services the purposes provided for in title II of H. R. 5881.

The Department of the Interior was a little more explicit on the point, saying:

Considering the differences between the two versions and the problems involved in integrating operations under either of them with operations under the Water Facilities Act and the Watershed Protection and Flood Prevention Act, leads us to join the Bureau of the Budget and the Department of Agriculture in recommending that coverage of the Eastern States in H. R. 5881 be deleted. This recommendation is made without prejudice to later consideration when the various problems inherent in the proposal have been satisfactorily resolved.

Now, subsequent to that time, as I was about to say, the gentleman from Texas [Mr. POAGE] introduced a separate bill, and it was brought before this House and passed the House of Representatives

some weeks ago. That bill is presently pending in the Committee on Public Works in the Senate. During the debate on that bill, which was the direct result of these departmental recommendations that these two matters be segregated and the projects under the Department of Agriculture be handled separately from the consideration of those under the Department of the Interior, Mr. HOPE, the ranking minority member of the House Committee on Agriculture, said this on page 6161 of the CONGRESSIONAL RECORD of April 24, 1956, when the Poage bill was under consideration. The Poage bill, for the purpose of the record, is H. R. 8750. He said:

> It has been a disturbing thing to the Department of Agriculture to find that they would be compelled to administer two programs, each authorized by a separate piece of legislation, which, in a sense, would be competing with each other.

He was referring to the Watershed Protection Act and the Water Facilities Act, both of which are administered under the Department of Agriculture.

Continuing, he said:

> This legislation will clarify that matter, and I assume in the conference between the two Houses on the small-projects bill the conflicting matter will be eliminated.

I have discussed the matter with the gentleman from Texas [Mr. POAGE], who is the author of H. R. 8750, the bill relating to the Department of Agriculture pending in the other body now, for the purpose of implementing the reports filed by Agriculture, Interior, and the Budget, and he is in agreement, too, that it would be just as well to eliminate title II from this bill.

The Poage bill is somewhat different in its terms than Senate title II which was tacked onto the bill presently before you. The suggestion was made that it might be possible to put the Poage bill into this conference report. There were certain questions which arose in connection with that which made it impossible for us to do it; not only the parliamentary matters involved, that is, taking the House-passed bill which came out of a different committee and in effect legislating in a conference committee to put that bill into the conference report, but in addition to that, the separate bill by the gentleman from Texas is presently pending over in the Senate where it was first referred to the Committee on Agriculture and subsequently to the Committee on Public Works. The Members can understand that there is a grave question of propriety of a committee of Congress taking over somebody else's bill, putting it in a conference report, and thereby depriving the regularly established committees of the other body of the consideration of that measure.

So the conference report which we have brought back has the complete concurrence of the Members of the conference of the two bodies, except for the gentleman from Pennsylvania [Mr. SAYLOR], who does not join in this report and Senator LONG, who on the Senate side did not join—4 Members of the House and 4 Members of the Senate joined in the conference report. This conference report strikes out the title II part of the Senate bill and substitutes what is in effect the bill passed by the House in May of last year applying only to the 17 Western States. The remainder will be taken care of in the separate legislation authored by the gentleman from Texas [Mr. POAGE] voted through this House and now pending in the other body.

So the conference report before us today is for all practical purposes the same measure that the House passed in May of last year limited to the 17 Western States. There are no really significant changes except for 1 or 2 smaller items that were referred to in the statement read of the managers on the part of the House with reference to certain of the details in the handling of these projects when they come before the Congress of the United States.

Mr. AVERY. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman.

Mr. AVERY. I am sorry I did not hear the complete statement made by the gentleman from California. As he probably knows, I am very much interested in the Poage bill. May I ask, did the managers on the part of the Senate, in the conference committee, give the gentleman from California any assurance that they would support the Poage bill as it was sent over to the Senate, if it were deleted from this conference report?

Mr. ENGLE. It is very difficult for me, as chairman, to refer to what happened in the conference itself; but I would say to the gentleman that it is my opinion that all members of the conference will support the Poage bill in the Senate and that every effort will be made to get the Poage bill out of the committee in the Senate, get it to the floor of the Senate and send it down to the White House simultaneously with this bill. I say, without referring to anything that went on in the conference itself, that it is my opinion that that will be done. For my own part, I will say to the gentleman that I do favor the Poage bill and any assistance that I can give in getting it enacted into law, I intend to do. That was everybody's understanding. There is no conflict between us here. I discussed this matter with Mr. POAGE and he is satisfied with this conference report and the action that we took.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman.

Mr. GAVIN. I want to say to the gentleman that just because Mr. POAGE is satisfied is not any reason why a great many of us are satisfied because, even though the gentleman from California and the gentleman from Texas are satisfied, that is not any reason why we should vote $100 million to 17 States, eliminating the other 31 States in the East. It does not make sense to me. The gentleman says that the Senate may consider the bill. Surely, they may consider it. But with the heavy schedule ahead and in the rush that will develop, it may never even get anywhere in the Senate.

Mr. ENGLE. The gentleman must keep in mind that there are some things that one can do in a conference and other things that one cannot do. I have tried to explain to the gentleman the difficulty we had due to the fact that we had a separate House-passed bill dealing precisely with that very subject matter, introduced in and passed by this House pursuant to the recommendations of the Bureau of the Budget, the Department of Agriculture and the Department of the Interior.

Mr. BOLAND. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield.

Mr. BOLAND. Is it not true that the 31 States about which the gentleman from Pennsylvania [Mr. GAVIN] is so much concerned, are adequately protected under the Poage bill that passed the House?

Mr. ENGLE. That is correct. They all want that bill. The problem which arose and on which there has been some discussion by my friend from Pennsylvania [Mr. SAYLOR], and I assume concurred in by his colleague from Pennsylcania [Mr. GAVIN], is that we did not hook the two of them together; and I tried to say that it just was not possible to do it.

Mr. GAVIN. It would be very satisfactory if the Poage bill were up here today. I heartily concur in the suggestion that the legislation is important. I should like to see it passed, but I do not want the other 31 States bypassed. The gentleman can give us no assurance that the Senate is going to take favorable action. I am interested in the East, as other people are interested in the Northwest. We, too, should participate in these programs that make great contributions to the conservation of our water supply in our economic and industrial life.

Mr. ENGLE. Will the gentleman withhold for just a minute for me to make this comment? His colleague, the gentleman from Pennsylvania, was a part of the conference. He knows what discussions occurred there. I am perfectly sure that the gentleman from Pennsylvania [Mr. SAYLOR] will be glad to discuss that with his colleague, but I cannot stand here on the floor, as the gentleman well knows, and discuss matters that occurred in the conference.

Mr. MILLER of Nebraska. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield.

Mr. MILLER of Nebraska. I call to the attention of the gentleman from Pennsylvania that the big difference between the Poage bill and this bill here is that the money involved in this bill will go to the local groups, who will repay it to the Treasury of the United States. Under the Poage bill, the hundreds of millions of dollars that go to the other States are not reimbursable to the Treasury of the United States.

Mr. GAVIN. Mr. Speaker, if the gentleman will yield further, may I say that, knowing the gentleman from Pennsylvania [Mr. SAYLOR] and knowing of his past record and stand, certainly the gentleman does not want to make it appear as though he concurred in the recommendations of the conferees, even if he was in the conference.

Mr. ENGLE. I made no such implication.

Mr. GAVIN. I doubt very much, knowing him as I do, that he would be taking such a position. I presume he was in the minority and, therefore, there was nothing he could do except to protest. If the group was in agreement, well, he might take the position, but he did not get anywhere. No doubt he will tell us of his position on the matter.

Mr. ENGLE. The gentleman raised a question as to what the other body was going to do with this legislation and with reference to whether or not there was a good faith intention to press the Poage bill on the other side. That is the matter to which I was referring and on which the gentleman can certainly secure adequate information.

Mr. YOUNG. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman from Nevada.

Mr. YOUNG. I wonder if the gentleman can tell us the relationship between the small-projects bill and the Rehabilitation and Betterment Act. Does the small-projects bill purport to amend or supersede in any way the rehabilitation and betterment legislation now on the books?

Mr. ENGLE. As far as I know, it does not. It is separate legislation that deals with physically small projects, permitting local agencies to build projects of that character themselves rather than have the Bureau of Reclamation do them more expensively. There is no project which is authorized by this bill which cannot be built under present reclamation law, but we think more of them will be built, and be built more cheaply, if this bill goes into effect.

Mr. YOUNG. One more question regarding the size of the project. I notice that the upper limitation is $5 million except in certain cases where projects between $5 and $10 million could qualify, providing the applying organization financed all costs in excess of what the charge would be if the project cost $5 million. To take a specific case, assume there was a $9-million project, one-third flood control, one-third reclamation, and one-third power. Would this mean a participating organization would receive one-third of $5 million, for example, for flood control, or would it be $3 million, the relationship to the overall cost of $9 million?

Mr. ENGLE. It is only contemplated that the total amount of money which can be advanced in non-interest-bearing loans total not in excess of $5 million for any one project. If there are nonreimbursables in the project, they are nonrepayable as they are presently under the law.

Mr. YOUNG. Is the overall project reduced to $5 million for the purpose of determining the participation by the Federal Government with the local agencies? I notice in the legislation it is stated that the upper limit is $5 million. There are certain projects between five and ten million that may qualify, providing the organization will finance all costs in excess of what would be required, the $5 million.

Mr. ASPINALL. In excess of $5 million. That was the provision in the first bill as it went through the House. That provision is in there. I think the chairman should explain the question of the procedure in reporting back to the Congress on projects over a certain amount. I think that would be of benefit.

Mr. ENGLE. We have been very careful in this bill to give control to the Congress itself of these small projects. That matter is referred to on page 7 of the conference report in the third paragraph, which I will read:

> Another significant change to the House-passed bill adopted by the conference committee relates to the authorization procedure. The bill, as it passed the House, would have required the Secretary to submit project proposals which he approved to both branches of the Congress and to not execute a contract covering any proposal prior to 60 days following such submission. This procedure would permit the review of the proposals by the Congress but it would not provide for approval or disapproval of such proposals. The conference committee retained this provision but extended it to provide for approval or disapproval by the appropriate House and Senate committees within the 60-day period. If either committee should disapprove a project proposal, approval by the Congress would be required before the Secretary could execute the contract.

This is important because it gives the Congress a chance to look these projects over. The Secretary of the Interior cannot sit down and parcel out these projects without any surveillance by the congressional committees. The Committee on Appropriations first passes on the amount of money and the authorizing committee has the right to review and reject the project. If the authorizing committee reviews and rejects the project by resolution thereupon the project cannot be built unless it is authorized by the Congress. That is an important provision it seems to me and it is the one to which the gentleman referred.

CALL OF THE HOUSE

Mr. GAVIN. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. PRESTON). The Chair will count. [After counting.] Ninety-two Members are present, not a quorum.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 67]

Andersen, H. Carl	Eberharter	Lipscomb
Anfuso	Fjare	McConnell
Ashmore	Fulton	McIntire
Bell	Gamble	McMillan
Betts	Garmatz	Machrowicz
Bolton, Oliver P.	George	Mailliard
Byrne, Pa.	Gray	Mason
Cannon	Hale	Miller, Calif.
Carlyle	Halleck	Mollohan
Carnahan	Hays, Ohio	Morrison
Christopher	Healey	Nelson
Chudoff	Hoffman, Ill.	O'Hara, Minn.
Cooley	Hoffman, Mich.	O'Neill
Coudert	Holtzman	Patman
Curtis, Mass.	Hope	Phillips
Dawson, Ill.	Horan	Powell
Denton	Jackson	Prouty
Diggs	Jensen	Reed, N. Y.
Dondero	Kee	Rhodes, Ariz.
Dorn, S. C.	Kelley, Pa.	Richards
Dowdy	King, Calif.	Riehlman
	Krueger	Rivers
	Lane	Robsion, Ky.
Rogers, Fla.	Vanik	Williams, N. J.
Sisk	Velde	Wolverton
Thompson, La.	Vorys	Zelenko
Thornberry	Wainwright	
Tumulty	Wickersham	

The SPEAKER. On this rollcall 350 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

DEPARTMENT OF COMMERCE AND RELATED AGENCIES APPROPRIATION BILL, 1957

Mr. PRESTON. Mr. Speaker, I ask unanimous consent that the Committee on Appropriations may have until midnight tonight to file a report on H. R. 10899, the Department of Commerce and related agencies appropriation bill for the fiscal year 1957.

The SPEAKER. Is there objection to the request of the gentleman from Georgia?

There was no objection.

The conference report and statement follow:

CONFERENCE REPORT (H. REPT. No. 2344)

The committee of conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10899) "making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1957, and for other purposes," having met, after full and free conference, have agreed to recommend and do recommend to their respective Houses as follows:

That the Senate recede from its amendments numbered 2, 4, 5, 15, 25, and 26.

That the House recede from its disagreement to the amendments of the Senate numbered 8, 12, 13, 24, 27, 29, 30, and 31, and agree to the same.

Amendment numbered 1: That the House recede from its disagreement to the amendment of the Senate numbered 1, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$2,450,000"; and the Senate agree to the same.

Amendment numbered 3: That the House recede from its disagreement to the amendment of the Senate numbered 3, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$7,475,000"; and the Senate agree to the same.

Amendment numbered 6: That the House recede from its disagreement to the amendment of the Senate numbered 6, and agree to the same with an amendment, as follows: In lieu of the matter stricken out and inserted by said amendment insert "one hundred"; and the Senate agree to the same.

Amendment numbered 7: That the House recede from its disagreement to the amendment of the Senate numbered 7, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$126,804,000"; and the Senate agree to the same.

Amendment numbered 9: That the House recede from its disagreement to the amendment of the Senate numbered 9, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$4,625,000"; and the Senate agree to the same.

Amendment numbered 10: That the House recede from its disagreement to the amendment of the Senate numbered 10, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$16,200,000"; and the Senate agree to the same.

Amendment numbered 11: That the House recede from its disagreement to the amendment of the Senate numbered 11, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$10,900,000"; and the Senate agree to the same.

Amendment numbered 14: That the House recede from its disagreement to the amendment of the Senate numbered 14, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$960,000"; and the Senate agree to the same.

Amendment numbered 16: That the House recede from its disagreement to the amendment of the Senate numbered 16, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$82,700,000"; and the Senate agree to the same.

Amendment numbered 17: That the House recede from its disagreement to the amendment of the Senate numbered 17, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,115,000"; and the Senate agree to the same.

Amendment numbered 18: That the House recede from its disagreement to the amendment of the Senate numbered 18, and agree to the same with an amendment, as follows: In lieu of the matter proposed by said amendment insert "$15,350,000"; and the Senate agree to the same.

Amendment numbered 19: That the House recede from its disagreement to the amendment of the Senate numbered 19, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$15,350,000"; and the Senate agree to the same.

Amendment numbered 20: That the House recede from its disagreement to the amendment of the Senate numbered 20, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$6,500,000"; and the Senate agree to the same.

Amendment numbered 21: That the House recede from its disagreement to the amendment of the Senate numbered 21, and agree to the same with an amendment, as follows: In lieu of the sum proposed by said amendment insert "$1,600,000"; and the Senate agree to the same.

The committee of conference report in disagreement amendments numbered 22, 23, and 28.

STATEMENT

The managers on the part of the House at the conference on the disagreeing votes of the two Houses on the amendments of the Senate to the bill (H. R. 10899) making appropriations for the Department of Commerce and Related Agencies for the fiscal year ending June 30, 1957, and for other purposes, submit the following statement in explanation of the effect of the action agreed upon and recommended in the accompanying conference report as to each of such amendments, namely:

TITLE I—DEPARTMENT OF COMMERCE

General administration

Amendments Nos. 1 and 2—Salaries and expenses: Appropriate $2,450,000 instead of $2,425,000 as proposed by the House and $2,465,000 as proposed by the Senate, and eliminate language inserted by the Senate providing funds to be expended upon the certificate of the Secretary.

The conferees concur in the statement contained in the Senate committee report concerning the handling of personnel transfers to the Office of the Under Secretary for Transportation.

Bureau of the Census

Amendment No. 3—Salaries and expenses: Appropriates $7,475,000 instead of $7,413,000 as proposed by the House and $7,575,000 as proposed by the Senate.

Amendment No. 4—Census of governments: Appropriates $1,750,000 as proposed by the House instead of $2,100,000 as proposed by the Senate. The action of the conferees is not intended to reduce any of the functions proposed under this program.

Amendment No. 5—National housing inventory: Appropriates $1,000,000 for a survey of housing as proposed by the House instead of $650,000 for a national intercensal survey of housing as proposed by the Senate.

Civil Aeronautics Administration

Amendment No. 6—Operation and regulation: Authorizes the replacement of 100 passenger motor vehicles instead of 90 as proposed by the House and 110 as proposed by the Senate.

Amendment No. 7—Operation and regulation: Appropriates $126,804,000 instead of $125,000,000 as proposed by the House and $128,608,000 as proposed by the Senate. The amount agreed to by the conferees includes the sum of $108,000 to permit continued operation of 39 intermediate landing fields scheduled for discontinuance in the coming year.

Amendment No. 8—Establishment of air navigation facilities: Appropriates $40,000,000 as proposed by the Senate instead of $37,500,000 as proposed by the House.

Civil Aeronautics Board

Amendment No. 9—Salaries and expenses: Appropriates $4,625,000 instead of $4,550,000 as proposed by the House and $4,700,000 as proposed by the Senate.

Amendment No. 10—Payments to air carriers: Appropriates $16,200,000 instead of $15,000,000 as proposed by the House and $17,400,000 as proposed by the Senate.

Coast and Geodetic Survey

Amendment No. 11—Salaries and expenses: Appropriates $10,900,000 instead of $10,800,000 as proposed by the House and $11,020,000 as proposed by the Senate.

Amendment No. 12—Construction of a surveying ship: Appropriates $3,700,000 as proposed by the Senate instead of $3,400,000 as proposed by the House.

Business and Defense Services Administration

Amendment No. 13—Salaries and expenses: Appropriates $6,900,000 as proposed by the Senate instead of $7,200,000 as proposed by the House.

Office of Business Economics

Amendment No. 14—Salaries and expenses: Appropriates $960,000 instead of $1,000,000 as proposed by the House and $900,000 as proposed by the Senate.

Maritime activities

Amendment No. 15—Ship construction: Reinstates House language authorizing reconditioning and betterment of one ship in the national defense reserve fleet which was stricken by the Senate.

Amendments Nos. 16 and 17—Ship construction: Appropriates $82,700,000 instead of $54,800,000 as proposed by the House and $108,880,000 as proposed by the Senate, and approves $1,115,000 for transfer to salaries and expenses instead of $1,000,000 as proposed by the House and $1,232,000 as proposed by the Senate.

The appropriation agreed to by the conferees includes $2,300,000 for the conversion of two mariners for the American President Lines, $65,000,000 for the ship replacement program, $10,000,000 for acquisition of replaced ships, $4,000,000 for research and development, and $1,400,000 for administrative and warehouse expenses.

Amendment No. 18—Operating differential subsidies: Approves 2,040 voyages instead of 2,000 as proposed by the House and 2,075 as proposed by the Senate.

Amendments Nos. 19, 20, and 21—Salaries and expenses: Appropriates $15,350,000 instead of $15,187,000 as proposed by the House and $15,500,000 as proposed by the Senate, and authorizes $6,500,000 for administrative expenses, instead of $6,482,000 as proposed by the House and $6,600,000 as proposed by the Senate, and $1,600,000 for maintenance of shipyards and reserve training facilities and operation of warehouses, instead of $1,445,000 as proposed by the House and $1,650,000 as proposed by the Senate.

Inland Waterways Corporation

Amendment No. 22—Reported in disagreement.

National Bureau of Standards

Amendment No. 23—Construction of facilities: Reported in disagreement.

TITLE II—THE PANAMA CANAL

Amendment No. 24—Panama Canal Company: Authorizes $3,679,000 for general and administrative expenses as proposed by the Senate instead of $3,562,100 as proposed by the House.

Amendments Nos. 25 and 26—Panama Canal Company: Authorize the purchase of not to exceed 18 passenger motor vehicles for replacement only as proposed by the House.

TITLE III—INDEPENDENT AGENCIES

Amendment No. 27—St. Lawrence Seaway Development Corporation: Authorizes $325,000 for administrative expenses instead of $315,000 as proposed by the House.

Amendment No. 28—St. Lawrence Seaway Development Corporation: Reported in disagreement.

Amendment No. 29—St. Lawrence Seaway Development Corporation: Authorizes the purchase of four passenger motor vehicles as proposed by the Senate instead of three as proposed by the House.

Amendments Nos. 30 and 31—Salaries and expenses, Small Business Administration: Appropriate $1,900,000 as proposed by the Senate instead of $1,890,000 as proposed by the House, and authorize the transfer of $4,634,000 from the revolving fund as proposed by the Senate instead of $4,610,000 as proposed by the House.

Managers on the Part of the House.

SUPPLEMENTAL FEDERAL RECLAMATION LAWS

Mr. ENGLE. Mr. Speaker, I regret that some Members were taken from

other matters in connection with this quorum call, but I would like to use the opportunity while they are here to restate the basic proposition that is before the House, and that is that this small-projects bill comes back here limited to the 17 Western States, because the House of Represenatives a few weeks ago passed separate legislation under the authorship of the gentleman from Texas [Mr. POAGE], which puts the administration of small projects in other areas of the United States under the jurisdiction of the Department of Agriculture; that bill is currently pending over in the Senate. It was not possible to sit and legislate as a conference committee with legislation in separate bills pending before the Senate, which had already passed the House, and to include that legislation then in this conference report.

Mr. POAGE. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman from Texas.

Mr. POAGE. I think the gentleman from California has well stated the situation. Some of the friends of this program, some of those who have been deeply interested in establishing a program all over the United States that would enable people in all parts of the country to enjoy the advantages of local irrigation and other water uses, have felt that if we passed this conference report today before we passed the bill that the Committee on Agriculture brought you some time ago and is now pending in the Senate, that we would be jeopardizing the opportunity to extend this program nationwide.

I think that is a mistake because I believe, if we pass this conference report and make the Engle bill applicable to the 17 Western States, that we have then given them a needed tool with which to work out their problem; that if we can then pass the small watersheds bill, as brought out by the Committee on Agriculture, we will have provided an effective tool for all of the United States; and that between the two we will have a very effective program of water utilization throughout the country.

I know that there are those who say that if you pass this bill you will get no help in passing a watersheds bill. That has not been my experience with the gentleman who now stands before you and those who have worked with him on this bill. I think that we may certainly assume that we will have all the support and all the cooperation that it is possible for them to give us.

I know that in the other body there is a considerable feeling that possibly they might even hold up action on this conference report until such time as they have had an opportunity at least to pass upon the watersheds bill in their committee and determine whether or not they were going to consider it there on the floor. They have that opportunity and I think we may rely upon them to use it intelligently. I do not think we should put ourselves in the position of forcing them to do something that they do not want to do. But I believe that we may rely upon them to do the intelligent thing, and by doing it we will have a well-rounded program.

Mr. ENGLE. Mr. Speaker, I appreciate the statement of the gentleman, and certainly he is correct. The problem develops from the fact that one portion of this program is administered under the Department of the Interior and the other under the Department of Agriculture. Each of those departments recommended separate legislation, concurred in by the Bureau of the Budget. When the separate legislation was passed by the House it preempted that field, so far as that legislation was concerned.

Mr. SMITH of Mississippi. Mr. Speaker, will the gentleman yield?

Mr. ENGLE. I yield to the gentleman.

Mr. SMITH of Mississippi. If the conference report before us today is approved and if the Poage watersheds bill is approved and still it develops that the effort to get an adequate local irrigation program for the States that are not in the present reclamation program is not successful, is it the idea of the gentleman from California that his committee would be receptive to correcting any defects that might develop in the coming year that could not be handled by legislation from the Committee on Agriculture; that is, if it develops that it is necessary for us to bring in the Department of the Interior in the Eastern States into this program, how would the gentleman react to that?

Mr. ENGLE. We tried to do that. Our original bill included the 48 States under the Department of Agriculture. If you have trouble with the Poage bill we will amend this law to put you in.

CALL OF THE HOUSE

Mr. GAVIN. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER. Evidently no quorum is present.

Mr. ALBERT. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 68]

Andersen, H. Carl	Garmatz	Miller, N. Y.
Ashmore	George	Morrison
Bell	Gray	Nelson
Betts	Hale	O'Hara, Minn.
Boggs	Halleck	Phillips
Bolton, Oliver P.	Hays, Ohio	Powell
Byrne, Pa.	Healey	Prouty
Cannon	Hébert	Rains
Carnahan	Heselton	Reed, N. Y.
Chudoff	Hoffman, Ill.	Rhodes, Ariz.
Cooley	Hoffman, Mich.	Richards
Coudert	Holtzman	Rivers
Curtis, Mass.	Horan	Robsion, Ky.
Dawson, Ill.	Jackson	Sieminski
Deane	Jensen	Sisk
Diggs	Kean	Spence
Dondero	Kee	Thompson, La.
Dorn, S. C.	Kelley, Pa.	Thornberry
Dowdy	Krueger	Tumulty
Eberharter	Lane	Velde
Fjare	McConnell	Vorys
Fogarty	McIntire	Wainwright
Fulton	Machrowicz	Wickersham
Gamble	Mailliard	Williams, N. J.
	Mason	Wolverton
	Miller, Calif.	Zelenko

The SPEAKER. Three hundred fifty-one Members are present, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

SUPPLEMENTING FEDERAL RECLAMATION LAWS

The SPEAKER. The gentleman from California will proceed.

Mr. ENGLE. Mr. Speaker, at the time of the quorum call I was answering a question by the gentleman from Mississippi preparatory to getting around to yielding some time to the gentleman from Pennsylvania [Mr. SAYLOR] which I will do immediately after answering this question.

The gentleman from Mississippi asked whether or not our committee would cooperate in getting irrigation benefits for the Eastern and Southern States if for some reason or other difficulty is encountered with the Poage bill.

My answer to him is that the bill now before us when it came out of our committee applied to the 48 States but provided for the administration of the entire program in the whole country by the Department of the Interior. On the floor of the House, however, the Department of Agriculture was put in charge of projects outside of the 17 Western States which, of course, is the genesis of the difficulty we have had and as a result of which separate legislation has been introduced to authorize these small projects by the Department of Agriculture in other parts of the country.

So the answer to the gentleman's question is, Yes; and the precedent of the committee's action in including the 48 States is the best evidence I can cite to him of our intention and the attitude of our committee with reference to aiding the other States.

The SPEAKER. The time of the gentleman from California has expired.

Mr. ENGLE. Mr. Speaker, I yield 10 minutes to the gentleman from Pennsylvania [Mr. SAYLOR].

(Mr. SAYLOR asked and was given permission to revise and extend his remarks.)

Mr. SAYLOR. Mr. Speaker, in May of 1955 when the House Committee on Interior and Insular Affairs reported the bill H. R. 5881 to the House, the jurisdiction of the Secretary of the Interior extended to the 48 States and the Territories of Hawaii and Alaska. When that bill was called up for debate on the floor of the House on May 26, 1955, there was an amendment offered by Mr. JONES of Alabama to limit the authority of the Secretary of the Interior to the 17 Western Reclamation States and in the 31 Midwestern, Eastern, Southern States and the Territories of Hawaii and Alaska the Secretary of Agriculture would administer the provisions of the bill. That is the way the bill passed the House.

It went over to the Senate, and the Senate also passed a bill covering the 48 States and the Territories of Hawaii and Alaska.

We went to conference in June of 1955. The conferees appointed on the part of the House were our good chairman, Mr. ENGLE, Mr. ASPINALL, Mr. O'BRIEN of New York, Mr. MILLER of Nebraska, and myself. The managers on the part of the Senate were Senators ANDERSON, BIBLE, WATKINS, BARRETT, and LONG of Louisiana.

It is interesting, and the Members of the House should know, that 7 of the 10 conferees came from the 17 Western States. All of the conferees who signed that report with the exception of the Honorable LEO O'BRIEN came from the 17 Western States. Senator LONG and myself did not sign this conference report. I could not in good conscience sign it. I am therefore going to ask the Members of the House to recommit this to the conferees because the House and the Senate both have spoken and have explicitly stated they expected this bill to apply to the 48 States, and the Territories of Hawaii and Alaska.

What the conferees did, in my opinion, was to absolutely disregard the will of the House and to absolutely disregard the will of the Senate and write their own legislation. This bill now gives the same $100 million not to the 48 States and the two Territories. This gives the $100 million to the 17 Western States.

Mr. Speaker, it is true, as has been pointed out, that we have passed the Poage bill, and I voted for that bill and I will support it and I hope that it will be come law; but the very reasons that has been given that we should accept this conference report indicates to me that the major premise of the proponents' argument is false, because if we should pass the Poage bill it will take care of not just the other 31 States but the entire 48 States. Why therefore should we pass this bill just to take care of the 17 Western States? If the Poage bill is as good as the chairman of our committee has said it is and as Mr. POAGE says it is, and as I hope that it is, we do not need this legislation, for all the States will be provided for. Why should we give to the 17 Western States the $100 million provided for in this conference report when the House of Representatives and the United States Senate said it should extend to all 48 States? To me, the proponents and conferees who signed this report fail to answer that important question.

May I say to the Members who come from the Midwest, Eastern, and Southern States that probably each and every one of you have had the same experience I have had. Municipalities and interested groups in your home communities have written to you to ask whether or not there is anything in the law that would enable them to get a little Federal help so that they might improve their water system or that they might enlarge their water system, or control their waste water, or irrigate their lands. They do not ask for a Federal grant but they would like just a little Federal help. They have been hearing about the fact that the 17 Western States have been able to use the Bureau of Reclamation and through it secure Federal funds to get help for the towns in those 17 Western States for the very type of project that yours and my communities are seeking. But we in the Midwest, East, and the South have had absolutely no help from the Federal Government for these identical projects. One of the things I had hoped would come out of the conference was that the Midwest, the East, and the South would be able to get for our communities just the same benefits enjoyed by the 17 Western States for so many years at the expense of the Midwest, the East, and the South. During the many sessions of the conference Senator LONG and I did not try to cut down the rights enjoyed by the 17 Western States. We only ask that our people be entitled to the same benefits. But, no, no; we did not get that. We were told that this bill should be changed to take care of the 17 Western States and if any help were to be given to the Midwest, the East, and the South it would come from the Poage bill. Under the guise of the Poage bill being passed some day we were told we could have no help in this conference report; that we in the 31 Midwest, Eastern, and Southern States could not have the same benefits for our communities to help them with their municipal water supply, to help them with their industrial water supply, to help them with their saline water control problems that we have in all of the Eastern States and on the Gulf of Mexico. No; we are cut out; we will have to rely on the Poage bill.

Well, let us see what has happened to the Poage bill. The Poage bill, as it passed the House of Representatives, was referred to the Senate and was sent to the Senate Agriculture Committee. Since it came before the House Agriculture Committee, it went, I think, to the proper committee, but the great chairman of the Senate Agriculture Committee asked that his committee be discharged from the consideration of that bill and had it referred to another committee. I have recently been informed that it has since been reported to a third committee and not reported out as of this time.

Now, when the House of Representatives passes a bill covering 48 States, which enables the people in every town and hamlet in the Midwest, the East, and the South to get some assistance from the Federal Government for their water-control problems—and I think it is conceded by all Members of the House and the Senate and the members of the executive department that water is one of the great problems of our country—why should we give this special consideration now to the 17 Western States? If the bill should be referred back to the conferees and told that the House passed a bill covering the 48 States and they wanted these benefits extended under this bill to the 48 States, then to me it seems it comes with poor grace from several of the bureaus downtown to report adversely on this bill.

Now, I can understand why the Department of the Interior reported adversely on the bill. To me it is very simple. Their jurisdiction was not extended. They were told that the House expected them to continue to control the water in the 17 Western States and to not come into the 31 Midwest, Eastern, and Southern States. In the 31 Midwest, Eastern, and Southern States we already have the Department of Agriculture functioning, and the Department of Agriculture should extend its groundwork and all they would have had to do was to enlarge their present program a very little bit, and they would have been able to handle it. The reason the Department of Agriculture reported adversely on this bill is this: This bill would have given them a job to do that would have required them to do a little work. The bureaus downtown do not like to work unless they are performing duties that they have asked Congress to pass.

One of the things before the House right now on this conference report, I think, is that they must determine whether or not they should pass the legislation and determine what should be done with regard to the laws of this country or whether we should leave it up to 1 or 2 of the bureaus downtown. I think this issue on this conference report points up very clearly the fact that the Members of the House must decide whether or not they are actually the legislative body of the United States or whether the legislative body lies within certain bureaus downtown.

As one who is interested in extending the provisions of this bill to all 48 States, Hawaii, and Alaska for equal treatment to all, I urge you to vote to recommit this conference report to the conferees.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I am happy to yield to the gentleman from Pennsylvania.

Mr. GAVIN. I understand there is $100 million involved in this bill. Is that right?

Mr. SAYLOR. That is correct.

Mr. GAVIN. That would be then prorated among the 17 States that would participate in the program; is that right?

Mr. SAYLOR. It would be allocated among the 17 Western States by the Secretary of the Interior.

Mr. GAVIN. Now, if the House bill had been agreed to and no deletion made by the conferees, then the $100 million would have given 48 States an opportunity to participate in this overall program; is that correct?

Mr. SAYLOR. That is correct. There was absolutely no effort on the part of the conferees to cut down the $100 million. The only thing they cut was the number of States from 48 to 17. But they kept the $100 million for the 17 Western States.

Mr. GAVIN. May I call the attention of the gentleman to the fact that the only answer to it is this. The other 31 States that would like to participate in the program will be paying the taxes which will be used to make up the fund of $100 million to give the benefits to those 17 States.

Mr. SAYLOR. That is right.

Mr. GAVIN. I think it is a great program. All I ask is that fair and equitable consideration be given to all sections of the country and no special benefits to one section against any other section of the country. If they had let the bill alone as it passed the House and the Senate I would be for it. I would support the Poage bill. I think we are entitled to just as much consideration as any other section of the country.

Mr. SAYLOR. That is correct. That is the reason I oppose this conference report. I should like this extended to all the 48 States.

Mr. ASPINALL. Mr. Speaker, will the gentleman yield?

Mr. SAYLOR. I yield to the gentleman from Colorado.

Mr. ASPINALL. The gentleman does not want to leave the impression with the Members of the House that there is going to be a prorated division of the $100 million authorized by this bill?

Mr. SAYLOR. No; I should like to make that very clear, that the gentleman's group kept the $100 million. The only thing that was prorated was the States. The $100 million will be allocated to the States by the Secretary of the Interior.

Mr. ASPINALL. But the money is not to be prorated State by State, anything like that. This is a trial or a research authorization. The gentleman also will admit that the Poage bill, which is an amendment to the Small Watersheds Act and which is supposed to take care of the interests of the 31 other States, has an unended authorization; that is, there is no limit to it and moneys may be expended as the Congress of the United States sees fit.

Mr. SAYLOR. That is correct. But the important thing is that the Poage bill includes the 17 Western States; it does not exclude the 17 Western States, and they will have the benefits of this bill and the Poage bill.

The SPEAKER. The time of the gentleman from Pennsylvania has expired.

Mr. ENGLE. Mr. Speaker, I yield 5 minutes to the gentleman from Nebraska [Mr. MILLER].

(Mr. MILLER of Nebraska asked and was given permission to revise and extend his remarks.)

Mr. MILLER of Nebraska. Mr. Speaker, the contents of the conference report have been accurately stated by the chairman of the committee, the gentleman from California [Mr. ENGLE]. Part of the report has been discussed by the gentleman from Pennsylvania, [Mr. SAYLOR], who is opposed to the bill.

Mr. Speaker, we are here considering a conference report on a bill for small projects, a bill that we passed in the 83d Congress and then lost in the other body in the closing days of that Congress. It has the same principle exactly, which I shall explain a little later. The bill before us now passed this Congress in June of last year. It did have 2 sections, 1 the watershed section touching the 31 Eastern and Southern States and the other dealing with the 17 Western States.

In the conference, of the managers on the part of the House and Senate, 8 of the 10 conferees saw fit to delete the watershed section, dealing with the 31 States, with the understanding that they would be included in a watershed bill known as the Poage-Hope bill, which passed this House. There is some concern about why that was done. I hold in my hand letters from the Bureau of the Budget, the Department of the Interior and the Department of Agriculture, these agencies wanted a separation of the bill because of duplication and troubles of administration—your conference committee followed the suggestion of the agencies concerned.

This is a bill to permit managers of local projects to handle their own planning, do their own work without a great deal of interference by the Federal Government. It is necessary for the local group to put up a thousand dollars to have their plans reviewed by the Federal Government. They may deposit up to 25 percent of the money and they may borrow up to $5 million if they meet all qualifications. It keeps details of planning and operation at the loval level. It cuts out controls from Washington.

I say to the gentleman from Pennsylvania, who is worried about the $100 million, that is the ceiling on the amount of money in the bill. Every penny of that money is to be paid back to the Federal Treasury. That is not true in the watersheds bill, which I voted for and which I think is a good bill. The only money repaid there would be the money for the municipal water supply. As to the flood-control moneys, the great State of Pennsylvania has received a quarter of a billion dollars in flood-control money, and not one penny of that has been or will be paid back to the Treasury.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. MILLER of Nebraska. Not at this point.

The SPEAKER. The gentleman from Nebraska has the floor.

Mr. MILLER of Nebraska. The local groups do the planning. They must repay borrowed moneys.

The local groups do their own planning. The bill has a provision that lets Congress review the project plans. That is a good point.

The original bill as passed by the House would have been difficult to administer. This is not a dispute between the 17 Western States and the East or South. Not at all. The watershed bill will benefit all States. I think the watershed bill is an excellent approach to the subject, and I voted for that bill.

Mr. ENGLE. Mr. Speaker, will the gentleman yield?

Mr. MILLER of Nebraska. I yield to the gentleman from California.

Mr. ENGLE. The gentleman from Pennsylvania [Mr. SAYLOR] referred to the fact that the bill that passed the House had 48 States in it and the bill as it passed the Senate had 48 States in it, with, of course, a separate title for the portion under the Department of Agriculture. But it is true, is it not, that since that happened the House passed the Poage bill, which takes care of those portions under the Department of Agriculture? That bill is presently pending in established committees of the Senate. That is the reason we had to take that provision out and that the Senate conferees would not agree to tacking the Poage bill on.

Mr. MILLER of Nebraska. I think the gentleman is correct. We should remember that this conference report makes it possible for local groups to borrow the money from the Federal Treasury. They must put up some of their own money. They have certain obligations they must fulfill. After they do that they can borrow the money and it must be paid back over a period of years.

I think the conference report is a good report. We have worked hard on it, and I recommend that it be adopted.

Mr. ENGLE. Mr. Speaker, I yield 3 minutes to the gentleman from Pennsylvania [Mr. GAVIN].

Mr. GAVIN. Mr. Speaker, after listening to my very good and able friend and colleague the gentleman from Pennsylvania [Mr. SAYLOR], of his very able presentation, I want to say I heartily concur in what he has said. I agree with him that this proposed legislation should be recommitted for further consideration. I feel that an injustice is being done in making it a sectional bill. Had the 48 States been considered rather than 17 States in the northwestern section of the country I would say it would be all right. However, it is quite evident that the 17 States and the Northwest got together and worked out legislation that will delete the 31 States in the East and the South and set up a $100 million program for their particular section of the Nation. If this bill is passed there will no doubt be a conference with Department of Interior as to the allocation of the $100 million authorized among the 17 States. Very nice program, I would say, for the Northwest; not so good for the East or South. All we do is pay the bill but not share the benefits.

There is something unique about the Congress. We do not seem to be organized in the northeastern part of the United States, and by that I mean the New England States and Pennsylvania, New York, Ohio, Rhode Island and Delaware. Some day, I hope in the not too distant future, we are going to get organized in the Northeast section as you are in the Northwest and then when these various programs come up we will say, "Certainly, we will go along with various legislative proposals provided you give fair and equitable treatment to all sections of the Nation and do not give preferred consideration to one section against another." So long as you look after your area you are not concerned about the rest of the States. After legislation was enacted to include the other 31 States in the bill the conferees got together. As was pointed out by my good friend, the gentleman from Pennsylvania, 8 of the 10 conferees came from the Northwest. So the only two in the minority, Senator LONG, of Louisiana, and Representative SAYLOR, of Pennsylvania, objected and were overruled. Certainly, they objected. So, we feel that it is rather an injustice that 17 States would bring in legislation to the exclusion of the other 31 States. Had I been one of the conferees handling the conference report, I would have let the legislation alone just as it was agreed upon by the House and Senate and would have permitted the 48 States to participate in this program without giving preferred consideration to one section of the country over any other section.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. GAVIN. I yield.

Mr. GROSS. Did I understand the gentleman from Colorado to say that the $100 million which would go to the 17

States was for experimental and research purposes?

Mr. GAVIN. If it is, it is quite a costly experimental and research program. I would not mind the northeastern section of the country having some kind of experimental program. My good friend here, the gentleman from Pennsylvania [Mr. FLOOD] can tell you about the coal industry in our State. I wish we could secure a $100 million program to carry on a research program to develop some technique and methods by which we could produce and sell more Pennsylvania coal. There are hundreds of miners who have been unemployed in the great State of Pennsylvania for the past several years in our region. A research program for coal would be most helpful. But should we offer legislation for such a program for coal in Pennsylvania, I wonder how much consideration would be given to it? Again, I say it is about time the States in the Northeast get organized. I hope we can get these Northeast States together and get organized and then maybe we can get some equitable and fair consideration when these legislative proposals are presented. I trust when this conference reported is voted upon it will be recommitted and the conferees will come up with legislation that will give fair treatment to all the States of the Nation.

Mr. ENGLE. Mr. Speaker, I yield 2 minutes to the gentleman from Texas [Mr. POAGE].

Mr. POAGE. Mr. Speaker, we have this afternoon witnessed a considerable difference of honest opinion. I think it is clear that everybody here is agreed that we ought to have a water program. Everybody, regardless of where he lives recognizes the importance of providing water storage both for municipal purposes and for irrigation purposes. The people of the West realized the need of water storage first because it was a more pressing problem for them. But, now such storage is a pressing problem for all parts of the United States.

This conference report will not solve all our problems all over the United States, but it does make a start in the direction that all of us think is sound and desirable. When combined with the bill that the Committee on Agriculture brought before this House recently and which we passed, and which is now pending in regular order in the other body, it will, as I see it, give us a pretty good water storage program all over the United States.

Now there are those who honestly say, "Let us beat down this conference report this afternoon and possibly that will force the advocates of the Engle bill into passing the Poage bill before we agree to this report." It seems to me that it is just a mistaken idea that you can or should force or blackmail others into seeing things your way. I think we all pretty well see the thing alike. We are all pretty well agreed that we need a water-storage program in every State in the Union. The bill, which the House recently passed, makes a water-storage program available to every State in the Union. This conference report on the one hand gives a program which I think is needed for these Western States, which are even more dependent on irrigation than your section and mine, perhaps. I live east of the 98th meridian. There are those who are trying to divide this House on a sectional basis. I do not live in that region where the Bureau of Reclamation now operates, although I do live in the great State of Texas. I come from east of that 98th meridian. Nevertheless, I want the reclamation area to have the program which they need. I also want the other States to have not only a water-storage program, but I also want the people of every State to have a sound flood-prevention program. The Poage bill provides both. Of course, I think the Poage bill should pass. Everyone seems agreed on that. The only question is whether we are more likely to secure passage by cooperation or by a kind of blackmail. I urge you to use cooperation.

Mr. ENGLE. Mr. Speaker, I yield 2 minutes to the gentleman from Colorado [Mr. ASPINALL].

(Mr. ASPINALL asked and wsa given permission to revise and extend his remarks.)

Mr. ASPINALL. Mr. Speaker, I think that the greatest difficulty here is the question of the jurisdiction of those who must supervise any of these programs. No one can charge me with being sectional in my approach to any of the beneficial conservation programs. I have always favored and supported programs that would help the Nation generally, regardless of where the projects—reclamation, flood control, or multipurpose—are located.

The Reclamation Act, the law of 1902, gave to the Department of the Interior the authority to supervise the reclamation program and such authority does not extend east of the 17 Western States. Accordingly, when we included in the original bill the 31 Western States we got into a difficulty of administration. There is no way at the present time by which the administration, that is, the Department of the Interior, can supervise under the terms of the general reclamation law any of the benefits which the 17 Western States have.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. ASPINALL. When I have finished my statement I will yield.

The conference committee is not composed of 8 western Members of Congress but is composed of 7 Members from the West—the gentleman from New York [Mr. O'BRIEN] is the third member of the majority of the House conferees. The members of the conference were chosen in accordance with the rules of seniority in this House. We were agreeable to going along with a separate bill—the Poage bill—for administration by the Department of Agriculture, because we wanted all of the States to have the benefits which flow from irrigation programs and projects.

I now yield to the gentleman from Utah.

Mr. DAWSON of Utah. Is it not a fact that part of this $100 million that is mentioned is derived from reclamation funds? Reclamation funds are separate from the revenues that come from the land holdings in these 17 Western States?

Mr. ASPINALL. The gentleman is correct. The reason for the $100 million authorization limit in this legislation is for the purpose of determining whether or not a program like this, under the jurisdiction of a Federal department, can be operated successfully and effectively. There was no question of dividing up the monetary benefits, that might be considered, between different areas of the Nation.

I now yield to the gentleman from Pennsylvania.

Mr. GAVIN. The gentleman realizes that the 31 States were to be operated under the supervision of the Department of Agriculture, so there would not be any difficulty in that respect, even if they were all in the same bill. The 17 States under the Bureau of Reclamation and 31 States under Department of Agriculture. What assurance have we that the other body is going to take any action on this bill in this session of the Congress? None whatsoever. The gentleman from Texas [Mr. POAGE] said the position we have taken today may be an effort to try to compel the Senate to take action on the Poage bill. I might say to the gentleman from Texas it will be a day well spent, as far as I am concerned, if we could recommit this bill and the other body did take action and passed the Poage bill. I would feel reconciled to this situation that fair and equitable consideration will be given to all States and sections of the country. The gentleman from Texas [Mr. POAGE], said the present bill before us was a step in the right direction. To me it is in the wrong direction. It is going in the direction of the Northwest and I am in the direction of the Northeast. It it was directed to the Northeast it would be all right with me.

The SPEAKER. The time of the gentleman from Colorado [Mr. ASPINALL] has expired.

Mr. ENGLE. Mr. Speaker, I yield 1 minute to the gentleman from Tennessee, [Mr. BASS].

Mr. BASS of Tennessee. Mr. Speaker, I would like to give my support to this conference report. It does not go as far as it should in taking in all the States in the East. However, I was happy to serve on the subcommittee which wrote the watershed protection amendment, known as the Poage bill, which includes agricultural irrigation service and also municipal water supplies to be administered by the Secretary of Agriculture. I hope, and I feel sure the Senate will take up that bill in the near future and pass the necessary legislation to carry out the provisions that are being demanded by people who are opposing this conference report.

Mr. ENGLE. Mr. Speaker, will the gentleman yield?

Mr. BASS of Tennessee. I yield.

Mr. ENGLE. What we are talking about is separate but equal treatment, because we have to handle matters in separate bills, inasmuch as one is in Agriculture and one is in Interior.

Mr. BASS of Tennessee. That is correct.

Mr. ENGLE. Separate and equal treatment, and we propose that the Poage bill will do just that.

Mr. BASS of Tennessee. That is right.

The SPEAKER. The time of the gentleman from Tennessee has expired.

Mr. ENGLE. Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER. The question is on the conference report.

Mr. SAYLOR. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the conference report?

Mr. SAYLOR. I am, Mr. Speaker.

The SPEAKER. The gentleman qualifies. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. SAYLOR moves to recommit the conference report to the conferees.

Mr. ENGLE. Mr. Speaker, I move the previous question on the motion to recommit.

The previous question was ordered.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and on a division (demanded by Mr. SAYLOR) there were—ayes 48, noes 66.

Mr. SAYLOR. Mr. Speaker, I object to the vote on the ground that a quorum is not present.

The SPEAKER. The Chair would remind the gentleman that there was an understanding that no votes would be had today.

Mr. McCORMACK. Mr. Speaker I ask unanimous consent that further consideration of the conference report be postponed until tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts?

There was no objection.

Mr. SAYLOR. Mr. Speaker, I withdraw my point of no quorum.

AMENDING COMMUNICATIONS ACT OF 1934

Mr. O'NEILL. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 503 and ask for its immediate consideration.

The Clerk read as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 4090) to amend part II of title III of the Communications Act of 1934 so as to require the installation of an automatic radiotelegraph call selector on cargo ships of the United States carrying less than two radio operators, and for other purposes. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Interstate and Foreign Commerce, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion, except one motion to recommit.

The SPEAKER. The gentleman from Massachusetts is recognized for 1 hour.

Mr. O'NEILL. Mr. Speaker, when I have concluded my statement, I will yield 30 minutes to the gentleman from New York [Mr. KEATING].

Mr. Speaker, the purpose of H. R. 4090 is to amend section 353 of the Communications Act of 1934 to provide that cargo vessels of the United States must carry more than one radio operator unless the ship is fitted with an automatic radiotelegraph call selector, in addition to the auto-alarm required by present law.

The bill would also amend section 353 to provide that a continuous watch by means of qualified radio operators must be kept unless the ship is fitted with both the automatic radiotelegraph call selector and the auto-alarm.

It is pointed out in the report accompanying H. R. 4090 that such installation would facilitate and improve communications and thus promote safety standards at sea for the protection of life and property.

The effective date of the mandatory installation requirement is 18 months, or shorter if the Commissioner of the Federal Communications Commission has found that the call selector is available and may be installed at a reasonable cost to shipowners, and that the patents necessary for the manufacture of the device are and will continue to be freely available for license at a reasonable royalty.

Mr. Speaker, this is a step in the right direction as far as safety of the sea is concerned. I recall just about a year ago—to be exact on June 27, 1955—when in Boston Harbor an excursion ship that travels around the harbor and oftentimes to Nantucket and to Providence, with 272 of a school group aboard ran aground in a dense fog in Boston Harbor. It was amazing to the public at large and to the people at large that there was no auto alarm, there was no radio alarm, there was no ship-to-shore communication available on this excursion steamer. If the 272 aboard had ever realized there was no means of communicating to another ship or back to shore, there surely would have been a panic aboard that boat. There was a headline in the paper of that day that caused great concern. At the present time we have a little over a thousand ships in our cargo fleet that must have auto alarms. Auto alarms are used only in cases of dire distress when they send out an SOS. The radio telegraph alarm which is forced to be put into these new ships or they would have to carry an added radio man does this:

No. 1. The automatic radio telegraph call selector with capability of receiving and responding to the following: A, the international distress signal, S O S, B, the international safety signal, T T T, the international urgent signal, X X X, the ship's call sign and any other predetermined code which is desired for use in national emergency.

Mr. Speaker, as I stated previously, this definitely is a step in the right direction. This is an opportunity for the Congress to enact legislation for further safety of life at sea.

Mr. Speaker, I urge the adoption of House Resolution 503 and at this time yield 30 minutes of my time to the gentleman from New York [Mr. KEATING].

Mr. KEATING. Mr. Speaker, I yield 20 minutes to the gentleman from Washington [Mr. PELLY].

(Mr. PELLY asked and was given permission to revise and extend his remarks).

Mr. PELLY. Mr. Speaker, the membership of this House will appreciate that it is not exactly a happy situation to oppose a bill authored by the majority leader.

At least, the gentleman from Washington [Mr. PELLY] is only doing what he believes to be right in opposing legislation he believes to be wrong.

H. R. 4090 is not a major piece of legislation. It is not included in any political program. It should be judged free of party and personalities. So, first, I urge my colleagues to act on the merit of the bill and not on the merit of its author and his worthy motives.

In my opinion, just the opposite occured when the Interstate and Foreign Commerce Committee reported the bill out. In fact, it reminded me of the old game of follow the leader. It could not have been decided, it seemed to me, on the basis of the testimony and hearings, and I feel if you read the 130 pages of the hearings you will recognize this as a gadget bill wrapped up and labeled "Safety at Sea:"

A substantial minority of the Commerce Committee, according to the minority views, voted against reporting H. R. 4090 favorably.

The witnesses favoring H. R. 4090 were the owner of the patents, his son-in-law, a representative of one group of radio operators, and of course the distinguished author of this bill. Outside the latter, the proponents had some reason to hope for the passage of the bill.

For that matter, admittedly the various shipowners' associations had similar incentives to oppose the measure.

But the departments of Government which were negative or downright opposed certainly are objective critics and in the case of the Federal Communications Commission, particularly Commissioner Webster, are experts in this field and the very sources to which we laymen should look in order to avoid pitfalls and mistakes.

When I was a member of the Interstate and Foreign Commerce Committee during the 83d Congress hearings were held on a bill similar to H. R. 4090. I signed minority views. Time, service on the Merchant Marine Committee, and further testimony have only served to increase my knowledge of the facts and conviction that this is bad legislation.

Frankly, it seemed to me the argument in the Rules Committee the other day was not a matter of explanation and logic but more of emotion.

For example, there was an attack on the steamship owners and the statement was made that this industry had always

opposed safety and means of protecting lives at sea.

On the other hand, in testifying before the committee on H. R. 4090 the industry stated without challenge that the shipping industry is safety conscious. It pointed out with pride that it incorporates millions of dollars in safety features into American vessels. It stated with pride that it spends millions of dollars in operational measures and devices to increase safety of life at sea. As a matter of fact, as the hearings state, new technical specifications for the auto-alarm presently used internationally were supported by the shipping industry at the Safety of Life at Sea Conference in London in 1948.

Improved auto-alarm devices to overcome atmospheric and interfering signals have been adopted by the Federal Communications Commission as the hearings show. But such features are not incorporated in the proposed call selector device which would become mandatory under H. R. 4090. The FCC reports this new gadget will not respond efficiently with atmospheric interference. Interference will blanket the alerting signals.

As to the criticism that the industry has always opposed safety, I think the voluntary installations of direction-finding equipment 20 to 25 years in advance of compulsion contradict such a statement. Radar, depth sounders, loran, gyrocompasses and gyropilots and similar devices installed but not required by law, indicate the irresponsible nature of such undocumented arguments. Steamship interests supported a program for merchant ships to have internationally improved lifeboat radio equipment. And besides, if there were a basis of truth for the charge, the argument is hardly germane to the merits or lack of them with respect to H. R. 4090.

A Commerce Committee member before the Rules Committee referred as a similar case to airline opposition to imposition of a new air-safety system. I submit that testimony regarding safety devices in the field of aeronautical control is completely irrelevant. The charge is often made that scientific testing such as is conducted by the Federal Communications Commission is slow. If I had patents and were hopefully awaiting approval I would feel that way. But if the safety of my family and friends, and myself, were at stake I would want thorough testing under all conditions. The patented device under H. R. 4090 has never had such an operational test. What is the hurry? This is being a bit overanxious to hand a signed order in blank to the patent owner, saying if you can make this device work here is an order forcing more than 1,000 American ships to install a $2,500 or $3,000 piece of equipment, and this without finding out if the present internationally accepted system can be adapted to the same purpose.

As a matter of fact, great care has been taken by someone in drawing this bill to insure that the present system cannot be adapted to perform the proposed function of this new radio call selector.

Now, my friends, we are discovering something. Why is there to be added to section 354 a paragraph (b) with these words:

> The automatic radio call selector shall be independent of any other radio equipment on the ship.

There you have it. That little provision insures a new device must be added to the ship's equipment. It prevents adjusting the present alarm system to respond to individual ship call signals. That provision, my friends, may well be worth a million dollars to the patent owner of this new gadget.

Figuring $1,000 profit per piece of equipment and 1,000 or more ships each one of which will be forced to install a separate device—there is your million dollars—less, of course, the cost of buying the patent from the inventor and any promotional expenses.

Reference was made in the Commerce Committee hearings to an example where this call selector was supposed to have contributed to the saving of lives. This was the case of the steamship *Mormacroy* which stood by the British tanker *Adellen* for 3 days. But listen—quoting the statement of Moore-McCormack lines: "The call alarm was not used in summoning aid." As the ships lay side by side this gadget was used three times as were light and flag signals, but this selector was no factor in saving any lives.

This measure has the voice of Jacob, but the hands are the hands of Esau; and the House may be misled into giving its blessing to the wrong object. This is special interest legislation. It is dangerous to allow the high and highly emotional motive of safety-at-sea to be considered hastily with only 1 hour of debate.

I urge that H. R. 4090 be defeated so the great Committee on Interstate and Foreign Commerce can restudy the measure in the light of the evidence.

Now I know very few Members have the time to read the complete printed committee report. However, the objections of the Coast Guard and the Federal Communications Commission should be noted—and above all the provisions of the bill itself should be thought out.

For example, in the Rules Committee one member, and this could have been true of all members, obviously was unfamiliar with the bill. He expressed support because of a case where 200 or more passengers on an excursion boat were stranded off a point of land near Boston. This bill pertains to cargo vessels. Passenger vessels must carry more than one radio operator.

Mr. O'NEILL. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield to the gentleman.

Mr. O'NEILL. I realize that what the gentleman is saying is true, but I was talking about safety at sea and that is what this bill has reference to.

Mr. PELLY. I thought the gentleman had not understood it.

Mr. O'NEILL. I understood it thoroughly, and I understand this, also, that all the laboring people, and the working people who ride on these ships, and all people connected with the cargo-carrying industry except the owners of the ships, are for the proposed legislation.

Mr. PELLY. I will come to that in my presentation.

Let me emphasize and repeat here and now that H. R. 4090 is to require an automatic radio alarm device on United States cargo vessels of 1,600 gross tons or more carrying less than 2 radio operators.

In summary, the reasons for opposing the bill are as follows:

First. As stated by the Coast Guard, Federal Communications Commission, and Defense Department in testimony on a similar bill—H. R. 6004—in the 83d Congress in 1954, the present mandatory internationally accepted auto-alarm device is more than adequate from the safety standpoint to receive distress calls and cyclone warnings on off-watch hours.

Second. The expense of hiring two more radio operators on cargo vessels, which as a practical matter is what would result if this bill is enacted into law, on the average per ship will amount to $12,000 per year straight-time pay and $2,500 for welfare per year, plus $3,500 overtime pay. A radio room on a ship now costs about $8,500 per year. By the terms of this bill, the cost will be $26,500, approximately. It is his sort of featherbedding that drives shipowners to transfer their cargo ships to foreign registry, where they employ low-wage foreign crews. My interest in this subject is in preserving an American merchant marine.

Third. This automatic radio call selector device duplicates existing equipment; it bypasses international safety and communications conventions; it bypasses procedures previously followed under section 602 (e) of the Communications Act of 1934, which specifically provided a method of approval of equipment in the field of marine radio.

GREAT LAKES STUDY

In the presentation to the Rules Committee the impression was gained that these devices had come into use since hearings on the bill in March, May, and June 1955. This misapprehension was due to 2 apparently conflicting statements; the statement that only 1 prototype device had been built, and the statement to the effect that 8 units were in use by the Moore-McCormack Steamship Co. The explanation is that a similar two-signal model was installed by Moore-McCormack in 1947 for convenience and commercial functions, not safety, but was found mechanically defective and the report of the hearings shows this company's unfavorable testimony.

A more complicated five-signal device is called for by this legislation. But the prototype model of it has never been tried out under operational conditions.

One of the most compelling arguments against the bill appeared in the Seafarers' Log, the official organ of the Seafarers' International Union. The article reads:

> The Radio Officers' Union, an affiliate of the Maritime Trades Department, is on record against the device as offering no advantages over the present automatic alarm sys-

tems. Automatic alarms, which are required by Government regulations, are keyed to respond to the international distress signal whether from ship or shore station.

An ROU spokesman explained that the automatic call selector would be of little advantage in an emergency because a shore station would have to know the specific call numbers of all vessels that happened to be in the area. Most shore stations would not be in a position to know which ships were in a given vicinity.

And speaking of unions, I imagine all Members received a telegram from George Meany supporting H. R. 4090.

Somebody, whoever asked Mr. Meany to do them a personal favor, certainly caused him to get his wires crossed, because the AFL–CIO maritime trades division, as I said, is on record as opposed. One radio union representative in the hearings did support the bill. However, when you realize that American ships are being driven off the sea you realize why other maritime union leaders oppose this legislation—why Mr. Meany's own maritime trades are opposed. We only have 69 United States tramp vessels in operation. As members of the House Merchant Marine and Fisheries Committee know only too well, our American shipowners have been transferring their ships to foreign registry. This can reduce the cost of wages, by substituting a low-wage foreign crew, about $20,000 a month. This bill would add about another $20,000 a year to American vessels expense which their foreign-flag competitors would not have to pay. No wonder the secretary of the Sailors' Union of the Pacific, Harry Lundeberg, wrote me saying he is in thorough accord with my statements and that he thinks my position is absolutely correct. About this gadget he commented that it is not a necessity and will only impose, as he says, a heavier burden on the industry. This burden would be about $12 million a year, of which Uncle Sam would pay $3.3 million through subsidy.

No wonder Capt. George Decker, first vice president of the National Organization of Masters, Mates, and Pilots of America, A. F. of L., urges that the matter be taken to the International Convention for Safety at Sea and thus make all signatories either accept or reject the alarm device. He says in his letter to me:

> Do everything in your power to defeat H. R. 4090.

Obviously George Meany is supporting a friend, not legislation as it has been studied and reported by the maritime trades division of the AFL–CIO. Whoever got him to send each of us a telegram did him a disservice. He has enough interunion squabbles without pulling someone's chestnuts out of the fire against the best interest of the maritime workers.

Mr. Speaker, on page 3 of the hearings, 84th Congress, 1st session, before a subcommittee of the Interstate and Foreign Commerce Committee on H. R. 4090, the gentleman from Massachusetts [Mr. McCORMACK] in his testimony, the second paragraph at the bottom of the page, says the automatic radio call selector "is commercially perfected." I think he has been misinformed. Compare this statement with the testimony of Moore-McCormack Lines, Inc., on page 122 of the same hearings. It reads:

> In addition to the call alarm's failure to operate from causes traced to interferences and mechanical weakness, it has on occasion also suffered from another annoying defect—that is false alarms.

Also I might point out that when the Federal Communications Commission tested the auto call selector specified by this bill it had 72 false responses in 646 hours of operation. This explains why the Bureau of the Budget, in replying to a request of the Interstate and Foreign Commerce Committee for its views, commented: "The reports of the Department of Commerce and Federal Communications Commission raise important and as yet unresolved questions concerning the technical reliability and operational utility of the particular device specified in H. R. 4090." The Bureau suggested, as I do, further study and experimentation before enacting legislation. Overtime pay in responding to off-hour calls and false alarms is estimated at $32.90 per day.

I should point out, too, that the gentleman from Massachusetts [Mr. McCORMACK] in his statement to the Interstate and Foreign Commerce Committee, indicated a belief that the device is essential if our safety standards are to be maintained at the highest level.

Whereas Commissioner Edward M. Webster, of the Federal Communications Commission, on this point of safety, said in his testimony: "There are a lot of things which contribute to safety. I was brought up in the Coast Guard to consider safety matters. Hundreds and hundreds and hundreds of devices were submitted to us for examination, and they all contributed to safety. If you legislated every one of those pieces because it contributed to safety, you would load down the ship and you would not have any place for cargo or for passengers. It is a relative matter.

Mr. GAVIN. Mr. Speaker, will the gentleman yield?

Mr. PELLY. I yield.

Mr. GAVIN. Would not the gentleman say that is quite an exaggerated statement that if all of these safety devices were put on the ship that the ship would be so loaded up that there would be no room for cargo and passengers?

Mr. PELLY. I think the point is that there are hundreds and hundreds of safety devices that are asked for.

Mr. GAVIN. Yes; but the point I am making is that the statement is quite exaggerated, would not the gentleman agree?

Mr. PELLY. I am quoting this testimony.

Mr. GAVIN. Yes; but the gentleman will agree that it is a bit exaggerated.

Mr. PELLY. I think Mr. Webster is considered to be the outstanding authority on electronic communications at sea.

Mr. Webster's statement continues as follows:

> I cannot deny that this would contribute something to safety. My point is that it is not necessary because you already have a system, and it is not necessary to superimpose this on a system which has been provided and which has been provided now by treaty and by law. I think the weight is on the convenience side more than it is on the safety side.

As to whether H. R. 4090 would be operationally effective until the automatic radio call selector is approved by the Federal Communications Commission is not clear. However, assuming the mechanical weaknesses of the device can be corrected, I would emphasize strongly that reliability of operation should be assured likewise by the international standardization of the speed of transmission and characteristics of the signal. Under any circumstances there should be no approval by the Federal Communications Commission until the device has been endorsed by the next International Convention for Safety of Life at Sea.

I hope H. R. 4090 will be sent back to committee for further study. It is unnecessary and premature, as Commissioner Webster has pointed out.

Before I close I trust Members will understand that under H. R. 4090 a patented gadget, the patents for which are owned by a Mr. Benjamin Green who bought them from one of his employees, would have to be installed on all radio operator American cargo vessels. The gadget would have to be capable of being set manually to simultaneously receive and respond to Morse code international signals as follows: First, the ship's own code call; second, the international distress signal—S O S; third, the international safety signal; fourth, the international urgency signal; and fifth, any other emergency code.

Thus when the radio operator on a cargo vessel was off duty, he could be called by an alarm. The present signal for an automatic alarm can only be used in an emergency but not for matters that might or might no lead to a disaster.

Of course, under the present internationally accepted system messages are arranged so as to be transmitted from shore during radio operator watch. A ship can send a message any time by paying the operator overtime. No disaster at sea, as far as I can figure, would have been averted, or lives been saved from the *Titantic* sinking until now, by this legislation.

Meanwhile, I submit, international ship signals—all five under this proposed new gadget if you will—should be approved by the regular International Safety At Sea Conventions.

To sum up quickly why this rule should be defeated: The provision requiring the owner of the patents to make them available at reasonable cost to other manufacturers is no protection. According to the committee report there are 266 Government subsidized vessels and 771 nonsubsidized ships affected. When the St. Lawrence seaway is opened up, 243 more bulk carriers could also become compulsory prospects for the gadget. On a production-line basis, say at $3,000 each, it would be like several auto manufacturers building 1,000 automobiles. It is only economical and practical for one company to manufacture such a limited number. Otherwise the cost would be almost double. Any other manufacturer would have to add

the royalty costs too and could not compete. So the special interest factor of the one family which owns the patents is distasteful to me. As I have said, the bill could be worth a million dollars to the patent owner.

That the gadget duplicates to a large extent an existing device on all ships, domestic and foreign, argues against the bill.

Finally, let me suggest that without the recommendation of technical Government advisers we laymen have no business approving such a measure. And why approve it in advance of the Federal Communication Commission's finding out if it works statisfactorily? Why the rush? Let the patent owner wait for his million.

With all the negative Government department reports, and with the facts which I hope I am contributing toward bringing into focus, I feel confident an Executive veto would result if the bill is passed as it might out of respect and deference to its sponsor.

Surely it is in the best interest of all—including the owner of the patents—to return the measure for further committee investigation and study.

In conclusion, let me say I intend, as I said before, at the proper time during the reading of the bill, to offer an amendment deferring the effective date until approval by the International Convention for Safety at Sea. If the committee would agree to accept that amendment which would cure the measure's greatest weakness, I would withdraw opposition now and let the experts by international convention resolve the issue.

If, as the proponents of the bill believe, H. R. 4090 has merit, international acceptance would greatly increase the safety factor of the bill, because all cargo vessels, domestic and foreign, would have to install the equipment.

Finally, I wish to thank the Members for their kind attention.

I have given you the facts, as I see them, and have explained my opposition. I consider H. R. 4090 special-interest legislation, but in no way, shape, or manner wish to diminish, as I told the Rules Committee, from the objectives or motives of any disagreeing Member.

I follow my conscience—and I say I hope the bill will be defeated.

If not, I urge adoption of an amendment providing for international acceptance.

If that in turn fails, I shall hope to gain recognition in order to move recommittal.

My colleagues, this is not good legislation.

I hope the bill will be defeated.

Mr. O'NEILL. Mr. Speaker, I yield 9 minutes to the gentleman from Massachusetts [Mr. McCORMACK].

(Mr. McCORMACK asked and was granted permission to revise and extend his remarks.)

Mr. McCORMACK. Mr. Speaker, this bill is before the House after long hearings and searching consideration in two Congresses by the House Committee on Interstate and Foreign Commerce. Under the chairmanship of the gentleman from New Jersey [Mr. WOLVERTON] last year, the bill was reported out. I have a telegram which he sent me, which I received today. It is addressed to me:

I regret that an unexpected matter of official business requires my presence in New Jersey today. I had expected to be in the House and speak in favor of your bill H. R. 4090 to require installation of an automatic radiotelegraph call selector on cargo ships carrying less than two radio operators. This bill should have the support of the House. It would provide additional safety and security to ships and men in maritime service. It is not claimed to be the last word but the system is undoubtedly a step forward in providing care and helpfulness to those who follow the sea. These men are entitled to have the benefit of every possible means that will provide for their safety and welfare. The need for this legislation has been given extensive consideration by the Committee on Interstate and Foreign Commerce both this session and in the previous Congress. Last session the bill was reported favorably but did not reach consideration in the House before adjournment. It should not be further delayed. It is important to our shipping interests and exceedingly important to the welfare of all seafaring men. I hope it will receive the approval of the House.

CHARLES A. WOLVERTON,
Ranking Republican Member, House Committee on Interstate and Foreign Commerce.

I also have a telegram from Mr. George Meany, president, American Federation of Labor-CIO, which I understand has been sent to all Members:

We will appreciate your giving favorable consideration to H. R. 4090, which is a bill to improve safety of life at sea through use of automatic radio call selector. Passage of this legislation means better protection for American seamen and ships on the high seas, and, as has been true in the past, we must look to Congress for leadership in achieving this objective. Your support of this legislation will be appreciated.

Respectfully yours.

GEORGE MEANY,
President, AFL–CIO.

Now the gentleman from Washington [Mr. PELLY] has referred to the testimony of Mr. Webster, of the Federal Communications Commission. I have profound respect for the views of Commissioner Webster, but his views have been met in this bill. This bill has to meet the requirements of the Federal Communications Commission.

This matter of the cost being $12 million is a new figure to me; I never heard that before, and I think that was just picked out of the air. The committee has been very careful. There is no monopoly. The language in the bill is specific, and the same protection is given in this bill as has been given in previous legislation passed by the Congress in years gone by to assure safety to men and property on the high seas.

This instrument is not something that costs $20,000; the outside cost is $1,650 to $1,800 per installation, and anyone can manufacture it by getting a license through the payment of a proper and justifiable royalty. Every instrument on a modern ship has at some time been controlled or owned by some individual or company as a result of a patent, and there is nothing unusual in relation to this bill that differentiates it from any other legislation the Congress has acted upon. We must keep in mind that every piece of legislation on the statute books for safety at sea has been brought about as a result of congressional action and against the bitter opposition of the steamship association. I am not saying that every shipowner is opposed, but the association as such has always bitterly opposed safety-at-sea legislation enacted by the Congress in the past.

It is the old battle of progress being impeded or attempted to be impeded, particularly when progress means the welfare of human beings; the big shipping interests bitterly opposed the existing laws for the protection of people in bygone years.

The bill means a saving of lives and property. Not so long ago there was a maritime catastrophe in the Pacific where a ship was sunk and about 35 seamen cast into the sea. They had their lifesaving instruments, but they floundered around in the sea for hours and hours and finally every one of them drowned, yet only a few miles away, not so far away, was another ship going in the same direction, but this other ship knew nothing of the disaster to the first or the plight of the seamen. Had there been one of these instruments on board there would have been constant communication with the shore and they would have learned of the disaster and could have come to the rescue of this stricken ship and probably saved most if not all of the men.

Talk about opposition, let me read you a list of the companies that use this device now:

	Units
Moore-McCormack Lines	35
States Marine Corp	20
Robin Lines	10
Standard Oil Company of New Jersey	15
Grace Line	14
United Fruit Co	1
Waterman Steamship Corp	3
Standard Vacuum	2
Maritime Administration vessels	108
United States Coast Guard	66

That is evidence they cannot contradict.

I will not take any more time under the rule except to make this observation about the amendment to be offered by the gentleman from Washington. I respect his views and his right to oppose this legislation, but I do not respect his effort to impugn the motives of others. I do not say the gentleman did, but in a letter that was sent out very generally was that the committee reported this bill for me. Nothing was done for my personal interest; I cannot proceed that way in regard to any legislation. I have never approached any colleague of mine or any committee on the basis of my being so interested in the bill that I asked them because of friendship with me and my position to vote for the bill. I certainly would not have undertaken to do that; it could not have happened. The bill was reported out last year supported by Republicans on the committee; and it was reported out again this year. So there is the history of this bill so far as this Congress and past Congresses are concerned. The amendment that the gentleman from Washington says he is going to offer would defeat the bill. We

have never put through legislation where it had to be internationally agreed upon as a condition precedent. All past legislation applied to American ships with reference to equipment for safety at sea and lives and property, then it was extended to the vessels of other countries. The amendment is a nice way of defeating the bill and is inconsistent with the history of Congress in the passage of sea legislation in the past. When the amendment is offered I hope it will be defeated.

Mr. KEATING. Mr. Speaker, I yield 5 minutes to the gentleman from California [Mr. HOSMER].

(Mr. HOSMER asked and was given permission to revise and extend his remarks.)

Mr. HOSMER. Mr. Speaker, before I got into politics I was a seaman and I want to speak today more as a seaman than as a Member of Congress, merely utilizing my membership in this body to gain the opportunity to speak. I am going to relate some past history not for the purpose of impressing anybody but for the purpose of trying to convince you that I know what I am talking about.

I have been on ships that have sunk under emergency conditions, others that have been rammed; I have gone over the side in the midst of typhoons to lash down equipment that was endangering the ship, I have sailed through good weather and bad, on easy seas and on rough ones. I have tremendous respect for the men who sail the seas, and I also know how very important is any piece of equipment, any regulation, any code, any custom that will promote safety at sea. I also have a similar understanding of any devices, codes, customs, and practices that will endanger the lives of men at sea, because when a ship casts off her lines and leaves port and gets out into the open sea she is on her own. What she has with her, what her men know as sailors, are those things upon which the lives of the men depend. So, with that kind of an introduction I just want to say that I think I know perhaps a little more about what is needed and not needed than our good colleague [Mr. WOLVERTON] despite all the testimony he has heard, and perhaps more than George Meany, who is not a seaman.

I agree with the Radio Operators Union, the men who sail on the ships, the SUP, the Sailor's Union of the Pacific, the Seafarer's International Union, who say: "Do not make us put these devices on the ships."

They do not come down here and say they are not necessary, they are duplicating equipment or anything like that. They say they are dangerous. Why are they dangerous? Just look at the minority views in this report that quote the Federal Communications Commission and these other Government departments affected, all of which have given adverse reports on this proposed legislation. The Federal Communications tests decry this equipment as unsatisfactory. Whether you say it has to be satisfactory before it goes on a ship or not, you are trying to compel the use of a piece of equipment that today cannot pass the tests.

What does that mean? Where men's lives depend upon the functioning of such equipment that does not work, you are putting them in peril. What happens when you get a piece of equipment like this that according to the FCC tests, during 464 hours it brought in a total of 72 false responses, or 1 every 9 hours. What does that do to your radio operator? It is like the boy who cried wolf. They flip it off, they cut the wires, they get rid of it somehow or other. They would not depend on it, and if they did, they would be responding to false alarms constantly, as well as the rest of these things that the Commission found out about this piece of equipment that will not work. Someone has said it will bring in one signal but will not bring in another. You see what I mean? I would not want to go to sea and be compelled by the laws of the United States Government to sail with a piece of equipment that is going to endanger me and endanger the men under me.

Mr. Speaker, I have been in command of ships. I commanded a 10,000-ton ship, and I know what the responsibility is, and based on that personal experience I plead with you to defeat this rule and defeat the bill, because you simply cannot put our seamen in the position of having to sail with equipment that is not worth while, that causes them to be in peril when they leave port, and if we execute our responsibility to this great group of people as we should, we will not force upon them a condition which will be created by this equipment which is unsafe.

Mr. O'NEILL. Mr. Speaker, I yield myself such time as I may require.

Mr. Speaker, I make reference to the steamer going aground in Boston Harbor last year with 272 schoolchildren on it. Now, this steamer would normally carry about 1,000 people. The interesting thing about it is that naturally it had a radio room like any ship would have, but the truth of the matter is that there was no radio operator aboard the ship, the reason being that the company wanted to cut down on expenses at the cost of the passengers who were aboard that steamer. I understand the Committee on Interstate and Foreign Commerce has already reported out a bill saying that ships that carry passengers, excursion steamers, fishing boats, and ships of that trade, will have to have a radio man aboard the ship. Every law that has ever been enacted as far as safety is concerned, whether it is about running lights, whether it is to put life preservers on the boat, whether it is to put lifesaving craft on the boat, has been accomplished because of the fact that you have had to have legislation for it. The owners of the ships at all times have tried to reduce their costs to whatever extent they can, and they have opposed every type of legislation along the line.

Now, the fact remains, as the gentleman from Massachusetts [Mr. MCCORMACK] has said, that the Moore-McCormack Lines have 35 units, the State Marine Corp. 20 units, and many others. He gave you a long list, naming some 8 or 10 companies that have over 300 of these units on their ships. Surely companies of this type would not have them on their ships if they did not think they were worthy.

I hope, Mr. Speaker, that the rule is adopted.

Mr. Speaker, I move the previous question.

The previous question was ordered.

The SPEAKER pro tempore (Mr. ROONEY). The question is on the resolution.

The resolution was agreed to.

Mr. PRIEST. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 4090) to amend part II of title III of the Communications Act of 1934, so as to require the installation of an automatic radio-telegraph call selector on cargo ships of the United States carrying less than two radio operators, and for other purposes.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H. R. 4090, with Mr. THOMPSON of Texas in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. PRIEST. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, the pending bill would require the installation of an automatic radiotelegraph call selector on certain cargo ships of the United States carrying less than two radio operators.

Ships equipped with such a device could receive radio messages from shore stations and other ships while the ship's radio operator is off duty. This would be an important contribution to safety at sea.

The Communications Act of 1934 now provides that cargo ships required to have radio must carry more than one radio operator unless the ship is fitted with an autoalarm. Unless such ship has an autoalarm, continuous watch must be maintained by qualified radio operators while the ship is being navigated outside a harbor or port.

The autoalarm responds to what is known as the international alarm signal, which is a series of 12 dashes 4 seconds long, spaced 1 second apart. The device is designed so that four dashes will actuate the circuit and ring bells in the radio officer's quarters, on the navigating bridge of the vessel and in the radio room. This will alert the radio operator to an emergency whenever he is off duty or listening to another frequency, so that he can receive the distress message, which follows the alarm signal by two minutes.

The primary usefulness of the autoalarm is in the period immediately before or after a maritime disaster occurs.

The call selector would perform a similar alerting function, but it would supplement the autoalarm by alerting the ship radio operator during situations which, although not of a distress nature, do involve maritime safety.

The autoalarm system now in use does not permit calling of ships in situations

of difficulty not of a full distress nature. A ship carrying only a single radio operator is to cut off from messages alerting the ship to potential danger when the ship's radio operator is not on duty, which is the greater part of the day. Additionally, the installation of call selectors aboard ships would supplement the autoalarm by substantially increasing the probability of alerting other ships during distress situations. This is because call selectors will be capable of responding to the international distress signal while presently approved autoalarms will respond only to the international alarm signal. Under international radio distress procedures, the distress signal is transmitted far more frequently than the alarm signal, so that the call selector would be useful in many situations where the autoalarm would not respond.

Specifically, for example, installation of an automatic call selector would facilitate and improve communications in the following manner:

First. Specific ships known to be in the vicinity of a distressed vessel may be called directly by use of that vessel's own call sign.

Second. During protracted distress traffic the single radio officer on a cargo vessel working traffic with the distressed vessel is assisted in responding to calls when in an exhausted state after continuously operating alone over a period of days.

Third. Medical assistance and transfer of sick or injured at sea may be facilitated.

Fourth. Promulgation of weather and other maritime safety information may be facilitated and ships cautioned to avoid exposure to needless danger by receipt of such information.

Fifth. Response of ships to lifeboat transmitter signals sent by survivors whose vessels may not stay afloat till rescuers reach them will increase the rescue possibilities of such survivors.

The automatic radiotelegraph call selector has been compared to the bell on a telephone. Without a bell the owner of the telephone, if away from the instrument, would not be able to receive messages since there would be no way of alerting him to the fact that another person wanted to communicate with him. Comparably, a ship which has a single radio officer on duty for 8 hours can receive messages during those 8 hours. However, for 16 hours during each day when such officer is not on duty no messages may be received.

The bill provides that the automatic radiotelegraph call selector must be capable of receiving and responding to the following:

First. The international distress signal, S O S.

Second. The international safety signal, T T T.

Third. The international urgent signal, X X X.

Fourth. The ship's call sign.

Fifth. Any other predetermined code which is desired for use in national emergencies.

The bill postpones the effective date of the mandatory installation requirement until 18 months—or such shorter period as the Commission may determine—after the Commission has found that, first, an automatic radiotelegraph call selector is and will continue to be available and may be installed at a reasonable cost to shipowners; and second, patents covering or necessary to the manufacture of an automatic radiotelegraph call selector are and will continue to be freely available for license at a reasonable royalty. The committee feels that to avoid monopolization in the manufacture of this device it is necessary, in the public interest, to require that the patent owner make binding commitments to the Commission that the necessary patents will be available freely and that the royalty charged for the use of such patents will be reasonable before installation of a patented device becomes mandatory.

While the installation of automatic call selectors would be mandatory only for cargo ships of the United States, it was pointed out to the committee that this equipment could serve as links in a radio network of ships which are not so equipped, thus making an important contribution to safety on the high seas.

The public interest requires that safety standards at sea be maintained at the highest possible level for the protection of life and property. The proposed legislation would help in carrying out the obligation of the Congress to enact legislation to protect the public interest.

Let me reemphasize, Mr. Chairman, that the committee after rather extended hearings in the 83d Congress reported a similar bill; that following hearings in the present Congress H. R. 4090 was reported after being amended in order to meet some of the objections that had been raised with reference to possible monopoly and also in connection with the question of approval by the Federal Communications Commission. We made it very certain in this legislation that no equipment would be installed unless it had the approval of the Commission. If tests fail on a pilot model and if they do not measure up to the standards required, then it will be up to the manufacturer to develop another model and another set that will meet the requirements of the Commission.

I hope, Mr. Chairman, in the interests of safety that the pending legislation will be approved by the House.

(Mr. PRIEST asked and was given permission to revise and extend his remarks.)

Mr. DOLLIVER. Mr. Chairman, I yield myself 5 minutes.

(Mr. DOLLIVER asked and was given permission to revise and extend his remarks.)

[Mr. DOLLIVER addressed the Committee. His remarks will appear hereafter in the Appendix.]

Mr. PRIEST. Mr. Chairman, I yield 5 minutes to the gentleman from Illinois [Mr. MACK].

(Mr. MACK of Illinois asked and was given permission to revise and extend his remarks.)

Mr. MACK of Illinois. Mr. Chairman, I rise this afternoon in the interest of safety at sea. I have never worked aboard a ship in any capacity, but I have traveled extensively by air over the Atlantic and Pacific: I appeal to this House to vote for safety at sea. There are vast expanses of ocean where there are no rescue facilities of any kind, and there are spots 1,200 nautical miles from the nearest land in any direction. That is the reason I believe it to be worthwhile for this committee to make navigation as safe as possible. That is the kind of bill we are considering today. It will be another step to help protect individuals, ship owners, passenger vessels, and cargo vessels traveling throughout the world.

Mr. Chairman, it has been said that we should wait until we have perfected this device, and then enact this legislation. That was not the case when the original legislation was passed, and I have before me the testimony of Commissioner Webster, of the Federal Communications Commission, wherein he stated that they recommended the legislation before they had actually developed the autoalarm.

As a matter of fact, what we are trying to do here today is merely to require a mechanism which can contribute more to safety than the one presently required, which was invented nearly 30 years ago—this is progress.

Our mechanical engineers, our electrical engineers have made progress, and we are trying to raise the requirements so that we will be up to date. Commissioner Webster made it clear in the hearings that at the time the other legislation to which I referred was passed by Congress, the device had not been perfected. He said it was simply a question of mechanical perfection, that the idea was well-known; there was no argument about that. So we are in exactly the same position today, as we consider this legislation, as we were at the time we considered legisaltion requiring the autoalarm on cargo vessels.

I want to say also, Mr. Chairman that, when we speak of cargo vessels, we are speaking of 97 percent of all the ships at sea. It is very important, therefore, that we provide additional requirement of safety for cargo vessels and thereby improve the safety of the passenger vessels as well. In the past we have waited until after the occurrence of a major disaster. We have already had several minor disasters, but we are prone to wait, as I say, until we have a major disaster, and then seek appropriate legislative action. What we must do is pass this preventive legislation, so that we may avert any major disaster at sea. That is the reason the Interstate and Foreign Commerce Committee has reported the legislation to the House at this time.

I do not think it is necessary to wait for other nations to develop this device. I believe it is appropriate that the United States, the world leader in most fields, take the initiative in this instance as well and require that automatic call selectors be installed on our cargo vessels.

The CHAIRMAN. The time of the gentleman from Illinois has expired.

Mr. PRIEST. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. MACK of Illinois. I yield to the gentleman from Arkansas.

Mr. HARRIS. Is it not a fact that the amendment to the Federal Communications Act of 1934 requiring an autoalarm came as the result of a tragedy and terrible disaster following the 1934 FCC Act and as a result of that tragedy the Communications Act was amended in 1937 to require an autoalarm radio system on United States cargo ships; is that true?

Mr. MACK of Illinois. That is correct. That is contained in our testimony here as well.

Mr. HARRIS. Following the utilization of this devie, is it not true that our Government then took the lead during these years to bring about international agreements — agreements with other countries—that this system be installed on their ships?

Mr. MACK of Illinois. That is certainly correct.

Mr. HARRIS. The international agreements were promoted by our own Government after the FCC Act had been amended in 1937 to require this radio system or alarm system aboard ships?

Mr. MACK of Illinois. That is correct. I thank the gentleman for his contribution.

Mr. Chairman, I repeat that all this legislation does is require the cargo vessels to install the new device we have referred to as the automatic call selector. This device responds to various signals, the urgent signal, distress signal, safety signal, and it also responds to the ship's call signal. It will also respond to any prearranged or predetermined code that the international conference would want to agree upon. So it would be contributing to safety.

I believe in safety at sea. I am not in favor of subsidies, but I would favor subsidizing safety if it is necessary to subsidize at all. We cannot put a price on safety with any more grace than we could put a price on human life. Therefore, I do not believe we should consider the price argument at all. As has been stated, it is only a matter of $1,500 or $2,000. The opponents have argued that it will run to $10,000 or $20,000, but it does not make any difference to me what the price is. If it involves safety, I am willing to pay the price. I do not care whether the Government has to pay it or whether the shipowners have to pay it, if it is for safety and will increase the safety of passengers on vessels at sea, I am for it and I am willing to pay the price.

Mr. Chairman, I want to say in conclusion I believe that this legislation is long overdue. We have been discussing it for the last 2 years. We reported out a bill last year, and naturally there were organizations which opposed it. The shipowners will always be opposed to this type of legislation, because it does not help the individual shipowners as the result of installing the device in any particular vessel, but it helps the people who are underway at sea in the event of an emergency. So, it is obvious that the Government must require this type of equipment, and it is imperative that Congress enact this legislation.

For these reasons, Mr. Chairman, I strongly favor this bill. I think it is a great stride forward. The opposition of the shipowners is to be expected but, I trust, not long endured. I want to reemphasize the fact that I have flown many, many thousands of miles over the water, and believe that if this equipment were installed in cargo vessels, it would be an aid in air emergencies as well as emergencies on the surface.

Mr. DOLIVER. Mr. Chairman, I yield 5 minutes to the gentleman from Washington [Mr. PELLY].

Mr. PELLY. Mr. Chairman, I want to say again and reiterate that I feel for my opponents in this particular debate the very highest degree of regard, for the members of the committee in particular, for when I was a member of that committee I always enjoyed it, and I think it is a wholesome thing to bring out the facts.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. PELLY. I yield to the gentleman from Arkansas.

Mr. HARRIS. I should like to say for the members of our committee and the Members of the House as well that we have the highest regard for the gentleman from Washington. We on the committee particularly recall that he was a member of this committee during the last Congress, and we regretted to see him leave. We know that his feeling in this matter and his attitude and position toward this matter is sincere. I recall that he opposed it when it was before this committee in the last Congress, as he is opposing it now. I just want to say that I, for one, know that the gentleman is sincere in his opposition, and I am sorry that I have to differ with him on this problem as I see it.

If the gentleman will permit me to say this further, the reason I feel that this is a principle that should be followed and pursued is because we are living in what we refer to and what everybody today calls the electronic age. More electronic devices are being developed for the benefit of the people, the public, to provide safety for the people of this country and of the world, and I, for one, am not going to say that by my action here I am going to take a position that would retard or otherwise prevent our scientists from developing these devices which can mean so much to the future development and for the welfare of this country. That is the reason I believe these electronic devices, when they are so designed and developed, ought to be made available for the use of the public throughout the whole world, not only the United States. For that reason I feel that we ought to promote this project as one of those electronic devices which I believe will prove to be highly beneficial.

Mr. PELLY. I thank the gentleman from Arkansas for his very kind remarks about my motives in opposing this legislation.

I would like also to say that I think the gentleman from Arkansas [Mr. HARRIS] will realize that the present device is only limited from doing exactly what this new call selector would do by international agreement. International agreement says that it be limited only to distress. Therefore, as far as the electronic device goes, to me, it would only do something by a complicated process that might well be done simply.

Mr. HARRIS. Mr. Chairman, will the gentleman yield further?

Mr. PELLY. I yield to the gentleman.

Mr. HARRIS. This is no different from the controversy that we are in today with our military. In this Congress we appropriated $550 million to the Navy to develop a system of air navigation aids, called TACAN, which is an electronic device that we all know about. We developed the common system which was promoted by this country and adopted by the ICAO Conference, the international conference, and which today has been adopted. But yet, in this Congress, through our own action, we appropriated $500 million to the Navy to develop this new navigation aid, which is another type of electronic device for the benefit and the use of our military people. If we were to adopt this one we are discussing it would not be contrary to the policy that we have pursued in promoting a new and an additional safety device for the benefit of our people.

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. PELLY. I yield to the gentleman.

Mr. HOSMER. The gentleman realizes that the development of TACAN is completely separate and different from the device which is to be used commercially and which is used all over the world. A great amount of confusion is caused merely by fiat of the Congress, which is acting without understanding the technical difficulties inherent in the problem, and creating a difficult situation commercially, not only in this country but all over the world. That is why the Congress ought to be careful, when it gets into such a field of technical devices, which we, as laymen, know little about, before it acts, or it might cause a great deal of trouble because of unthoughtful action.

The CHAIRMAN. The time of the gentleman from Washington has expired.

Mr. PRIEST. Mr. Chairman, I yield the gentleman 5 additional minutes.

Mr. PELLY. In that regard I want to make it plain that I am a layman and my judgment in this matter is based largely on the recommendation of Commissioner Webster who suggested that this intercommunication at sea should be based on standardized international agreement.

I want to say also at this time that when we come into the House again I am going to ask permission to put in the RECORD a statement covering the additional operating cost attributable to the call-selector device which would be required under H. R. 4090. I realize that we used a figure such as $12 million a year as the cost. I think if you would look at the record you would find the basis on which the various statements have been made.

I have outlined my objections to this bill at some length in the debate of the rule. There is nothing to be gained, as I see it, to add to that public record.

As stated by me, then, I intend to offer an amendment at the appropriate time. Already the Interstate and Foreign Commerce Committee added a section providing an effective day of the legislation as 18 months, or a shorter period if the Federal Communications Commission determines, after it finds this new equipment is available at reasonable cost and freely available for license at a reasonable royalty. I would add one more proviso to these two, so that this law would be deferred also until after the FCC finds this equipment is in conformity with safety of life at sea convention like the automatic alarm is.

I have told the distinguished chairman of the Interstate and Foreign Commerce Committee I would withdraw my objection if that amendment is accepted.

One provision in section 3 I dislike. It is designed to prevent adjusting the present automatic alarm to perform the added duty of responding to four signals—so it would make installation of this new gadget unnecessary. In section 3 the bill reads:

> The automatic radio call selector shall be independent, except for source of power and antenna, of any other radio equipment on the ship.

There is the provision to protect the owner of the patents to this gadget. There is monopoly written right into the language of the bill. It could not be plainer. That sentence should be worth a million dollars to Mr. Benjamin Green, who bought up the patents from an employee who worked for him at one time.

I shall have an amendment to nullify the effect of that language. I would accomplish this in section 4 by a provision to defer the effective date of this bill until it is determined by the FCC that agreement cannot be effected internationally to permit use of the present automatic alarm for the purposes which would be served by this new gadget.

Let me emphasize what the testimony of Commissioner E. M. Webster called for—the desirability of a common standardized distress call system in the world. If there is going to be any aid called for, why limit it to assistance from an American vessels. Why ignore a foreign ship—it may be the only one in the vicinity. Finally, too, let me say if the FCC were asking for legislation of this nature, I would not be in the well of the House today. But no Government department recommends this measure.

As minority views state, legislation of this type is most unusual. If there is doubt to the facts, the normal procedure is to direct that a study be conducted and a factual report be compiled. There is ample precedent in the field of marine safety radio equipment—as was provided in section 602 (e) of the Communications Act of 1934, as amended.

The present auto alarm can be used to accomplish exactly what this new call selector would do as provided in this bill. All it would take is a broadening of the limitation on its use by International Convention on Safety of Life at Sea.

This bill would make use of the present alarm impossible by insisting on a separate piece of equipment.

Accordingly, as I said, I shall introduce an amendment, the simple effect of which will be to defer the effective date of this legislation until the Federal Communications Commission finds "agreement cannot be effected internationally to permit use of the present auto-alarm for the safety purposes which would be served by the automatic radio call selector specified in this bill and unless and until such an automatic call selector is required by the next International Convention for Safety of Life at Sea to be installed on all vessels subject to such convention."

If that amendment is adopted, I see no objection to passage of the bill. It would cure the greatest weakness which is lack of international standardization.

I strongly urge support of such an amendment.

And I should like to say further, if my amendment is not adopted, I expect to offer a motion to recommit.

Estimated additional operating cost attributable to the call selector device which would be required under H. R. 4090

1. If device used with one radio operator: [1]

Alarms responding to T T T and other calls (from Coast Guard radio station data hearing, pp. 112–114): Average 1 alarm every 2 hours.

False alarms (from FCC laboratory tests, hearing, p. 59): Average 1 alarm every 8 hours.

Alarm in operation 16 hours per day: Average 10 alarms per day.

Overtime payable to radio operator for answering alarm ($3.29 per alarm): $32.90 per day.

Annual cost (ship at sea 50 percent [2] of time or 182.5 days): $6,004.24 per year.

2. Cost of second radio operator:

Basic wage of $501.72 per month	$6,020.64
Required wage increase to first radio operator	433.92
Automatic weekend overtime (52 weeks times 2 days equals 104 days plus 9 holidays) estimated at sea 50 percent or 56½ days at 8 hours per day times $2.19	989.88
Welfare, 365 days at $1.60 per day	584.00
Taxes (estimated)	150.00
Vacation fund, 9½ percent of basic wages ($6,454.56)	613.18
Wage classification cost, per year	8,791.62
Subsistence (average $1.75 per day), per year	638.75
	9,430.37
Overtime payable to radio operators for answering alarm, if installed (alarm in use 8 hours per day) [3]	3,002.12
Total, per year	12,432.49

3. Per annum cost to Government and industry: [4] On subsidized cargo vessels the entire cost must be borne by the Government because the added cost is 100 percent in excess of foreign wage and/or operating costs.

[1] NOTE.—It is the shipowners contention that it would be impossible to use the proposed device with a single radio operator because the radio operator could not physically stand the strain of being brought on duty an average of 10 times per night during off watch hours.

[2] Based on dry-cargo vessel. Other vessels, such as tankers, will be at sea more than 50 percent of the time.

[3] NOTE.—The dilemma presented by this bill is apparent. The call selector need not be installed if a second radio operator is carried, yet the purpose of the bill is to require the call selector.

[4] NOTE.—These cost figures are exclusive of equipment purchase, installation, and maintenance costs for which no accurate figures are available since the device itself is not in production. Estimated manufacturing costs range from $3,000–$10,000 per unit. (House committee report, p. 12.)

	To Government (266 subsidized cargo vessels)	To industry (771 nonsubsidized cargo vessels)	Total (1,037 cargo vessels)
Estimated cost if device could be used with single radio operator	$1,597,127.84	$4,629,269.04	$6,226,396.88
Estimated minimum cost of 2d radio operator	2,508,478.42	7,270,815.27	9,779,293.69
Estimated added cost if device used with 2 radio operators	798,563.92	2,314,634.52	3,113,198.44
Estimated total probable cost	3,307,042.34	9,585,449.79	12,892,492.13

4. Other costs: The following costs are not applicable to all vessels, and the number of ships which would be affected is not ascertainable:

(a) On some vessels, such as certain tankers, the ratio of crew to stewards is in such critical balance that if a second radio operator must be hired the ship must carry an additional steward. This will add an additional $4,108 per annum to the wage classification of the vessel involved.

(b) The second radio operator must be furnished with a room. In cases where new space must be provided, or when one of the 12 passenger spaces is utilized for this purpose, the cost is estimated at $6,000 to $8,000. If passenger cabin space is taken the cost becomes an annual revenue loss.

Mr. DOLLIVER. Mr. Chairman, I yield 5 minutes to the gentleman from California [Mr. HOSMER].

Mr. HOSMER. Mr. Chairman, I tried to make it clear a while ago that I had a more than usual interest in safety at sea. We might have a bill before us to require every ship in the United States merchant marine to have an empty black box placed on the wheelhouse 5 feet long, 2 feet wide, and 3 feet deep. We could all get up and argue that such a device would make the sea safe for people who are passengers and people who are seamen, but we certainly could not give any reasons why.

The same situation pertains as to the device to which the bill refers. Nobody understands what there is about the wires, tubes, condensers, circuits, and dials of the device before us that would make for safety at sea. So nobody can give any reason why. So the argument made, that we are legislating for safety at sea, and you cannot be against saving lives so you should vote for this bill, sounds kind of good, but is specious when analyzed. And let me tell you, you can get yourself in trouble that way, whether

you buy a pig in a poke or buy a black box or some other kind of mysterious device to put on ships is the same thing, if they do not work properly for the purpose of safety your safety argument is no good. On that issue, what is the evidence?

This is what the Federal Communications Commission says about this thing before us, according to the minority report:

FCC took two kinds of tests. They took tests on it to see if it could be set manually to receive the five different kinds of signals it is supposed to receive. In other words, a series of dots and dashes that are supposed to actuate any one of five particular types of signals. The signal then is supposed to appear in the wheelhouse or radio shack or wherever this device is setup. The FCC found that the device could not be set manually for equally efficient and accurate reception of each of the various signals. FCC further found that accuracy varied with the speed of transmission of the same actuating signals. In other words, it receives dots and dashes that are sent out by radio operators. Radio operators vary in the speed at which they send. Some of the foreigners do it differently than we do, and vice versa. So you might have a ship of some particular nationality sending a signal back home for one purpose and it will be actuating an alarm on an American ship for an entirely different purpose, all because of the different speeds and characteristics with which radio operators may transmit.

FCC also found that even room temperature and voltage had a great effect on these devices. 'If ever any of you have sailed a ship or operated on it, you know that the voltage is quite a problem. We have automatic voltage regulators, and so forth, but 9 times out of 10 somebody will dope off in the engineroom and maybe instead of 110 volts you will be getting 90 or 120. All of these uncontrollable factors and variables lead to the device's malfunctioning. I have great respect for marine engineers and the remarks I have just made should not be interpreted as critical. But anyone who knows the sea also knows that neither the deck gang nor the black gang ever misses an opportunity to complain about the other, so let us accept my words about voltage variations in that spirit, and just concede that for causes unknown and beyond the control of competent watches in the engineroom, it goes up and down.

The second kind of test, the positive response of this device to actuating signals, is where the true test of its value lies. The percent of true response varied from 46 percent to 92.5 percent on the 500-kilocycle band, which is the international distress frequency. On the lifeboat frequency it varied from 53.7 percent up to 100 percent on one of the tests.

You must be able to rely on a piece of equipment 100 percent if it is to save lives. How many people have bought a car that turned out to be a lemon, and you could not rely on it and had to get rid of it? When safety at sea is at stake you do not want to legislate devices on ships unless they are going to bring safety instead of danger. That is plain commonsense, because their reliability will either protect or endanger the lives of your seamen and passengers.

The startling facts about this device, according to the Federal Communications Commission tests, is that there were a total of 72 false responses in 646 hours of operation, or 1 every 9 hours. What if they had a false alarm in each fire department station here in Washington every 9 hours? Visualize it. The confusion and demoralization would be endless. Visualize what it would mean at sea, where just 1 radio operator is aboard ship. You see what a terrible thing it is to have these false alarms. It not only destroys the confidence of the people in the equipment, in this case the whole ship's crew, but, more than that, think of your radio operators. These fellows have so many hours on and so many hours off. If they are jumping up all during off-duty hours to respond to these false alarms, you can see what kind of shape those operators are going to be in before the voyage is over. You can see how disruptive of morale and efficiency this type of equipment is going to be. We should not be legislating for it; we should be legislating against it, if safety at sea is our goal.

I have stood watches for a long time. All of you that sailed in the Navy or merchant marine during the war know that the general alarm was ringing all the time. After that lasted a few months, you had to get back to port to rest or go crazy. You cannot keep people keyed up with alarms, real or false. That is all this device promises.

Congress appropriates a lot of money for the Federal Communications Commission and its engineering and testing people every year. If you have enough confidence in this agency to appropriate this money, you should have an equal confidence in what it says when it comes up here on the Hill and tells you that a piece of equipment is no good and gives you the statistics on its tests and everything else to prove it. Is it not just plain common sense to believe the FCC?

We have heard the argument here that the people who stood up in the well of the House in 1934 arguing against the enactment of the auto-alarm legislation were just obstructionists. They may have been. But that does not apply to those who argue against this admittedly deficient and defective device proposed by the bill before us. For the auto alarm is today serving the purpose of alerting unmanned receivers when a May Day S O S distress call is broadcast. Legislating the additional device, called for by this bill on to American ships would not only have all the disadvantages mentioned by others, but would, in addition, serve not to alert radio operators to emergency calls, but, through the device's inherent defects, serve to deaden response to them. It would promote anger, not safety, at sea. Protection of American seamen and passengers on United States-flag vessels demands this bill be scuttled.

Mr. DOLLIVER. Mr. Chairman, I have no further requests for time.

Mr. PRIEST. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. If there are no further requests for time, the Clerk will read.

The Clerk read as follows:

Be it enacted, etc., That section 3 of the Communications Act of 1934, as amended (47 U. S. C., sec. 153), is amended by adding at the end thereof the following paragraph: "(hh) 'Automatic radiotelegraph call selector' on a ship of the United States subject to the provisions of part II of title III of this act means a device meeting the requirements prescribed for such devices in section 355 (b) of this act and approved by the Commission."

SEC. 2. Section 353 of the Communications Act of 1934, as amended (47 U. S. C., sec. 353), is amended to read as follows:

"OPERATORS, WATCHES, AUTO-ALARM, AND AUTOMATIC RADIOTELEGRAPH CALL SELECTOR—RADIOTELEGRAPH-EQUIPPED SHIPS

"SEC. 353. (a) At least two qualified operators shall be carried for safety purposes on—

"(1) each cargo ship of the United States which is required by this part to be fitted with a radiotelegraph installation and which is not fitted with an auto-alarm and an automatic radiotelegraph call selector;

"(2) each cargo ship (other than a ship of the United States) which is required by this part to be fitted with a radiotelegraph installation and which is not fitted with an auto-alarm; and

"(3) each passenger ship which is required by this part to be fitted with a radiotelegraph installation.

"(b) At least one qualified operator, who shall have had at least 6 months' previous service in the aggregate as a qualified operator in a station on board a ship or ships of the United States, shall be carried for safety purposes on—

"(1) each cargo ship of the United States which is required by this part to be fitted with a radiotelegraph installation and which is fitted with an autoalarm and an automatic radiotelegraph call selector in accordance with this title; and

"(e) Each cargo ship (other than a ship of the United States) which is required by this part to be fitted with a radiotelegraph installation and which is fitted with an autoalarm in accordance with this title.

"(c) Each ship of the United States required by this part to be fitted with a radiotelegraph installation shall, while being navigated outside a harbor or port, keep a continuous watch by means of qualified operators: *Provided*, That in lieu thereof, on a cargo ship of the United States fitted with an autoalarm and an automatic radiotelegraph call selector in proper operating condition, a watch of at least 8 hours per day, in the aggregate, shall be maintained by means of a qualified operator.

"(d) The Commission shall, when it finds it necessary for safety purposes, have authority to prescribe the particular hours of watch on a ship of the United States which is required by this part to be fitted with a radiotelegraph installation.

"(e) On any ship of the United States fitted with an autoalarm or an automatic radiotelegraph call selector, or with both an autoalarm and an automatic radiotelegraph call selector, such apparatus shall be in operation at all times while the ship is being navigated outside of a harbor or port when the operator is not on watch, and at such other times as the Commission may prescribe."

SEC. 3. Section 355 of the Communications Act of 1934, as amended (47 U. S. C., sec. 355), is amended by redesignating paragraphs (a) through (h) as paragraphs (1) through (8), by striking out the words "subsection (d) of this section" in each place where they appear

in the paragraphs redesignated as (5) and (6) and inserting in lieu thereof the words "paragraph (4) of this subsection", by inserting "(a)" immediately after "SEC. 355.", and by adding at the end thereof the following new subsection:

"(b) The automatic radiotelegraph call selector installed on any ship in accordance with this part shall be capable of being set manually to simultaneously receive and identify and respond to the following international Morse code signals:

"(1) The ship station call sign;

"(2) The international distress signal;

"(3) The international safety signal;

"(4) The international urgency signal; and

"(5) Any other predetermined code which is desired for use in national emergencies.

It shall provide a means for receiving such signals on the frequencies 500 kilocycles and 8,364 kilocycles, or such other frequency as the Commission may prescribe in lieu of 8,364 kilocycles, selectively but with respect to frequency not simultaneously, and shall sound an alarm if, but only if, any of the above 5 signals are received. Such alarm shall be sounded in the radio room, on the bridge, and at such other places on the ship as may be directed by the Commission. The automatic radiotelegraph call selectors shall be independent, except for source of power and antenna, of any other radio equipment on the ship."

SEC. 4. This act shall take effect on the expiration of 18 months (or such shorter period as the Commission shall determine) after the Federal Communications Commission has found that—

(1) an automatic radiotelegraph call selector (as defined in section 3 (hh) of the Federal Communications Act of 1934, as amended by this act) is and will continue to be available, and may be installed, at a reasonable cost to shipowners; and

(2) patents covering, or necessary to the manufacture of, such an automatic radiotelegraph call selector are and will continue to be freely available for license at a reasonable royalty.

Mr. PRIEST (interrupting the reading of the bills). Mr. Chairman, I ask unanimous consent that the bill be considered as read, printed in the RECORD at this point, and open for amendment.

The CHAIRMAN. Without objection, it is ordered.

There was no objection.

Mr. PELLY. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. PELLY: On page 6, in section 4, after line 2, insert a third proviso as follows:

"(3) agreement cannot be effected internationally to permit use of the present auto-alarm for the purposes which would be served by the call selector device, and unless and until an automatic radio call selector is required by International Convention for Safety of Life at Sea to be installed on all vessels subject to such convention."

Mr. PELLY. Mr. Chairman, I have no wish to delay the committee at this late hour. I think everyone understands what the amendment would accomplish. In brief, it would carry out the recommendation of Commissioner Webster of the Federal Communications Commission.

(Mr. PELLY asked and was given permission to revise and extend his remarks.)

Mr. HARRIS. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, first I would like to inquire of the author of the amendment as to the language which he proposes. He would add a new section on page 6; is that correct?

Mr. PELLY. No, that is not correct. The gentleman will see that on page 5 there are two provisos. This would add a third proviso so that the legislation would take effect after this third proviso.

Mr. HARRIS. The bill reads as follows.

On page 2 of the bill, subsection (2) of section 4, with reference to the effectuation of the act reads:

(2) patents covering, or necessary to the manufacture of, such an automatic radiotelegraph call selector are and will continue to be freely available for license at a reasonable royalty.

And then the gentleman by his amendment would add the number (3) after line 2, page 6.

Mr. PELLY. So then it would read, "after the Federal Communications Commission has found that—" subparagraph (1), which is followed by subparagraph (2); and I would add a third proviso, namely, that agreement cannot be effectuated internationally to permit use of the present auto-alarm for the purposes which would be served by the call selector device.

Mr. HARRIS. I see. That is the third subparagraph of section 4?

Mr. PELLY. That is correct.

Mr. HARRIS. After the Federal Communications Commission has found that an agreement cannot be effected internationally that would permit the use of the autoalarm for a purpose which will be served by the call-selector device, and unless and until the automatic radio call selector is required by international convention for safety of life at sea to be installed on all vessels subject to such convention.

Mr. PELLY. I would explain that this provision would mean that the Federal Communications Commission would have to find that under international convention it was acceptable and standardized before the law would take effect.

Mr. HARRIS. I hope you will pardon me if I have to ask for more time, but I have not seen the gentleman's amendment before. The amendment says:

The act shall take effect on the expiration of 18 months (or such shorter time as the Commission shall determine) after the Federal Communications Commission has found that—

(3) Agreement cannot be effected internationally to permit use of the present autoalarm for the purposes which would be served by the call-selector device, and unless and until an automatic radio call selector is required by international convention for safety of life at sea to be installed on all vessels subject to such convention.

Mr. PELLY. That is, it would be affected by the use of five different messages.

Mr. HARRIS. The gentleman knows very well from the hearings which our committee held last year and this year that the autoalarm cannot provide other signals which this call selector is designed to receive. Is that not true?

Mr. PELLY. I might say that the present alarm, that is, 12 dashes, under the present system that alert a ship for a disaster call could be used for an urgent message or a safety message or any other kind of message, but under international convention it is limited to disaster messages.

Mr. HARRIS. The gentleman knows very well that the autoalarm system has this one signal which it will receive; is that not true?

Mr. PELLY. Twelve dashes. That is right.

Mr. HARRIS. It does not receive an international distress signal?

Mr. PELLY. It does not.

Mr. HARRIS. Then it does not receive an international safety signal?

Mr. PELLY. It would alert to say that a safety message is coming through.

The CHAIRMAN. The time of the gentleman from Arkansas [Mr. HARRIS] has expired.

(By unanimous consent Mr. HARRIS was granted 5 additional minutes.)

Mr. PELLY. The point of this amendment is to provide that the alert signal presently used on ships can be for messages other than disaster messages.

Mr. HARRIS. I think I understand what the gentleman means, and certainly it confirms my feeling about it, that the amendment itself—I do not say it is designed for that purpose—but the effect of it will be to kill the bill. It cannot have any other effect.

Mr. PELLY. That is right.

Mr. HARRIS. The gentleman admits it. Therefore, I am opposed to the amendment because I am for the bill. The gentleman's admission is precisely what I thought he intended, and that was to kill the bill by this method. The gentleman has clarified precisely what I thought was in his mind, for the record.

Now, the purpose of bringing up this legislation is not because the Moore-McCormack Lines is against it; not because the labor organizations or someone else is for it. The purpose of this legislation is for safety of life at sea and safety of property. The hearings have revealed that over the years we had development in the electronic field. We developed the autoalarm system in 1934, 1935, and 1936, and it was adopted by this Congress in 1937. From that the International Radio Conference adopted it as a part of the international program. Through these years we have had, then, the development of a new system which can add to safety of life at sea. This is just in keeping with the great advances that have been made in electronics in many other fields during the last 15 years. Here is a device that not only will increase safety of life at sea but the safety of the ships owned by the very companies who are opposing it. To save my life I cannot understand why they should oppose something like this which would cost them 1 extra operator or else about $1,600 to $1,800 for this installation.

Mr. DOLLIVER. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. I yield to the gentleman from Iowa.

Mr. DOLLIVER. The fact that it has been said that the adoption of the amendment would kill the bill to me makes the amendment very desirable, also because I am opposed to the bill. However, in all seriousness, let me say that this amendment would permit or require that this device be adopted internationally as the present signaling device is adopted internationally by the International Convention; and it seems to me in, all seriousness, that is a very desirable amendment to this legislation and that it ought to be adopted for that reason, because then all the ships at sea would be required to have this kind of device.

Mr. McCORMACK. Mr. Chairman, will the gentleman yield?

Mr. HARRIS. My time is very limited.

Mr. McCORMACK. It was not adopted until—

Mr. HARRIS. That is the point I was going to make; the International Radio Conference did not adopt the autoalarm system until after this Congress had amended the Federal Communications Commission Act to provide for it. Here we have another device. How can you promote something if it is not by law or by policy or principle adopted by the Government that is going to promote it? Who is going to promote something that has not been recognized by the man that offers it? They are going to say, of course, that if your own country does not adopt it, how can you expect us to adopt it and follow your leadership in an international conference?

I think it is well to remember that we have a system here that can add to what we already have had in these last nearly 20 years. If we will undertake to carry out our safety policies by development of a device of this kind and adopt it in our own country and then promote it in the international field, I think we will find that we will promote safety at sea, and, therefore, be in a better position to save life and property and avoid some of the disasters at sea that have occurred in the recent past.

I ask that the amendment be defeated.

Mr. GROSS. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, unfortunately, I have not been able to be here all afternoon. I should like to address a question to the proponents of this bill. Is there anything in the majority report that gives any indication of the cost? Can the gentleman from Tennessee tell me?

Mr. PRIEST. I believe the best estimate the committee received on cost was approximately between $1,600 and $1,800 per unit, though there were some who felt that about $1,800 was the best estimate the committee received.

Mr. GROSS. What would be the total cost?

Mr. PRIEST. It would depend on the number of ships. I do not recall the total number of cargo ships, but 97 percent of the cargo ships flying the American flag have but one radio operator. What the number is I do not know at the moment.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I gladly yield to the gentleman from Washington. I am searching for information.

Mr. PELLY. I think the gentleman, unfortunately, was not here when I made a statement on that subject. It was to the effect that there are approximately 1,000 such vessels.

Will the gentleman yield further?

Mr. GROSS. Yes.

Mr. PELLY. As soon as we get back into the House I shall ask permission to insert in my remarks a statement showing those figures, of the lumber of ships and cost.

I may say that the 4-way signal device of 1947 cost $1,650, and costs have about doubled since that time; so I would think the 5-way device, which is considerably more complicated, would be around $3,000, as a conservative estimate.

Mr. GROSS. Can the gentleman give me any idea of the total cost of equipping the ships with this new device?

Mr. PELLY. I have said there are approximately 1,000 ships at $3,000 each. You can see it is an order for somebody to the extent of about $3 million. I would like to call attention to the fact also that the overtime involved in responding to the calls, either false alarms or regular calls that come to a ship on the basis of tests results in a cost to each ship of $30.90 per day. Figuring the ship is at sea approximately half of the time, you get a cost per year to a ship of $6,000. But no radio operator can stand being awakened approximately 10 times during his recreation and sleeping period, therefore you will have to put on extra radio operators.

Mr. GROSS. What would be the Government contribution by way of subsidies?

Mr. PELLY. $3 million, according to the ship operators.

Mr. GROSS. That would be the cost to the taxpayers of this country?

Mr. PELLY. That is correct.

Mr. GROSS. That would be the direct cost to the taxpayers of this country?

Mr. PELLY. That is correct.

Mr. PRIEST. Mr. Chairman, will the gentleman yield?

Mr. GROSS. I yield to the gentleman from Tennessee.

Mr. PRIEST. May I ask the gentleman from Washington about the total cost of the installation say of a thousand of these units at $3,000, which I believe is a rather high figure, but we will accept that estimate for discussion. It would cost the taxpayers, he says, $3 million.

Mr. PELLY. I did not say that.

Mr. PRIEST. I think the gentleman from Iowa so understood it and I wanted that clear.

Mr. GROSS. I simply understood that the cost to the taxpayers of the country for this device—at least that is the statement of a number of people here—is not necessarily reliable, but that the cost would be $3 million.

Mr. PELLY. That is the operational cost.

Mr. PRIEST. That is the cost to the shipowners, the total cost to a thousand cargo ships, but it is not the cost to the taxpayers of the country. This is not a Government subsidy and it is not a Government program.

Mr. GROSS. It would be financed in part up to the amount of our subsidies to the shipping lines by the taxpayers?

Mr. PRIEST. There will be some of these ships that will receive subsidies, I am not sure how many that would be, but I do want to emphasize this is not a Government program insofar as paying the cost of the installation is concerned.

Mr. PELLY. I would like to emphasize that the cost to the shipowners of this device is not the big expense to them. It is in operating through additional radio operators. It is anticipated that the 277 subsidized ships that would have to put this device on will in operating cost each year have to draw on their subsidies to the extent of $3,300,000.

Mr. GROSS. And as these costs went up there would be a demand from Congress for more subsidy?

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. PRIEST. Mr. Chairman, I move to strike out the requisite number of words simply to point out this fact. The gentleman from Washington in response to the gentleman from Iowa said that a great deal of the additional cost would be involved by putting extra radio operators on. If there are as many as two radio operators, they would not have to put the device on. They have the choice. They may either install this equipment and continue to operate with one radio operator or they may put on two operators and not install the equipment.

Mr. PELLY. Mr. Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from Washington.

Mr. PELLY. They would not have to buy $3 million worth of equipment but instead they would have entailed an expense per year of approximately $12,000 a ship, or a total of $12 million which would in effect be what would have to be done because no radio operator could stand these overtime difficulties on a reglar basis.

Mr. PRIEST. May I say to the gentleman, if they are going to put on the additional operator they would not have to buy the equipment. Let us make that clear. Let us not double up on the cost and say they have to pay both.

Mr. PELLY. That is correct.

Mr. DINGELL. Mr Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from Michigan.

Mr. DINGELL. I would like to ask the gentleman from Washington a question. We have had the question raised as to how many of these ships would be subject to subsidy. The gentleman from Washington, I am sure, will agree with me that as a matter of fact a very few of the ships concerned here would be subject to subsidy for the reason, after all, as I understand the Merchant Marine Act, only certain classes or certain cargo vessels can be licensed to receive subsidies. Bulk cargo carriers generally and coast-

wise ships do not receive subsidy; am I correct?

Mr. PRIEST. Yes.

Mr. PELLY. Mr. Chairman, will the gentleman yield further?

Mr. PRIEST. I yield.

Mr. PELLY. The record shows that there are 277 cargo vessels of 1,600 tons or more which would be affected by this legislation, which are under subsidy. That is in the record.

Mr. DINGELL. 277?

Mr. PELLY. Yes. But the bulk carriers on the Great Lakes, when the shipway is completed, would have to comply with this when they get ore

Mr. HOSMER. Mr. Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from California

Mr. HOSMER. I think probably the people who are most familiar with safety at sea are the maritime insurance people, and anything, of course, that would reduce hazards at sea would reduce maritime rates. I wonder if there was any testimony at all before the committee from any maritime insurance people with respect to what the adoption of this law might do to maritime insurance rates.

Mr. PRIEST. May I say to the gentleman that I was not a member of the subcommittee, but I understand from the chairman of the subcommittee that there was no testimony on that particular subject.

Mr. HOSMER. It would be compelling to me that anything like this should have the opinion of the marine underwriters before such a drastic step was taken as to enact this device into law.

Mr. DOLLINGER. Mr. Chairman, will the gentleman yield?

Mr. PRIEST. I yield to the gentleman from New York.

Mr. DOLLINGER. On that question, would it not reduce insurance rates if the safety of the ships has been increased?

Mr. PRIEST. That was the general theory, I believe, that any increase in safety would have the effect of reducing the insurance rates.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Washington [Mr. PELLY].

The amendment was rejected.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. THOMPSON of Texas, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee having had under consideration the bill (H. R. 4090) to amend part II of title III of the Communications Act of 1934, so as to require the installation of an automatic radio-telegraph call selector on cargo ships of the United States carrying less than two radio operators, and for other purposes, pursuant to House Resolution 508, he reported the bill back to the House.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

Mr. PELLY. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. PELLY. I am, Mr. Speaker.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. PELLY moves to recommit H. R. 4090 to the Committee on Interstate and Foreign Commerce:

1. For the purpose of bringing about evaluation of reliability of device under actual operational conditions of sufficient variety and duration to determine value of the device for safety purposes;

2. To bring in line with international procedures and criteria for safety and distress; and

3. For purpose of determining alternative and more reliable methods of accomplishing the purposes of this bill.

Mr. PRIEST. Mr. Speaker, on that motion I move the previous question.

The previous question was ordered.

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that further consideration of this bill be postponed until tomorrow.

Mr. PELLY. Mr. Speaker, reserving the right to object, I should like to have a record vote on this bill. I wonder, if it is deferred, whether I could ask for a division and then, if there is not a quorum, get a rollcall vote.

Mr. McCORMACK. Mr. Speaker, the gentleman from Massachusetts cannot guarantee that. I can assure the gentleman from Washington that the gentleman from Massachusetts will resort to no parliamentary methods to try to stop a rollcall vote. Of course, there is going to be another vote before the vote on this bill and, if there is a quorum present, then the constitutional number must stand.

I want the gentleman to understand that, but I am making my request in accordance with our agreement and in accordance with an agreement that I made with the House.

Mr. PELLY. Mr. Speaker, I would like to say to the gentleman that I should like to ask for a division in order to be sure that there will be an automatic rollcall.

The SPEAKER. If the gentleman does that, then the House can do only one thing, and that is to adjourn. It would not be able to transact any more business today.

Mr. PELLY. Mr. Speaker, I withdraw my reservation of objection.

The SPEAKER. Is there objection to the request of the gentleman from Massachusetts [Mr. McCORMACK]?

There was no objection.

PROVIDING READJUSTMENT PAY FOR MEMBERS OF THE RESERVE COMPONENTS INVOLUNTARILY RELEASED FROM ACTIVE DUTY

Mr. BOLLING. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 517 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 9952) to provide a lump-sum readjustment payment for members of the Reserve components who are involuntarily released from active duty. After general debate, which shall be confined to the bill, and shall continue not to exceed 1 hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Armed Services, the bill shall be read for amendment under the 5-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. BOLLING. Mr. Speaker, I yield 30 minutes to the gentleman from Ohio [Mr. BROWN], and at this time I yield myself such time as I may consume.

Mr. Speaker, House Resolution 517 makes in order the consideration of H. R. 9952. The resolution provides for an open rule and 1 hour general debate on the bill.

H. R. 9952 amends the Armed Services Reserve Act of 1952 to provide a lump-sum readjustment payment for members of the Reserve components, officers, and enlisted men, who are involuntarily released from active duty after having completed, immediately prior to release, at least 5 years of continuous active duty.

The payment would be computed on the basis of one-half of 1 month's basic pay in the grade in which the member is serving at the time of release for each year of active service ending with the 18th year.

Another section of the bill provides that a member of the Reserve who is within 2 years of qualifying for retirement pay shall not be involuntarily separated until he qualifies for retired pay.

Reserve members involuntarily released may elect to receive severance pay based on military service under any other provision of law.

Those who would not be entitled to such payments are listed in the bill—those released from active duty at their own request; those released from active duty for training; those released for moral or professional dereliction; those who would be immediately eligible for retired pay based on military service and a few other categories.

Reserve members may elect to receive readjustment pay or Veterans' Administration disability compensation to which they may be entitled, but not both.

The committee report complies with the Ramseyer rule and I urge the adoption of House Resolution 517.

Mr. Speaker, I reserve the balance of my time.

Mr. BROWN of Ohio. Mr. Speaker, the gentleman from Missouri [Mr. BOLLING] has so well and ably described the content and purpose of the bill which House Resolution 517 makes in order that I do not believe any additional com-

ment on my part is necessary, except to say that it was the understanding of the Committee on Rules, according to my best recollection, that this bill was reported from the Committee on Armed Services by a unanimous vote, and I believe the rule was granted by the Committee on Rules by a unanimous vote.

I have no further requests for time.

Mr. BOLLING. Mr. Speaker, I move the previous question.

The previous question was ordered.

The resolution was agreed to.

Mr. BROOKS of Louisiana. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H. R. 9952) to provide a lump-sum readjustment payment for members of the Reserve components who are involuntarily released from active duty.

The motion was agreed to.

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill H. R. 9952, with Mr. BAILEY in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

Mr. BROOKS of Louisiana. Mr. Chairman, I yield myself 20 minutes.

Mr. Chairman, the purpose of the bill before the Committee is to amend the Armed Forces Reserve Act of 1952 in order to provide a reasonable lump-sum readjustment payment for members of the Reserve components who are involuntarily released from active duty, after its enactment, and who shall have completed at least 5 years of continuous active duty.

As a result of the Korean hostilities and related international tensions of the last few years, a large number of Reserve officers with wartime experience have been retained on active duty.

These officers have served faithfully and efficiently, in many cases have 10 or more years, and now many are approaching the age at which their usefulness to the military forces is less than that of younger officers who are needed for current and future military service.

These older reservists have been away from civilian life for an extended period and, in some cases, have been called away from their civilian occupations on two separate occasions, during World War II and the Korean incident.

It is because of this that the legislation is before us today. We believe that these deserving individuals should be given an equitable payment upon involuntary release from active military duty to help them readjust themselves to civilian life again. We must all recognize that the Armed Forces require today, and will in the foreseeable future continue to require, large numbers of Reserve officers on extended active duty to meet the commitments of national defense.

As of the close of the last calendar year, approximately 72 percent of the active duty officer strength for the entire Defense Establishment were Reserve officers. For instance, the percentage of Reserve officers serving on active duty in each of the military departments were as follows: Army, 76 percent; Navy, 49 percent; Air Force, 83 percent; and Marine Corps, 49 percent.

Furthermore it is anticipated that the requirement for Reserve officers to serve on extended active duty in the future will continue to be high. As a matter of fact, it is estimated that to maintain the active military forces at a level approximating 2.8 million currently and for the foreeeable future, it will be necessary to keep approximately 150,000 Reserve officers on active duty to supplement the Regular officer corps. Excessive turnover of these Reserve personnel is costly and detrimental to the effectiveness of the military forces and the national security. The economic security which would be given by this legislation provides an inducement for qualified reservists to remain on active duty for prolonged periods, thereby reducing costly personnel turnover and increasing the effectiveness of our fighting forces through retention of experienced officers needed to direct our military units.

The commissioned Reserve element of the military departments consists of both volunteers and nonvolunteers. The nonvolunteers, for the most part, are any commissioned Reserve lieutenants serving the 2-year military obligation which they assumed in order to complete their college education and ROTC training.

The services must retain a considerable number of these officers on extended active duty beyond their obligated periods of service in order to maintain a balanced officer structure. On the other hand, these officers must be subject to release when their services are no longer required.

Existing law provides authority for keeping Reserve officers on active duty for long periods of time and also for releasing them when their services are no longer required. However, there is no provision for readjustment pay, or any other monetary cushion to ease their transition back to civilian occupations when their services on active duty can no longer be justified.

Personnel turnover among reservists continues to be a serious problem with all of the armed services. Much has been done, both by the Congress and the military departments, in the way of career attractiveness legislation and improved personnel management to reduce personnel turnover. These steps have had some effect as established by the fact that the personnel turnover rate of some 31 percent of the officer corps during fiscal year 1954 has been gradually reduced to a point of turnover of about 17 percent.

It is obvious, however, that anything that can be done to reduce personnel turnover will result in considerable savings to the Government and in increased effectiveness of the services.

Fluctuating military strength since World War II and lack of security in terms of tenure for Reserve component officers serving on active duty have caused undue uneasiness and anxiety among such officers, and many fine officers whose services were needed by the military departments have voluntarily returned to civilian life. This trend is particularly true in the case of officers who hold a civilian specialty for which there is great demand—for example, engineers and doctors. The armed services are doing all within their power to provide a greater sense of security to the highly capable type of active duty Reserve officers. Nevertheless, because of a continuing need to provide the degree of vitalization that is so essential in the active officer corps, it has been necessary and will continue to be necessary to release certain reservists involuntarily prior to their qualification for retirement benefits.

Those reservists who are subject to involuntary release from active duty, are usually those who have the greatest need for some type of monetary compensation to help them readjust to civilian pursuits. Most are reservists who have rendered relatively long and faithful service, and now that they are being released from their chosen career in the military service, through no fault of their own, it is only right that they be provided with a monetary cushion to ease their readjustment back into civilian pursuits.

At this time I would like to explain the provisions of the bill. The readjustment payment authorized by this bill would be computed on the basis of one-half of 1 month's basic pay in the grade the reservist is serving at the time of release from active duty, for each year of active service up to and including the 18th year. A part of a year, that is 6 months or more, will be counted as a whole year, and a part of a year that is less than 6 months would be disregarded.

Although the bill provides for readjustment payments only through the 18th year of service, a provision of the bill provides that a member of a Reserve component who is on active duty and is within 2 years of qualifying for retirement pay shall not be involuntarily separated from active duty before he qualifies for that pay. Consequently, this type of individual would be retained in active service until he was eligible for retirement benefits.

Under the provisions of the bill, a reservist must have served 5 years of continuous active duty before he could qualify. Inasmuch as the required terms of service, both for enlisted men and officers, do not exceed 3 years, we know that a person who has served for 5 years has either reenlisted or has remained on active duty voluntarily, presumably with the thought of making the military service his career.

Now, I want to call your attention to the provisions of the bill which set forth those persons who are not entitled to any readjustment payment. For instance:

First, a person who is released from active duty at his own request is not entitled to any of the benefits of this bill.

Second, neither is a person who is released from active duty for training, inasmuch as he has been in training on active duty, that, in itself, means that he did not intend to remain on active duty for an extended period and thus make a career of the service.

Third, furthermore, a person who is released from active duty because of per-

sonal or moral dereliction would not be entitled to benefits.

Fourth, and persons released from active duty, who would be immediately eligible for retirement pay or for disability compensation, would not receive readjustment pay.

I should also point out that a person could only receive readjustment pay once. If a person serves for an extended period of time on active duty and then is involuntarily released, he would be paid readjustment pay. If he should later return to active duty and be qualified for another readjustment payment under this bill, he could not receive it unless he refunded the earlier payment.

I want to make one point clear. This bill does not authorize the payment of a bonus. This bill is not intended to reward a person for having served in the armed services but rather to recognize that when an individual has rendered long and satisfactory service, and then is required to leave active duty before qualifying for retirement, some monetary payment is necessary to readjust him to a new way of life.

I would like to call to your attention the fact that this legislation does not set a precedent. The Mustering Out Payment Act of 1944 provided for mustering-out payments for members engaged in active duty during World War II, who were discharged or released from active service under honorable conditions on or after December 7, 1941.

The Veterans Readjustment Assistance Act of 1952 provided for mustering-out payments to members engaged in active service or or after June 27, 1950, and prior to February 1, 1955.

The Officer Personnel Act of 1947 provides that an officer eliminated from the active list shall, if not eligible for retirement, be honorably discharged with severance pay. The Permanent Warrant Officer Act of 1954 provides for severance pay for warrant officers.

Consequently there is ample precedent to grant a rehabilitation payment to members of the Reserve components who are involuntarily released from active duty.

I should also mention something about the cost of the bill. In the first place, the committee report sets out tables which show the payments that will be made under the provisions of the bill to an enlisted man in pay grade E–1 through E–7, and for officers from a warrant officer, pay grade W–1, on up.

The total estimated cost of the legislation for fiscal year 1957 is $11,842,000. This cost figure is based on the estimate that it will be necessary to involuntarily release 4,335 reservists during this period. It is not feasible to estimate a cost beyond fiscal year 1957 because there is no way of knowing at this time how many members of the Reserve components will have to be involuntarily released from active duty.

Mr. Chairman, I would like to close my remarks by reminding the Members that the personnel requirements of the Armed Forces are not static. Many considerations dictate what the size of our Armed Forces shall be at any time, and our officer personnel requirements contract and expand accordingly. It is not possible to avoid fluctuations. With the stabilized end strengths and the new Reserve program the military departments are working toward, I am sure it will be the policy and effort of the entire Department to keep fluctuations to the irreducible minimum. However, we all know that fluctuations will occur and that certain reservists, when circumstances require, will be released from active duty through no fault of their own.

In this respect the problem is comparable to that of industry with its fluctuating periods of increased and decreased productivity with attendant changes in personnel requirements. It is a growing practice in industry to grant severance pay to workers who have completed a specified minimum number of years in the company's employ if the worker's employment is thereafter terminated without fault on his part. This practice promotes stability because it requires prior faithful service and it promises financial aid to the individual during the period in which he is seeking other and new employment.

We have spent many years trying to build a strong and efficient Reserve. This bill is another milestone in the progress made by the Reserve components. I urge all of my colleagues to support this very worthwhile legislation.

Mr. CRUMPACKER. Mr. Chairman, will the gentleman yield?

Mr. BROOKS of Louisiana. I yield.

Mr. CRUMPACKER. As I understand the legislation, the readjustment payment would not be made if the man secured a position in civil life and started receiving income before the expiration of a certain time.

Mr. BROOKS of Louisiana. Suppose the man has entered the service planning to make a career of it and through no fault of his own is separated after 5 years, he is paid an amount which would help him readjust himself in civilian life.

Mr. CRUMPACKER. The readjustment benefits are not contingent upon any criteria of need. In other words, the officer might be fortunate enough to get a high paying job as soon as he leaves the service but would still draw these benefits?

Mr. BROOKS of Louisiana. The officer who is involuntarily separated from the service because of fluctuating needs of the defense picture after he has served 5 years gets a readjustment payment, but once he gets out into civilian life there is no military control over what he does.

Mr. CRUMPACKER. I think the gentleman does not understand my question: Take the case of a reservist who is separated against his will but is fortunate enough to land a good-paying job immediately, would he still draw benefits?

Mr. BROOKS of Louisiana. He would draw the benefit before he got out of the service at the time of his release.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. BROOKS of Louisiana. I yield to the gentleman from Pennsylvania.

Mr. VAN ZANDT. Is it not true this will apply to the Reserve officer who has had more than 5 years' service but less than 18 years?

Mr. BROOKS of Louisiana. That is correct.

Mr. VAN ZANDT. This is to assist him in the reestablishment of himself as a civilian?

Mr. BROOKS of Louisiana. That is correct. We started with 5 years because we estimate that the average individual who stays 5 years in the service has in view making a career of that service. After he has gone a long way toward making a career of the service and when we take that opportunity away from him and turn him back to civilian life, we feel that there should be some sort of readjustment.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. BROOKS of Louisiana. I yield to the gentleman from Iowa.

Mr. GROSS. The minimum, then, is 5 years; is that correct?

Mr. BROOKS of Louisiana. That is correct. The reason for the 5 years, of course, is that a 3-year enlistment would require a reenlistment, or, if you put it this way, a man who is in for 4 years will have to reenlist for an extended period. After he completes the first enlistment I think he intends to stay in the service and this encourages him to stay in the service as long as the service needs him.

Mr. GROSS. Let me ask another question. Referring to a graduate of West Point, for instance, is he credited with 4 years of service at the Academy?

Mr. BROOKS of Louisiana. No.

Mr. GROSS. They are not so credited?

Mr. BROOKS of Louisiana. No.

Mr. GROSS. This would involve $5 million plus in the fiscal year 1956?

Mr. BROOKS of Louisiana. Eleven-million-dollars-plus.

Mr. GROSS. I am talking about 1956. The cost in 1956 according to the Secretary of the Army is $5 million.

Mr. BROOKS of Louisiana. There would not be any cost for the fiscal year 1956 because that has expired. For next year there would be a cost of $11 million.

Mr. GROSS. The letter from the Secretary of the Army so states?

Mr. BROOKS of Louisiana. That refers to the bill before we changed and amended it. This bill has been changed a great deal. This is a committee written bill. However, the Department now approves it, the Budget approves it just as though it were an original bill. It is a better bill than the Department sent us.

The CHAIRMAN. The time of the gentleman from Louisiana has expired.

Mr. VAN ZANDT. Mr. Chairman, I yield myself 5 minutes.

(Mr. VAN ZANDT asked and was given permission to revise and extend his remarks.)

Mr. VAN ZANDT. Mr. Chairman, the bill before the House today is an important item of personnel legislation for the members of our Reserve components.

For many years I have worked to bring about an equalization of rights and benefits for members of the Reserve and Reg-

ular components of our military services. Because of my work in this field, I favor the enactment of this bill.

At the present time, all of the military departments are faced with a sizable hump in their officer corps resulting from the high personnel procurement during World War II—individuals who have remained on active duty and now have some 10 to 16 years of active military service.

Most of the armed services have more officers in this hump and now serving on active duty than can be properly utilized on a long-term basis. Many of these officers, who entered active service during World War II at relatively high ages, are now becoming overage in grade. They cannot be retained on active duty in an officer corps that must, of necessity, be composed primarily of highly qualified young officers who would be able to withstand the rigors of sustained combat.

A vitalized officer corps thus demands that many of these officers, who have relatively long periods of service but not enough to be qualified for retirement at this time, must be separated. These individuals find themselves with a major readjustment problem.

Now, I should point out that, under the provisions of the Officer Personnel Act of 1947, a Regular officer eliminated from the active list before being eligible for retirement, may be honorably discharged from the Regular Army with severance pay.

Under the Permanent Warrant Officer Act of 1954, a permanent warrant officer who is unfit, or whose performance of duty is unsatisfactory, and who is not eligible for retirement, and who is separated after having completed more than 3 years of active service, is entitled to severance pay. Furthermore, a permanent warrant officer with less than 18 years of active service, who has twice failed of promotion is entitled to severance pay.

Consequently, I feel that it is only equity that Reserve officers be authorized a readjustment allowance, when they are involuntarily released from active duty, just as are Regular officers.

I have already mentioned that reservists, who are involuntarily released from active duty after many years of service, have a major readjustment problem. This is true because many of our business organizations are, like the Military Establishment, most reluctant to hire individuals at advanced ages. So we find that individuals released from active duty who have been away from civilian pursuits for a long period, and are now at advanced ages, are finding it extremely difficult to reestablish themselves in civilian occupations that will enable them to meet their financial needs. This is particularly true of individuals whose military training has been in fields that bear little relationship to civilian pursuits. These individuals have rendered faithful service to their country at a time when their services were vitally needed. Many have served in two or more armed conflicts. As a matter of fact, some of these officers were recalled to active duty involuntarily for the Korean emergency with considerable personal sacrifice.

The readjustment pay proposed by this bill will help these deserving individuals cushion their readjustment to civilian life and is certainly a justifiable element of the cost of national defense. In addition to the very real benefits to be provided to deserving reservists by this legislation, there are equivalent benefits that may be expected to accrue to the Government.

This bill should do much to induce stability in the officer structure of the Defense Establishment. Capable Reserve officers, knowing that they will be eligible for readjustment pay in the event of involuntary release prior to the time for retirement, will have an increased feeling of security and will be more likely to remain on active duty voluntarily for extended periods.

Never forget that under present and foreseeable circumstances, our national security is dependent on sizable augmentation of our Regular forces by members of our Reserve components. We depend heavily on them to maintain our military effectiveness.

The Congress has authorized severance pay for Regular officers whose careers are terminated prior to qualifying for retirement. But, at the present time, no such provision is available to members of the Reserve components. This is wrong. It is inequitable. It is discriminatory. But, by passing this legislation, we will be setting up a program whereby Reserves and Regulars will be placed on a similar basis and thus, we will give substantial equality for all who serve on active duty and must be released prior to qualifying for retirement.

I sincerely hope that all Members of the House, who are interested in the welfare of our reservists that serve with the active military services, will give their unqualified support to this legislation.

Mr. CRUMPACKER. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Indiana.

Mr. CRUMPACKER. I would like to address the same question to the gentleman as I did to his predecessor. I have in mind the very considerable criticism which was addressed to the so-called 52–20 club following World War II, where payments were periodic and conditioned on the ex-serviceman not obtaining employment. I am just wondering if there is a possibility of similar criticism of this measure or if this program is somewhat different in nature from that.

Mr. VAN ZANDT. While the answer is no, I wish to qualify it by saying this: Let us consider the situation faced by a Reserve officer who has been on active duty, away from his home for a period of anywhere from 5 to less than 18 years, and who within 90, 60, or 30 days may receive word from his superior that he will be separated from active duty as of the 1st of the month. In such an instance here is what happens? First he has to think about moving his family to a community, because he may be occupying quarters on the station. Next he has to think about establishing a home somewhere for himself and family, because he can no longer live on the military station. In addition he has to buy civilian clothes and have a period of time for the purpose of establishing himself in a position, and rehabilitating himself in civilian life. This bill will provide him with a sum of money that he will use for the purpose of reestablishing himself as a Reserve officer on inactive duty as he returns to civilian life.

Mr. CRUMPACKER. I thank the gentleman for his explanation.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. VAN ZANDT. I yield to the gentleman from Iowa.

Mr. GROSS. I think the committee has inserted a number of very good provisions on page 2 of the bill. But, I should like to ask the gentleman what is meant by a person who is released from active duty for training. What kind of training?

Mr. VAN ZANDT. A Reserve officer who is called up for training purposes may find himself on active duty for a period of months, weeks, or days, so we differentiate between an officer who is on active duty for a longer period of time—anywhere from 5 years to less than 18 years—and the Reserve officer who is called up only for training purposes.

Mr. BROOKS of Louisiana. Mr. Chairman, if the gentleman will yield, the 6-month trainee under the reserve program would be one of the men included, and the National Guard sometimes sends its officers to the Regular Establishment for training purposes only. In those cases the trainee would not be included under the act.

Mr. GROSS. But this is confined to a military trainee?

Mr. VAN ZANDT. This is confined to active duty by a Reserve officer but does not include a Reserve officer called up only for training.

Mr. VAN ZANDT. Mr. Chairman, I yield such time as he may consume to the gentleman from Maryland [Mr. DEVEREUX].

Mr. DEVEREUX. Mr. Chairman, I think the gentleman from Louisiana [Mr. BROOKS] and the gentleman from Pennsylvania [Mr. VAN ZANDT] have thoroughly explained this bill. We sat in hearings for a long time and discussed the various angles of it. I believe it is a bill that is needed and one that is just to take care of the situation of, as I call him, the career reservist who has spent many years on active duty.

If there are any questions about the bill, I should be glad to answer them. Otherwise, I simply urge the support and passage of this bill.

Mr. BROOKS of Louisiana. Mr. Chairman, I yield myself 3 minutes.

Mr. Chairman, I should like to thank the members of the subcommittee for long and patient work on this bill. We started out with one type of bill. The subcommittee analyzed the provisions of the bill submitted to us very carefully. We revised it and redrafted it and came out with a much-improved bill. I think everybody on the committee is entitled to a great deal of commendation for the patience they displayed in helping

us work out a good bill. I am pleased, therefore, to be able to present such a fine bill.

Mr. VAN ZANDT. Mr. Chairman, will the gentleman yield?

Mr. BROOKS of Louisiana. I yield to the gentleman.

Mr. VAN ZANDT. I think it would be well to say for the record that this bill has the endorsement of the Reserve Officers Association, the National Guard, and other groups supporting the reserve of the country.

Mr. BROOKS of Louisiana. I thank the gentleman. I should like to add this—this does not pertain exactly to the bill, but I think it is a matter of great interest to the Members of Congress. Under the Reserve Act which we passed last year providing for 6 months' training and for the training of reserves in active duty, I should like to say that last week the Army recruited 1,980 reservists under this program. Of these 1,980 recruited in a 1-week period, 856, I am told by the Pentagon, were recruited under the 6-month training provisions of the act. There has been a lot of interest in it. The 6-year provision of the act refers to those cases where a reserve goes on active duty for 2 years. We recruited last week 680 persons and, surprising to all of us, we recruited last week 444 under the provisions of the act which permits a man getting out of the active service to take 1 year of active duty in the reserves in lieu of his obligation. As I say, we recruited 444 of those. Up to date we have recruited a grand total of 40,310 in the Army Reserve program under the new law.

We have until August 7 to complete this recruitment. We have a need for 90,000 in the Army Reserve. That represents a little less than 50 percent of our needs for the current year. I think that all who have been studying this program are optimistic that for the next year we will get the full needs of 90,000 persons for the Reserves under the Reserve Act of 1955. That was the requirement of the Army for that 1-year period of time.

The CHAIRMAN. The Clerk will read the bill for amendment.

The Clerk read as follows:

Be it enacted, etc., That the Armed Forces Reserve Act of 1952 (66 Stat. 481), as amended, is further amended by adding the following section after section 259:

"SEC. 260. (a) A member of a reserve component who is involuntarily released from active duty after having completed immediately prior to such release at least 5 years of continuous active duty, except for breaks in service of not more than 30 days, as either an officer, warrant officer, or enlisted person, is entitled to a lump-sum readjustment payment computed on the basis of one-half of 1 month's basic pay in the grade in which he is serving at the time of release from active duty for each year of active service ending at the close of the 18th year. For the purposes of this subsection, a part of a year that is 6 months or more is counted as a whole year, and a part of a year that is less than 6 months is disregarded.

"(b) The following persons are not entitled to any payments under this section:

"(1) A person who is released from active duty at his own request.

"(2) A person who is released from active duty for training.

"(3) Under regulations prescribed by the Secretary of Defense, a person who is released from active duty because of moral or professional dereliction.

"(4) A person who upon release from active duty would be immediately eligible for retired pay, retirement pay, or retainer pay based entirely on his military service under any provision of law.

"(5) A person who upon release from active duty would be immediately eligible for severance pay based on his military service under any other provision of law. However, such a person may elect to receive either readjustment pay under this section or severance pay, but not both.

"(6) A person who upon release from active duty would be eligible for disability compensation under laws administered by the Veterans' Administration. However, such a person may elect to receive either readjustment pay under this section or disability compensation under laws administered by the Veterans' Administration, but not both. Election of readjustment pay shall not deprive a person of any disability compensation to which he may subsequently become entitled under laws administered by the Veterans' Administration.

"(c) The acceptance of readjustment pay under this section shall not deprive a person of any retired pay, retirement pay, retainer pay, or other retirement benefits from the United States to which he would otherwise become entitled.

"(d) Under regulations prescribed by the appropriate Secretary, which regulations shall be as uniform as practicable, a member of a reserve component who is on active duty and is within 2 years of qualifying for retired pay, retirement pay, or retainer pay under any purely military retirement system, shall not be involuntarily separated from that duty before he qualifies for that pay unless his separation is approved by the appropriate Secretary.

"(e) A member of a Reserve component who on the effective date of this section is serving on active duty under an agreement authorized by section 235 of this act, and who is involuntarily released from active duty before completing his agreed term of service, may elect, in lieu of separation payment under that section, to receive readjustment pay under this section.

"(f) Any payments accruing to a person under this section shall be reduced by the amount of any payment previously received by that person under this section, unless he has already refunded the prior payment to the United States. If he has refunded the earlier payment, the period covered by the earlier payment shall be considered as a period for which no payment has been made under this act.

"(g) A person who receives readjustment pay under this section is not entitled to mustering-out pay under the Mustering Out Payment Act of 1944 or under the Veterans' Readjustment Assistance Act of 1952.

"(h) For the purpose of this section, the term 'involuntary release' shall include release under conditions wherein a member of a Reserve component, who has completed a tour of duty, volunteers for an additional tour of duty and the service concerned does not extend or accept the volunteer request of the member for the additional tour."

With the following committee amendment:

Page 1, line 5, strike out "section 259" and insert in lieu thereof "section 264"; and in line 6, strike out "SEC. 260." and insert in lieu thereof "SEC. 265."

The committee amendment was agreed to.

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker pro tempore (Mr. ALBERT) having assumed the chair, Mr. BAILEY, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H. R. 9952) to provide a lump-sum readjustment payment for members of the Reserve components who are involuntarily released from active duty, pursuant to House Resolution 517, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER pro tempore. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER pro tempore. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

The SPEAKER pro tempore. The question is on the passage of the bill.

The bill was passed.

A motion to reconsider was laid on the table.

COMMITTEE ON THE JUDICIARY

Mr. KLEIN. Mr. Speaker, I ask unanimous consent that the Committee on the Judiciary may sit while the House is in session during general debate on Thursday and Friday of this week.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from New York?

There was no objection.

THE FARM PROBLEM

(Mr. LONG asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

[Mr. LONG addressed the House. His remarks will appear hereafter in the Appendix.]

SOCIAL SECURITY

(Mr. SIEMINSKI asked and was given permission to extend his remarks at this point in the RECORD and include extraneous matter.)

Mr. SIEMINSKI. Mr. Speaker, at the suggestion of the Honorable Bernard J. Berry, mayor of Jersey City, N. J., I have today introduced a bill to amend titles I and XIV of the Social Security Act to provide that, where a State requires an individual to assign his life-insurance policies to the State agency as a condition of assistance thereunder, such requirement shall not apply to the first $1,000 of the proceeds of such policies.

I deem it a high privilege to list below the letter from Mayor Berry which develops the proposal that prompted the introduction of this bill.

In his letter, it appears to me, and I trust that it does to the membership of this House, the distinguished mayor of

Jersey City clearly justifies the need for the remedy which passage of the bill would provide:

OFFICE OF THE MAYOR,
CITY HALL,
Jersey City, N. J., May 17, 1956.

Hon. ALFRED D. SIEMINSKI,
Congressman, 13th District, New Jersey,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN SIEMINSKI: Our local public assistance and medical center officials have called my attention to a condition at the medical center which is the cause of much resentment among some old age or disability assistance recipients receiving care at the medical center.

Under the present State approved program which includes a Federal matching formula the Hudson County Welfare Board is permitted to pay up to $168 per month to the chronically ill old age receipient for his care in the approved areas at the medical center.

Because of a Federal regulation the Hudson County Welfare Board is not permitted to give this assistance unless the recipient assigns all insurance, if any, to the Hudson County Welfare Board.

This has caused much resentment among the recipient, his family, and his legally responsible relatives since no part of this insurance may be retained for the funeral and burial expenses of the recipient in case of his death.

While it is true that the Hudson County Welfare Board is permitted to pay $255 for burial expenses it is felt that this is not sufficient and would be unnecessary if the family or legally responsible relatives were permitted by the regulations to retain up to $1,000 of the insurance for funeral and burial expenses.

I believe that this proposal is humane and realistic and therefore urge that you sponsor such a change in the present public assistance regulations of the Bureau of Public Assistance, Department of Health, Education, and Welfare.

May I offer the following proposal;

"All old age and disability assistance recipients, who are covered by life insurance, shall be permitted to retain up to $1,000 of personal life insurance to be used for funeral and burial expenses upon their death."

May I have your reactions to this proposal?

I also wish to urge your active support of title I, title II, and title IV of the public assistance amendments of H. R. 9120 introduced by Representative JERE COOPER, of Tennessee and now in the House Ways and Means Committee.

Title I of this bill amends the formula for determining the Federal share of assistance expenditures to become effective July 1, 1957, so as to provide separate dollar-for-dollar matching of State expenditures for medical care in behalf of assistance recipients, up to a specified maximum.

Federal share would be 50 percent of amounts spent by the States up to $6 per month times adult recipients, $3 per month times child recipients.

The Federal share for medical care would be in addition to present Federal matching of public assistance.

Cost—$65 million commencing July 1, 1957, and increasing to about $110 million annually after 10 years.

Title II extends from September 30, 1956, to June 30, 1959, the present formula for determining the Federal share of public assistance expenditures.

Failure to extend the formula would result in a reduction of about $200 million in Federal grants and may result in a reduction in payments to recipients.

Title IV amends the aid to dependent children program by extending the list of relatives with whom the child may live and receive aid, and by eliminating the school attendance requirement from children 16 to 18 years of age.

I feel that these suggestions are in the best interests of our citizens and urge their adoption.

Best regards.

Sincerely yours,

BERNARD J. BERRY, *Mayor.*

THE 24TH NATIONAL 4–H CLUB CAMP

(Mr. DIXON asked and was given permission to address the House for 1 minute and to revise and extend his remarks and to include extraneous matter.)

Mr. DIXON. Mr. Speaker, I call attention to three items of interest and import.

Mr. Speaker, the 24th National 4–H Club camp will be held here in Washington, D. C. from June 13 through June 20, 1956. The purpose of the National 4–H Club camp is to assist these young people between the ages of 10 and 21 years of age to prepare for more responsible citizenship and service through:

First. Learning more about the organization, structure, and functioning of the Federal Government.

Second. Travel over this vast country and the exchanging of ideas and experiences with other delegates from different parts of the country.

More than 2,156,000 young people belong to nearly 90,000 4–H Clubs in the 48 States, and Alaska, Hawaii, and Puerto Rico. The delegates to this the 24th National 4–H Club camp, numbering some 200 boys and girls, however, are chosen by their respective State extension service directors for outstanding project achievement, citizenship activity, leadership ability and community service.

Mr. Speaker, some 357,650 unpaid volunteer local leaders direct the activities of these 4–H'ers. They in turn are given training, and assistance by the county agricultural and home demonstration agents and the subject matter specialists of the State land-grant college or university. Some 100 of these adult 4–H leaders will accompany these 200 4–H Club delegates to Washington. They will attend special instruction classes so as to better equip themselves for their volunteer leadership activities.

The 4–H Club program, Mr. Speaker, now includes an international farm youth exchange program involving 40 countries. Over 300 outstanding 4–H Club members spend a summer in a foreign country living with farm families, assisting in the fields and participating in local community activities under this program. On the other hand, a young outstanding rural youth comes to this country living under the same type arrangements. Many civic organizations have sponsored on a State basis the exchange of 4–H Club members, as have business firms and foundations.

In particular, however, the National 4–H Club Foundation, with offices in Silver Spring, Md., has played a major role in establishing and administering, as an arm of the Federal-State Cooperative Extension Service, the international farm youth exchange program. In 1951, the Chevy Chase Junior College property was purchased by the Foundation. This property valued at $500,000 has been completely paid for and is now owned by the Nation's 2 million 4–H Club members. The center is to be renovated and ready for occupancy in 1958.

The property will be used by 4–H Club groups visiting here. They will live at the center while attending national camps. Facilities for meetings will be included.

Mr. Speaker, the National 4–H Club Foundation Journal for March 15, 1956, includes a short article on plans to renovate the property.

It is as follows:

RENOVATION PLANS PROCEED FOR NATIONAL 4–H CENTER

Plans for renovation of the National 4–H Club center are moving full speed ahead, following the decision by the board of trustees of the National 4–H Club Foundation to occupy the center by early 1958.

After its January 24–25 meeting, the board announced that the foundation would take over the center when the lease now held by the Department of Defense expires in June 1957. The Department has occupied the center property since shortly after its purchase in February 1951.

The center property consists of a beautiful 12½-acre campus in Chevy Chase, Md., a suburb of the Nation's Capital. There are three main buildings: Smith Hall, named for C. B. Smith, extension pioneer; and Turner and Warren Halls, named for Ray Turner and Miss Gertrude Warren, retired extension 4–H officials. When renovation is completed the center will be able to house and feed groups of 250 to 300 people, as well as provide conference rooms and other working facilities.

The property will be renovated to accommodate National 4–H Club Camp, the offices of the National 4–H Club Foundation, incoming and outgoing IFYE participants, and many other activities.

Among the many activities expected to take place at the center after its restoration are: Workshops and training conferences in connection with citizenship and human relations training programs; adult and junior leader training conferences; State and county 4–H citizenship training groups; meetings of 4–H Club program development committees, and county extension agent associations; subject matter specialists workshops; homemakers council sessions; and meetings of farm organization youth groups, agricultural commodity groups, etc.

The decision by the board of trustees to move ahead with putting the center in operation, brings to a final stage the work and dreams of 4–H members and leaders for more than a decade. As a working shrine the 4–H center will reflect the vision and dedication of the thousands of 4–H members and leaders who have given both of time and money to turn this idea into reality. Through the share and care program more than $100,000 has been contributed to the development of the center, now valued at half a million dollars. More than half of the States have already completed their quotas with 4–H'ers giving a dime each to establish their own National 4–H home. Business groups, too, will be given an opportunity to give special financial assistance to establishing the center.

RISE IN DAIRY INCOME

Mr. Speaker, the publication, Dairy Situation, for May 14, 1956, should be read by all Members of the Congress who have been concerned about the dairy price support program, since it indicates that:

With larger sales and higher prices, cash receipts from dairy products this year will be substantially above the 1955 level.

Although production of milk is continuing to show substantial increases over a year earlier, the consumption of fluid milk and cream has also been on the increase. In addition, consumption has been aided by a substantial increase in the amount of creamery butter being made from whole milk and the production of several whole milk products.

Mr. Speaker, this has resulted in a 5- to 10-cent per hundred pounds price increase for milk during the first 4 months of 1956 over the corresponding period in 1955. As of May 15, 1956, according to the publication, Agricultural Prices, the average price of milk—whole—was $3.86 per hundredweight. This represented 91 percent of the parity price of $4.69 per hundredweight.

Although milk prices are not as high as a few years ago, prices for feeds have declined even more. For example, the milk feed price ratio has been above the longtime average since July of 1955. In April 1956, it was 6 percent above the average for that month. The result, of course, has been higher prices for dairy farmers.

OPERATIONS OF SMALL BUSINESS ADMINISTRATION IN UTAH

Mr. Speaker, during the past few months I have heard several Members complain about the operations of the Small Business Administration. Of course, in this election year one expects to hear such charges made against a Republican administration. But an accurate picture of the job the Small Business Administration has been doing in Utah makes it evident that a great many small businesses of all types have received financial assistance without which they could not have continued in business.

For example, about 37 percent of the net applications received in Utah by the Small Business Administration totaling some $857,000 were approved. What type of business firms received loans? Namely, these:

First. Canning and processing of fruits and vegetables.
Second. Grain mill products.
Third. Logging camps and sawmills.
Fourth. Household furniture.
Fifth. Stone, clay, and glass products.
Sixth. Poultry processing.
Seventh. Retailers.
Eighth. Motels.
Ninth. Contractors.

How have the borrowers fared? Mr. Wendell B. Barnes informed me by letter that two of the loans made were canceled, and that although no loans have been repaid in full or otherwise liquidated, no loss is "anticipated to result."

Mr. Speaker, the small-business firm predominates in Utah's economy. A great many of them have and are finding financial assistance forthcoming from the Small Business Administration, which otherwise would fail to keep pace with their larger competitors, if not fail altogether.

ONE-HUNDREDTH ANNIVERSARY OF WISE COUNTY, VA.

(Mr. JENNINGS asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. JENNINGS. Mr. Speaker, may I take the opportunity here today to bring to the attention of the Members of the House a celebration that is taking place in the Ninth Congressional District of Virginia.

Wise County is observing its 100th anniversary. A countywide, year-long series of events have been planned by the directors of this centennial celebration in order to bring every person and every facet of community life into the observance.

Wise County was formed on February 16, 1856, from three neighboring counties. The General Assembly of Virginia, which approved the formation of Wise in 1856, commemorated the 100th year of the county's existence with an appropriate resolution this year. This joint resolution, which I include herewith in my remarks, was introduced in the Virginia House of Delegates by two of my very good friends, Delegates Orby L. Cantrell and James L. Camblos. The resolution follows:

Whereas the county of Wise was formed 100 years ago, on February 16, 1856, by the severance of territory from the counties of Lee, Scott, and Russell, and was named in honor of Henry Alexander Wise, Governor of Virginia from 1856 to 1860; and

Whereas Wise County ranks sixth largest among the counties of the State, according to population, with over 56,000 sons and daughters; and

Whereas the Trail of the Lonesome Pine winds serenly through Wise County, which is endowed with the scenic beauty of lofty High Knob, and the tranquillity of peaceful Powell's Valley; and

Whereas in Wise County is located the Southwest Virginia Museum and the home of the noted author John Fox, Jr., who recorded forever the romance of mountain life in his novels, The Trail of the Lonesome Pine, The Shepherd of Kingdom Come, and others; and

Whereas Wise County is in the heart of Virginia's rich coal fields decorated with quaint beehive coke ovens and towering, modern coal tipples and coal processing structures, and is gifted with a variety of industry and agriculture: Now, therefore, be it

Resolved by the House of Delegates (the Senate concurring), That the General Assembly of Virginia joins the county of Wise in commemorating its centennial anniversary, and acknowledges its contribution to the glorious history of this Commonwealth and the Nation; and be it

Resolved, further, That the clerk of the house of delegates is directed to send a suitably prepared copy of this resolution to the clerk of the board of supervisors of the county of Wise.

The objectives of the Wise celebration are, indeed, noteworthy. I list them here and commend the directors of the centennial for their intense interest in seeing that this observance results in much that is good for the future of the county.

The objectives are:

To pay tribute to the hardy pioneers who settled in this part of Virginia and passed on to us a heritage of which we are proud.

To give every citizen of Wise County, their friends and acquaintances abroad, an opportunity to celebrate in unity, friendship and good spirit, the 100th birthday of the county's glorious history.

To call attention to our own people as well as people beyond the borders of our county the outstanding progress our county has made in the development of schools, churches and industry.

To call attention of the tourist to the opportunities which Wise County affords them in scenic beauty and places of interest and recreation.

To contribute something to the achievement of education in the realm of local history and at the same time furnish entertainment and opportunity for having good wholesome fun.

Many outstanding events have been planned in connection with this centennial celebration. Among them are historical programs, parades, picnics, a centennial pageant, Governor's Day, and a special Labor Day celebration. In addition schools, churches and the various communities are scheduling, or have completed, special programs.

I would like to extend today to the Members an invitation to join me in attending and taking part in these many events that are a part of the Wise celebration. I know from experience that you will enjoy any visit to Wise County, which not only offers the hospitality for which southwest Virginia has become famous, but can provide many other recreational and entertainment opportunities. I quote from a recent article written by Mr. Luther F. Addington, executive director of the centennial, as an example of what you can expect to find in Wise County:

Visitors will find their way to turbulent, singing streams leaping from the mountain and cast a red ibis or a black gnat or maybe a worm into the deep, dark pools to lure a trout from his watery hiding place. Whether they go to Machine Creek or Clear Creek or the head of Old Stoney, they will know the surcease from toil and worry and find joy untold in the exhilarating air of the land in the sky.

So I urge you to come to Wise County—to the land of John Fox, Jr., who wrote such books as The Trail of the Lonesome Pine and The Little Shepherd of Kingdom Come.

Mr. Speaker, I am proud to have Wise County among the counties and cities of my district. I am proud to have the opporunity of representing this fine group of citizens in the House. It is desirable and appropriate that we recognize Wise County and her sons and daughters on the occasion of their 100th birthday.

I am not one to make predictions, but I feel confident in stating that Wise County has a bright, prosperous future. Basing my prediction on the accomplishments of the past, I feel certain that this progressive county will go forward with continued vigor after pausing to reflect on the 100 years.

The 56,000 citizens of Wise County have a "song of celebration in their hearts" in this 100th year of their existence as a county. I pay tribute, today, to Wise County, and send by best wishes for the future years of growth and development in every field that I know are forthcoming.

IMPORTATION OF POULTRY AND EGGS FROM CANADA AND THE ARGENTINE

(Mrs. ROGERS of Massachusetts asked and was given permission to address the House for 1 minute and to revise and extend her remarks and include extraneous matter.)

Mrs. ROGERS of Massachusetts. Mr. Speaker, I rise to tell the House of the plight of the poultry farmers in Massachusetts. A number of farmers in my district have gone out of business as the result of the high cost of feed, and they are protesting most bitterly now against the importation of a good deal of poultry and a good many eggs from the Argentine and also from Canada. It is a very unfair position to put my poultry farmers in, and I am extremely anxious to have this situation remedied. I am working with the Department of Agriculture, and I hope to have the support of the Members of the House in seeing that this importation of poultry and eggs from Canada and the Argentine stops. The eggs and poultry from these countries sell at a lower price than our farmers can afford to sell their products. The low price is always the market price.

CORRECTION OF ROLLCALL

Mr. O'KONSKI. Mr. Speaker, on rollcall No. 56 I am recorded as "not voting." I was present and voted "aye." I ask unanimous consent that the RECORD and Journal be corrected accordingly.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

PAN AMERICAN AIRWAYS NEW NONSTOP SERVICE TO EUROPE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Indiana [Mr. BEAMER] is recognized for 30 minutes.

(Mr. BEAMER asked and was given permission to revise and extend his remarks.)

Mr. BEAMER. Mr. Speaker, significantly it has become the responsibility of Pan American World Airways to bring to an end an era of aviation history just as it was that airline's responsibility to open new transportation vistas by being the first carrier to order jet aircraft for international operations.

This week Pan American began DC–7C service across the Atlantic, nonstop to Europe. This handsome new aircraft, built by Douglas, is capable of flying 5,000 miles without refueling. Consequently, passengers who board Pan American's new DC–7C this summer for a holiday in Europe will know that they will be arriving in London in 10 hours and in Paris in 11 hours.

The super–7 clipper, adapted from the luxury DC–7 by Pan American and Douglas Aircraft for over-ocean, nonstop, tourist class service, will be put into the transatlantic schedules of the airline in time to add more than 30 percent in passenger capacity during the booming summer season.

Carrying a full load of 71 passengers and 6,300 pounds of baggage and cargo, the plane will speed along at 353 miles an hour, faster than any other passenger plane. It is 30 miles faster than any over-ocean plane.

Newly designed seats, with built-in tables, more leg room, and enlarged galleys are among the improvement that make the plane the most comfortable available for tourist service travelers.

The planes will go into daily New York-Paris service this month with four of these flights continuing to Rome. In July, daily service between New York and London will begin, continuing on to Frankfurt three times a week. Super–7's will be put into additional flight to Frankfurt via Shannon and Brussels, and also via Prestwick and Amsterdam, in August.

The plane is powered by 4 of the newest Wright turbo-compound engines that give it 13,000 horsepower at take-off. Extra gasoline tanks built into the wing enable the Super-7 to fly nonstop for 4,000 miles and still have reserve fuel to fly another 1,000 miles.

The new seats have molded backs and cushions 30 percent thicker than in present tourist-class seats, with a down-filled pillow molded into the back of the cushion. The table, built into the back of the seat, can be dropped down for the use of the passenger sitting behind. It has been built so that even if the seat is fully reclined, the table will remain level. A new, large coatroom has been added, and there is more room for storing passengers' hand baggage.

More efficient and faster food service for passengers is made possible by the Super-7's enlarged galleys. The galleys are designed to store two full meals and an in-between snack for all passengers and crew members. A newly-developed coffee machine provides fresh coffee at all times.

The plane, which enables large groups of tourists to speed across the Atlantic faster than ever before, is still another step forward in the program to make travel available to more and more people.

This program was outlined in 1949 by the President of Pan American. He said at that time: "The goal is not just to fly airplanes on schedule, across oceans, to all six continents, and around the world. The goal is to carry people, cargo, and letters in great numbers—mass air transportation, for the average man at fares he can afford to pay."

Mr. Speaker, I opened these remarks with the use of the word "significantly" and let me explain why: Pan American was the first air carrier to use the glamorous and romantic old flying boats for transoceanic passenger travel. It was Pan American which first put the DC–4's into service around South America, across the Atlantic, and across the Pacific. In 1949, the revolutionary Boeing Stratocruiser went into service on Pan American routes bringing to air passengers the most luxurious accommodations of all times.

It is virtually certain that the DC–7C's will be the last of our piston engine aircraft built.

The jet age is already upon us, and Pan American will begin operating jet flights across the Atlantic, across the Pacific, and around the world in late 1958 or early 1959. Until that time the DC–7C's will provide the ultimate in dependable, swift, and comfortable service to the four corners of the world.

You will recall, Mr. Speaker, that historic day in October 1927, when a comparatively tiny Pan American plane flew 80 miles from Key West to Havana carrying United States mail over water by air for the first time. Swiftly the enthusiasm for Pan American spread, and working with the complete cooperation of the United States Government the airline expanded down the east coast of South America and, in 1928, combined with the W. R. Grace Co. to form Panagra, which has been flying down the west coast of South America for 28 years.

This expansion took place at a time when bilateral air agreements were unknown. Without the help of Government agencies, Pan American negotiated for landing privileges with our Latin American neighbors. Let it be understood, Mr. Speaker, that Pan American did not carry the financial burden alone. An interested and farseeing administration, which caught the importance of having a United States-flag carrier dominant in the international field, subsidized Pan American's early operation to a considerable extent. I recently learned from the Civil Aeronautics Board that Pan American is now almost completely off subsidy, that only on the national interest routes to Scandinavia, South Africa, and Australia does that airline still receive subsidy.

Pan American does not have a domestic operation as yet. All its American competitors in the international field do. Should Pan American ever obtain a high-density domestic route the Civil Aeronautics Board advises me the subsidy requirements would disappear overnight. This is a situation that can and should be corrected by quick and positive action on the part of the CAB in order that Pan American can compete sensibly and equally with other United States carriers with domestic certificates who fly on parallel routes to Europe, to the Orient, and to South America.

Pan American's record is one of remarkable and unbelievable achievements. This airline was first across the Pacific in 1935, first across the Atlantic in 1939, and first around the world in 1949. Credit for these accomplishments belongs to a great team of progressive air pioneers headed by Juan Terry Trippe, the company's president since its inception. A young Yale graduate and Marine Corps flier of World War I, Mr. Trippe was barely 28 years old when he conceived the idea of a privately owned commercial airline flying over water to every section of the world. Juan Trippe and his company have rendered a great public service. Those of us who have had the good fortune to travel extensively throughout the world get tremendous pride and comfort in seeing Pan American equipment at almost every airport of importance. We

have also been greatly impressed with the amount of foreign competition Pan American has from airlines wholly owned and heavily subsidized by the governments under whose flag they fly.

Mr. Speaker, as Pan American begins to pioneer again with its new DC–7C equipment it seems imperative to me that the Congress of the United States should take pride in its record and should do everything in its power to help Pan American grow, expand, and prosper. It is no longer the tiny little company which began operating from Key West in 1927; Pan American now has 18,000 employees all over the world and is owned and controlled by 33,000 stockholders.

Personally, I am proud to be a member of our Interstate and Foreign Commerce Committee, which is largely responsible for the good health of our commercial air-transport industry. I am likewise proud to salute Pan American World Airways for its initiative in placing at the disposal of American tourists such excellent equipment as the DC–7C.

Mr. KLEIN. Mr. Speaker, will the gentleman yield?

Mr. BEAMER. I yield.

Mr. KLEIN. Mr. Speaker, I am very happy to ask the gentleman to yield so that I may say a few words in behalf of Pan American, about which the gentleman is talking; and also, as a fellow committeeman with the gentleman, it has been my pleasure to observe the operations of Pan American and the fine services they have been extending to the public. I want to specifically call attention to one point about which I have some intimate knowledge, and that is the question of labor relations, the fine labor relations maintained by Pan American with the Transport Workers Union of New York City. In fact the relations have been so pleasant that Mike Quill, president of the Transport Workers Union, has written a letter to Pan American suggesting that Pan American be given a route from New York to Miami Beach.

So I want to commend the Pan American Airlines and the gentleman from Indiana for calling to the attention of the House this fine and splendid work that is being done.

(Mr. KLEIN asked and was granted permission to revise and extend his remarks.)

Mr. MACHROWICZ. Mr. Speaker, will the gentleman yield?

Mr. BEAMER. I yield to the gentleman from Michigan.

Mr. MACHROWICZ. I also wish to join with the gentleman from Indiana in the remarks he has made. I think it is particularly refreshing to know at a time when other nations are taking superiority in the air away from us not only in the military but also in the civilian air travel, that this country is making such rapid strides. I am particularly interested to know that it will now be possible for people in my area to fly nonstop to the principal cities of Europe.

Mr. BEAMER. I thank the gentleman.

Mr. LESINSKI. Mr. Speaker, will the gentleman yield?

Mr. BEAMER. I yield.

Mr. LESINSKI. Mr. Speaker, I would like this time to concur in the remarks made previously on the flight of Pan American to Detroit from Europe.

I would like to point out other significant features of the flight. To the auto and other industries that have exports and imports, this will be of great assistance to them. This emphasizes Detroit as being a international port.

Pan Americans decision to fly to Wayne Major Airport is important for it emphasizes the superiority over Willow Run as an airport for Detroit. Nearness, adequate landing field, and the practical arrangements with the Wayne County Road Commission, is certainly more desirable.

Pan American's move to Wayne-Major is a gain to Detroit not only for the additional service but also the practical approach of utilizing Wayne-Major as a civilian airport and to give back to the military Willow Run which they now so drastically need.

Mr. BEAMER. I thank the gentleman.

(Mr. LESINSKI asked and was given permission to revise and extend his remarks.)

Mr. FASCELL. Mr. Speaker, will the gentleman yield?

Mr. BEAMER. I yield to the gentleman from Florida.

Mr. FASCELL. Mr. Speaker, Florida has unmatched pride and feeling for Pan American World Airways, for this airline which carries the United States flag around the world with such great distinction is our own. The company was formed in my district in Florida in 1927 with Mr. Juan Terry Trippe as president. Many of the residents of south Florida can remember when Pan American made its first flight from Key West to Habana on October 28, 1927. It was an augury of the future that 90 miles of this 110-mile route were over water. Pan American was America's first overseas air service.

Today Pan American's 4-engined airliners equipped with all the most modern electronic aids to navigation span the oceans and seas in our Western Hemisphere, alone they link 34 countries and colonies. Last year this company transported 1,045,131 passengers between the Americas.

This great worldwide air transport operation had its beginning in Florida with only seven employees. Its Florida-based Latin American division today employs 7,785 persons. Its planes are among the newest and finest produced by America's aircraft industry. Pan American's vast experience and skill helped design them.

As long ago as 1930, this company flew 600 miles nonstop across the Caribbean from Kingston, Jamaica, to the Panama Canal Zone. This was the longest scheduled overwater hop in the world until PAA began its transpacific service. While expanding around the world PAA has never forgotten Florida, its birthplace. It maintains its greatest overhaul depot in international aviation at Miami. It employs 6,028 persons in Florida alone, with an annual payroll in the State of $28,606,554.

Its employees are permanent, substantial residents of my congressional district, 4,500 of them owning their own homes there. About 5,500 of them own automobiles. Real estate and automobile taxes paid by these employees to the State of Florida exceed $1 million a year. They are active in civic affairs, as indicated by the $51,000 they contributed to the most recent Community Chest drive. Entirely in addition to the great importance of its employees to the community, Pan American itself spends $5 million a year for supplies and materials in Florida alone. The company also pays important taxes and fees to the State and Dade County.

PAA Clippers flew 456,171 passengers in and out of Florida in 1955. Conservatively estimating that each spent $15 daily for at least 3 days in the State, we can see that PAA's passengers spread another $20,500,000 through the State's economy, reaching every level from bankers to bootblacks.

Pan American has made Florida a summer resort for thousands of our good neighbors from Latin America. Nearly as much Spanish as English is heard on Miami's streets in summer months. Thousands of North Americans also fly in PAA Clippers to Latin America, this interchange of visitors is a major and vital contribution to greater understanding among the peoples of the Western Hemisphere.

Our country's policies and international relationships are aided too. It is not difficult to remember when mistrust and even hatred was the unhappy state of affairs in our part of the world. Since 1927 there has been a noticeable and growing change until now there is a high degree of understanding, friendliness and mutual respect. The family of nations of the Western Hemisphere now assist each other in their social cultural and economic development. PAA has had an important part in this new era of cordiality by linking all these countries with swift, efficient air transportation making possible the peoples visiting and knowing one another. For not only does PAA fly in and out of the Latin American countries, it also has assisted a number of them to establish air transport systems of their own. It lent its vast knowledge and experience to help found associate companies in Mexico, Cuba, Colombia, Venezuela, Costa Rica, Nicaragua, Honduras, Brazil and the Dominican Republic. Thus Latin American air transportation advanced on a par with our own and a great store of good will resulted, not only for PAA but for the United States as well.

Among its many contributions in the international field, PAA has spent millions of its own advertising and public relations dollars to foster understanding and travel throughout the Western Hemisphere. It has striven for lower fares. Today bargain-rate tourist fares which PAA inaugurated are in effect on many airlines around the world.

We of Florida note with satisfaction that when Pan American has another great aerial achievement to demonstrate, it returns to its birthplace to make the demonstration. Thus its newest plane

departed May 25 from Miami for 4,806-mile nonstop flight to Paris, the first ever to link Florida and France directly and the longest nonstop flight ever scheduled by an airline. This historic trip was made in 14 hours and 2 minutes with 63 persons on board.

This magnificient flight, too, is an augury of things to come with the jet age. We of Florida would be happy to see Pan American World Airways make regular flights from Florida to Europe, and opening up a new phase of intercontinental tourism. The plane used for the Miami-Paris flight was a DC-7C, the newest, fastest, and last of piston-driven airliners. It was the first aircraft capable of demonstrating the great distances which can be covered nonstop by jet airliners.

The world will shrink one-third in size with jet-propelled air transports, and the new era will bring new glory to the United States to Florida, and to the great airline born in my State.

Mr. BEAMER. I thank the gentleman.

(Mr. FASCELL asked and was given permission to revise and extend his remarks.)

Mr. MACK of Illinois. Mr. Speaker, will the gentleman yield?

Mr. BEAMER. I yield.

Mr. MACK of Illinois. Mr. Speaker, I want to commend the gentleman on the statement he has made. I have had considerable experience in air transportation and have flown as a pilot. I have followed the development of international air transportation with great interest.

I very well remember the situation at the beginning of World War II when we found that Pan American had developed a system of international airways and air transportation which greatly assisted us in the war effort in ferrying airplanes and transporting troops in the early stages of World War II.

Furthermore, Mr. Speaker, I am very happy that our international carriers have continued to expand, notwithstanding the fact that we now have competition in international air transportation from nearly every country in the world. To maintain our leadership it is necessary for us to have the very best equipment, and it is gratifying to me to know that Pan American is continuing to expand their facilities to provide additional service and extend the length of their flights, as I understand, to 5,000 miles.

Mr. BEAMER. I thank the gentleman.

Mr. MORANO. Mr. Speaker, the gentleman from Indiana has already paid many fine compliments to Pan American Airways and I wish to join with him in this most fitting tribute. Many of Pan American's employees reside in my congressional district and while I would like to acknowledge them all I have particular reference to Juan T. Trippe, president of Pan American, and Samuel F. Pryor, vice president and assistant to the president of that airline.

Both of these men have given a lifetime to the development of a sound commercial aviation system. It would have been relatively simple for either or both of them to get into some field of endeavor which brought a great reward and less heartache. But aviation, to them, presented an exciting challenge which they could not deny.

No one is more aware than these two constituents of mine of the competitive aspects of international aviation. Pan American Airways is unique in that it has no domestic routes, while all its American competitors in the international field enjoy the privilege of flights within the continental United States. Several of Pan American's foreign competitors are similarly situated in regard to domestic operations but these carriers are all owned by their governments and are heavily subsidized. Pan American is an international example of private enterprise, and for that reason this body should do all in its power to further its expansion and encourage it to fly wherever it can.

Mr. Speaker, I join with my distinguished colleague from Indiana in his complimentary remarks about Pan American Airways and jealously suggest that Connecticut has had a great stake in this company's conception and has an even greater stake in its future.

GENERAL LEAVE TO EXTEND

Mr. BEAMER. Mr. Speaker, I ask unanimous consent that all Members who are interested in the advancement of domestic or international airlines may have the opportunity and privilege of extending their remarks at this point.

The SPEAKER. Is there objection to the request of the gentleman from Indiana?

There was no objection.

DISRUPTIVE INCREASES IN IMPORTS OF FOREIGN OIL

The SPEAKER pro tempore (Mr. ALBERT). Under the previous order of the House, the gentleman from Oklahoma [Mr. JARMAN] is recognized for 1 hour.

(Mr. JARMAN asked and was given permission to revise and extend his remarks.)

Mr. JARMAN. Mr. Speaker, this is a speech I had hoped would be unnecessary. It involves a matter of great urgency to the Congress, to one of our basic defense industries, and to our country. It concerns a problem that many of us thought, and certainly hoped, we had solved. I refer to the unwarranted and disruptive increases in imports of foreign oil, in defiance of established Government policy and in violation of minimum defense standards set forth in that policy.

The issue of excessive oil imports is not new to my colleagues. It had exhaustive, and we thought conclusive, consideration in the first session of this Congress. It was one of the primary issues which led to enactment of the defense amendment to the 1955 Trade Agreements Extension Act.

It was the intent and expectation of the Congress that the defense amendment would be implemented in a manner which would solve the import problem, by establishing a proper relationship between imports and domestic oil production. Definite assurances were given that the amendment would be so employed. In fact, many leaders in Congress agreed to support the amendment only after such assurances were given.

Because of recent actions of the Office of Defense Mobilization, in effect disregarding the clear intent of Congress, as expressed in the defense amendment, it is urgent that the Congress review the oil import matter in light of what it hoped would occur, as against what has actually happened. I believe my colleagues will be shocked and disturbed, as I have been, by facts which indicate a handful of international oil companies have been given a green light to write their own ticket in importing foreign oil to the detriment of our defense-vital domestic petroleum industry.

Policies which we had hoped would end this problem have suddenly evaporated. Standards which the Congress considered and accepted as proper and necessary have been abandoned. Studies by government and industry which indicated an urgent need for less foreign oil—not more—have been ignored. Assurances given by the administration that the defense amendment would be implemented to hold oil imports to their 1954 relationship to domestic production, as recommended in February 1955 by a special Cabinet committee, have been forgotten.

The Director of the Office of Defense Mobilization, under the law, is responsible for administration of the defense amendment as to imports of oil and other critical materials. In a recent action, based on an arbitrary reevaluation, ignoring the clearly expressed intent of Congress, the Director of the Office of Defense Mobilization has, in effect, invited the importation of more foreign oil—at a time when total petroleum imports are scheduled at a rate 42 percent higher than in 1954—and at a time when production in most of our major oil producing States is being curtailed by State conservation agencies for lack of market.

Because of these developments, I believe the Congress needs and deserves a report on the stewardship of its defense policy as to foreign oil. This involves a review of past considerations of the problem by the administration, by the Congress, and by the petroleum industry. I will try to make this review as brief as possible. When I have finished, I do not believe there will be room for any other conclusion than that the Office of Defense Mobilization has broken faith with domestic oil producers and with the Congress, and has diluted Government policy so as to make it ineffective and meaningless.

Mr. Speaker, I can recall no problem which has had the benefit of more study, analysis, and discussion. Not within my memory do I recall when more sincere men dedicated so much time and thought to a single problem and accomplished so little. After more than a year of encouraging signs which indicated an equitable solution could be achieved, we find ourselves right back where we started. Rather than a reduction in oil imports, there have been huge increases. Where we had hoped for and expected an effective limitation on imports, we

find in effect a policy of encouragement for more imports.

More than a year ago, we received the first signs of a hope that the oil import problem could be resolved. In October 1954, President Eisenhower appointed a special Cabinet Committee on Energy Supplies and Resources Policy to study, among other things, the oil import problem.

In February 1955, the Cabinet Committee reported. Essentially, its findings supported many previous studies which concluded that imports were taking an increasingly disproportionate share of the domestic market, and were threatening the national security. Unlike many other studies, the Cabinet report reached definite conclusions. It stated that:

If imports of crude and residual oil should exceed significantly the respective proportions that these imports bore to the production of domestic crude oil in 1954, the domestic fuels situation could be so impaired as to endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense.

Based on this conclusion, the Cabinet Committee recommended that:

If in the future the imports of crude oil and residual fuel oil exceed significantly the respective proportions that such imported oils bore to domestic production of crude oil in 1954, appropriate action should be taken.

These findings were disappointing to many, including myself. They proposed to restrain future imports on the basis of 1954 imports which had already been proved to be excessive. However, the recommendation recognized the important principle that future imports should be limited in relationship to domestic production. That was a principle for which domestic producers, and many in the Congress, had sought recognition since shortly after World War II. The Committee's recommendations were therefore accepted, in good faith, by the industry and by the Congress.

Here, at long last, we had found a basis for agreement and a basis for settlement of a longstanding and grievous problem. It was especially encouraging since neither side in the oil import controversy voiced any serious objections. Here was a basis, we hoped, for an equitable solution, acceptable to all concerned.

As my colleagues know, the Congress was considering the oil import problem when the Cabinet report was released. Many in the Congress thought legislation should be immediately adopted which would give meaning and effect to the Cabinet's recommendations. Legislation to effectuate a reasonable relationship between imports and domestic production was introduced, and strongly supported in both Houses. During discussions and hearings on this legislation, which would have given imported oil a permanent 10 percent of the expanding domestic market, a more than liberal formula, some leaders of Congress conferred with the administration on the oil import problem.

The sponsors of the proposed 10-percent limitation were persuaded that the matter could be resolved without writing into the law a specific limitation. The Cabinet Committee's formula was offered as a yardstick. In effect, the Congress was told, "We have a good formula. All we need is general legislative authority to effectuate this formula, if and when the need exists."

The result, as we all know, was compromise legislation, known as the defense amendment. I should like to here quote the provisions of that amendment:

In order to further the policy and purpose of this section, whenever the Director of the Office of Defense Mobilization has reason to believe that any article is being imported into the United States in such quantities as to threaten to impair the national security, he shall so advise the President, and if the President agrees that there is reason for such relief, the President shall cause an immediate investigation to be made to determine the facts. If, on the basis of such investigation and the report to him of the findings and recommendations made in connection herewith, the President finds the existence of such facts, he shall take such action as he deems necessary to adjust the imports of such article to a level that will not threaten to impair the national security.

In adopting this amendment what yardstick did the Congress expect would be employed in dealing with the oil import problem? It was made imminently clear, Mr. Speaker, that the Congress expected—and in fact had assurances—that the Cabinet Committee formula, holding imports to their 1954 relationship to domestic production, would be the criterion for effectuating this amendment.

The record is abundantly clear that this was the intent of the Congress. The defense amendment originated in the Senate Finance Committee. Members of that committee made searching inquiry of the administration to determine whether the amendment would accomplish the intent of restricting oil imports. They were satisfied that it would.

So the defense amendment was written into the Trade Agreements Extension Act and the bill went to a Senate-House conference. The President called the amendment very fine, and said he would sign it into law. Subsequently, on June 21, the President signed the bill embodying the amendment in which the Congress, for the first time in a quarter century, had provided a means to restrict excessive oil imports.

Now, let us examine the interpretation of the Congress as to how it felt this amendment would be effectuated.

On July 30, 27 Members of the Senate addressed a letter to the Director of Defense Mobilization, Dr. Arthur S. Flemming, who had served as chairman of the Cabinet Fuels Committee, and who was responsible under the law for administering oil import policy. This letter unmistakably spelled out the intent of Congress in writing the defense amendment. It read in part:

As you know, the 1955 extension of the Trade Agreements Act contains a new provision commonly referred to as the "national defense amendment," authorizing the President to take such action as he deems necessary to adjust imports of any commodity when such imports threaten to impair the national security. Responsibility for initiating such action under that provision of the law rests with your office.

In adopting the national defense amendment one of the principal factors considered by the Congress was the problem created by the large and increasing importation of foreign oil into the United States. In this connection the Congress gave particular attention to the findings of the Cabinet Committee, that in the interest of national defense oil imports should not exceed significantly the ratio that these imports bore to the production of domestic crude oil in 1954.

The legislative record of the Trade Agreements Extension Act in the Senate Finance Committee and in the Senate itself shows that the new provision of the act was adopted in the light of assurances that the executive branch of the Government would take action under this new authority to assure that oil imports would not exceed the levels recommended by the special Cabinet Committee. In the case of oil imports, therefore, the executive and legislative branches of Government are in agreement, without the need for further study, as to specific standards to be applied in implementing the policy contained in the national defense amendment.

These 27 Senators advised Dr. Flemming that they "would greatly appreciate your informing us as to what actions are now being contemplated by you under the authority contained in the 1955 extension of the Trade Agreements Act."

Further, at the time of Senate discussion of the "defense amendment" several Members of the Senate made significant statements in that body which further clarified the intent of the Congress.

Senator HARRY F. BYRD, chairman of the Finance Committee, stated in the Senate on May 2:

The committee believes that this amendment will provide a means for assistance to the various national defense industries which would have been affected by the individual amendments presented.

Congress can initiate and adopt such legislation as it might deem advisable, should the action needed to protect these essential industries not be taken.

On the same day, Senator MILLIKIN, in discussing this amendment said:

I am convinced that the proposal can and will work. It grants to the President authority to take whatever action he deems necessary to adjust imports if they should threaten to impair the national security. He may use tariffs, quotas, import taxes, or other methods of import restriction. He is not limited as far as commodities are concerned except that they must be involved in our national security.

On May 3, Senator PRICE DANIEL, of Texas, addressed the following question to Senator CARLSON, of Kansas, a member of the Finance Committee:

Was there any reason why the committee included the (defense) amendment at all, if the committee did not feel that the national security would suffer if oil imports were in excess of the 1954 ratio?

Senator CARLSON answered:

We have assurances that those administering the act will act in accordance with the proposals submitted by the President's Advisory Committee on Energy Supplies and Resources Policy and the evidence submitted to our committee. I have no doubt about it.

One reason why I say that is very definitely the opinion of the committee, or at least the intent of the committee, is the fact that the chairman of the Finance Com-

mittee included in the report of the committee a part of the Advisory Committee's report, which, after all, in my opinion, gives the intent of the Finance Committee.

Senator CARLSON further stated on May 4:

I supported the proposal adopted by the committee because I was assured by those in the administration, responsible for the administration of the Trade Agreements program, that if such amendment were adopted by the committee and by Congress, action would immediately follow, and that imports of petroleum and its products would be definitely restricted.

I was further assured that such restriction would be based upon the study previously made, to which reference was made by the committee; that the basis of the limitation would be in accordance with the recommendation of that study. This study indicated the necessity of limiting imports of petroleum and its products to an amount and in the relative position of the imports of petroleum in 1954 as related to domestic production of crude oil in 1954.

I was further assured that the Director of Defense Mobilization would take the action indicated as necessary to adjust imports of petroleum and its products to the level and relationship of 1954.

I can assure the Senate that I would not have agreed to the amendment in H. R. 1, dealing with imports of commodities which are of national defense interest, had I not been assured that it would be the policy of those who administer the act to follow the intent of those who participated in preparing the report of the Advisory committee.

If it develops, and we find that the program is not to be so administered, then it will become the duty of the Senate Finance Committee, the House Ways and Means Committee, or individual Senators and Members of Congress to demand full compliance with this intent.

On the same date, Senator ANDERSON, of New Mexico, inquired of Senator CARLSON:

Does he (Senator CARLSON) feel that the oil producers of my State would be justified in taking the assurances given as guaranties that the oil industry is not going to be disrupted by unusual and devastating amounts of oil imports?

Senator CARLSON replied:

Had I not believed the amendment we approved in committee, which was recommended by a very substantial vote, would protect the industry from ever-increasing imports, I certainly would not have voted to report the bill to the Senate, and I certainly would not be on the floor today stating I favored it and would vote for it.

I have given here only a partial recapitulation of the intent of the Congress, reflected in the expressions of Senators who worked earnestly for a solution of the problem and who, in good faith, accepted assurances of administration action, based on the Cabinet committee study, and supported the defense amendment, on the basis of these assurances.

What was the industry's position concerning the effect of excessive imports at this time? On May 3, while Senators were discussing these assurances on the floor of the Senate, the National Petroleum Council issued a report of a special council Committee on Petroleum Imports. This committee had been organized to study the import problem at the specific request of the Department of the Interior.

I would remind my colleagues that the membership of the National Petroleum Council is composed of representatives of both oil importing companies and domestic producers. The report of the council's special committee, at this juncture, was therefore timely and of great significance. So were the conclusions of that committee, which read as follows:

1. The continued increase in imports of crude oil, coupled with a decline in exports of crude oil and its products, has damaged, in varying degrees, segments of the domestic oil industry.

2. Further increase of imports without regard to the principle of only supplementing the domestic production of crude oil and its products will seriously damage the domestic oil industry and thus affect the domestic economy and the national security.

3. Fair and equitable relationship have not prevailed between total imports of crude oil and total demands for oil in the United States during periods of excess availability of domestic oil for United States consumption. Fair and equitable relationships should obtain at all times between total imports of crude oil and its products and total demand for oil in the United States.

This, again, Mr. Speaker, is only one of many instances wherein we found general industry agreement that imports were not only too high and had harmed the domestic industry, but that action to curtail imports was due, if not overdue.

This, then, is a partial picture of the support from both industry and government for a limitation on imports. All these statements supported the principles laid down by the Special Cabinet Fuels Committee. I have to this day to hear one statement, from any quarter, that the conclusions of that Committee were in any way impractical, unworkable, or unfair.

With this background of support from all concerned, and in an atmosphere of agreement, in which we all trusted a solution was forthcoming, we were encouraged on August 8, 1955, when Defense Mobilizer Flemming took his first step in action which we expected would result in implementation of accepted policy. In a letter to 18 oil-importing companies on that day, Director Flemming recited the provisions of the defense amendment. In a press release, the Office of Defense Mobilization said Dr. Flemming was requesting information from the importing companies with respect to their importing programs, "after he received figures which indicated that the crude oil and residual oil imports of some companies have exceeded, and apparently will continue to exceed, the formula recommended by the Presidential Advisory Committee on Energy Supplies and Resources Policy."

This observation by Dr. Flemming's office, that imports "apparently will continue to exceed the formula," was indeed prophetic. A little later I will explore with you how seriously imports have since then exceeded the formula.

Dr. Flemming also quoted portions of the Cabinet Committee's report, concluding with its findings that "if, in the future, the imports of crude oil and residual fuel oils exceed significantly the respective proportions that such imported oils bore to domestic production of crude oil in 1954, appropriate action should be taken."

The domestic oil industry, and the Congress, confident that action would be forthcoming, continued to wait for the appropriate action.

On September 12, Dr. Flemming again addressed a letter to the importing companies. Based on his studies of their programs, he advised them that:

First. Imports of crude oil and residual oils had increased more rapidly than domestic production of crude oil.

Second. Half of the companies reporting imports of crude oil had exceeded the ratio recommended by the Cabinet Committee.

Third. Unless company policy changes were made, the imports would continue to be substantially in excess of the standard recommended by the Cabinet Committee.

Dr. Flemming further advised the companies in that letter, that in the absence of individual voluntary action over and above that already taken, "it would be necessary to seek other means of implementing the recommendations of the advisory committee."

Despite these repeated explicit requests for voluntary curtailment, no overall action occurred which resulted in any downward adjustment in imports. We continued to await the appropriate action or other means which Dr. Flemming implied would be used.

Yet no positive action was forthcoming. Dr. Flemming, who had repeatedly called for voluntary compliance by the importing companies, for some reason did not exercise the specific authority he has under the law to obtain mandatory compliance.

Instead, on October 29, 1955, the Office of Defense Mobilization again called for voluntary action by the importers. Despite the fact that he had had convincing experience, indicating no likelihood of voluntary action by the importers, Dr. Flemming pleaded with them again.

What effect did this action have? Did it result in substantial compliance with the Cabinet committee's formula? The record tells the story. For the year 1955, total oil imports exceeded the standards set by the Cabinet committee by 116,000 barrels a day. While the Cabinet committee recommended that imports be held to the 1954 relationship to domestic production, which was 16.6 percent, total imports in 1955 increased to 18.3 percent of domestic production.

We are now concerned, Mr. Speaker, with 1956 and the future. How much higher can imports go without disastrous effects? Scheduled imports this year give a hint of what can be expected. In recent reports to the Texas Railroad Commission, importing oil companies filed schedules which indicate total imports of 1,463,000 barrels daily in 1956, and more than 1,500,000 barrels a day in the last 6 months of this year.

In other words, total imports will amount to almost 21 percent of expected domestic production, and in the last 6 months, will be even more. I, again, point out that the original Cabinet report recommended restriction of imports to 16.6 percent of domestic production.

The domestic producer has thus lost more than 5 percent of his market while awaiting positive action by the Office of Defense Mobilization.

So, the vicious spiral has never ceased. Voluntary action repeatedly has proved a farce. I would remind my colleagues that "industrial statesmanship," or "voluntary action," was first argued as the wisest solution to the import problem in 1948. Since that time, total imports have almost tripled, rising from an average of about 500,000 barrels daily to a scheduled amount of more than 1,500,000 barrels a day, in the latter part of this year.

Mr. Speaker, I do not know how the domestic petroleum industry, on which we must depend for our security, can stand much more of that type of "voluntary action."

I would now call to the attention of the House some of the things that are happening to the domestic petroleum industry, in the face of this record and rising imports. I have requested some information on what is happening in some of the oil producing States. Here are the facts which stand as an indictment of the actions of the importing companies, and the condonement, and in fact encouragement, of these actions by the Office of Defense Mobilization.

I will begin with Texas because it is our largest producing oil State. For the month of May, the Texas Railroad Commission ordered the third consecutive reduction in crude-oil production. The reduction, ordered this month, amounted to 80,000 barrels a day. Total reductions, since March, amount to almost 200,000 barrels a day. The Fort Worth Star-Telegram reported a fourth consecutive reduction in Texas oil producing allowables "is expected" to be ordered for the month of June.

In Oklahoma, the State corporation commission, in May, ordered an across-the-board reduction of 15 percent in oil producing allowables amounting to about 35,000 barrels a day below the previous month's average.

In Louisiana, John B. Hussey, conservation commissioner, set that State's daily oil production allowable for May at a rate of 38,900 barrels below the April level. Kansas and North Dakota both reduced production 5,000 barrels daily in May.

More reductions are on the way. It is a foregone conclusion that further reductions must be made if we are to prevent waste of a vital natural resource, denied access to a market glutted with foreign oil.

These conditions in the oil-producing States make it imperative that Congress evaluate the problem of oil imports. Is the defense amendment being implemented as intended by Congress and can we expect that it will be? The answer, I fear, is obvious. It has just recently, on May 11, been made obvious by Dr. Flemming in another letter to the importers of oil.

In this letter, Dr. Flemming completely abandons the defense amendment and the policy of maintaining a stable relationship between imports and domestic production.

In this letter, Dr. Flemming continues to recognize the necessity of maintaining the 1954 relationship—but now only after excepting certain areas of the domestic market, certain types of imports and certain countries of origin.

For example, imports no longer to be considered as affecting the defense are the following:

First. All crude oil imports to the United States west coast of California, Washington, Oregon, Nevada, and Arizona whether from the Middle East, Far East, or Western Hemisphere countries.

Second. All crude-oil imports from Venezuela and Canada.

Third. All residual fuel oil imported for fueling ships at United States ports.

Fourth. All fuel oil imported for military use.

As amazing as it may seem, these exceptions account for over 75 percent of all imports scheduled for the year 1956. In other words, any limitation to be applied to imports would affect only about 375,000 barrels daily—while total imports are approaching 1,500,000 barrels a day.

In this latest proposal, outlined in Dr. Flemming's letter of May 11, to the importing companies, the following conclusions are reached:

First. Crude oil imports to the United States west coast should not be considered from a defense standpoint. This entirely ignores the large and increasing shipments into this area from the Middle East and the question of dependency on such sources.

Second. Crude oil imports from Canada and Venezuela should not be considered although these countries account for about 70 percent of total imports.

Third. Imports for fueling ships at United States ports and for military use, have no relationship to our national defense.

After making these amazing exceptions, which strip all possible effectiveness from existing policy, it was concluded that a reexamination of the oil import problem should be undertaken and completed by September 1, 1956. If this reexamination shows that imports were threatening the Nation's security, public hearings should then be held by October 1, 1956.

Mr. Speaker, I find it impossible to reconcile this latest action with existing and long-accepted national defense considerations as to oil imports. Importing oil companies, by these exceptions, have been afforded an escape hatch through which they can bring in more and more, not less, foreign oil. These few big importers of oil seem, conclusively now, to lead a charmed existence outside of any control by Government or without responsibility to the Nation.

These companies are powerfully persuasive. Despite their outrageous record of ignoring all policy, they have apparently convinced the Office of Defense Mobilization that they really intend to employ "voluntary restraint." Even worse, they evidently have persuaded the Office of Defense Mobilization to ignore the law and leave this vital problem in the hands of the international oil companies. Following through with their favorite tactic of "delay and postpone," they have even convinced those in authority that another investigation is in order. This will give them the most part of a year to increase imports, without restraint, at the expense of the domestic industry and the Nation's security.

Mr. Speaker, I for one do not propose to stand tonguetied while these companies lullaby the Office of Defense Mobilization into actions which violate every intent of the Congress, every accepted statement of industrial policy, and, even worse, the assurances given by the administration that oil import reductions would be effectuated.

We can no longer afford to leave the solution of the oil import problem in the hands of the importers themselves. We have trusted to this course, without result, so long as to make the Congress and the administration appear ridiculous, and, worse than that—our Government is beginning to look subservient to the international oil companies.

As my colleagues know, the Office of Defense Mobilization is concerned with maintaining a sound mobilization base for the defense of our country in these troubled times. We know, all too well, from recent events, that the entire Middle East area is embroiled in powder keg tensions. To invite, at this critical time, further dependence on Middle East oil—for the west coast or any part of our country—is utter folly which deserves the opposition and intervention of every Member of this Congress.

In maintaining our mobilization base, the Office of Defense Mobilization is concerned with the stockpiling of certain critical materials. In fact, Director Flemming reported last October that 65 strategic materials, 55 of them metal and minerals, are being stockpiled against any future emergency, under authority of the Strategic and Critical Materials Stockpiling Act.

What would my colleagues think if we suddenly found that these strategic materials were being stockpiled, under canvas, on the sand dunes of the Middle East Arabian countries? That question, I will admit, sounds so unthinkable as to not even merit discussion. Yet, through inviting increased imports of Middle East oil, we are placing increasing dependence for our most vital munition of war—petroleum—on an area which is not only afflicted with political and economic strife, but stands under the very shadow of Russia.

We are fortunate, Mr. Speaker, that oil is one of the materials we need not worry about stockpiling. Indeed, oil cannot be stockpiled beyond a few weeks supply, so we are doubly blessed in having within this country an abundance of developed reserves—and a vast hunting ground for more reserves—adequate to assure the defense of our country.

I emphasize that today we are the only major free world country with adequate oil to fuel world war III, if and when it should come. We must be wary if we are to preserve this position tomorrow, and next year, and 5 years from now. If we are to do this, I submit that we must preserve wise policies conducive to the continuous exploration and develop-

ment which must be ceaseless if we are to maintain adequate future oil supplies. Above all, we must not trade away our oil security through a policy of subservience to the international oil companies.

Mr. Speaker, I want to make it clear that I am not talking against all imports. A favorite line of the importing companies every time this subject is broached is that, "we cannot shut off foreign oil." No one has proposed, ever, that this be done. What we are insisting upon, and have insisted upon, for nearly 10 years now, is that imports should be in reasonable relationship to domestic production. In the past year, we thought and hoped we had developed a basis for achieving this, and now we find this faint vestige of hope is being discarded; is being simply tossed out of the window, arbitrarily.

I would remind the House that strife for the goal of sometime, someway, relating imports to domestic production, so that foreign oil would share in any increase in the domestic market, now has a 10-year history. Since shortly after World War II, we have discussed, studied, committed, commissioned, and worried over the problem. What has happened in that time?

Here, briefly, is the record. From the years 1941 to 1945, this country imported a total of 220,000 barrels of oil a day. In that period, we exported 420,000 barrels a day. This year, in 1956, imports are scheduled at 1,463,000 barrels a day. Exports are expected to be about 333,000 barrels daily. In slightly more than a decade, then, we have gone from a net exporter of 200,000 barrels daily to a net importer of more than 1,100,000 barrels daily.

This means, Mr. Speaker, that while we have vacillated on implementing sound policy on this matter, oil imports have increased more than 600 percent.

Mr. Speaker, we obviously have dickered with this vital question until 2 minutes of midnight, and in the face of these facts, the Office of Defense Mobilization now proposes an attempt to turn the clock back to a fruitless and nonexistent daylight; to turn the problem back to the importers for solution, and to hide the head of authority and responsibility in the sand.

Mr. Speaker, many of my colleagues in the House, and many Members of the Senate, are understandably distressed over this situation. Like myself, they are primarily concerned with maintaining our domestic oil producing industry in a sound condition, recognizing that an adequate supply of oil within our own backyard is our first line of defense.

However, there are other important considerations. One of these is the effect of increasing imports on our domestic economy. My own State of Oklahoma has more than a theoretical or academic interest in this problem. Oklahoma has a very real stake in achieving a solution now, and many Oklahomans are deeply disturbed that we are now faced with a further unnecessary postponement of that solution.

Oklahoma grew up as an oil State, and now ranks fourth in production. Our first oil production came just 2 years after the run of 1889. Out of 77 counties in Oklahoma, 66 now produce oil or gas, and petroleum accounts for more than 92 percent of the total value of our mineral production. More than 50,000 Oklahomans are employed in the production of oil alone, not to mention the additional thousands employed in petroleum exploration, research, transportation, refining, and other phases of industry operations. Every county in my district produces oil, and anything which affects oil production is of real concern to the people of my district.

Oklahoma, for the past few years, has been a victim of this unsolved import problem. Since 1949 we have experienced recurring curtailments in the market. In each of these instances, the Oklahoma Corporation Commission has necessarily been forced to restrict Oklahoma production in accordance with its conservation standards. Throughout this period we have watched imported oil take an ever-increasing share of the domestic market. In addition to recent production curtailments ordered by the corporation commission, 4 major crude oil purchasers have instituted "pipeline proration" affecting almost 30,000 barrels of crude oil daily. This at a time when imports of oil are at a historic high, and still climbing.

Mr. Speaker, unless this new policy of inviting increased imports is immediately corrected, the Congress will have a clear call to act. We must do something if the vast reserves of the Middle East are to be stopped from taking an increasing share of our market. Imported oil has doubled its share of the domestic market in the past 7 years. Without effective control, imports can and will continue to take over more and more of the domestic market.

Unless more meaningful action comes from the administration, and soon, this Congress will be compelled to effectuate, with specific standards, the policy it has already so clearly spelled out. Unless we do, we risk becoming prostrate, without oil, before whatever enemy might choose to attack.

A reasonable limitation on oil imports, in relation to domestic production, seems indeed a small price to pay for our security as to oil. As representatives of the American people in the Congress, we are challenged to see that this small price is paid.

Mr. BELCHER. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Oklahoma.

Mr. BELCHER. I wish to commend the gentleman for bringing these facts before the House of Representatives. We all realize, of course, how seriously these oil imports have affected the economy, not only of Oklahoma but of every oil-producing State in the Nation. I have always contended that there could be no final cure for this except legislation by the Congress of the United States. I had hoped, however, that under the legislation that did exist it would be possible to get some relief. I had also hoped that Dr. Flemming's request for a voluntary reduction by the major companies would bring some results. I understand that in some instances it has brought certain results, but certainly not the results that are going to have to be obained if the oil industry of this country is not seriously injured. I want to commend the gentleman on his statement and join with him in his remarks.

Mr. MAHON. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Texas.

Mr. MAHON. I want to commend the gentleman from Oklahoma for his statement in regard to the seriousness of the threat which is confronting the oil industry of this country. This is not something that has just arisen today. As the gentleman knows, he and many other Members of the House and many people of the Nation have been concerned for years over this problem of oil imports. Insofar as I know, none of us has ever advocated that all imports be banned. I have gone along with the theory it would be best to avoid further legislation if adequate results can be achieved otherwise. I think the administration has all the power it needs to cope with the situation, and I am sure the gentleman agrees. The percentage of oil of foreign origin which we are using has sharply increased. It has reached the danger point for the United States. It is causing trouble in my congressional district and in many other areas, as we all know, and something ought to be done about it. If something is not done about it we have got to pass legislation bringing about a reduction in these imports of foreign oil. I believe our people are on the right track in their effort to try to get relief and I hope our action here today will be noted by officials in authority and I hope that some effective results will be accomplished.

Mr. HIESTAND. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from California.

Mr. HIESTAND. I would like to state that I have carefully studied the gentleman's statement. It should be called a study because it is very effective. It is commended to all of those interested in the oil industry, it is commended especially to the members of the Department and the Office of Defense Mobilization for careful study. It depicts a serious situation. In the event of a crisis, we have not only got to protect our production and our reserves but we must protect the industry of exploration. That exploratory industry can be jeopardized and is now being jeopardized by the unlimited importation of oil. May I suggest to the Office of Defense Mobilization that unless something is done, this Congress is in a mood to take action and make it necessary. Neither the oil industry nor the administration would regard that as desirable. But something is going to have to be done.

I thank the gentleman for his very able statement.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Oklahoma.

Mr. ALBERT. Mr. Speaker, I desire to avail myself of this opportunity to

compliment my colleague on his fine statement. Oil production in this country is one of our really basic industries. It is an industry that is indispensable to the economy of the great State which my colleague and I are privileged to serve in this House. I agree with my friend that this is a matter which should be dealt with by the Congress. Experience has shown that we can get nowhere by delegating our responsibilities on this problem to administrative agencies. Increasing imports are hurting the oil industry in this country, and the time has come when specific legislative restrictions on imports or quotas should be imposed by law. Again I want to commend my friend for his statement.

Mr. BURLESON. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Texas.

Mr. BURLESON. I am sure the gentleman will cover certain areas on this question which seem to me to be of utmost importance, namely, the clear intent of the Congress expressed in the Trade Agreements Act. I am sure the gentleman agrees that in the Trade Agreements Act passed in 1955, it was the clear intent of the Congress that all imports should be held to the 1954 level. Now, I would like to inquire of the gentleman, if I understand the conclusion of the President's committee, recently reported, if it is not a fact that they have made certain exceptions of imports from the Western Hemisphere, from Canada, and from Venezuela, and that bunker fuel for ships and even crude oil to the west coast of the United States, as well as military fuels, are not excepted by the committee; in other words, that is not to be taken into consideration in determining the 1954 level. I hope the gentleman will cover these points in his discussion of this question. Further, may I inquire if that is the gentleman's understanding?

Mr. JARMAN. I will say to the gentleman that certainly is my understanding. As a matter of fact, the exceptions that Dr. Flemming has set out in his letter of May 11 amount to over 75 percent of all imports scheduled for the year 1956, and he removes from the import field under consideration all but 20 to 25 percent of what we have heretofore classified as imports.

Mr. BURLESON. And as our colleague, the gentleman from Oklahoma, the distinguished majority whip [Mr. ALBERT], has just said about the administration of this clear intent of the Congress, allow me to say that unless something is done, the administration of the congressional requirement is about to administer the independent oil operator out of business.

Mr. JARMAN. I thank the gentleman for his contribution.

Mr. VURSELL. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Illinois.

[Mr. VURSELL addressed the House. His remarks will appear hereafter in the Appendix.]

Mr. IKARD. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I am very happy to yield to my colleague from Texas.

Mr. IKARD. Mr. Speaker, I want to join in the remarks that have been made by my colleagues in commending the gentleman from Oklahoma [Mr. JARMAN] for bringing this very important problem before us.

I was very happy to see the gentleman so clearly point out in his remarks what was, without question, the intent of this Congress last year when we passed H. R. 1, the Reciprocal Trade Act, the so-called national defense amendments, which were designed to take care of this situation and without any shadow of doubt, according to the record before the committees and on the floor of the Congress, the intention of Congress was clearly expressed. While it may be necessary to have additional legislation in the future, if the situation is not corrected, it should be pointed out—and I think the gentleman did it very well in his remarks—that there is now in existence legislation that could take care of this situation and that was intended to take care of the situation and by all means should take care of it; in other words, it is administrative failure, in my judgment, and complete surrender on the part of the Office of ODM and others in the administration of the Reciprocal Trade Act, failure to carry out what was clearly the intent of Congress, that has brought about this situation.

Mr. BURLESON. Mr. Speaker, will the gentleman yield?

Mr. JARMAN. I yield to the gentleman from Texas.

Mr. BURLESON. As the gentleman knows, the State of Texas has proration. I should like the RECORD to show that starting in March—for March, April, May, and June—production cuts occurred during each of those months. Today we are on a 15-day-out-of-a-month production basis, and the prospects are just about certain that there will be another cut in July, which poses a very serious situation for the small independent oil producer in the State of Texas.

Mr. JARMAN. Analogous to the last comment of the gentleman from Texas [Mr. BURLESON], I would add that in Oklahoma, State corporation commission in May ordered an across-the-board production cut of 15 percent in oil-producing allowables amoumting to about 35,000 barrels a day below the previous month's average. The figures the gentleman has given and that I have cited are indicative of exactly what is happening to the domestic oil industry.

Mr. IKARD. If the gentleman will yield further, we have all heard that imports for the first quarter of this year are moderate and in line with what the 1954 imports were. I should like to point out, and I am sure the gentleman has later information than I do, that it is my understanding that while the imports for the first quarter are not too much out of line, beginning with the second quarter and projected on through the rest of this calendar year they will continue to zoom upward to where they get completely out of any relationship of the 1954 figure in the second quarter and become worse in the third and fourth quarters, as near as we can project them at this time.

Mr. JARMAN. I would say to the gentleman that it is my understanding that during the first quarter of 1956 imports have averaged 110,000 barrels per day above the relationship in 1954, and it is anticipated that for the entire year of 1956 it will be an average of about 300,000 barrels per day, which is a sizeable increase, having a great impact upon the industry as a whole.

Mr. VURSELL. Mr. Speaker, if the gentleman will yield again, may I say that there is no question but that it is having an impact, as has been stated by the last speaker, and I think it is due to increase. It has had sufficient impact upon the producers in my State and in my district that the Ohio Oil Co., I understand, in the last day or two has reduced the price of oil by 10 cents a barrel. To me it would seem that with our industry growing at the greatest pace ever in the history of this country in peacetime, there ought to be a reasonable market and a reasonable production of oil allowed in this country to the American taxpayers.

Mr. JARMAN. I certainly agree with the gentleman.

Mr. Speaker, I ask unanimous consent that all Members who have spoken on this subject be permitted to revise and extend their remarks, and that any Members who may be interested in doing so be permitted to extend their remarks at this point in the RECORD.

The SPEAKER pro tempore. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. IKARD. Mr. Speaker, I appreciate the time given me here to discuss an issue of critical and growing concern to our domestic economy and the Nation's security—the long-standing and increasing problem of excessive petroleum imports.

The oil-imports issue, as my colleagues know, is one which has perplexed the petroleum industry and the Congress since shortly after World War II. In the absence of any sound policy as to oil imports, we have seen foreign oil take an ever-increasing and unjustified share of the domestic market. For years a solution of the problem seemed elusive and difficult of achievement.

Since 1949 we have had recurring studies. We have had repeated enunciations from the petroleum industry that oil imports should only supplement domestic production, always with agreement from the importing companies that this was a wise policy. We had study after study by Government indicating a need to restrict imports to a supplementary level. Despite these almost endless efforts, a solution, somehow, failed to materialize.

Finally, last year action by both the Congress and the administration gave encouragement that a solution at last was forthcoming. The administration again conducted a study which indicated a need to curtail oil imports and, following through on that, the Congress amended the Trade Agreements Act so as to provide the administration the au-

thority to achieve the necessary limitation.

In the defense amendment in the 1955 extension of the Trade Agreements Act the Congress placed in the Office of Defense Mobilization the authority and the responsibility for reducing oil imports when they threaten to impair the national security.

Previous to this action by the Congress, a Special Cabinet Committee on Fuels Policy, headed by the Director of the Office of Defense Mobilization, Dr. Arthur S. Flemming, conducted an exhaustive study of the oil-import problem and concluded:

First. The oil imports in excess of their 1954 relationship to domestic production "could endanger the orderly industrial growth which assures the military and civilian supplies and reserves that are necessary to the national defense"; and

Second. If future oil imports should exceed their 1954 relationship to domestic production, "appropriate action should be taken."

Mr. Speaker, here were developments which, to the Congress, made an effective solution to the oil import problem seem inescapable. The administration set a standard, advised that oil imports exceeding that standard could impair the national security, and recommended appropriate action should the standard be violated. The Congress, in adopting the defense amendment, provided the authority and defined the responsibility for implementing this appropriate action.

The defense amendment said imports should be curtailed when they "threatened to impair the national security." The Cabinet Committee had already determined that imports above their 1954 relationship to domestic production could impair the national security.

Is it any wonder that the Congress was encouraged, and indeed was satisfied that it had solved the oil import problem, when assurances were given by the administration that the defense amendment would be so administered as to accomplish the import limitations recommended by the Cabinet Committee.

In fact, never in my experience have I seen a clearer mandate to implement authority provided by law. The legislative history of the defense amendment established beyond doubt that Congress intended that administration of the amendment must result immediately in import limitations.

Here was a problem which threatened our Nation's security. To solve it, we provided a law. We had an accepted standard for enforcement of the law. We delegated authority to enforce the law in compliance with this accepted standard. Notice was served on the violators, and potential violators, that they must comply, or face more stringent consequences.

Immediately after adoption of the defense amendment, it became obvious that enforcement was immediately necessary. Oil imports were substantially above their 1954 relationship to domestic production, and rising. Many in the Congress, concerned that the law be given effect, transmitted inquiries to the Office of Defense Mobilization. In one instance, 27 Senators wrote the ODM Director urging that enforcement of the law be implemented, and reciting the assurances from the administration that such enforcement would follow under authority of the defense amendment.

Mr. Speaker, the actions which have followed since that time are almost unbelievable. In a series of communications to the oil importers, the Director of ODM has urged compliance with the Cabinet Committee standard. In his succeeding communications, however, the rules of compliance have been so relaxed as to defeat any chance of ever achieving a limitation of imports on a basis recommended by the Cabinet Committee or, in fact, on any realistic basis.

The first of these letters from ODM to the importing companies was last August 8. Since that time oil imports have continued upward. When the year 1955 was over, and the figures added up, we found that total oil imports exceeded the Cabinet Committee standard by 116,000 barrels a day. In the meantime, other letters were dispatched to the importers by ODM. Dr. Flemming threatened the importers. He said if import limitations were not achieved voluntarily, other means would have to be employed.

Finally, Dr. Flemming apparently dispaired of ever achieving voluntary compliance, and for some unexplained reason did not choose to employ the authority given him by Congress to obtain compliance. So, on the 11th of May, he dispatched an extraordinary letter to the importers. In this letter, he again cited the Cabinet Committee standard, and then proceeded to completely abandon all rules which might remotely have given him a chance to attain that standard.

In this letter, Dr. Flemming advised the importers that they could just forget certain oil imports. He omitted from any control at all imports of oil to the west coast of the United States, imports from Canada and Venezuela, and imports for fueling ships at United States ports and for military use.

Mr. Speaker, by these exceptions, Dr. Flemming has actually excused from any control at all more than 75 percent of the total imports now coming into the United States. On what basis this action can be justified is difficult for me to comprehend. It amounts to nothing more than complete surrender to the importing companies.

The implications of this surrender are disturbing and dangerous. At a time when we are confident of a policy of strength, we find a policy of vacillation, weakness and surrender. The potential disaster of such a policy is made clear when we recognize how much of the domestic oil market has already been surrendered to the international oil crowd in only recent years.

In 1936 to 1941, total oil imports averaged 171,000 barrels daily, or less than 5 percent of domestic production.

In 1946 to 1951, total imports averaged 611,000 barrels a day, or more than 11 percent of domestic production.

In 1954, imports totalled 1,052,000 barrels a day, or 16.6 percent of domestic production. This was the danger point enunciated by the Cabinet Committee. This was the point beyond which the committee said excess imports should be subjected to appropriate action by Government.

In 1955, total imports averaged 1,248,000 barrels a day, exceeding the Cabinet Committee formula by 116,000 barrels a day, and amounting to 18.3 percent of domestic production.

In 1956, total oil imports are scheduled at an unprecedented 1,463,000 barrels a day, according to schedules filed by the importing oil companies with the Railroad Commission of Texas. This schedule, Mr. Speaker, exceeds the Cabinet Committee formula by 301,000 barrels a day, and amounts to almost 21 percent of expected United States oil production as forecast this year by the Bureau of Mines.

In the face of this record and these facts, the director of Defense Mobilization now removes all semblance of any barriers to increased imports, and invites increased imports and increased dependency on oil producing areas on which this country would be helpless to depend in time of emergency.

Like many of my colleagues, I find it impossible to reconcile the actions of ODM with either existing policy, or the obvious increasing need to curtail, rather than invite more, oil imports.

What result are these tremendously increased imports now having?

To begin with, imports are denying more and more of the domestic market to domestic producers. Our crude oil producing capacity in the United States is about 9,100,000 barrels a day. The Bureau of Mines says domestic production this year will average 7 million barrels a day. This means, Mr. Speaker, that in face of these record and rising oil imports, the domestic petroleum industry now has more than 2,000,000 barrels of oil a day shut in the ground, lying idle for want of a market.

It does not take much of a mathematician to compute what this will mean in terms of oil unfound, and thus unavilable, in any future emergency.

As previously stated, imports will exceed the Cabinet Committee formula by 301,000 barrels a day in 1956. If imports were made to comply with the formula, this would mean added income to domestic producers of more than $850,000 a day, or $310,250,000 in the year 1956, based on current crude oil prices.

Since World War I, Mr. Speaker, there have been an average of seven wells completed by the domestic petroleum industry for every million dollars of total income from oil and gas. A loss of total income amounting to $310,250,000, simply on the basis of nonconformity with the Cabinet Committee's import formula, will deny the domestic drilling of 2,170 wells in 1956.

Deducting dry holes, this means more than 1,000 new producing oil wells and almost 175 producing gas wells will not

be drilled because of a failure to effectuate existing policy as to oil imports.

Mr. Speaker, if we project this result into an uncertain future without any limitation on imporation of foreign oil, the implications to the defense of our country become fearsome.

It is clear that if imports are left unrestrained in the next 10 years, as they have been in the past 10 years, income to domestic producers, to plow back in the ground to prove and develop new oil reserves, can be severely curtailed as to mean the difference between victory and defeat in any future war.

President Eisenhower has called our oil-producing ability a deterrent to Communist aggression. No greater truth was ever spoken. Without a strong domestic petroleum industry, we would be helpless before any enemy. It is obvious, therefore, if ODM shares the President's views as to the defense importance of our home oil industry, it should be concerned with building our domestic defense as to oil, rather than reverting to policies which experience has proven will undermine and defeat that objective.

In my home State of Texas, we are today reliving an all-too-familiar experience. With imports at a historic high, the Texas Railroad Commission has for the past 4 months been forced to reduce the flow of Texas oil. Our producing allowable for June was reduced 74,000 barrels daily from the May average. Together with previous curtailments in March, April, and May allowables have been reduced more than 200,000 barrels a day. In addition to this enforced curtailment for conservation purposes, we have experienced for the past year in west Texas the institution of pipeline proration, affecting at times up to 40,000 barrels daily of crude oil. This means that oil-purchasing companies, with their lines and tanks full, simply could not take the oil and many wells in a vast area of west Texas simply stood idle.

Mr. Speaker, the west Texas sour crude oil affected by this situation is of the same quality and type as much of the middle east oil which Mr. Flemming has told the importers they can bring into the United States west coast area in unlimited quantities.

Mr. Speaker, I cannot too strongly condemn this recently announced policy which, unless challenged by the Congress and corrected by the administration, can result in the trading away of our security as to oil.

In these troubled times, I can think of no greater folly. This is no time to change the rules to suit the whims of the importing oil companies. It is clearly a time for positive action. If the administration refuses to take such action, then I submit that the Congress must.

Mr. BURLESON. Mr. Speaker, at this very moment the importation of foreign crude oil into the United States is seriously threatening the economy of the Southwest. Particularly I can testify it affects the area which I represent in the Congress. It has already had a serious effect and the prospects are that the situation will become extremely acute in the future if there is not a curb put upon imports of foreign oil. I speak from the standpoint of the independent oil operator, whom I think can be properly referred to as the small-business man of the oil industry.

Mr. Speaker, it is with considerable pride that I contend that I represent more independent oil operators than any man in the Congress. I believe this statement can be supported statistically, but I well know that several of my colleagues will contest my contention. Be this as it may, I mention it to emphasize that in my area the independent oil operator supplies one of the most important needs of the great Southwest area, and because of the number in the business and the number of people involved, it becomes tremendously important not only to the immediate area but the Nation that he be treated fairly by his Government.

The oil industry, and particularly the independent operator whose very identity of being an independent means independence, very much desires that he not be regulated by the Government and wishes to have as little Government interference in the industry as possible. He has not wanted to see quotas on oil imports established, but rather it has been his hope that the major companies discipline themselves and limit their imports to a reasonable amount so as to supplement, rather than to supplant, the supply of oil in the United States. He has become desperate in view of the continued increase of foreign oil imports. In the last trade agreements bill the provision was made that oil imports should be held at the level of 1954. Mr. Arthur S. Flemming, Director of the Office of Defense Mobilization, heads the agency that is to carry out the intent of the Congress.

We are aware of the situation since that time. Oil imports have continued to increase.

On May 11, 1956, the President's Cabinet Committee under Mr. Flemming announced its findings relative to imports for 1956, as related to the 1954 level.

The Cabinet committee should reconsider its findings because of the following:

First. Under the committee's recommendations oil imports for this year would exceed the 1954 domestic crude-oil production by an average 234,000 barrels per day.

Second. The findings of the committee would permit increases in crude-oil importation in 1956 over 1954 of 1,300 percent from Canada; 36 percent from the Middle and Far East; and 26 percent from Venezuela; as compared with an increase of 10 percent in United States crude-oil production.

Third. The conclusions would permit the United States western coast to become increasingly dependent on Eastern Hemisphere crude oil.

Fourth. The conclusions of the committee would permit total imports of crude-oil and refined products to take over 20 percent of the United States market in 1956 as compared with 18.3 percent in 1955 and 16.6 percent in 1954. This is the largest increase in ratio since 1950.

If this trend is to continue and the policy of our Government supports these increases, I say unequivocally it will lead to an inadequate domestic supply of oil and an increasing dependency on foreign oil.

Mr. Speaker, my State of Texas has a system of proration of production. Contrary to the contention of some who are not familiar with it, proration is conservation. It is a sensible practice to conserve our natural resources. While we are conserving these God-given natural resources, and while the independent oil operator is the one who discovers between 85 and 90 percent of all the oil reserves in this country, he is being sabotaged by his own Government, which permits unprorated and cheaply produced crude oil to come into both his front and back door.

On many occasions it has been pointed out to the committees of the Congress, and on the floor of both the House and the Senate, that this country cannot afford to depend on foreign oil supplies. Those supplies could be cut off any day. In the meantime, if the domestic supply and the domestic oil economy has been dropped by this policy, it cannot be revived overnight. It would take years for the domestic oil economy to become healthy again once it had been supplanted by oil from sources outside of the United States.

As far back as 1950 I introduced legislation to establish quotas on foreign oil imports. As I have previously stated, the independent oil operator does not favor quotas if it can be avoided. The purpose of my bill at that time, and legislation introduced since, was to point up the need for a sensible policy and in order to bring it to the attention of Congress.

The day is rapidly approaching when drastic action must be taken unless the major oil-importing companies can be prevailed upon to act most sensibly and to recognize that the goose which lays the golden egg is not feeling well at all.

Mr. Speaker, I hope the President's Cabinet Committee and Mr. Flemming will reconsider their earlier conclusions and act in the most forceful manner to place restraints upon the importing companies. In my opinion, they must now take positive action because every appeal has been made to the importing companies, but they have failed to respond. The time is rapidly drawing near, if it does not already exist, which will make the situation extremely critical. Definite and positive action is absolutely necessary in order to place some reasonable control on ever-increasing oil imports.

SURVEYS OF FOREIGN TRADE

The SPEAKER pro tempore. Under previous order of the House, the gentleman from West Virginia [Mr. BAILEY] is recognized for 10 minutes.

(Mr. BAILEY asked and was given permission to revise and extend his remarks and to include a newspaper article.)

Mr. BAILEY. Mr. Speaker, within the past 2 or 3 years a number of surveys have been made by various groups, both

private and public, purporting to show the true interest of congressional districts or even States in foreign trade. Usually the results are given out under some title such as "The Stake of the *n*th Congressional District of the State of Blank in Foreign Trade."

Such surveys have been made by the Library of Congress Legislative Reference Service, by the League of Women Voters, by world trade groups, universities, and so forth.

One thing most characteristic of such surveys is that they always demonstrate that further tariff reductions would be helpful; that is to say, the exporting interests of the district or area are shown to employ more people than would be hurt by a greater volume of imports.

Recently a proposal has been made that several million dollars be appropriated by Congress to be used by the United States Department of Commerce to make surveys of this character throughout the United States.

The time is therefore here when we should take a critical look at these surveys. From what I know of them they appear to be launched by those who are interested in export markets and unfailingly prove what the propagators set out to prove in the first place.

Of course, there is nothing to stop the League of Women Voters from making all the surveys they want. The same goes for any other privately financed organization. When, however it is proposed to expend public funds, all of us have a right to insist that any proposed survey must include both sides of the equation.

If the number of people employed in the export industries is to be determined, the number of people that would be needed to produce the goods imported should also be ascertained. Only in this way could a proper balance be struck. If this were not done the result of any such surveys would only be one-sided distortions of the true state of affairs, and therefore misleading.

I shall certainly oppose most strenuously any proposal to appropriate public funds for foreign-trade surveys in this country that would draw false pictures.

As for private surveys, some of them may need public exposure for their biased approach and lack of objective purpose.

Recently a survey of the kind I have referred to came to my attention. It was made by University of Minnesota economists in combination with private industries of that State. In response to an article that appeared in the Minneapolis Tribune giving the results of the survey a letter was printed in the same newspaper. This letter points out some of the serious defects of a survey of this kind.

I ask that this letter be included at this point in the RECORD. I am sure that more criticisms of this kind will be evoked as more of these private surveys are made:

(The writer of this letter is director of public relations, Cooperative Wool Growers, of Minnesota, South Dakota, and Iowa.)

To the EDITOR: The Sunday Tribune of April 8, carried an article entitled "Research Shows Tariff Cut Would Aid State Industry."

The article states that the report of a combined group of businessmen and University of Minnesota economists found that reduced tariffs would help more industries of the State than they would injure. It says also that in 1947 no less than 13,488 Minnesotans in 27 industries held their jobs because of export trade.

Among the industries that would be helped by further tariff cuts are listed farm machinery and equipment, plastic products, construction and mining machinery, electric motors and generators, internal combustion engines and general industrial machinery and equipment.

Among the industrial products that would be injured are listed leather products (except footwear), pottery and sugar refining. Notably missing is the dairy industry. Among the agricultural groups that the report lists as likely casualties of lower tariffs are wheat, sugar beets and wool. Smaller injury, it says, would be inflicted on oats, malting barley, rye, and flax producers. On the other hand, growers of corn, soybeans, peas, and canning corn would stand to be helped moderately.

This gives the report the appearance of a product of honest effort; and that much may be granted. Nevertheless it is something of a shock to find the dairy industry, in which Minnesota stands third or fourth from the top in the Nation, missing from the list of industries that would be severely crippled by removal or a great reduction of trade barriers. This is one of the State's key industries. It could not be injured substantially without grievous injury to the State as a whole. But for the restrictive import quotas on cheese and the virtual embargo on butter the dairy industry of Minnesota would have been on the skids long ago.

The same would be true of wheat and wheat flour, both important sources of income for Minnesotans. The import quotas on these products are very much more restrictive than the tariffs on other products.

Ruin the dairying, the wheatgrowing, and flour-milling industries of Minnesota, and your exporters of different classes of machinery and motors would also soon feel the plight. It happens that the principal products of Minnesota are the beneficiaries of the most highly protective devices employed by the United States. That includes sugar, not yet mentioned here. Sugar is also protected by a special import quota law. The fact is that if products of the rest of the county were as highly protected as those of Minnesota we would have a low volume of imports, except of products on the free list.

It should not be forgotten that dairying, wheatgrowing, flour milling, and sugar-beet growing and sugar refining are also important to other States. If the import quotas on these products were removed the exporters of farm implements would find their sales falling off not only in Minnesota, but in Wisconsin, New York, and Pennsylvania (dairy States), in Utah, Colorado, Michigan, and California (sugar beet States), Louisiana and Florida (sugarcane States), and in Kansas, Nebraska, Illinois, and other wheatgrowing States.

While cotton is not grown in Minnesota, it also is highly protected by an import quota. Remove it and many Southern States would also decline drastically as a domestic market. Could the exporters of Minnesota live on their export markets? No.

There are the freer traders who wink at import quotas on agricultural products and explain them by pointing to price supports. They overlook the fact that price supports were instituted to bring about parity between farm products and industrial products. If support prices on agricultural products make them vulnerable to imports does it not follow that industrial products, to the price level of which it is sought to lift farm products, must be equally vulnerable?

The business groups and University of Minnesota economists are to be congratulated for initiating a serious study on foreign trade. A beginning has been made. It would be useful if this were followed by a more comprehensive inquiry, taking into account all the factors. (Leonard J. Nadasdy, Minneapolis.)

SPECIAL ORDERS GRANTED

By unanimous consent, permission to address the House, following the legislative program and any special orders heretofore entered, was granted to:

Mr. BAILEY, for 10 minutes, today.

Mr. CURTIS of Missouri, on Wednesday next, for 30 minutes.

Mr. DIGGS (at the request of Mr. MACHROWICZ), for 60 minutes, on Wednesday, June 13, 1956.

EXTENSIONS OF REMARKS

By unanimous consent, permission to extend remarks in the Appendix of the RECORD, or to revise and extend remarks, was granted to:

Mr. KEOGH, and include an editorial that appeared in the Chicago Daily News.

Mrs. GRIFFITHS and includs a letter.

Mr. REUSS in three instances, in each to include extraneous matter.

Mr. BARTLETT and include an address made by the gentlewoman from Oregon [Mrs. GREEN] at the University of Alaska on May 14, when she was awarded an honorary degree of doctor of laws, notwithstanding it exceeds the limit and is estimated by the Public Printer to cost $200.

Mr. ROOSEVELT and include extraneous matter.

Mr. DELANEY and include a statement on the fluoridation of water, by Arthur C. Ford, commissioner of the department of water supply, gas, and electricity of New York.

Mr. THOMPSON of New Jersey and include extraneous matter.

Mr. DOYLE in five instances, in each to include extraneous matter.

Mr. CELLER in three instances, in each to include extraneous matter.

Mr. ALGER in three instances and to include extraneous matter.

Mr. CURTIS of Missouri in three instances and to include extraneous matter.

Mr. AVERY.

Mrs. ST. GEORGE in eight instances and to include extraneous matter.

Mr. CELLER and to include a newspaper article.

Mr. KILBURN and to include a speech by Mr. DONDERO.

Mr. MORANO to extend his remarks following the special order of Mr. BEAMER today.

Mr. PILLION and to include an article.

Mr. HOLLAND in two instances and to include articles.

Mr. RABAUT and to include extraneous matter.

Mr. WIER and to include an editorial from the Richmond (Va.) News Leader.

Mr. GROSS and to include extraneous matter.

Mr. EVINS in two instances, in each to include extraneous matter.

Mr. KEARNEY.

Mr. SIEMINSKI.

Mr. PELLY (at the request of Mr. MARTIN) to revise and extend his remarks made in Committee of the Whole today and include extraneous matter.

Mr. DODD (at the request of Mr. JENNINGS) in five instances and to include extraneous matter.

Mr. ABBITT (at the request of Mr. MACHROWICZ).

Mr. BURNSIDE in two instances, in one to include an address notwithstanding the cost is estimated by the Public Printer to be $200.

Mr. LESINSKI and to include an article.

SENATE ENROLLED BILL SIGNED

The SPEAKER announced his signature to an enrolled bill of the Senate of the following title:

S. 2967. An act to amend the act of June 22, 1948 (62 Stat. 568), and for other purposes.

ADJOURNMENT

Mr. IKARD. Mr. Speaker, I move that the House do now adjourn.

The motion was agreed to; accordingly (at 5 o'clock and 46 minutes p. m.) the House adjourned until tomorrow, Wednesday, June 13, 1956, at 12 o'clock noon.

EXECUTIVE COMMUNICATIONS, ETC.

Under clause 2 of rule XXIV, executive communications were taken from the Speaker's table and referred as follows:

1960. A letter from the Secretary, Department of Health, Education, and Welfare, transmitting a draft of proposed legislation entitled "A bill to encourage and assist the States in the establishment of State Committees on Education Beyond the High School"; to the Committee on Education and Labor.

1961. A letter from the Archivist of the United States, transmitting a report on records proposed for disposal and lists of schedules covering records proposed for disposal by certain Government agencies, pursuant to the act approved July 7, 1943 (57 Stat. 380), as amended by the act approved July 6, 1945 (59 Stat. 434); to the Committee on House Administration.

REPORTS OF COMMITTEES ON PUBLIC BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. ENGLE: Committee on Interior and Insular Affairs. H. R. 9974. A bill to amend section 1 of the act entitled "An act to authorize the cutting of timber, the manufacture and sale of lumber, and the preservation of the forests on the Menominee Indian Reservation in the State of Wisconsin," approved March 28, 1908, as amended; without amendment (Rept. No. 2331). Referred to the Committee of the Whole House on the State of the Union.

Mr. KLEIN: Committee on Interstate and Foreign Commerce. S. 1146. An act to further amend section 20 of the Trading With the Enemy Act, relating to fees of agents, attorneys, and representatives; without amendment (Rept. No. 2332). Referred to the Committee of the Whole House on the State of the Union.

Mr. ENGLE: Committee on Interior and Insular Affairs. H. R. 10412. A bill to amend the act for the protection of walruses; without amendment (Rept. No. 2333). Referred to the Committee of the Whole House on the State of the Union.

Mr. FORRESTER: Committee on the Judiciary. H. R. 11499. A bill to amend the Texas City Disaster Claims Act; without amendment (Rept. No. 2334). Referred to the Committee of the Whole House on the State of the Union.

Mr. PRESTON: Committee of conference. H. R. 10899. A bill making appropriations for the Department of Commerce and related agencies for the fiscal year ending June 30, 1957, and for other purposes (Rept. No. 2344). Ordered to be printed.

REPORTS OF COMMITTEES ON PRIVATE BILLS AND RESOLUTIONS

Under clause 2 of rule XIII, reports of committees were delivered to the Clerk for printing and reference to the proper calendar, as follows:

Mr. BURDICK: Committee on the Judiciary. S. 417. An act for the relief of Pearl O. Sellaz; without amendment (Rept. No. 2310). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 530. An act for the relief of the Sacred Heart Hospital; without amendment (Rept. No. 2311). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 1034. An act for the relief of Mr. and Mrs. Donald D. Parrish; without amendment (Rept. No. 2312). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. S. 1414. An act for the relief of James Edward Robinson; without amendment (Rept. No. 2313). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 1622. An act to authorize the Secretary of the Interior to make payment for certain improvements located on public lands in the Rapid Valley unit, South Dakota, of the Missouri River Basin project, and for other purposes; with amendments (Rept. No. 2314). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. S. 2016. An act to confer jurisdiction upon the Court of Claims to hear, determine, and render judgment upon the claim of Lawrence F. Kramer; without amendment (Rept. No. 2315). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 2152. An act for the relief of the estate of Susie Lee Spencer; without amendment (Rept. No. 2316). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. S. 2582. An act to confer jurisdiction upon the Court of Claims to hear, determine, and render judgment upon the claim of William E. Stone for disability retirement as a Reserve officer or Army of the United States officer under the provisions of the act of April 3, 1939, as amended; without amendment (Rept. No. 2317). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. S. 3472. An act for the relief of Patricia A. Pembroke; without amendment (Rept. No. 2318). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 1403. A bill for the relief of Anthony J. Varca, Jr.; with amendment (Rept. No. 2319). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 3062. A bill for the relief of Paul H. Sarvis, Sr.; without amendment (Rept. No. 2320). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 3987. A bill for the relief of Onie Hack; with amendment (Rept. No. 2321). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 4336. A bill for the relief of Z. A. Hardee; with amendment (Rept. No. 2322). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 7738. A bill for the relief of Scott Berry; with amendment (Rept. No. 2323). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 9106. A bill for the relief of Saul Lehman; without amendment (Rept. No. 2324). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 10281. A bill for the relief of Walter C. Jordan and Elton W. Johnson; without amendment (Rept. No. 2325). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 10818. A bill for the relief of George T. Moore and Carl D. Berry; without amendment (Rept. No. 2326). Referred to the Committee of the Whole House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 10587. A bill for the relief of Charlie Gardener Ford; with amendment (Rept. No. 2327). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. H. R. 11207. A bill for the relief of Cyrus B. Follmer; without amendment (Rept. No. 2328). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. H. R. 11530. A bill for the relief of M. Sgt. Harold LeRoy Allen; without amendment (Rept. No. 2329). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. House Resolution 520. Resolution to refer H. R. 4507 to the United States Court of Claims; without amendment (Rept. No. 2330). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 245. An act for the relief of Ahmet Haldun Koca Taskin; without amendment (Rept. No. 2335). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 1375. An act for the relief of Pingfong Ngo Chung and Pearl Wah Chung; with amendment (Rept. No. 2336). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. S. 1814. An act for the relief of Teresa Lucia Cilli and Guiseppe Corrado Cilli; with amendment (Rept. No. 2337). Referred to the Committee of the Whole House.

Mr. HYDE: Committee on the Judiciary. H. R. 9020. A bill for the relief of Toini Margareta Heino; with amendments (Rept. No. 2338). Referred to the Committee of the Whole House.

Mr. FEIGHAN: Committee on the Judiciary. House Joint Resolution 636. Joint resolution for the relief of certain aliens; with amendments (Rept. No. 2339). Referred to the Committee of the Whole House.

Miss THOMPSON of Michigan: Committee on the Judiciary. House Joint Resolution 637. Joint resolution to waive certain subsections of section 212 (a) of the Immi-

gration and Nationality Act in behalf of certain aliens; without amendment (Rept. No. 2340). Referred to the Committee of the Whole House.

Mr. CHELF: Committee on the Judiciary. House Joint Resolution 638. Joint resolution to facilitate the admission into the United States of certain fiancées of United States citizens; without amendment (Rept. No. 2341). Referred to the Committee of the White House.

Mr. FORRESTER: Committee on the Judiciary. H. R. 1986. A bill for the relief of Robert M. Deckard; with amendment (Rept. No. 2342). Referred to the Committee of the Whole House.

Mr. BURDICK: Committee on the Judiciary. H. R. 6765. A bill to confer jurisdiction upon the Court of Claims to hear, determine, and render judgment on certain claims of the United Foundation Corporation of Union, N. J.; without amendment (Rept. No. 2343). Referred to the Committee of the Whole House.

Mr. WALTER: Committee on the Judiciary. H. R. 5155. A bill for the relief of Peder Strand; with amendment (Rept. No. 2345). Referred to the Committee of the Whole House.

PUBLIC BILLS AND RESOLUTIONS

Under clause 4 of rule XXII, public bills and resolutions were introduced and severally referred as follows:

By Mr. COOLEY:

H. R. 11708. A bill to amend the Agricultural Trade Development and Assistance Act of 1954, as amended, so as to increase the amount authorized to be appropriated for purposes of title I of the act, and for other purposes; to the Committee on Agriculture.

By Mr. DURHAM:

H. R. 11709. A bill to amend Public Law 506, 84th Congress, 2d session, to increase the authorization for appropriations to the Atomic Energy Commission for acquisition or condemnation of real property or any facilities, or for plant or facility acquisition, construction, or expansion, and for other purposes; to the Joint Committee on Atomic Energy.

By Mr. HALEY:

H. R. 11710. A bill to provide vocational rehabilitation for certain persons who serve in the active military or naval service of the United States after January 31, 1955; to the Committee on Veterans' Affairs.

H. R. 11711. A bill to extend for an additional year the authority to make, guarantee, and insure loans under title III of the Servicemen's Readjustment Act of 1944, as amended; to the Committee on Veterans' Affairs.

By Mr. KING of California:

H. R. 11712. A bill to amend the Internal Revenue Code of 1954 to provide that annuitants may elect to have their annuities taxed in the manner provided by the Internal Revenue Code of 1939; to the Committee on Ways and Means.

By Mr. SAYLOR:

H. R. 11713. A bill relating to certain inspections and investigations in metallic and nonmetallic mines (excluding coal and lignite mines) for the purpose of obtaining information relating to health and safety conditions, accidents, and occupational diseases therein, and for other purposes; to the Committee on Education and Labor.

By Mr. COOPER:

H. R. 11714. A bill to extend for 3 years the existing authority of the Secretary of the Treasury in respect of transfers of distilled spirits for purposes deemed necessary to meet the requirements of the national defense; to the Committee on Ways and Means.

By Mr. FLOOD:

H. R. 11715. A bill to establish an effective program to alleviate conditions of excessive in certain economically depressed areas; to the Committee on Banking and Currency.

By Mr. GRAY:

H. R. 11716. A bill to establish an effective program to alleviate conditions of excessive unemployment in certain economically depressed areas; to the Committee on Banking and Currency.

By Mr. KLEIN:

H. R. 11717. A bill to provide for the inclusion within the purview of the Civil Service Retirement Act of May 29, 1930, of United States commissioners and the crediting for retirement purposes of certain past service of their secretarial and clerical assistants; to the Committee on Post Office and Civil Service.

By Mr. RUTHERFORD:

H. R. 11718. A bill to provide for the maintenance of production of tungsten, asbestos, fluorspar, and columbium-tantalum in the United States, its Territories and possessions, and for other purposes; to the Committee on Interior and Insular Affairs.

By Mr. SIEMINSKI:

H. R. 11719. A bill to amend titles I and XIV of the Social Security Act to provide that, where a State requires an individual to assign his life-insurance policies to the State agency as a condition of assistance thereunder, such requirement shall not apply to the first $1,000 of the proceeds of such policies; to the Committee on Ways and Means.

By Mr. VURSELL:

H. R. 11720. A bill creating the City of St. Francisville Bridge Commission, defining the authority, power, and duties of said commission; and authorizing the commission and its successors and assigns to construct, maintain, and operate a bridge across the Wabash River at or near St. Francisville, Ill., and Knox County, Ind., to purchase and operate a ferry at such location, and for other purposes; to the Committee on Public Works.

By Mr. WALTER:

H. R. 11721. A bill to protect the national security of the United States by permitting the summary suspension of employment, and dismissal, of civilian officers and employees of the Government, and for other purposes; to the Committee on Post Office and Civil Service.

By Mr. CANNON:

H. J. Res. 647. Joint resolution to provide for the reappointment of Dr. Arthur H. Compton as Citizen Regent of the Board of Regents of the Smithsonian Institution; to the Committee on House Administration.

PRIVATE BILLS AND RESOLUTIONS

Under clause 1 of rule XXII, private bills and resolutions were introduced and severally referred as follows:

By Mr. BATES:

H. R. 11722. A bill for the relief of Maria Sebbio; to the Committee on the Judiciary.

By Mr. BROYHILL (by request):

H. R. 11723. A bill for the relief of Christos Petropoolos; to the Committee on the Judiciary.

By Mr. DAVIDSON:

H. R. 11724. A bill for the relief of Albert Charles Jolly; to the Committee on the Judiciary.

By Mr. HERLONG:

H. R. 11725. A bill for the relief of M. E. Boales; to the Committee on the Judiciary.

H. R. 11726. A bill for the relief of Leon Anderson; to the Committee on the Judiciary.

By Mr. HOLT (by request):

H. R. 11727. A bill for the relief of Rachel Abouganem vda de Violin; to the Committee on the Judiciary.

By Mr. LESINSKI:

H. R. 11728. A bill for the relief of Mohamad Hassan Dardari, alias Hassan Choukat Dardari; to the Committee on the Judiciary.

By Mr. McGREGOR:

H. R. 11729. A bill for the relief of Daniel Wilging; to the Committee on the Judiciary.

By Mr. MATTHEWS:

H. R. 11730. A bill for the relief of Miss Helene Dimitrowa; to the Committee on the Judiciary.

By Mr. MORANO:

H. R. 11731. A bill for the relief of Lars T. Radberg; to the Committee on the Judiciary.

By Mr. MULTER:

H. R. 11732. A bill for the relief of Wolf Greenberg; to the Committee on the Judiciary.

H. R. 11733. A bill for the relief of Alfonso Giangrande; to the Committee on the Judiciary.

By Mr. OSMERS:

H. R. 11734. A bill for the relief of Marie Haladjian; to the Committee on the Judiciary.

By Mr. POWELL:

H. R. 11735. A bill for the relief of Andor Muller and Rosa Muller; to the Committee on the Judiciary.

H. R. 11736. A bill for the relief of Ante Lisica; to the Committee on the Judiciary.

By Mr. ROONEY (by request):

H. R. 11737. A bill for the relief of Leonard Pignatello; to the Committee on the Judiciary.

By Mr. SHUFORD:

H. R. 11738. A bill for the relief of Connie Jean Osinski; to the Committee on the Judiciary.

By Mr. THOMSON of Wyoming:

H. R. 11739. A bill for the relief of Vasilios A. Xerikos, his wife, Eleni, and three minor children, Nicoleta, Constantinos, and Andreas; to the Committee on the Judiciary.

PETITIONS, ETC.

Under clause 1 of rule XXII, petitions and papers were laid on the Clerk's desk and referred as follows:

1134. By Mr. SILER: Petition of some 4,700 residents of the counties of Greene, Montgomery, Miami, Warren, Allen, Putnam, Summit, Ashland, Athens, Meigs, Butler, Carroll, Champaign, Clark, Clinton, Columbiana, Coshocton, Crawford, Cuyahoga, Fairfield, Franklin, Gallia, Guernsey, Hamilton, Hancock, Mercer, Harrison, Highland, Jefferson, Lorain, Lucas, Mahoning, Noble, Pickway, Portage, Richland, Seneca, Trumbull, Warren, Washington, and Wood in the State of Ohio, urging enactment of legislation to prohibit the transportation of alcoholic beverage advertising in interstate commerce and its broadcasting over the air; to the Committee on Interstate and Foreign Commerce.

1135. By Mr. SMITH of Wisconsin: Resolution adopted at a meeting of Estonian, Latvian, and Lithuanian Americans of the city of Racine, Wis., held under the auspices of the local branh of the Lithuanian American Council, on June 10, 1956, to commemorate the 16th anniversary of the forcible occupation of the Baltic States by Soviet Russia; to the Committee on Foreign Affairs.

Appendix

A Changing Navy Faces the Future

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. BURNSIDE. Mr. Speaker, I was privileged to attend the Armed Forces Day ceremonies held at the city of Huntington, W. Va., on May 19, 1956. Rear Adm. Rawson Bennett, Chief of Naval Research, was the principal speaker of the occasion. His excellent dinner address admirably points up the Navy's modern research program and its contribution to our national defense.

The address follows:

A CHANGING NAVY FACES THE FUTURE

(By Rear Adm. Rawson Bennett, U. S. Navy)

Ten years ago the United States was disbanding its Armed Forces as fast as it could. The war was over. Our people wanted to turn all their energies to peaceful pursuits. Yet at the very moment of demobilization the Iron Curtain was being stretched across Eastern Europe and the tensions of cold war were beginning.

The decade that opened with our great victory in World War II soon became a period of bitter disillusion, followed by reevaluation. We realized that freedom, once won, must be continually safeguarded. During those first few years we were relatively strong in one important sense—we had the atomic bomb; the Communists did not. This fact is credited by many with preventing large-scale aggression during that period. We had an effective deterrent.

By 1949 this advantage was wiped out—the Soviet Union exploded atomic weapons of its own. This event was swiftly followed by the invasion of South Korea in 1950, and we had to fight again. Since then the United States has been building up its military strength once more, because force must be met with force. Only those who remain strong can remain free.

The postwar decade was a period of continuous change as we pondered the lessons of World War II and adjusted our thinking and actions to the future. The Nation's basic organization for defense was changed in 1947 with the unification of the Armed Forces. There has been steady adaptation and internal reorganization since, as the military has adjusted its structure and its thinking to the requirements of the atomic age.

Most astonishing of all has been the change in the weapons of war themselves. We are in a revolution based on science and technology and characterized by sharp increases in speed, complexity, and expense.

So, 10 years after demobilization we are still building a new defense structure, because we cannot afford not to. One of the bitter lessons of the 1930's and 40's is the wisdom of preventing aggression through firmness based on strength. If all deterrents to aggression fail, we must be ready to fight, immediately and effectively.

These are the reasons the United States maintains military forces: to deter aggression, large or small, and to win a war of aggression is not deterred. Another lesson the reaffirmation of the age-old military doctrine of surprise. We cannot know what form the next overt act of aggression might take, but we must expect the enemy to try to do what we least expect and are least prepared for. In 1950 we were thinking largely in terms of long-range bombing attacks, and the enemy launched an invasion by land, in Korea. For years we have thought of the Soviet Union primarily as a great land power, and suddenly we realize that it now has the world's second greatest Navy.

We cannot know what sort of action we may have to fight. We must be prepared for anything. This is why the United States maintains balanced forces. We need the long-range, large-scale nuclear weapons delivery capability of a modern strategic Air Force. We must be able to dislodge enemy troops from areas important to us and to repel any land invasion. Therefore we need powerful ground forces—an Army. To project our power across the seas, to be able to fight battles at a place and time of our own choosing, to be able to retaliate quickly from nearly any corner of the globe, to maintain command of the seas, we need naval forces.

The objective of the Department of Defense has been to maintain an Army, Navy, and Air Force equipped to perform the specific missions they have been assigned in the defense of our country. New weapons, and the possibility of newer weapons, have been unfolding at such a fast pace that all the capabilities of any force cannot be defined specifically as an inherent, unchanging thing. Guided missiles and nuclear weapons in particular have opened up new dimensions to be explored, new tactics and even new strategy to be developed. The one constant in future defense planning is change, and each of the Armed Forces is always searching for the best way to keep abreast of future developments.

Our Navy is now in the midst of dramatic sweeping changes. Weapons are changing and new tactics are being molded to take advantage of them. A new kind of military force is being created on a foundation that has remained constant throughout history—the inherent advantage that comes from being able to move freely over nearly 70 percent of the globe, and denying that freedom to the enemy.

First, let's look at the Navy's job. We have four assigned missions.

1. The security of overseas transport. We must have command of the seas so that we can join our strength with those of our friends and allies. The United States has entered treaties and commitments with 62 nations spanning 5 oceans forming an oceanic federation. These are the NATO alliances in Western Europe and the SEATO alliances with our friends in southeastern Asia. We must always have free use of the seas to supply our great industrial machine with the more than 60 critical and strategic raw materials that come only from abroad. We must be able to transport our armies across the seas and keep them supplied.

2. Seaward extension of continental defense. The Navy shares with the Air Force and the Army the responsibility for defense against attack through the sea approaches to this continent. The first threat is long-range air attack. Far out at sea, Navy radar picket ships and submarines are watching for the first sign of enemy bombers headed for the American continent. Their job is to help head off the attack before it takes place. The second threat comes from guided missiles launched from submarines and surface ships. The Navy has built up a defense network against these sneak craft that includes surface picket ships and submarines, and air-borne antisubmarine equipment.

3. Amphibious operations. This is the means by which the power of the fleet is extended to allow our forces to establish and maintain a foothold in almost any area in the world. The ability to mount a successful amphibious assault allows us to fight where we choose, on the enemy's ground.

4. Naval striking power. The heart of this power is the fast carrier task force. Highly defended with interceptor planes and missiles, the jof of the task force is to roam the seas, ready to strike at the enemy on a moment's notice. It can launch air raids, bombard installations on shore and inland with guided missiles, and support amphibious landings. Nuclear powered missile carrying submarines and large jet seaplanes will soon add new dimensions to the Navy's ability to hit the enemy on his own ground, with speed and surprise.

These are the Navy's assigned missions. As the world situation changes, one or the other may require more or less emphasis. As technology advances and new weapons appear, the methods of carrying out these missions change.

In different eras seapower has appeared in different forms—first oars, then sails, then steam. Sweeping new developments have altered navies almost beyond recognition, and now we are on the verge of changes that can make naval power more formidable than ever in the past.

"Flexibility" is a word that is closely woven into Navy thinking. We look at the operating Navy itself as a flexible weapons system, capable of carrying out a wide variety of missions in different ways to suit the time and the circumstances.

When the fortunes of war and diplomacy left thousands of anti-Communist refugees stranded in North Vietnam, the Navy was able to come in and move them southward, to freedom. This was the "Passage to Freedom" operation, a humanitarian act that must have gained us many friends in Asia.

When aggression threatened in the Formosa Strait, the United States was represented by the firm hand of the 7th Fleet, on the alert, ready for instant action, free to go or to stay, as we chose. We needed no one's permission to say, since the 7th Fleet is not based on foreign soil; its domain is the high seas.

The southern flank of NATO's defenses is protected by the 6th Fleet. This powerful force has cruised the Mediterranean for several years. It shows the flag, to our friends and to our potential enemies. At an air show in Paris 2 years ago, European newspapers reported the most impressive event. The sudden appearance of a flight of Navy jet fighters that had roared off a carrier deck in the Mediterranean, flown overland to Paris, circled over the air show and flew back to their base—at sea. The long arm of naval striking power was evident to everyone at the show. And this powerful fleet that has represented us in southern Europe and northern Africa is based not in Italy, not on Malta,

not in Algiers or Morocco—its home base is Norfolk, Va.

If cold war should turn to a brush fire or an all-out clash, the Navy is ready to switch from diplomatic missions to large-scale attacks, troop-carrying, amphibious assaults, pinpoint interdiction missions, submarine raids, or whatever the situation should require. We are a flexible force.

"Flexibility" also describes the Navy's overall attitude toward its organization, its weapons and its tactics in battle. It can adapt to changing external conditions. It constantly looks for possible internal changes that will lead to a more efficient, harder-hitting fleet.

This attitude of flexibility is stiffened and given substance by a set of firm naval principles. The first is that the Navy's overall job is to secure and maintain control of the seas, as an indispensable condition for victory in any kind of a conflict. World War II was almost lost at the outset when German submarines nearly grasped control of the North Atlantic. We were able to campaign in Korea because the Pacific was ours, to ship troops and supplies to the battle area without serious challenge.

Following from this first principle are the ideas that command of the seas stems from mobility, from superior striking power and from superior staying power. These are the things we are really after when we work for new developments for the Navy. No matter how much the weapons change, these will still be the elements of victory for naval forces.

Working from these fixed principles, the Navy has brought continuous change in the methods of sea-based warfare, and has brought new kinds of warfare into being. These changes have all contributed to a major aim of American military strategy: keeping war away from American soil.

The First World War saw the rise of the submarine, and naval efforts revolved to a large extent around efforts to combat it, and keep supplies moving.

World War II brought submarine warfare again, and the totally new concept of aircraft carrier task forces dominated naval warfare in the Pacific. Fighters and bombers flying from floating airbases that could move to nearly any corner of the globe introduced a new element in warfare. In the dark days of 1942, when we were still on the defensive, the Japanese homeland was raided by General Doolittle's bombing planes. He flew from "Shangri-la," the deck of an aircraft carrier far out at sea. This was only the first hint of the great carrier sweeps to follow. A new cycle of change had been produced by the Navy and a new dimension was added to sea power. Techniques were developed for refueling and resupplying the carrier task force while it was at sea, so naval staying power—the ability to stay on and fight indefinitely—was also increased.

The fighting in Korea proved that the principles of sea power were still sound. They demonstrated again some of the advantages that can come only to the Nation with command of the seas—the ability to move large forces overseas and keep them supplied; and to furnish air strikes where they are needed, immediately, to cover landings and harass the enemy's railroads and troop movements. Throughout the war, carriers, battleships, cruisers, and destroyers cruised the waters around the Korean peninsula, furnishing air support and shore bombardment as they were needed.

In pondering our commitments in the North Atlantic Treaty Organization we should remember that Europe, too, is a peninsula, especially if you turn your map on end and look at Europe the way it is seen from Moscow. It is a much bigger peninsula than Korea, but the naval weapons of today have a much longer reach than the ones that did so much damage in Korea.

The Korean war saw naval aviation take a major step forward with the introduction of jet aircraft to combat operations. It marked the real close of the World War II era, and the beginning of a new cycle of change that is now in full swing. It epitomizes the Navy of today. This Navy is what we call the "fleet-in-being," the force that is cruising the high seas at this very moment, ready to go into action.

What does this fleet-in-being look like? It is composed of fast carrier task forces, equipped with sturdy *Essex*-class and *Midway*-class carriers. These are ships of World War II design. Many of them are veterans of historic engagements, in that war and in the Korean war. Jet airplanes fly from their decks. Converted cruisers and destroyers with modern sonar and radar, and radar-picket submarines make up the protective screen. New and converted snorkel-equipped submarines add to the offensive power of this fleet. It is a powerful, rugged fleet, built largely around World War II ships, but with hundreds of improvements, alterations, and advanced new equipments that represent the best in postwar technology.

Now we are entering another era of change, an era that will greatly alter the appearance and the effectiveness of our Navy. It is an era with potential advances for many years to come.

The shipbuilding programs begun 5 years ago have been steadily delivering carriers, cruisers, submarines, destroyers, landing ships, and auxiliaries of advanced design, to replace the veterans of the fleet.

The *Forrestal* is operating with the fleet. She is the first of a class of new carriers that will form the heart of the jet age carrier task force. She is designed to operate with the best jet aircraft now coming off the drawing board. She can launch planes twice as fast as our present carriers, and can launch and recover them at the same time.

New naval aircraft to fly from these decks are on the way. An entire family of new, different types that represent a new era in design are moving up to join the fleet. These are the swept-wing and delta-wing fighters and interceptors that can crack the sound barrier in level flight. When the alarm sounds, an advanced interceptor like the F4D Sky Ray or the F8U Crusader can be catapulted from the deck and reach 10,000 feet in 1 minute—less time than it takes most aircraft to get off the ground. We have a fast, jet-powered medium bomber, the A3D, that can be catapulted from a carrier deck.

The swept-wing, delta-wing era of turbojets that is now coming in will eventually be superseded by a new cycle of change. Our current basic research and exploratory development programs indicate that we can continue to develop new and extremely advanced types of aircraft. Rocket-powered interceptors are in the future, and nuclear power for aircraft shows great promise. Guided missiles will play a steadily growing role in the future of the Navy.

The first guided missile ship, the *Boston*, is now at sea. She will eventually join a task force, as the herald of a new era in fleet air defense. Current shipbuilding programs, and the request now before Congress, include 9 guided-missile destroyers and 7 guided-missile frigates, plus conversion of 5 cruisers and 1 submarine to guided-missile ships.

The undersea arm of this present day fleet consists of many attack submarines, and others that function as radar pickets, undersea tankers, troop carriers and missile launchers. We have submarines designed specifically to hunt down and kill enemy submarines. This is an effective submarine force, although we wish it were larger, as we think of the potential of the 400 submarines in the hands of the Soviet Union.

The cycle of change that is just now hitting this undersea fleet of ours is nothing short of a revolution. For here we have the first application of nuclear power to propulsion. Our first nuclear submarine, *Nautilus*, is a record breaker, as I am sure you have read. Her log already shows 34,000 miles without refueling. It is hard to digest at once the implications of a ship that can travel for months, and for thousands of miles, without once showing herself above water.

Soon this potent new weapon will be joined by a sister, the *Sea Wolf*. Six more are now being built and another six are planned.

Next on the list is a nuclear-powered guided missile cruiser. The request for funds for this ship is now before the Congress, and we hope to have her operating within 5 years. We are asking for funds to complete final development of a reactor for an aircraft carrier. Our experimental program on reactors for surface ships involves five different types of reactors now under development.

The ultimate goal is to have all Navy combat ships run by nuclear power. When this goal is reached it will mark the closing of one of the greatest cycles of change in naval history, a cycle that has just begun. And by that time, I am certain that we will be embarked upon still newer programs, of a kind that we cannot even foresee today.

If nuclear power personifies fundamental change in the Navy's ships, the change in the Navy's weapons is personified by the guided missile. Both are just beginning to enter the fleet. Both open the way to new dimensions in tactics and strategy. Both are major advances, typical of the revolutionary thinking we have come to expect in this post-war decade.

Five major Navy-developed guided missiles are in production. The surface-to-air missile, Terrier, will be the armament for the *Boston*. Terrier will be followed by another antiaircraft missile, the Talos. Talos will have longer range, but, like Terrier, is designed to be launched from the deck of a ship, against incoming aircraft.

Sparrow is an air-to-air missile, designed for our fighters and interceptors to take into battle against any enemy bombers and fighters. As these missiles move in to take over the job of fleet air defense, the five-inch antiaircraft guns aboard our ships will assume the role of a close-in, last-resort weapon.

The fifth Navy missile now in production is Regulus, a bombardment missile. Regulus can be launched from a surface ship or from a submarine, to hit shore targets such as cities and submarine pens, or to support an amphibious landing.

This change from guns to guided missiles, from high-pressure steam to nuclear power, from subsonic to supersonic jet airplanes is the vanguard of far-reaching changes in this fleet-in-being that is on guard today. Now concepts in aviation, in surface ships, in undersea warfare, in amphibious operations, are unfolding as new equipment moves from the scientist's blackboard to the engineer's drawing board, to the factory, to the fleet.

Now, let's have another look at the jobs the Navy is called upon to do, and see what impact these new developments will have. We have been working to bring about these changes not just for the sake of change, but to create a Navy that can carry out its missions faster and better.

First, we are better prepared to safeguard our overseas supply lines. Destroyers and destroyer escorts of the latest design are joining the fleet.. Their job is to hunt down and destroy the enemy submarine. Advances in electronics have led to significant advances in sonar and radar detection gear, and our new destroyers will be fitted with these devices and with new antisubmarine weapons. They will work in close collabo-

ration with the new hunter-killer submarines, and will be assisted by helicopters and blimps capable of towing sonar gear. Long range patrol planes will criss-cross the sea lanes, on the lookout for submarines.

Amphibious operations—The goal of developments in this field is greater surprise and speed. We are on the verge of sweeping advances. We want to swarm over enemy positions in a matter of minutes, rather than hours. This means bringing troops and equipment in by air as well as by sea. Now amphibious tactics are being developed, using new kinds of equipment, to achieve this goal of envelopment in three dimensions.

Assault helicopters and logistic seaplanes that can land troops and material directly on the beach and inland, and new high-speed landing craft based on new design principles are entering the picture. Heavy offshore bombardment by guided missiles is another new factor in amphibious operations.

To carry out our role in continental defense, new developments have extended the range of our electronic eyes and ears. Sonar and radar equipments have longer range and can provide us with more positive identification. Aircraft like WV2, a highly modified version of the Constellation, are now operating successfully with long-range radar equipment. These aircraft carry 6 tons of electronic equipment and a crew of 31 technicians. Their high speed and altitude enables them to spread a search over a large area, to spot farway objects and pinpoint their distance, course, speed and altitude. Surface ships and submarines must also perform this sentry duty far out at sea, since they can stay on station in weather that would make air operations extremely hazardous.

If a contact is made with unidentified aircraft, naval forces on the spot would go into action immediately. Guided missile crews would man their stations. All-weather interceptors would catapult from carrier decks, guided to their targets by radar, lock on the target and release their missiles.

Now, a fourth mission—those tasks to be handled by the striking power of the Navy. This is the naval ability to hit back at the enemy, to carry the action to his doorstep. I mention it last because naval striking power is a many-sided concept. It is prepared for many different tasks and it employs a variety of means. It is a complex, but potent, system. At its heart is the fast carrier task force.

The carrier task force has always been a lethal-weapons system, capable of ranging far, hitting hard, and presenting an elusive, shifting target. The task force, as we have known it for the past several years, is a force able to steam rapidly to any portion of the earth's surface that is covered by water, then unleash its bombers to strike targets up to 600 miles inland, or harass armies in the field. The bombers and carriers can then rendezvous far out at sea, at a spot unknown to the enemy, ready for a strike again the next day, and the next, at different targets and from a different quarter.

This force is highly mobile. It can roam the seas for months, then strike with little or no warning, with hundreds of jet bombers, and swiftly disappear, to prepare for another attack.

It is self-sustaining. The carrier task force can cruise and fight indefinitely, hitting target after target, without ever returning to a land base.

It has tremendous defensive power. The carrier task force is the most heavily defended target that an enemy air, surface, or undersea craft can tackle. It is defended by its own cover of fighter planes, by the concentration of fire power of the guns and torpedoes of its cruisers and destroyers and by antiaircraft fire from the carrier itself. Now, guided missiles are being added to this firepower. Attacking a carrier from the air means running a gauntlet of 100 miles of concentrated antiaircraft and missile fire. Attacking from beneath the sea means running a gauntlet of torpedoes and depth charges from ships listening, with sensitive sonar, for the approach of any submarine.

The aircraft carrier would certainly be one of the costliest targets that an enemy could attack. Yet he cannot ignore it without risk of sudden disaster at home.

This is the striking power of the carrier task forces in existence today. Now, picture the added punch of a similar force propelled by nuclear power and armed with offensive guided missiles with nuclear warheads. Here is a new factor in warfare: the mobile nuclear retaliatory force, ready to strike the first counterblow if anyone attacks us. It is a floating platform for launching fast jet bombers or intermediate range guided missiles. Every 3 minutes its position has changed by 2 miles, so the enemy cannot zero in in advance with ballistic missiles.

Naval striking power has other dramatic new aspects. The P6M Sea Master, our new high-speed jet seaplane is a type with great potential as an offensive weapon. It could be based in remote inlets and lagoons, supplied by submarine and be as free from the possibility of detection as any major weapon yet devised. Yet it can carry a heavy load swiftly, over a long distance.

The nuclear powered submarine can be another offensive weapon. Armed with guided missiles, it could cruise indefinitely, within striking range of hostile targets. Such a submarine could surface briefly at night, launch its atomic warhead missiles, and withdraw.

This great striking power is a real deterrent to aggression. The existence of such a powerful weapons systems places enormous burdens on anyone who hopes to attack us, or invade the territory of our NATO and SEATO allies. His land commanders must scan the skies to seaward, watching for well-dispersed attackers with greater mobility than his own forces. He cannot base his plans on his ability to knock out prelocated facilities—he must include the time necessary to locate our task forces, then attack with weapons useful against moving targets. He has the burden of continual surveillance of a vast area of sea against the danger of an atomic attack from sea-based aircraft or missiles, teamed up with submarines.

This growing naval striking power forces any potential enemy to increase the complexity and quantity of weapons he needs to contend with our forces. The stress which this imposes on his economy, his industry, his military experts and manpower can do much to weaken the structure of any military plan, or blunt the will to engage in such competition. This is cold war in its essence. It forces an enemy to face the reality of what it will cost to win a military victory.

The American military program for national security is based upon this concept of developing weapons systems so effective that the enemy will be deterred from an attack, because he knows that to attack is to court disaster. Naval striking power and the advanced weapons systems developed by our sister services are part of the balanced forces being forged as a deterrent to attack on our country.

I have tried to give you a look at a changing Navy, as it faces the future. We are proud of our past, and the naval traditions it has bequeathed us. We live in the present, ready for any assignment on a moment's notice. And we believe in the future.

In the words of the Chief of Naval Operations, Adm. Arleigh Burke, "We are determined to do our job. We are confident that we can do it. We know that together with our wonderful Army, our Air Force, and our gallant Marine Corps, we are ready to maintain our country's honor, prestige and security against all enemies."

The American Police—Problems and Progress

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. EVINS. Mr. Speaker, there appears in the Police Chief magazine of June 1956 a well-written and significant article by my long-time friend and former schoolmate, Royce L. Givens, now the secretary-treasurer of the National Conference of Police Associations. Policeman Givens also serves as legislative representative for the International Association of Policemen and is well known by many members of the Congress. Policeman Givens' article sets forth the high standards of ethics and practice of policemen, as well as some of the legislative objectives of the conference, indicating the emergence of policemen as a profession.

Believing that this article is worthy of wider review and consideration, under unanimous consent, I include this article in the Appendix of the RECORD.

The article follows:

THE AMERICAN POLICE—PROBLEMS AND PROGRESS

(By Royce L. Givens, secretary-treasurer, National Conference of Police Associations, Washington, D. C.)

In his excellent book, the Trouble With Cops, Albert Deutsch rightly points out the excesses that result when an apathetic community fails to secure for itself an efficient and honest police force. But Mr. Deutsch also points out that there are thousands upon thousands of honest and efficient policement in the United States, dedicated to their sworn duty to protect life and property and to preserve the public peace, and ready to lay down their lives in pursuit of that duty.

To cite instances of corruption, as was done in the London, England, press, while overlooking Deutsch's mention of the many acts of kindness, courtesy, and courage that are a daily practice in police routine, as well as the startling progress being made toward professionalizing the American police, is a distortion of Deutsch's intentions in my opinion and the product of poor reporting.

Naturally, in a field so intimately tied to a community's health and well-being, any instance of a policeman betraying his public trust is shocking and reprehensible. But such examples should not be allowed to obscure the positive efforts being made by American citizens and police officials.

A combination of causes contribute to making the performance of police work difficult in the United States. Seldom in history have so many people of varied beliefs and modes of conduct gathered in so complex a social structure. The variety of religious and political creeds, national origins, and diverse cultures is matched only by the variety of ideals, emotions, and conduct found in its individual citizens.

Police administration today is complicated also by many factors that did not exist 100 years ago. The urbanization of population, improvements in transportation and communication, and dislocations caused during World War II and the Korean conflict, have fostered a shifting population group which at present still lacks the community roots that provide a desirable control for those who lead more settled lives.

American police problems date back to our earliest governments, and have been complicated, in part, through inactivity and neglect. The original settlers were too busy subduing a continent to give much thought to the nice distinctions upon which successful police administration often hinges, and according to the late Bruce Smith, one of our foremost authorities, "probably did not even become aware of the existence of a police problem * * * until the growth of great cities was well underway."

Police systems can be said to have "grown up with the country." Since that growth was extremely rapid, police service in the United States has never really had an opportunity for orderly and consistent development. It is only during the last 20 years that a significant number of American police agencies have been able to report excellent progress.

At that time able administrators began appearing in various parts of the country whose activities served to attract a new type of recruit to police service. This informed and vigorous leadership has gradually produced not only a new standard of management, but an increasing proportion of intelligent, trained, and hopeful members of the rank and file. The best police forces have captured the imagination of millions of youths, thus providing an opportunity to raise the quality of recruitment that will assure the police future as nothing else can.

In city after city and State after State, one finds competent police administrators who have exercised control over their respective forces for a period sufficiently long to have made their influence felt. Rising sometimes from the ranks, or appointed from fields related to police work, they represent an improvement over the past when police administrators often were politically appointed without adequate preparation of either a general or technical nature.

Coupled with this movement is the brilliant record of the Federal Bureau of Investigation, the emergence of a dozen or more State police forces of outstanding quality, and the striking reversal of old police patterns in many cities and villages. These physical evidences of a radical change in police thought and action are the more remarkable since our country has the most decentralized police system in the world, and there is no central authority to set and exact compliance with the latest standard of police service. But as Bruce Smith remarked in a special issue of the Annals of the American Academy of Political and Social Science, devoted to new goals in police management, "precept, example, and a widespread desire to emulate have combined to produce a result so striking that one may doubt whether it could have been achieved in any other way."

The trend toward a professional police service has been aided by the growing recognition by States, counties and municipalities that capable men must be adequately paid. Liberal pension programs, progressive pay plans, a shorter work week, fair promotions, and equal opportunities under civil-service regulations, have helped to attract men who are well adapted to the special requirements of police duty.

For the unusual opportunities and temptations presented to policemen, and the grave nature of the responsibilities imposed on them and the authority that is theirs, requires men of above average intelligence, ethics, and emotional stability. It is the growing prominent of such well-qualified men which has stimulated much of the concentrated effort, within police ranks, to raise the professional standards of law enforcement.

Recognizing that the high regard the public has for the established professions like law and medicine is the result of years of effort by its early practitioners to develop a professional ethic, professional techniques, and improved performance, police organizations such as the National Conference of Police Associations are working to define similiar standards for themselves.

In cooperation with the International Association of Chiefs of Police, the NCPA is drafting a Code of Ethics which sets forth in detail those acts which will be deemed proper and improper. And realizing that a code is useless unless all policemen share a sincere desire to abide by it, the committee is preparing a training syllabus on law-enforcement ethics for use in the curriculums offered by the various police departments and universities. At the present time, 22 colleges and universities give 2- or 4-year courses which lead to certificates and degrees in police administration and police science.

In general, police training in America has greatly increased in quantity and improved in quality during the past few years. One of the most significant trends has been toward in-service training programs. These consist either of institutes of a few days to 9 monts' duration in which officers devote full time to a course of study designed to fill specific training needs, or of a series of classes offered by local undergraduate colleges during policemen's off-duty hours. The latter type usually permits the accumulation of credits toward a degree.

The Delinquency Control Institute at the University of Southern California, and the Southern Police Institute of the University of Louisville, are two relatively recent ventures which are pioneering in new concepts of police training and philosophy.

Supported by the Carnegie Corp., the Rockefeller Foundation, ond the city of Louisville, Ky., the Southern Police Institute gives advanced training to 25 ranking law-enforcement officers 3 times a year. Each officer selected to attend the 12-week semester—mainly from departments in the southern part of the United States—is given free tuition and a scholarship to cover living and travel expenses. In addition to courses on police organization, crime detection, and traffic control, the students examine psychological, psychiatric, and socio-economic studies that relate to police work. Because of community sentiment that police officers must be equipped with skills and attitudes conducive to good human relations, particularly in situations involving racial tensions, the institute has developed special techniques for calming disorders resulting from disagreements between various racial, social, and economic groups.

The Delinquency Control Institute is the result of joint planning by school and law-enforcement officials and provides courses in sociology, recreation, education, law, social work, and administration. Its tuition-free, 12-week course is available to qualified officers anywhere in the country. The courses, utilizing field trips and seminars as well as regular classroom instruction, are taught by outstanding specialists with many years of experience in working with delinquency problems.

Institutes such as these are designed to train key leaders in local police departments, who, in turn, may be assigned to pass along their knowledge to fellow officers. An example of this is the juvenile aid school operated by my own department in Washington, D. C., which recently completed its first term following the attendance by two of our officers at the Delinquency Control Institute.

In addition to the above types of training, there are the educational programs offered by the National Police Academy of the FBI, by numerous local police departments, and through traveling instructors furnished by State departments of education. No police force is too small to receive such on-the-spot training from these traveling teachers who carry with them visual aids and other equipment. Training for recruits also is given by a growing number of colleges, and includes not only the normal police subjects, but related academic subjects, such as English composition, municipal government, constitutional concepts, public relations, and sociology.

At the same time schools like New York University are developing graduate level police administration curriculums, while a number of progressive police departments—Milwaukee and Detroit, for instance—have been experimenting with the apprentice, or cadet, plan. By catching the interest of young men just graduating from high school, and giving them employment and training as police apprentices, this method enables police officials to observe and control their activities during these formative years and select only those for permanent appointment who show aptitude for police work.

Improved personnel techniques are likewise contributing to the professionalization of police work. Widespread establishment of merit systems that provide minimum entrance requirements with higher intelligence and educational standards, through recruiting campaigns, written examinations, physical agility tests, medical examinations, and character investigations, are doing much to insure that policemen are properly qualified for their jobs. Psychiatric examination—first advocated by August Vollmer, the father of scientific policing—also is receiving responsible consideration as an essential part of police recruitment. The practice of holding nationwide competitive examinations to fill the position of police chief has become commonplace, while preemployment residence requirements for police candidates has been substantially relaxed in recent years.

The many police professional organizations that exist at national, regional, and State levels, and the social and benefit organizations frequently maintained by local forces have, by their effort to improve policemen's work and pay conditions, also demonstrated their value in discovering and correcting morale-destroying influences.

These groups also are working to increase the prestige of police officers in the public's eye. They realize that only when our police obtain the public confidence and the popularity that their British counterparts now enjoy, will conditions favorable to the best performance of law enforcement be achieved. Through the efforts of the NCPA, self-regulatory groups in the publishing, motion picture, radio, and television industries have agreed to eliminate derogatory depictions of police work.

Organized public opinion is another increasingly positive force. Public indignation over the conditions exposed by the Special Senate Committee To Investigate Organized Crime ran high throughout the country. This indignation was expressed at the polls in municipal elections where existing political regimes were overthrown and police officials exposed as corrupt were subsequently replaced. Civic leaders in numerous localities began forming citizens' crime commissions. During 1951 the Chicago Crime Commission received over 400 inquiries from citizens in every part of the United States requesting information regarding formation of similar groups. The Chicago commission, which had long been calling attention to the problem of organized crime, became a focal point of citizen efforts to eradicate bad conditions which had arisen in their communities. Recently its director, Virgil Peterson, was elected president of a National Association of Citizens' Crime Commissions.

In the aftermath of the Senate committee's hearings the American Bar Association recommended passage in each State of a model police council act under which police inefficiency anywhere in the State becomes the responsibility of a permanent agency con-

cerned with the improvement of police administration.

The work of these influential groups and the promotion and support of local efforts by the Department of Justice has done much to concentrate public opinion on the problem. It is because of these efforts and achievements that I think it justified to conclude with the prediction made in 1951 by O. W. Wilson, former chief of police in Wichita, Kans., and present dean of the School of Criminology at the University of California, at Berkeley. "The next 50 years," Wilson said, "will see the American police emerge as a true profession."

Can Our Potomac Flow Clean Again?

EXTENSION OF REMARKS
OF
HON. M. G. BURNSIDE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. BURNSIDE. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following news item entitled "Can Our Potomac Flow Clean Again?" which appeared in the Washington Sunday Star, June 3, 1956:

CAN OUR POTOMAC FLOW CLEAN AGAIN?

The Jesuit missionary who discovered the Potomac 300 years ago called it "the greatest and sweetest river I have ever seen."

The subsequent growth of a large metropolitan area on the banks of Father Andrew White's stream has changed it, however, from a great and sweet river into a problem in pollution control.

The problem has defied solution through piecemeal methods for many years. But in a few days the House Rules Committee will hold hearings that could lead to a new approach—to a sweeping, areawide attack on Potomac pollution.

The measure due for consideration by the House rules group next week is the amended Federal Water Pollution Control Act, nationwide in scope. Sponsored by Representative BLATNIK, Democrat, of Minnesota, it provides for $25 million in Federal grants to State and interstate agencies toward covering the cost of water-pollution programs. Perhaps, more significantly, it would authorize up to $500 million in grants to both States and interjurisdictional agencies and municipalities toward actual construction of waste-treatment plants.

DISTRICT WOULD BE ELIGIBLE

The District as a State would be eligible, with Maryland and Virginia, of course. The bill is regarded as an excellent stimulus to river cleanups here as well as in pollution plagues throughout the country.

In short, the Blatnik bill seems to hold a promise that the people here may someday be able to rediscover a clean Potomac—a river that could be Washington's greatest recreational asset.

It could be an asset as valuable as Denver's mountains, Minneapolis' lakes, or Atlantic City's beach.

An enticing picture of what the Potomac could mean as a local and national playground was drawn by the Interstate Commission on the Potomac River Basin 2 years ago.

BOATING COULD DEVELOP

Boating, the equal in variety and beauty of any in the country, could be a charming recreation. The gorge above Chain Bridge is unusual in geology and lush in plant and bird life. Historic sites and loafing areas are handy to the shore. Couples in canoes and families in rowboats continue down the lazy river past old Georgetown, the fascinating industrial area near there, the botanic and wildlife retreat of Roosevelt Island, past the Lincoln Memorial and the parklands that line the river, past yachts, big and small, in the Hains Point area, and on past Alexandria, Fort Hunt, Mount Vernon, and all the woods and stately homes that overlook the stream.

Fishing could never equal that of the Columbia River because there aren't too many varieties of game fish that naturally haunt the Potomac. But shad, herring, and perch, and the rough carp and catfish could provide sport and relaxation for lazy athletes. The good fishing sites are numberless.

Picnicking, hiking, bird watching, nature study, horseback riding, camping, bicycling, and lolling on the grass could attract numbers that never would be able to crowd into Rock Creek Park.

COULD EQUAL A PARK

It all adds up to this: Persons who live in the Washington area and hundreds of thousands of persons who come here every year for visits could find in the Potomac the equivalent of a great national park.

The hard reality of today is a different story, however. The Potomac is dirty. Everyone knows it's dirty. Persons longing for a place to relax stay away.

How was Washington's great recreational asset lost?

It was lost through its use as a sewer. Pollution has ruined fishing, halted swimming, made boating dangerous and picnicking on its shores unpleasant.

One hundred billion gallons of raw and partially treated sewage flowed into the Potomac last year, according to best available estimates. To get an idea how much that is, use the Washington Monument for a measuring stick and lay out a giant cube, one Washington Monument length high, wide, and long.

The amount of sewage poured into the Potomac last year would fill that cube—77 times.

SILT VOLUME IS LARGE

To complicate the sewage problem, the river also receives an average of 2 million tons of silt every year. That's enough dirt, sand, and gravel to fill the Capitol Building to overflowing and almost bury the dome.

The effect of pollution is to kill the fish life, provide a breeding ground for harmful bacteria and drive away the public.

Communities in this area have always sent their sewage into the Potomac or its tributaries. The practice was hard to criticize when it started. A large river can purify itself if given a chance. Any other disposition of wastes would have been prohibitively expensive in those days.

Some 90 years ago, however, engineers began to give the river a little help by treating the sewage. Basically, the operation is simple. Solids are settled out of the water, chemicals are added to neutralize any impurities that are missed. The relatively clean water is sent into the river—which can handle the rest of the cleaning job itself.

GROWTH TOO FAST

That is the theory. In the Washington area however, as in many others, population has run away from sewage treatment capacity. An estimated 10 to 20 percent of the sewage is not treated at all. The rest gets only partial treatment. The river is too choked with wastes to do its own cleanup chore.

A score of treatment plants have been built in the area, and more are planned, but their capacity never catches up with the burgeoning population.

Here are a few examples of how existing facilities fall short:

The largest treatment plant in the area, Blue Plains, at the southern tip of the District of Columbia, provides at best only 30 to 35 percent treatment, but during heavy load periods, that effectiveness drops to around 15 percent.

Alexandria does not treat any of its sewage, nor do some other small communities in the area.

The Bladensburg plant, designed to settle out 30 to 35 percent of the solids, is operating about 5 million gallons daily above its capacity, while another 10 million gallons of raw sewage have to be diverted into the Anacostia River, from which it flows into the Potomac.

Only one major plant, at the Pentagon, gives consistently complete treatment. It settles out about 90 percent of the solids, about as good as engineers can manage.

WIND STOPS FLOW

The Potomac problem is further complicated by the peculiar nature of the river flow. Sometimes it doesn't flow at all. On a summer day when the river is low an upriver wind can stop the Potomac in its bed.

On a normal summer day the river carries the wastes a few feet downstream, and the tide carries them a few feet back. Sometimes it takes a drop of water 40 days to move from Three Sisters Island to Fort Washington.

Thus a once great and sweet river has been lost to the people of Washington.

And barring a new approach to the problem, the future is even bleaker. Although almost all jurisdictions are spending large amounts of money for additional sewage treatment, population is expected to outrun sewage-handling facilities even more in the future.

The Burroughs Corp.

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. GRIFFITHS. Mr. Speaker, in the interest of setting the record straight, I want to include in my remarks the text of a letter I have received from Edward Littlejohn, director of public relations for the Burroughs Corp.

On May 23 one of my colleagues, the Honorable JAMES UTT, caused to be printed in the Appendix of the RECORD his views in opposition to H. R. 5550, the pending bill to allow United States membership in the Organization for Trade Corp.

My esteemed colleague included in his summation some comments about the Burroughs Corp. and its president, Mr. John Coleman, who recently was named president of the United States Chamber of Commerce.

The point of the attack upon Burroughs and Mr. Coleman was the allegation that because the company had opened a plant in Scotland in 1949 for the manufacture of calculating machines, the American plant doing the same work was closed, thereby destroying jobs.

The American Burroughs plant which made calculators is located in Plymouth, Mich., which is within my congressional district. Instead of being closed, this plant has twice been expanded since 1949 and its work force has increased almost six times.

These facts can be checked by anyone. The residents of Plymouth, Mich., realize the importance of the Burroughs plant in their social and economic life. My entire congressional district enjoys these benefits in some measure.

Personally, I endorse the position of Mr. Coleman with respect to the need for more trade in the free world. I am happy that he has gratutiously used his time to promote that position, and in the interests of complete fairness to Mr. Coleman, our distinguished Detroit citizen, it is a pleasure to include Mr. Littlejohn's letter in the RECORD.

The letter follows:

BURROUGHS CORP.,
Detroit, Mich., June 1, 1956.

The Honorable MARTHA W. GRIFFITHS,
House of Representatives,
Washington, D. C.

MY DEAR MRS. GRIFFITHS: Our attention has been called to an attack on Burroughs Corp. and on its president, Mr. John S. Coleman, by Congressman JAMES B. UTT, of California, printed as an extension of his remarks in the CONGRESSIONAL RECORD, May 23.

The gist of Congressman UTT's attack is that Burroughs Corp. has transferred American jobs to foreign lands, and that the corporation has exported technical and managerial know-how, thus spawning foreign competition to our domestic products. In making this charge, Congressman UTT is presumably referring to the establishment of a Burroughs plant in Strathleven, Scotland, and the production there of a line of calculators. In this connection, he quotes the testimony of an unnamed person before the Senate Finance Committee hearings on H. R. 1: "The company appears to have closed down one plant in this country and moved the production jobs to Scotland."

It is true that Burroughs' line of calculators are manufactured in Scotland. It is not true, however, that the corporation has closed down a plant in this country. Indeed, exactly the opposite has happened. In 1949 when the move to Strathleven was made, the Plymouth plant where calculators were manufactured, occupied 498,379 square feet. That plant now occupies 654,877 square feet, and by early 1957 when another new building has been completed, will occupy 840,000 square feet. And far from destroying American jobs, Burroughs has at this same plant increased employment from 587 in 1946 to 3,207 in 1955.

Congressman UTT further accuses the president of Burroughs Corp. of endangering our native business machines industry. In the period from 1946 to 1955, Burroughs' sales have increased from $46.2 to $217.8 million. And let me emphasize that the number of Burroughs employees in the United States has in the same period increased from about 8,500 to 21,182.

Congressman UTT asks what do the moves made by Burroughs Corp. mean for the individual American. The answer to his question is simple. Contrary to the Congressman's implications, they have meant, as the record shows, more jobs for Americans, an increase in the equity of stockholders, and important contributions to the office-equipment industry in research and new products.

The President of the United States has said: "The United States continuously seeks to strengthen the spiritual, political, military, and economic bonds of the free nations. By cementing these ties, we help preserve our way of life, improve the living standards of free peoples, and make possible the higher levels of production required for the security of the free world."

By developing overseas manufacturing and marketing organizations parallel with its domestic expansion, Burroughs believes that in a modest way it is contributing to the implementation of the foreign policies enunciated by the President. And in continuing to do so, the corporation believes that it thus serves the mutual interests of the United States and the whole free world.

In view of the unwarranted attack on a distinguished American industrialist contained in Congressman UTT'S remarks, I respectfully ask that this letter in reply be made part of the CONGRESSIONAL RECORD.

Sincerely yours,

EDWARD LITTLEJOHN,
Director of Public Relations.

Fluoridation of the New York City Water Supply System

EXTENSION OF REMARKS
OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following excellent statement on fluoridation of water by Arthur C. Ford, commissioner of the department of water supply, gas, and electricity of the city of New York:

STATEMENT OF THE DEPARTMENT OF WATER SUPPLY, GAS, AND ELECTRICITY, CITY OF NEW YORK, APRIL 1956

DEPARTMENT'S POSITION WITH REGARD TO FLUORIDATION OF THE NEW YORK CITY WATER SUPPLY SYSTEM

Under the city charter, the commissioner of the department of water supply, gas, and electricity is charged with the responsibility of maintaining the purity and wholesomeness of the city water supply. The matter of purity has a direct bearing on the people, and involves the determination and evaluation of the tolerance of suspect, hazardous or toxic substances which may, in some manner, gain access to the water supply. Fluoride is a toxic substance.

The department has extensive laboratories staffed by reputable scientists and competent sanitary engineers, with a massive library in which is contained over 5,000 references on the subject of the fluorides alone. We have continued to study and evaluate the effect of toxic substances as related to water supply. The matter of fluorides has been under our scrutiny for over 20 years.

The addition of fluorides to the water supplies is not coupled with the concern of maintaining or improving the quality of the water or making it safe. No one has suggested that dental caries is a waterborne disease or that water is a cause of dental decay. No satisfactory reason has ever been advanced to show why everyone in a community must be compelled to risk lifelong extraordinary exposure to the toxic action of fluorides, particularly when safer, more effective, and more economical ways of administering fluorides for caries reduction in children's teeth have been pointed out and are available.

Whatever the merits of fluoridation, it would not concern us as a department if the question of water supply safety were not involved. But we are concerned and our concern is primarily with the safety of the water supply for each and every individual of our entire population of 8 million people throughout the city.

We are aware that the fluorides are extremely toxic substances, and evidence exists to show that even at the recommended level of one part per million of fluoride in drinking water, people in fluoridated communities have been harmed. A very small percentage among a population of 8 million, sensitive to the chemical and adversely affected, would constitute a seriously significant number of persons harmed.

We know of reputable, independent medical authorities throughout the United States and in the local area who have found evidence of fluoride damage to persons living in fluoridated communities. These medical authorities disagree with the fluoride hypothesis, and they have raised grave questions with respect to the safety of the procedure for an entire population which includes the young, the old, the susceptible and the infirm as well as the healthy.

No one has made a claim that the ingestion of fluoride can be of benefit to the teeth beyond the formative years of childhood. Because of this, and for reasons of safety and economy, this department has proposed that the city distribute fluoride tablets through health stations, free of charge, for parents to administer to children. The cost to the city, ascertained at less than 25 cents for a thousand days for each child, would be less than one-fifth of the cost of a fluoridated water program. Tablets (a pharmaceutical grade in contrast with the commercial by-product used in water fluoridation) would provide an exact procedure, under control, to be taken only by those during the formative period of their teeth.

Fluoride, besides being a toxic substance, is not all excreted when taken into the system, a significant percentage remaining cumulatively. Fluoridation of the drinking water at any level of concentration is a very indiscriminate procedure since children drink widely varying amounts of water, each according to taste, physical activity and seasonal variations of the year. The daily intake of one child often differs greatly from that of another who may drink milk, fruit juices and soft drinks in abundance.

How then, will each child receive his appropriate share of fluoride when each drinks widely different amounts from the same source of water having a given concentration in parts per million of fluoride?

The problem of managing the control of dosage of fluoride chemical to obtain uniformity throughout a grid-work of more than 5,000 miles of pipe and tunnels involving different sources and pressure gradients, as in the New York system, is formidable. None of those who have made statements to the contrary have ever had the experience nor do they possess knowledge of what the exact result would be. Our concern and responsibility in the department is to provide the people of our city with a dependable supply of the purest and safest water possible. No one can guarantee similar safety to all the people in the city of New York under a program using the water supply as a fluoride vehicle.

Unfortunately the forum on the subject of fluoridation is not as open as it should be, even among professions. There has been too much of emotion, blind following and lack of objective thinking by too many people on both sides of the question.

The people of the city of New York are entitled to know the risks they are being asked to assume before endorsing a program involving so many questions yet unanswered.

ARTHUR C. FORD,
Commissioner.

The Road to War

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. EVINS. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an article by the eminent columnist and news analyst, David Lawrence, which appears in the June 15 issue of U. S. News & World Report. The article entitled "The Road to War" succinctly reviews some of the failures of the League of Nations and some more recent failures of the U. N., pointing a parallel of mistakes leading to war. While I do not always agree with Mr. Lawrence, I feel that his comments are most thought provoking and should challenge the thinking of our officials of the State Department and those immediately concerned with matters of policy in foreign affairs. I believe this article is worthy of the earnest consideration of all of our leaders.

The article follows:

It's the 1930's all over again.

Then, the League of Nations faltered by failing to enforce an economic embargo on Mussolini in his war of aggression against Ethiopia.

Today, the United Nations has failed to enforce an embargo on shipments of war materials to Red China, though the government at Peking was formally declared by the U. N. in 1951 to be an aggressor in Korea.

When Mussolini saw the League of Nations unable to enforce its own embargo in 1935 and 1936, he was encouraged in his aggression—and so was Hitler. As a consequence, in 1939 the world was at war.

Today we are witnessing a strange parallel. Great Britain, a member of the U. N., has broken ranks by consenting to the shipment of rubber from Malaya to Red China. Promptly the Indonesian Government, also a member of the U. N., announced last week that what Britain had done meant that the U. N. embargo was no longer in effect and hence she, too, now will ship rubber to Red China. Indonesia is the largest producer of natural rubber in the world.

In the 1930's Italy could not have waged war without oil and war materials from the Middle East and this hemisphere. The ministries of Great Britain and France floundered. They passed the buck to the United States by trying to give the impression that, because this country was not a member of the League of Nations, no embargo could be effective. But the late President Roosevelt advised them that he was willing to act separately to enforce the embargo in accordance with a then-existing law passed by Congress.

The truth is that London and Paris weakened at the critical moment in the face of economic and political pressures from within. This enabled Mussolini to win his war in Ethiopia. Taking advantage of the breakdown of allied unity, Hitler began building up his war machine and his stockpile of strategic materials with shipments from the West that were permitted up to the very eve of the outbreak of World War II.

But rubber in unlimited quantities is now to be shipped to Red China and, if the embargo imposed by the U. N. is to be wilfully disregarded by its own members, all strategic materials soon will be exported to the enemy. For Red China is still an unrepentant enemy. No peace treaty has ever been signed in Korea, and the terms of the armistice agreement there are being violated every day.

History tells us that, as the moral force of the League of Nations went to pieces in the 1930's, the statesmen of the West resorted to the direct approach in diplomacy. They fraternized with the aggressors and exchanged many trade missions and visits of high officials. The cry in Britain and France was, "You can do business with Hitler." And in September 1938, at Munich, Chamberlain and Daladier proclaimed that peace in our times had come at last.

But the dictators also turned then to the direct approach and won Stalin's help, first with a neutrality pact and then later with an agreement giving the Nazi armies a free hand in Western Europe without immediate fear of a second front.

Today, Khrushchev has won Tito, of Yugoslavia, and Nasser, of Egypt, and Nehru, of India, to the cause of neutrality. This means a free hand for Soviet Russia in the Middle East and in southeast Asia. What a feat of military strategy.

We may ask ourselves whether the dictators in Moscow and Peking now may take the risk of encouraging some of those so-called smaller wars which can bring on a world war. Hitler, too, was confident that Britain and France would not fight to save Poland in a small war. Must we again expend human lives to disprove a fatal miscalculation by dictators?

This is a dangerous time in world affairs. The Communists see a divided alliance in the West, a collapsing U. N., a faltering NATO, and now a faltering SEATO as the faith of our allies in the western Pacific is shaken by the unfortunately phrased remarks of the White House press conference last week which had the disastrous effect of encouraging the neutralists in Europe as well as in Asia.

Will the dictators in Moscow see the coming months as a time to solidify their internal situation by seeking new conquests in the international field?

It is a dark prospect for the world. Overnight the chances of involvement in a world war have been increased. For as the disarmament intrigue progresses, it is possible that both sides will agree never to use nuclear weapons. Then conventional war could be thrust upon us as Soviet Russia's master stroke.

Whatever kind of war is threatened, the American people, through wise statesmanship, can and must be protected against its outbreak. Responsibility for carrying out that objective rests as much upon London and Paris as it does upon Washington.

War materials must not be shipped to the aggressors. We have kept the faith. But last week's news of the breakdown of the U. N. embargo was, indeed, ominous.

International Trade Union Activity: A Vehicle for Greater World Security

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following conclusion of an article entitled "International Trade Union Activity: A Vehicle for Greater World Security," by Solomon Barkin, director of research, Textile Workers Union of America, AFL–CIO, in the Labor Law Journal, December 1955:

To an even greater extent than before World War II, the ICFTU is free of sectarian political allegiances, including as it does trade unions allied with Socialist movements, others which are free of political entanglements, and still others which maintain strict neutrality. They are bound together by a dedication to trade unionism, determined to fight for the right of individuals to social justice, work, and choice of employment, security of that employment and their persons, and mutual protection of their interests through forming and joining trade unions which shall be free bargaining instruments and which derive their authority from their members and democratic means of changing their government.

The movement for greater world security has derived great strength from the individual national trade unions and, significantly, from the international movement. They have encouraged and supported national defense. But their primary contributions have been made in other areas. Within their individual countries, they have fought for better terms of employment, higher living standards, greater security, and full employment, as well as advancing free collective bargaining. These achievements have removed despair and have inculcated hope in the mass of workers. Immediate economic objectives rather than elusive political changes hold the attention of the trade unionist. These efforts have solidly arrayed the workers in most countries against the Communists. In nations like France and Italy, where benefits have been slow and meager and inequalities have not been substantially eradicated, the fight is still on. Progress is being made as unions exact real economic gains and governments correct the basic sources of inequality and discouragement.

Fighting communism in unions: The Communist movement in most sections of the world has been routed or is in retreat in its efforts to win over the workers and capture the trade union movement. As in this country, the task was not simple. Its agents had infiltrated many unions during the war. They had established incontestable records in the undergrounds of many free nations. They held on during the early years of the war. In 1948, they were expelled from the CIO. The British exorcised them with less formal means. The formation of the ICFTU in 1949 dates the emphatic severance of the Communist groups from the free trade union movement.

In the few areas where the Communists still dominate, they have been exploiting the issues of colonialism—as in Malaya—or poverty, unmitigated by determined efforts to relieve distress and plan for greater economic well-being—as in Italy, France, and South America. In Morocco and Singapore, they capitalize on nationalist sentiments. Successful free unionism, able to bring benefits either through direct negotiations or political reforms, has been a true bulwark against such infiltration.

The ICFTU has determined to assist workers in other lands to form and strengthen their unions. Encouragement and financial and technical assistance to weak unions have been a central responsibility. An interregional fund of $1 million has been planned for this venture.

These efforts have not been uncontested, since Communist organizers have been found everywhere, seeking to infiltrate into national unions and capture them. The preeminence assigned to this objective of building unions and ridding them of communistic influence is further illustrated by the action of the ICFTU executive board prior to the Vienna Congress, in appointing a director of organization with responsibilities

for "planning, encouraging, and assisting in the formation of unions in areas where they do not exist; strengthening affiliated organizations where they are weak; and planning for concerted, continuous activities to combat and eliminate the totalitarian menace and to promote the influence of free trade unionism as an organized movement." The American Federation of Labor has, for the first time, also agreed to merge its world efforts with those of the ICFTU, so that they will be fully coordinated and unified.

These programs will not merely build free trade unions but will also contain and eliminate Communists from trade unions and other worker activities. As they are destroyed in these sectors, their basic support is undermined, and they will have to rely on less certain elements, such as fanatics, nationalists, peasants, intellectuals, and the footloose.

Present channels of assistance: To operate effectively in this assistance program, the ICFTU maintains central activities in Brussels and also has regional organizations for Latin America, Asia, and Europe. In addition to the agencies in Calcutta and Mexico City, offices have been set up in Singapore, Chile, Brazil, Accra, Nairobi, Tokyo, and Barbados. Staffed by local men, they are aided in some cases of special difficulties or limited experience by trained trade unionists from outside the area. These help to establish educational centers for the training of new leaders recruited from the ranks of workers, provide specific assistance as needed and coordinate unions in the area. Individual, veteran trade unions have been sent on special assignments to Asian, African, and Latin American countries to assist workers to build stable unionism and effective collective bargaining.

Roving representatives cover vast areas of Asia and Africa, collecting information on industrial and economic conditions, and encouraging the struggling unions with helpful advice. Recently, special assignments have been made for Turkey, Kenya, and Indochina. In Europe, the ICFTU has assisted in unifying the trade unions in Greece and has helped to bring together the non-Communist unions in Italy. As a result of a survey of plantations in Asia and West Africa, a special committee has been appointed for organization, and a special representative operates for this group from Singapore.

Publications have appeared in the four official languages, English, French, German, and Spanish. Special weeklies or other printed literature have been developed in Japan, West Africa, South America, Arabia, and Asia in native languages. Strikers in these nations have been helped through relief and grants—for example, the contributions sent to the striking Japanese miners and silkworkers, the northern Rhodesian copper miners, and the East German rebels of 1953.

These efforts have been supplemented to date by the special activities of the AFL, CIO, and the British Trade Union Congress. The AFL has carried on worldwide activities with special representatives, particularly in Europe, Asia, and Latin America. The CIO has had people in Europe and Latin America. The BTUC has been most active in the British Commonwealth, particularly in colonial regions. While the American trade unionists have been useful to unionists employed by American subsidiaries abroad in facilitating understanding and better relations between emloyers and workers at the private level, the BTUC has been most helpful in getting better relations with the British Colonial Office. Union representatives from colonial territories have been encouraged at international conferences to voice their views and positions.

Defense and attack: The ICFTU has been the zealous defender of free labor and free unions and has pushed hard for international opinion to effect liberation of trade unionism in nations where it is repressed, suppressed, or under governmental domination. It has presented before the United Nations an exposé and careful documentation on the extent of slave labor in the Soviet Union, Communist China, and the Soviet satellites, with the result that slave labor has been condemned by UNESCO.

The International Labor Organization has appointed a special committee to conduct inquiries into the freedom of worker and employer organizations from government domination and control. The ICFTU led the opposition to Franco Spain's request for admission to the ILO. Its boycott of the Caracas conference of the ILO petroleum industry committee because of that country's persecution of labor leaders and unions, followed by the expulsion from the country of the worker-member of the ILO government group, led to the adjournment of this conference and the subsequent resignation of Venezuela from the ILO. This helped focus world attention on the suppression of workers' right to organize in that country. The admission of Yugoslavian unions by two trade secretaries has been widely protested as out of keeping with the concepts of free trade unionism. It protested the imprisonment of Moroccan unionists and the denial of trade union rights to African natives in the Union of South Africa.

Supplementing the efforts of the ICFTU are the activities of the individual trade secretariats, of which 19 are affiliated with the ICFTU through a liaison committee. These range in size from the International Metal Workers Federation, with 5 million members, to the International Federation of Free Teachers Unions, with about 100,000. These secretariats work closely with the ICFTU, but are concerned with the promotion of industrial interests and standards. They have been particularly useful to the individual national unions in helping organize, fight for standards, and solve difficult industrial issues. They have arranged for the free interchange of information and membership.

Presentation of labor views: If strong, free trade unions, working effectively in the workers' interests, are a primary tool for developing progressive nations and a bulwark against Communists, the ICFTU also serves to reinforce these moves by its representations to and activities with international bodies. The workers' point of view is presented vigorously in a well-documented manner and their representatives are coordinated in a united determination for improvement.

Since 1919, the international trade union movement has served to coordinate efforts and opinions of workers' delegates from all nations before the International Labor Organization. This activity has helped to assure continued worker support for the agency and pressure for more significant achievements, and to keep governments behind the agency.

The ICFTU has a consultative position before the Economic and Social Council of the United Nations and its specialized agencies. Its representatives have presented its views. It has applied pressure for the principle of full employment and specific measures to achieve it, such as higher wages, increased social security benefits, low-cost public housing and public works. It has supported programs for technical assistance and economic development. The movement for a Covenant on Human Rights secured its wholehearted endorsement, as did the United Nations Children's Emergency Fund. Its representation in UNESCO has provided active leadership in the field of workers' education.

The ICFTU has been most active in the continental agencies for Eurpoe, Asia and Latin America. Not only does it maintain contacts with them, but it is also a participant through representatives on a number of them. It has a majority of the members of the workers' consultative committees in the European coal and steel community. Its former president was a member of the high authority of the community.

Support of democracy and self-determination: The ICFTU has, of course, played an important role in promoting distinctly political causes. It has condemned the racial discrimination practiced in the Union of South Africa, supported various peoples in their efforts for national self-determination, and urged quicker liberation and self-government for other colonial peoples. No issue has commanded more interest than that of peace. The "joint harnessing of atomic energy for peaceful purposes" was foremost among its resolves in Vienna.

In its May Day manifesto the ICFTU declared: "We of the free labor movement stand for real international cooperation and the settlement of all outstanding problems by peaceful means. So long as the Communist governments refuse to release their political prisoners, grant the workers the right to strike, allow genuine trade unions to operate, restore the liberty of speech, press, and assembly, then Communist talk of 'peaceful coexistence' and 'unity of action' must be treated as show sham and hypocrisy. Let the democratic nations set their own house in order. Full employment must be secured. Wages and working conditions must be brought into line with the ever-increasing production possibilities of modern industry. Housing and social security must be improved to correspond to the real needs of the people. Nor must the special needs of the economically underdeveloped countries and the striving for self-determination of the non-self-governing territories be forgotten.

"Let the strong help the weak. The free trade unions have set a magnificent example to the nations of the world by their unstinting support of the ICFTU efforts to assist the trade-union movements of the world's economically underdeveloped areas.

"Workers in the dictatorship countries, your elementary labor and human rights have been ruthlessly trampled underfoot, but the ICFTU has not forgotten you. We are hoping and planning for the day when you will be able to rejoin the international family of free labor."

American foreign-relations policy: No discussion of international trade-union activity should omit a description of the part played by these organizations, its membership and leadership, in the promotion of a sound American international policy and practice. Both the AFL and CIO have actively fought for the major planks of recent American foreign policy, such as the U. N., the Marshall plan, the defense of Korea, NATO, economic and technical assistance, reciprocal trade, and other measures designed to advance world security and economic activity. If anything, the trade unions have tended to criticize the present administration for being too conservative in the amounts it has allotted to the economic-assistance programs and for stinting in its support of the Charter on Human Rights and the fund for the financing of the improvement of underdeveloped countries. Trade-union leaders have advocated the cause of constructive international programs before their members, Houses of Congress, and the public.

In the administration of a number of these programs individual unionists have been added to the Federal Foreign Service to perform essential duties which few other groups are as well equipped to discharge. Many are now labor attachés in our foreign embassies. Others are labor advisers in specific aid programs. Still others perform other assignments of a nonlabor character, for which their special background, experience, and

training have particularly qualified them. Many trade unionists have been sent abroad on special missions to establish contacts with peoples in other countries.

The trade unionist in our Foreign Service enjoys the advantage of having easy access to the trade union and labor movements of these countries. If his bona fide character is established, and his truthfulness and trustworthiness are confirmed through experience, he can help overcome the prejudices and suspicions among trade unionists and labor leaders in these countries. He can help open their eyes and minds so that they may objectively consider our American position. The existence of many labor or socialistic governments throughout the world makes this contact particularly important.

The benefits of our industrial system and the description of its operations are more easily understood and believed when described by these men than by political leaders. American capitalism and democracy are more frankly discussed by the foreign intelligentsia, nationalist political leaders and academic progressives with a trade unionist, because they recognize in him a spokesman of the underprivileged rather than the vested interests. Moreover, they are likely to approach one who has an innate understanding of, and is fundamentally responsive and sympathetic to, the longings and activities of the disfranchised, the dispossessed, the underpaid and the repressed. The trade unionist will not only know the facts and react to the conditions, he will also comprehend their special speech, no matter what their language may be.

Through their participation in the international trade union organizations such as the ICFTU, the Trade Secretariats and the ILO, American unionists are also performing yeoman services in presenting our American points of view and explaining them to these organizations. The result has been a gradual shift in emphasis to immediate economic improvements, greater democratic rights and individual human rights. The battle with communism is now conducted openly through an accent on deeds rather than the sophistry of political argument.

In the United States, the trade-union movement has a special responsibility for developing among its membership and the general public a better understanding of the foreign labor, democratic and nationalist progressive movements. Through intimate contacts wtih these foreign groups, trade unionists can help the American people identify the adventurous and reactionary groups who pose anti-Communists but whose real ambition it is to substitute new personal dictatorships for the current ones. American trade unionists are beginning to understand developments in the rest of the world, and they can share their findings wtih other Americans. As a nation we must all develop greater tolerance for the institutions and goals of other peoples. We desired it for ourselves in our days of growth.

The President and Mr. Dulles

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Walter Lippmann, from the Washington Post:

TODAY AND TOMORROW
(By Walter Lippmann)
THE PRESIDENT AND MR. DULLES

There is only one subject of public interest and that is the rate and the character of the President's recovery. On that his doctors alone are qualified to speak, and they have done so not only in reassuring but indeed in enthusiastic terms. Later on, however, after he is out of the hospital and has had time to try himself out, it will be the turn of the President himself to speak. Until then, the country must once again resign itself to a period of uncertainty.

Had the President not been stricken, there would be many subjects of great public interest. One of them is the sharp conflict on neutrality between what the President tried to say in his press conference on Wednesday and what Mr. Dulles said in his speech at Iowa State College on Saturday. This conflict is all the more surprising in view of the fact that at the press conference the President promised that Mr. Dulles would make it all very clear "so that we can all understand what it is we are trying to do in waging the peace." What Mr. Dulles made clear is that he and the President do not think alike, or perhaps we should say that they do not feel alike, on the subject of the nations which refuse to join our military alliances.

For the President, who remembers our own history as a neutral in respect to the alliances of Europe, it does not seem immoral, or necessarily unwise, if a nation prefers not to aline itself in a military pact. For him, such neutrality does not mean indifference "as between right and wrong, or decency and indecency."

But for Mr. Dulles, who is in one of his sternest and most righteous moods, neutrality among military alliances is "except under very exceptional circumstances * * * an immoral and shortsighted conception." This is a rather sweeping generalization in view of the fact that in Europe it covers Sweden, Switzerland, Ireland, not to speak of Austria and Finland; and in Asia it covers India, Burma, Ceylon, and Indonesia; that in the Middle East it covers all the Arab states except Iraq; and that if one looks into the fact it would cover a lot of Latin America.

What has brought about the Eisenhower-Dulles muddle is that apparently uncontrollable itch in high quarters to utter resounding generalizations. Why was it necessary for the President to discuss neutrality in general and abstract terms? Why was it necessary for the Secretary of State to speak on the subject as if from a mountain top? Do other heads of state and other foreign ministers anywhere feel that they must generalize and declare moral judgments about the policies of other governments? Why then must we suffer this recurrent affliction in Washington?

The essence of the problem of neutrality and alliances is that it is the problem of each sovereign state, and that there is no general rule. What is best for some states is not necessarily best for all states. The vice of the Dulles position is that it presumes to judge and condemn on general grounds the policy of many states with whom we have no quarrel, who have done us no injury, who have as much right as we have to join or to refuse to join particular alliances. Mr. Dulles should know that his sweeping moral judgments will win him no allies but can alienate many friends.

The occasion for these untimely and dangerous utterances is that certain of the new military alliance—particularly the Southeast Asia Treaty and the Baghdad Pact—are causing so much trouble that a reappraisal has become necessary. The President's friendly remarks on neutrality reflect one aspect of this reappraisal in which he has undoubtedly been participating. Mr. Dulles' harsh remarks reflect another side of the reappraisal. They reflect the fear that if any concessions, like the President's, are made to neutrality, the whole fragile structure of the alliance will crumble.

The crux of the problem is to find ways of reducing the military character of these alliances and of transforming them into agencies of economic cooperation. The administration has not yet, however, succeeded in formulating such a solution of the problem. Fearing that the existing system of alliances will dissolve before a new system of cooperation can be worked out, Mr. Dulles is for public purposes—let us hope for public purposes only—grimly standing pat on the pretense that the whole policy is firm and is in no need of serious revision.

Could Your GI Baby Born Abroad Be President?

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. RABAUT. Mr. Speaker, on June 10, the able Washington correspondent of the Detroit Times, Don O'Connor, acquainted the readers with a situation that I have sought to correct through a proposed amendment to the Constitution. Under leave to extend my remarks, I am inserting the following article: Was Your GI Baby Born Abroad?—He May Not Be Future President:

WASHINGTON, June 9.—It's no longer true that any American boy can climb to the Presidency of the United States if he obeys his parents, studies hard, and has luck in politics.

At least, there is grave doubt here about the status of the tens of thousands of young Americans who were born in the remote parts of the world after World War II—and are still being born in United States garrisons in Germany, Japan, and other nations.

It's a definite handicap to these GI mothers and fathers that they cannot definitely hold out the old White House lure to young Johnny for diligent homework, a clean face, and good table manners.

PROBLEM MUST BE RESOLVED

But the Constitution provides that only "natural born citizens" can be elected President, and no court has clarified the status of the young Americans born in foreign lands.

Because so many children have been born to United States citizens in other lands since World War II, the problem must be resolved some day soon.

It becomes increasingly likely that an American lad now playing on the streets of Tokyo, Naples, Berlin, or some other foreign city may one day be a nominee for President.

Article II, section 1 of the United States Constitution restricts the presidency to "natural born" citizens only. The same restriction applies to the vice presidency. This is the only place in the Constitution where the term is used, and nowhere did the Founding Fathers define what they meant.

The Library of Congress says that actually no case has arisen for application of the restriction, so that the courts have had no

occasion for a definitive ruling. However, the matter is not entirely academic.

In the past few years, several names have been mentioned in the public press as presidential possibilities where the fact of birth outside the country has posed the question of constitutional eligibility. The most prominent of these was Gov. Christian A. Herter, of Massachusetts, a Republican, who was born in Paris on March 28, 1895, of American parents.

HERTER SPONSORS MAPPED PLANS

When it appeared that President Eisenhower might not be a candidate in 1956 by reason of his health, Herter's sponsors mapped plans for securing a judicial decision on whether their potential candidate could be considered a natural-born citizen. Eisenhower's eventual decision to run again made the question moot, but the Library of Congress says:

"The fact that in that particular case the matter was not pursued does not mean that a judicial determination may not be possible, though there is some question about it, and reputable authority can be found on either side.

"Some authorities hold it unlikely that the courts would take jurisdiction, considering it a political rather than a judicial matter; while others maintain it is a legal question."

Some of the questions which constitutional lawyers believe are raised by the vague wording in our national charter are these:

Is there any difference between natural born and native?

Was natural born a familiar expression in 1787 when the document was written, or did it leave even the people of that day in doubt?

Did the writers of the Constitution recognize citizenship as determined by place of birth or by the fact of birth from citizens?

CONGRESS ACTED IN 1790

In 1790, Congress passed an act to establish "an uniform rule of naturalization." It included a statement that "the children of citizens of the United States, that may be born beyond sea, or out of the limits of the United States, shall be considered as natural born citizens; provided that the right of citizenship shall not descend to persons whose fathers have never been resident in the United States."

That act was repealed and replaced by subsequent naturalization laws, and to this day the expression "natural born citizen" has not been used again. Did this language of a Congress contemporaneous with the Constitution represent the general interpretation of "natural born," or did repeal of the law and the failure of Congress to reemploy the term indicate that the lawmakers felt they were stepping out of bounds in so interpreting the Constitution? The Justice Department answers simply:

"We don't know. The law is not clear and it has never been tested."

In 1898, the United States Supreme Court had before it the case of a person born in the United States of alien parents who had petitioned for reentry to this country. The Court held he was a citizen of the United States. But whether the proposition is equally true in reverse—that a person born abroad of American parents is not a citizen—remains a mystery.

CITIZENSHIP IS DEFINED

While the Constitution uses the term "natural born" only once, it does in the 14th amendment define citizenship in these words:

"All persons born or naturalized in the United States and subject to the jurisdiction thereof are citizens of the United States and of the State wherein they reside."

Obviously this definition does nothing to clarify the meaning of "natural born," and it may well be that unless Congress takes steps to correct the confusion over the point, the courts will be confronted with the problem of whether an elected President has the right to occupy the office.

Stop This Fluoridation Program

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Richmond News Leader, Monday, May 14, 1956, entitled "Stop This Fluoridation Program."

The editorial follows:

STOP THIS FLUORIDATION PROGRAM

Within the past several months, reputable evidence against the fluoridation of public water supplies has begun to mount with astonishing speed.

In the view of this newspaper, the evidence is of so serious a nature that city council should take affirmative steps now to suspend the city's program pending a complete reappraisal of fluoridation.

The evidence we have in mind is not directed toward what might be termed the philosophical aspects of mass medication. We are not here debating the unwisdom of socialized medicine.

What is becoming daily more clear is that millions of Americans have been subjected to a scheme of water fluoridation on the flimsiest pretenses of research and statistics. On close examination by qualified scientists and physicians, the evidence supporting the effectiveness and safety of fluoridation proves to be exceedingly shaky evidence indeed.

Typical of the accumulating testimony now mounting against fluoridation is the recent paper by Benjamin C. Nesin, published in the Journal of the Maine Water Utilities Association in March. Mr. Nesin speaks from a background and a position that command a respectful hearing: He is director of laboratories for the New York City water supply. Hear what he has to say:

"It must be emphasized that the fluoridation hypothesis in its entirety rests on a very narrow base of selected experimental information. It is this very base which is vulnerable to scientific criticism. And it is upon this very narrow base that the very impressive array of endorsement rests like an inverted pyramid.

"It can be shown that long before the special committee of the National Research Council gave its endorsement, serious evidence against fluoridation was already in existence. The validity of this information has been confirmed by subsequent investigations. Had the committee applied the simple concept of factor of safety to their hypothesis, it is clear their proposal could not pass the test as a safe procedure to be used in conjunction with the public water supply."

Mr. Nesin observes that rather extensive and devastating critical reviews of the fluoridation program recently have been published by outstanding scientists. In general, these reviews make four points:

(1) The data submitted by the proponents of fluoridation to prove the safety of the measure is unreliable and contraverted by scientific and medical information on record.

(2) The data submitted to prove the claims related to dental prophylaxis is questionable.

(3) The public water supply is neither a suitable nor efficient vehicle for administering fluoride. Fluoride cannot be distributed by this means without entertaining hazard. The variable consumption of children makes individual dosing unreliable.

(4) There are safer, more economical, and more positive alternate methods available.

Mr. Nesin has made independent studies of fluoride toxicity in his own laboratories. He has studied the mounting evidence of fluoride poisoning. "It is no longer a question of fluoride being toxic when ingested continuously in small quantity," he writes. "This is established. It is possible for an individual living in an area with the water supply fluoridated at the recommended level of one part per million to acquire a chronic fluorosis due to subacute poisoning."

We would urge every reader, and especially every candidate for city council and every member of the city council to read Mr. Nesin's next two paragraphs with care:

"Regardless of the merits claimed for fluoridation in dental prophylaxis, the use of the public water supply must carry a guaranty that its contamination with fluoride could not visit even a minimal harmful contamination upon the consuming population. This does not mean average individuals, but must also apply to the weak, the sick, and the underprivileged. Since water supply is an exceedingly important economic factor in industry and commercial activity we are also confronted with special considerations in these areas. However, the prime test at the moment must rest with the projected safety of the proposal for everyone in the community.

"The addition of fluoride to the public water supply is not concerned with its purification, improvement in quality, or providing an additional factor of safety. No one has suggested that water is a cause of dental caries in children. The essentiality of fluoride as an element in nutrition has not been established, and there is a considerable amount of information which reveals that very low caries rates may obtain in nonfluoride water supply areas. There is no question about the toxic character of fluoride even when ingested in small quantities. It is evident from the proponents's data that the margin between claimed benefit and hazard is extremely narrow, poorly understood, and not compatible with safe water supply practice. No satisfactory reason has ever been advanced why everyone in a community must be compelled to risk a lifelong extraordinary intake of toxic fluoride. Unsuspected and unbridled exposure to fluoride can lead to health hazards and in any event an extraordinary intake increases the risks involved. In the light of existing derogatory evidence, it is not possible to add fluoride to the public water supply at the recommended level and maintain even a nominal factor of safety."

Mr. Nesin's paper is a long paper, thoroughly documented. The evidence he cites of disfigured teeth and possible bone damage cannot be brushed aside as "crackpot stuff," though this has been the defense the fluoridators have relied upon.

This newspaper is a belated arrival on the battlefield of fluoridation. We were thoroughly bamboozled by the impressive array of endorsements offered when Richmond began fluoridation in 1953; to our regret, we endorsed the program at the time. Now the unsubstantial foundation of these endorsement is being exposed; the questionable nature of the evidence is becoming clear; an increasing number of reputable scientists are breaking through the barriers of censorship and are pointing to the grave

dangers involved in adding this poison to public water.

City council has an affirmative duty to obtain such evidence on the other side of fluoridation. Even a few hours of study will convince council members, we believe, that criticisms of fluoridation have mounted to a point where the public interest demands that the program be suspended forthwith.

Natural-Gas Pipeline Operators Still Doing Profitable Business at Same Old Stand, Despite Veto Pipeline Bill

EXTENSION OF REMARKS
OF
HON. H. R. GROSS
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. GROSS. Mr. Speaker, as one who voted against the so-called pipeline bill, and who also supported President Eisenhower's veto of this legislation, I find the following article in the June 1, 1956, issue of Forbes magazine very interesting and enlightening.

The article follows:

CHANGE OF TUNE

(EDITOR'S NOTE.—Out of the knockdown brawl to get the Harris-Fulbright bill enacted the pipelines emerged badly whipped. But where are their bruises?)

While the Harris-Fulbright natural-gas bill was fighting its way through a bitterly resistant United States Senate last year, interstate gas-transmission outfits were sounding strident battle cries in every precinct in the land. Unless the Senate decontrolled the price of gas at the wellhead, they warned, the United States would be in a fine fix for future supplies of the vital fuel.

Pay the piper: Independent drillers, the argument ran, just would not stand for anything that smacked so strongly of creeping socialism as controls did. Not only would they refuse to explore for more gas reserves, but they would either cap their wells and refuse to sell what they had, or sell it within the State where it was produced, thus avoiding price fixing. In any case, the interstate pipeliners would suffer. So would their customers. Instead of getting their gas cheaper, which was what opponents of the bill professed to be after, they would probably end up getting no gas at all.

The bill passed. The President vetoed it. The pipeliners furled their battle flags and retreated silently homeward, stoically resigned to their sad and dreary fate.

But, like Mark Twain's death, reports that gas transmission was a dying industry seem in retrospect to have been "greatly exaggerated." At any rate, there was certainly nothing sad or dreary about the first-quarter statements pipeliners were sending through the mail last month. The fact was, they had never had it so good. Eight of the United States biggest pipeline companies, for example, rang up almost $300 million in revenue, 23 percent more than their totals a year ago. Profits also soared, rising 33 percent to $41 million. Not one pipeliner failed to roll up rousing gains. If natural gas transmission is a dying industry, there are no figures to verify the fact.

Quite the contrary. The evidence last month, and it was impressively solid, seemed to show that the mournful tune the gasmen were piping just a year ago actually was little more than a tactical campaign song.

No sympathy: As things have turned out, almost every turn has set the stage for pipeline profits. Some systems, like Texas Eastern, can matter-of-factly attribute their first-quarter fortunes to heavier demands because of a severe winter. Others like Northern Natural, El Paso, and Panhandle Eastern are collecting higher gas rates under bond. Texas Eastern also upped its profits by merging a producing subsidiary, and is now busy with plans to convert its Little Big Inch to an oil products pipeline. El Paso banked extra cash from its ventures in uranium and mercury. It also rang up larger profits from oil refining and petrochemicals sidelines, as did Tennessee Gas and Panhandle. Across the board, the carriers were receiving benefits from increased capacities and higher load factors.

With 5 months of what almost certainly will be the best year in their history behind them, natural gas men sing a changed tune. No talk of an impending gas shortage. No word of a revolt in the gas fields. Just statistical reports that draw a profile of prosperity.

	Assets [1] (in millions)	Revenues (in millions)		Percent change	Net profits (in millions)		Percent change
		1956	1955		1956	1955	
Tennessee Gas Transmission	[1] $868.0	$65.5	$44.1	+49	$8.1	$6.8	+19
El Paso Natural Gas	757.6	55.6	42.0	+86	7.7	4.5	+71
Texas Eastern Transmission	579.6	44.6	41.1	+9	5.9	4.0	+49
Northern Natural Gas	427.7	34.4	33.0	+4	6.0	5.6	+8
Transcontinental Gas	381.5	24.2	19.1	+27	2.7	2.1	+28
Panhandle Eastern	333.6	30.0	26.2	+14	5.8	4.9	+18
Southern Natural Gas	233.4	21.2	16.5	+28	2.8	1.4	+96
Texas Gas Transmission	215.4	21.3	18.8	+13	2.0	1.5	+35

[1] As of latest report.

Mrs. Green Awarded Degree

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. BARTLETT. Mr. Speaker, Alaska was honored last month when our colleague, Representative EDITH GREEN, traveled to the Territory to receive an honorary degree from the University of Alaska. On may 14 President Elmer Rasmuson, of the board of regents of America's farthest north institution of higher learning, conferred on Mrs. GREEN the degree of honorary doctor of laws. Thus Mrs. GREEN became the first woman in the history of the university to be singled out for such an honor. Before President Rasmuson and President Ernest Patty, of the university, and all the others who had gathered at college for this memorable occasion, Representative GREEN delivered an address, Alaska and the Future: The Case for Liberalism, which makes a significant contribution to our present-day thinking. I deem it a privilege to be able to include Mrs. GREEN's speech with my remarks:

When President Patty honored me with the invitation to receive a degree with you today and to speak at your commencement, I was greatly pleased. But I was also a little hesitant. For I am not at all sure how much my generation is entitled to give advice to yours. I came today, therefore, hoping you might extend to me the charity Mark Twain once showed toward his father. "When I was a boy of 14," Mark Twain observed, "my father was so ignorant I could hardly stand to have the old man around. But when I got to be 21, I was astonished at how much the old man had learned in 7 years." So I am trusting, you see, in the tolerance of your maturity.

But I had other misgivings, too. From my own student days and from later experience as a teacher I have submitted to a number of commencement speeches in my time. So when I accepted your kind invitation, I did so with a determination to avoid, if at all possible, the pitfalls of the commencement speaker—the rolling rhetoric, the purple platitudes, the temptation to place on your shoulders, already weighed down with a black gown, the responsibility for all the future problems of the world.

Nevertheless, I accepted, because I genuinely looked forward with real pleasure to joining you on this occasion. And being here, in this role, I will inevitably talk about the future—because to young people like you, and particularly you in Alaska, the future is so appropriately the focus of importance.

Yet what led me to the decision that I must after all speak of the future was a journey into the past. Thinking back over past commencements I had taken part in, I could not help contrasting the mood of the thirties, the temper of the times young people were launched into then—and the mood of the fifties, the climate of opinion and action in which you are beginning your adult careers.

The climate of the thirties was a liberal climate—liberalism was the banner of the decade and most young people went out into the world of the thirties marching behind that banner. But the intellectual and practical temper of 1956 is dominated by what I would call the cult of middleism.

Now I want to make it clear that I am not here labeling political parties. Both of our major parties today, I think, are affected by the temper of the "middle of the road approach." But they are reflecting, not creating the larger mood of our society. The cult of middleism, I would say, reaches into every corner of our life—not only our politics but our literature, our social life and social values, our entertainment, our tastes and our fashions. My concern, therefore, is only in part political and, I believe, in no sense narrowly partisan. I am concerned rather with the mood of a nation, in all the manifestations of its life.

This contrast of the climate of the thirties and the climate of the fifties, leads me, to some convictions that have been crystalizing in my mind over several years—convictions that give me a great deal of concern. I should like to share them with you and submit them for your consideration this morning. They take the simple form of two general propositions and a third more specific one that bears on the fact that we are here today at an Alaskan university, honoring a graduating class of Alaska's young people. My first proposition is this: "Middleism" in its present cult is, I think, a snare and a de-

lusion, a social creed without a future, and if I am right, and the pursuit of the middle has brought us to an inert standstill, then we should explore alternatives. And so, as a second proposition, I want to make the case for liberalism—to argue that liberalism, presently in something of an eclipse, is not just the outdated mood of the thirties but the best guide to the sixties—to the years of your maturity—you who are graduating here today. And finally to you, as young people, I want to say that you in Alaska should weigh the case for liberalism with very special interest—for the problems and challenges of your future, it seems to me, call with particular urgency for the liberal approach.

Let me briefly examine these three propositions. I am not, let me emphasize, condemning moderation. We are all moderates; who, indeed, is willing to call himself an extremist? But just because moderation is such a beguiling word, it needs to be examined with some care. There is moderation and there is moderation that is middleism. Before we embrace a particular brand we ought to examine it with some care—approach it, shall I say, with moderation. To my mind there is a great difference between true moderation and the creeping complacency that, far too easily, characterizes the present vogue of middelism.

Middelism, as it spreads its smog over our present-day attitudes, stands immobilized at a mathematical point halfway between two gutters. Now, we would do well to remember, that most accidents happen in the middle of the road. But more important, this attitude is a debasing of the meaning of moderation. True moderation is, indeed, a mean between extremes. But it is not a mathematical middle. And before you can find the mean, you have to recognize what are the extremes.

Let me give an example: Many of you are undoubtedly aware that a hot debate is presently going on over the proposal to provide Alaska with mental facilities to care for its own mentally ill. In the last few months, an irrational, extremist opposition has grown up against this legislation. Now where should a sensible man stand on this issue? Where are the extremes? One is certainly the hate-obsessed groups that call this a plot to create a "Siberia, U. S. A."; who charge that this is a scheme to allow the Governors of Alaska and of the several States, conspiring together, to ship off their political opponents to a million-acre concentration camp in Alaska. Is the other extreme, then, the medical associations, the many Members of the Congress of the United States, the Health, Education, and Welfare Department, and the leading citizens, in Alaska and the States, who conceived this project, drew up the bill that embodies it, and support its passage? Are these the two extremes? The lunatic right on the one hand and the overwhelming mass of informed judgment on the other, and if so, does moderation require the citizen to stand halfway between the two to take the middle of the road? Is he to believe that the Government, the professional groups, and the citizens supporting this proposal are, say, half-treasonable? What is a compromise on a mental hospital for Alaska—a point halfway between decent medical care and inadequate care? And there are those in Washington, subjected to this barrage of propaganda, who say let's not go to extremes—let's take the middle of the road—let's study this a bit longer.

Perhaps I labor the point. But I must confess, this seems to me the dilemma we are left in by the cult of middleism. For it is a cult that wants to avoid clear-cut decision, that wants always to stand halfway between the points of controversy and try to please everyone. As often as not, this leaves us halfway between sense and nonsense.

This is, I profoundly believe, an insidious and dangerous philosophy and it is much too prevalent today. Its symptoms are everywhere. In their anxiety to avoid the charge of extremism, men rush together to huddle in an indistinguishable mediocrity. We reduce opinion and belief to the lowest common denominator. We banish uncomfortable questions from the realm of public discussion by labeling those who raise them as radicals or traitors. The deadly blight of overzealous Government security programs spreads down into the informal pressures of every community to threaten men whose greatest crime is that, in the distant past, they deviated from mass conformity in opinion or association or action.

Elizabeth Sprague Coolidge was a wealthy patron of the arts and a grand lady, who endowed a chamber music foundation at the Library of Congress. Her son is an eminent violinist and Harvard professor. Yet, after her death, when he had been invited to become a trustee of his mother's foundation, the Library of Congress hastily withdrew its invitation because some said he is a Socialist.

Last year, the Symphony of the Air, under the auspices of the State Department, made a tour abroad that was a great success in building good will for the United States. This year, its tour was suddenly canceled because an unnamed person charged that some of its members were pro-Communist. The procommunism of at least one of them consisted in having publicly criticized our atom-bomb testing program in the Pacific.

Now these are extreme examples. Yet in less dramatic forms, they are repeated daily in our society. Public libraries come under attack for having unpopular books on their shelves—books at least unpopular with certain vigilantes. In Indiana, a woman proposes to banish Robin Hood from children's literature as Communist in meaning. In Illinois, the American Legion finds subversion in a Girl Scout publication. One Southern State passed a law requiring that publishers of textbooks certify not only that the authors were not subversive—but also that the authorities cited in footnotes were non-Communist. This would presumably bar even a mention of Karl Marx from the textbooks of the State.

The Man in the Gray Flannel Suit becomes a best selling novel as the symbol of a mass-produced stereotype of the cult of middleism. The cautious man—the middle-of-the-road man—would do well to read only mass circulation magazines, watch his television set, confine controversy to the merits of big league baseball teams.

Such a trend, carried to its logical conclusion, can end only in a mass of mechanical men, repeating the safe and sterile platitudes of middleism, avoiding like a plague the outer regions where individuality, spontaneity, and originality live.

This pressure toward the mediocrity of the middle seems to me the great evil of our decade. It not only debases art and opinion, public discussion, and practical action, it does something more dangerous—it leads to a dangerous illusion of unreality. Some of its causes seem clear, and at the same time they point the danger. After a generation of struggle and hardship, of war and conflict, many men are tired of the strenuous life. They are tired of difficult decisions, of responsibility, and of sacrifice; they are tired of the unpleasant and often costly necessities the real world has forced upon us. They want, instead, a vacation from responsibility—a life without problems. They would rather take the middle of the road to avoid conflict with extremists at either end. Unfortunately the facts of life have not gone on vacation. The only way, in the middle fifties, that the comfortable illusion of a placid world can be achieved is through an exercise in unreality.

And that, I believe, is the meaning of the cult of middleism. For the cult of the middle is precisely a sedative guaranteed to banish the hard problems of reality and create instead the comfortable and drowsy illusion of unreality. But, unfortunately, the sedative is guaranteed to produce a hangover. If we succumb to the cult of middleism, we are headed for a hangover of cosmic proportions when the facts catch up with us.

Water Lippmann a few years ago wisely pointed out that this illusory moderation is, in fact, not a guide to wise and practical action, but instead only the wishful misconception of men who think "getting along" is the only important thing—more important than where we are "getting along to" or where it will bring us out. It is a product of the illusion that differences of belief and value are not important—that the real issues over which men disagree can be clouded over and dissolved into a kind of porridge of good feeling.

This is a fatal misconception. Differences do matter. What one side is maintaining may be a great deal better than its opponent's position. It does matter whether we build a mental hospital for Alaska or because of wild charges of treason by a small but very vocal minority, play it safe to avoid criticism, we refuse to build one. And building a hospital is more important than coming to some middle ground of compromise with hysteria-mongers who oppose it. It's understandable that, today, most of us are tired of conflict and danger and seek some middle ground of moderation and safety. But as a recent writer has pointed out, "when, as is now the case, the balance of power between the major conflicting groups at the extremes gain disproportionate power simply because they are in a position to upset the whole applecart."

One danger of middleism, then, is that in the "name of moderation," we compromise good sense with the absurdity of the extremes. In our anxiety to avoid discomfort and conflict and criticism we hop from midpoint to midpoint, as the issues confront us, in a path that is not consistent moderation but aimless muddling. The end of such a path is clear—a paralyzed inertia at the center of a swamp of conformity.

This, I submit, is not true moderation. Yet if I read the signs of the times rightly, it is a misconception of moderation that is only too rapidly gaining ground in our country. It leads us in our public life to substitute rhetoric for reality, to gloss over the great problems that confront us with catch slogans and to attempt, by a kind of self-salesmanship, to deal with our problems by illusion rather than solution.

For the fact is, reality does not surrender to rhetoric; problems are not solved by catch phrases. Facts remain facts, and conflict remains conflict. Differences of opinion do matter; and real moderation is not an attempt to disolve difference into indiscriminate compromise. As Charles Frankel says, "Every solution of a conflict between different groups in a society means some rearrangement of the existing balance of power. And in this rearrangement, it is inevitable that some people are going to lose more than others." And I submit—those who want to follow the middle of the road—have the most to lose. What we need today is a little more enthusiasm for differences—in opinion, in clothes, in television programs—a little more honest recognition that there are conflicts of interests and principle—and a little more willingness to face up to the necessity to make hard choices and to tackle tough problems. And that brings us back to the case for liberalism. For the true moderation, I believe is liberalism.

Now I know that liberalism has been replaced in the current vogue, by something that is called "moderation" and is offered as a contrast. I simply do not buy that piece of semantics, no matter how much of a hard sell it is given. I say that, in fact,

today's moderation is coasting on the momentum of the liberal past. And I say that, if we are not to end in a static bankruptcy, it is time we generated a new liberal program for the future.

What can liberalism offer? First, it can offer leadership. A mob is not a community; and a scramble to stay in the middle of the mob is not leadership. Leadership recognizes differences and conflict. What it provides is a direction to move, a solution to difference—and that doesn't mean simply leading us back to the mathematical middle. It means charting a course on the basis of realistic recognition of differences and choice as to the best practical direction in which to go.

Secondly, liberalism can offer leadership because it has some further guide to action than the haven of dead center. It is committed to principles and to goals that give it direction. At the same time, liberalism is truly moderate. For instance, we are dedicated to the liberal goal of giving to all Americans their equal rights and opportunities, regardless of creed or color. But as moderates, we recognize that time and patience and good will are necessary in practice to achieve that goal.

Liberalism, in fact, is a firm dedication to democratic and humane goals, tempered by a clear understanding of practical limitations. Now those who follow the cult of the middle will argue that their uncritical dependence on the patterns of the past is preferable to the bolder willingness of liberalism to open new frontiers. But I am reminded of another observation of Mark Twain's, a little sermon on the value of experience.

"We should be careful," said Mark, "to get out of an experience only the wisdom that is in it and stop there! Lest we be like the cat that sits down on the hot stove lid. She will never sit down on a hot stove lid again, and that is well, but also, she will never sit down a cold one any more either." Middleism assumes that each new stove lid is hot. The liberal approaches each stove lid with an open mind, only being a true moderate, he tests it out first.

Thirdly, liberalism offers a quality that cannot be found in the sterile wasteland of dead center, it offers imagination. The greatest weakness of middleism is that it has no purpose. It is going nowhere and it has no ideas to offer as to where to go. It is trapped in the sterility of its own formula, a prisoner of the midpoint, wherever that midpoint happens to fall. What liberalism can offer in contrast is a willingness to explore and meet the challenges of the future in their own terms. We are in a new time, with new problems, yet still coasting, I am afraid, on the ideas of the thirties. But the ideas of the thirties are not immortal. Having accepted the general principles of the liberal program of the thirties, we argue the details of social security, fair labor legislation, and so on. Yet our debate is only an echo of the thunder of the thirties.

Now these are important issues; I would not dismiss them. But the point is that they are only the residue of the great issues of our past. They are not the great issues of the future. Our future confronts us with new problems, new challenges. How are we to identify and understand the problems of our future—how to meet them? These are questions that are today too little asked, too little answered. They are questions that call, I say, for a renascence of the liberal imagination—the kind of bold imagination that met the challenge of the thirties, brought up to date to meet the challenge of the decades ahead. I think it is a unique strength of liberalism that it has in the past supplied the imagination to deal with new problems. In the tides of time we have used up the imagination of the past. We need today a new liberalism.

The shape of this new liberalism is, I think, emerging. Let me point to some evidence. In the thirties our great problems were elemental—the basic wants of housing, food and clothing, of a decent living and a reasonable security against personal catastrophe. Those problems have by no means completely disappeared for all our people. But the broad lines of solution have long since been laid down and we have made great progress along them. Today, for most of us, our future needs and wants go beyond basic and personal material necessities. As our wealth increases, we move toward new and previously undreamed of levels of income and standards of living. The pattern of our wants shifts. It is becoming plainer all the time that our great needs in the years ahead are likely to be community needs, calling for cooperative effort. While we have constantly added our new cars, television sets, household appliances, and other conveniences, some important things have been comparatively neglected. There is a growing concern today with the condition of our schools, our highways, our hospitals. With the growth of leisure and the resources for more recreation, we become more interested in the possibilities of our great national parks and forests, our community recreational facilities, our theaters, our museums.

Yet as we have grown wealthier, a smaller and smaller share of our income has gone for these things. The fact is, in the midst of plenty, we have neglected some of our most important needs. Our schools are a vivid example. We are confronted today with the consequences of years of neglect—a school system overcrowded and partly obsolete, teachers underpaid and in short supply.

Now these are only suggestive of the issues of our immediate future. But they indicate something of the nature of the problems we face. And they contain puzzling questions that we have not yet answered, for which our past experience provides only limited guidance. Many of these problems lie in what Arthur Schlesinger, Jr., has called "the public sector" of our life. And, they call, in his terms, for a "rehabilitation of a sense of the public interest" as contrasted to private interests. To a certain extent, it is clear, we need to shift some of our emphasis and some of our income from our purely private, purely personal wants to our more public, our community needs. Here are problems that are not answered simply by government, or by government spending. They reach down to every level of our society, and they call for a response by all of us—through government, through our personal activity, in our groups and associations. There, in brief, is the case for liberalism, as I see it: the challenge of new problems, the need for new vigor and new ideas to meet the future ahead of us. It calls for imagination, for a realism willing to face facts, pleasant or unpleasant, to choose and discriminate among differences of interests rather than glossing them over, and for a leadership informed by liberal goals and tempered by true moderation. These qualities, I believe, liberalism has.

I would expect this Alaskan audience to be more than ordinarily receptive to the case for liberalism—both because of your own tradition and because of the special circumstances of your own future. Alaska has a great liberal tradition. One of the first acts of its first legislature, back in 1913, was to establish woman suffrage. The same legislature initiated a pattern of labor legislation, carried on in later years, that put Alaska in the liberal vanguard in its social responsibility toward its working people. Alaska, in 1949, enacted a law requiring equal pay for women for equal work—a step forward that has not yet been accepted by the Federal Congress.

A special word is in order for Alaska's new constitution. It has been widely praised, and properly, I think, as a thoroughly enlightened achievement. The thinking that produced it is as good an example as I could ask of what I mean by the liberal imagination. And the constitution is a fitting climax to Alaska's liberal tradition. And may I say that I think Ernest Gruening's keynote speech at the constitutional convention is one of the finest speeches I have ever read.

Alaska, in very special degree, needs a liberal approach to its future. The generation that is present here today in the person of this graduating class will be the generation of Alaskan statehood. For statehood is coming—must come and I hope soon, and I for one will watch with interest and concern to see if the Tennessee plan hastens that day. In spite of the disappointments and the broken promises, the facts of Alaskan progress will be irresistible and must be recognized and accepted in statehood. But Alaska as a State has before it a future that is not only big with promise, its promise is encased in some very new and very special problems.

Alaska has been a sleeping giant, just now waking to its enormous potential. Its resources of coal and oil and other minerals are only beginning to be explored. Its resources of soil and subsoil have barely been tapped. Farming, livestock raising, mining have great promise for the future. The wealth of your forests is only now being unlocked, with the first pulp mill recently constructed near Ketchikan. Furthermore, thanks to a wise liberal policy of conservation and planned foresight, your resources will have an orderly development, instead of the wasteful exploitation that has blighted so much of resource management in earlier American experience.

These are only a few of the facts that suggest the enormous potential of Alaska's future. But I would be less than candid if I did not acknowledge the problems that complicate your future. Alaska is big—one-fifth the area of the 48 present States—and its climate and terrain complicate its problems of bigness. Alaska is not 1 region but 3, and its differences, the peculiar problems of its differences, present real difficulties. Thanks to climate and to the character of some of its industries, your economy is greatly affected by seasonal employment and seasonal fluctuation of activity. Your highway communication, however promising, cannot bear all the burden of your future. Modern communications have brought Fairbanks closer to New York, today, than was Chicago a generation ago. Yet the fact remains that Alaska is remote and, to a degree, isolated from the rest of the continental United States.

I do not cite these considerations in a spirit of pessimism. I acknowledge them only as challenges. Like all problems, they contain hidden opportunities. But they are problems and they must be faced if Alaska is to grow. They call for planning, for vision, and for cooperation. They call for a leadership and imagination that can go beyond past experience into new fields. You will not get that kind of leadership and imagination from the cult of static, unimaginative mediocrity. You will get it from a moderate but dynamic liberalism.

It seems to me, indeed, that to inventory Alaska's problems and its future, however sketchily, is to make the case for liberalism. For the kind of leadership Alaska needs is liberal leadership; the kind of imagination Alaska needs is liberal imagination. Your future needs a congenial climate for individualism and the kind of encouragement to diversity of ideas and efforts that individualism breeds. But it needs, too, a climate of cooperation. Much of the basic development of Alaska will call for community effort—to develop electric power, to build communications, to encourage and promote the large-scale investment that development needs. The record demonstrates, I think, that liberalism, not timid "middleism," is the basis for such bold efforts, both individual and cooperative. Your native people, many of

them making the drastic leap from the primitive to complex modern society in one generation, need sympathy and understanding and help in making that adjustment. They will get that help, the record shows, from liberalism.

If Alaska is to progress, it needs the kind of confidence and vision that is willing to invest now for the sake of the future, and that believes that when all of us as a nation invest in a region, like yours, that we all, in the long run, benefit. It needs a strong conservationist policy, dedicated to sustained-yield treatment of renewable resources. It needs government dedicated to wise and careful development of the vast treasures of your public domain, careful to guard against its capture by shortsighted exploiters. On the record, you will get these qualities from liberalism. You will not get them from the compromisers of "middleism."

A generation ago, Alaska was an outpost of civilization. Today, in the swift movement of global development, it lies at a crossroads of the world.

So I think it particularly appropriate, today, to put the case for liberalism to the bar of your judgment. For all of us, escape from the atrophy of the cult of "middleism" is of great importance. But Alaska has a special stake in the revival of a true liberalism. I hope and trust that in your generation the challenge will be accepted and that, through you, there will grow the new liberalism in which Alaska may flourish.

Commemorative Stamp for Amelia Earhart Putnam

EXTENSION OF REMARKS
OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. AVERY. Mr. Speaker, it has been called to my attention on a number of occasions that no official Government recognition has been bestowed upon the late Amelia Earhart Putnam for her many contributions to the development of aviation in this country.

Since Miss Earhart was a native of Atchison, in my home district of Kansas, I have urged that a commemorative stamp be issued by the Post Office Department to honor her for her pioneering role in aviation. This honor would renew in our national memory the courage and daring of Amelia Earhart and would express a nation's gratitude for her contributions to our welfare and advancement.

I believe sincerely that few women of this century deserve so completely the honor of a commemorative stamp as does Miss Earhart. Her achievements in aviation were phenomenal. She made history as the first woman to fly the Atlantic Ocean. This she accomplished in 1932 and in so doing established a new trans-Atlantic record time of 13 hours and 30 minutes.

At one time Miss Earhart held the altitude, speed, and distance records for women in aviation. She became the world's No. 1 woman flier, and has to her everlasting credit an impressive list of "firsts."

First woman to fly the Atlantic Ocean.

First woman to fly the Atlantic Ocean alone.

First person to fly the Atlantic Ocean alone twice.

First woman to pilot an autogiro.

First person to cross the United States in an autogiro.

First woman to receive the Distinguished Flying Cross.

First woman to fly nonstop across the United States.

First woman to fly from Hawaii to the United States.

In March 1937, accompanied by a navigator, Miss Earhart started on a flight around the world. She flew from California to Hawaii, where the flight was interrupted when her plane was damaged as she took off from Honolulu on the second leg of the journey. Undaunted, she returned to the United States and prepared for another attempt to fly around the world.

On June 1, 1937, again accompanied by a navigator, Miss Earhart took off from Miami, Fla. She flew south to San Juan, P. R.; to Surinam, Dutch Guiana; to Brazil; across the Atlantic Ocean to Africa; across Africa to the Red Sea; along the Arabian coast to India; across India to Calcutta; to Rangoon; to Singapore; to Java; to Port Darwin, Australia; to Lae, New Guinea. On July 2 she took off for Howland Island, a tiny speck in the vast Pacific Ocean. Between 2:45 a. m. and 8:44 a. m. the following day the Coast Guard cutter *Itasca*, on watch for the plane near Howland Island, picked up a number of garbled messages which indicated the flight was in trouble. The plane was never seen again.

Amelia Earhart had flown more than three-fourths of the distance around the world when she disappeared. She was not quite 39 years of age, having been born July 24, 1898, at Atchison, Kans. The whole world watched and listened while hope steadily diminished for the safe return of Amelia Earhart and her navigator. It was difficult for the American public to believe Amelia Earhart was forever gone.

Although her most ambitious venture ended tragically, Miss Earhart displayed, in addition to the necessary high technical aptitudes for flying, courage and resourcefulness of the first order.

Amelia Earhart's activities outside her career in aviation also was distinguished. Few are aware of her untiring devotion and hard work in a hospital during World War I. She spent a number of years working in Boston and New York settlement houses and conducted English extension courses for Boston University in industrial communities in Massachusetts. She abounded in enthusiasm for the progress of women toward economic and political independence and equality. She worked tirelessly for the abolishment of laws which discriminated against women and she was vitally interested in careers for girls.

Miss Earhart wrote of her experiences in settlement work in these words:

The biggest job of the social worker is to give boys and girls the experience that will keep them young and that will inspire a zest for life.

That phrase would seem to reflect a shining quality in Miss Earhart's own personality. Although she received the homage of the world, she remained a modest, dignified, and charming woman to the end.

In reviewing Miss Earhart's many contributions to aviation, we should not overlook her interest in the scientific aspect of flying. She became a consulting member of the faculty at Purdue University, specializing in aeronautics and careers for women. In 1931, she married publisher George Palmer Putnam, who never dissuaded her from her interests in aviation.

Amelia Earhart can be counted among America's pioneers in science, medicine, industry and exploration. It cannot be questioned that she brought merited glory to her country, not only as the world's chief woman flier but as one of the world's chief fliers. She was a stirring example of devotion to a cause larger than individual ambition or personal safety.

The spirit, the personality and the courage of Amelia Earhart should be singled out as a model by which future generations of Americans can pattern themselves. A commemorative stamp would be a highly appropriate memorial to Miss Earhart and to the traditional pioneering spirit which has been instrumental in making our Nation great.

Miss Earhart's achievements certainly merit her the honor of a special stamp. Furthermore, such a stamp would serve to further bring aviation to the public mind. I think one would not be amiss to say that such could be considered in the national interest. The interest in the stamp is not local.

The Ninety-Nines, Inc., the International Organization of Women Pilots, has adopted the Amelia Earhart commemorative stamp program as a project of the national organization.

The National Flying Farmers has expressed their keen interest in the stamp. This is of special meaning to me because I took part in the first organizational meeting of the Kansas Flying Farmers at Hutchinson.

The Honorable EDWARD H. REES, of Kansas, ranking minority member of the Post Office and Civil Service Committee of the House of Representatives, has stated that he favors the issuance of this stamp.

Mrs. E. E. Kaufman, president of the Women's National Aeronautical Association of the United States, Inc., Raton, N. Mex., has written me to the effect that her organization is supporting the project.

Mr. Al Bennett, editor of the Atchison (Kans.) Daily Globe, says:

It was her courage that broke the barrier for women pilots everywhere. It was her contagious smile that won friends for aviation, and for America, on the airstrips of Europe and Asia.

Amelia Earhart was the Nation's Lady Lindy. A commemorative stamp issued in her honor seems a fitting and proper way to indicate her country's appreciation and gratitude.

Last year Senator FRANK CARLSON, of Kansas, and Senator LEVERETT SALTONSTALL, of Massachusetts, introduced a joint resolution providing for the issuance of such a commemorative stamp. Both Senator CARLSON and Senator SALTONSTALL have urged the Post Office Department give early consideration to this matter.

Arthur Godfrey manifested his interest in this vital project by informing his many viewers and listeners on his daytime TV and radio show of the proposal for a special stamp on behalf of Miss Earhart.

Mr. Leo Pusch, president of the Kansas State Junior Chamber of Commerce, has indicated the interest of the Jaycees in this worthwhile project. He states that the "young men of action" feel such a stamp is important to remind our Nation of one who added much to our heritage.

Mr. J. E. Schaefer, vice president, general manager, Wichita division, Boeing Airplane Co., states:

Amelia Earhart's courage and her deeds in the dynamic field of aviation most certainly are deserving of this recognition.

We of Boeing are keenly interested in the individual roles and historic events which have contributed to the tremendous progress of aviation in the United States. Our country would indeed be remiss if the contributions of such a person were to be overlooked.

Mr. Brook L. Haines, president of the Topeka, Kans., Stamp Club:

Last year France put out a special stamp honoring their outstanding, early-day aviatrix. The United States of America has an even better reason for honoring Amelia Earhart.

Louis M. Dobbin, chairman, Kansas chapter, the Ninety-Nines, Inc., Wichita, Kans.:

Her many accomplishments very adequately establishes the need for such a commemorative stamp. We believe wholeheartedly that Miss Earhart deserves the honor for her untiring and unselfish efforts to further aviation.

The Kansas City Star in an editorial on April 7, 1956, entitled "Tomboy on a Stamp?" said in part:

In any list of attractive American heroines, Miss Earhart would surely have a place. So naturally her name comes up with a discussion of women on postage stamps.

The Topeka Daily Capital expressed its interest in this stamp by reprinting in its entirety the Kansas City Star editorial.

The Post Office and Civil Service Committee of the House of Representatives and Senate have jurisdiction on legislation introduced for commemorative stamps. The Postmaster General also is empowered to issue such stamps, exercising his authority through administrative order.

In the 81st Congress, however, Members of the House and Senate Post Office Committee by joint resolution agreed not to consider bills introduced for commemorative stamps. They felt too much time was being devoted to discussion of such bills, most of which were not deserving of legislation. They justified their position by pointing out that the Postmaster General already had the authority under law to issue commemorative stamps; that only approximately a dozen such stamps can be authorized in any given year; and that since this function was already being fulfilled by the Postmaster General there was no need to take up valuable time of the committees with it. I think the committee's position is sound and constructive.

Although no such concurrent resolution is valid at this time, the position of the respective committees is the same; that is, they will not consider legislation for the issuance of commemorative stamps. The only course of action remaining, then, is to request a commemorative stamp issue of the Postmaster General.

The Post Office Department has indicated that their 1956 program for issuance of special stamps is unusually full. Nevertheless, I believe the significance of this commemorative stamp merits the special consideration of the Postmaster General, not only for 1956 but also for 1957 issuance. I am certain that all Members of Congress recognize the good which can be gained from such a stamp. This has international meaning. I urge all Members to express their interest in a special stamp to honor Amelia Earhart Putnam to the Postmaster General.

Likewise all interested citizens should write to the Postmaster General and inform him of their desire to have such a stamp issued. As Senator FRANK CARLSON has stated:

It is a stamp that should be issued.

Address of the Honorable George A. Dondero, Member of Congress, 18th Michigan District—Dedication of the Eisenhower Lock, St. Lawrence Seaway, Massena, N. Y. June 3, 1956

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. KILBURN. Mr. Speaker, I include herewith a speech given by our highly respected colleague, the gentleman from Michigan, Mr. DONDERO, at the dedication of the Eisenhower lock at Massena, N. Y., on June 3, 1956.

Mr. DONDERO worked for many years to get the St. Lawrence seaway through and he was one of the authors of the bill that passed. People of northern New York will ever remember him with respect and gratitude:

A little more than 2 years ago, May 6, 1954, one of the great legislative battles to take place in the Congress of the United States came to an end. On that date the St. Lawrence seaway and power project was adopted by Congress, and the United States had determined it would join Canada, our friendly neighbor government to the north, in constructing and developing this master project of North America.

Today it is under construction, and the dream of two friendly nations who speak the same language and read the same Bible is about to become a reality.

After a number of visits to the St. Lawrence River with committees from Congress, this visit today on this occasion is of the greatest personal pleasure and satisfaction to me. To say that I am extremely happy is an understatement, for today it is my rare privilege to view the actual construction of the seaway. This comes after a struggle of nearly 20 years, after many discouragements, and after overcoming formidable opposition. I say it is a fitting climax to nearly a score of years of unrequiting effort to advance the cause of the seaway. To have made at least some contribution toward the adoption of the seaway by the United States will permit me, upon my retirement from Congress next January 1957, to take with me a feeling of accomplishment of a project that will be of great benefit to the people of our time and generations yet unborn.

In my final appeal to the House of Representatives 2 years ago urging passage of the Wiley-Dondero bill, authorizing participation by the United States with Canada in building the seaway and power project, I called attention to the only quotation on the walls of the House Chamber in Washington immediately above the Speaker's chair. Webster nearly a century before proclaimed it, and I give that quotation:

"Let us develop the resources of our land. Call forth its power, build its institutions, promote all its great interests, and see whether we also in our day and generation may not perform something worthy to be remembered."

The spirit of Webster prevailed that day, and all who played a part in advocating and promulgating this gigantic undertaking enjoy a consciousness of performing "something worthy to be remembered."

The subject of the seaway is not a new one. It has been the dream of man for more than 200 years. The French explorer, Champlain, first visualized the possibility of a canal linking the Great Lakes and the Atlantic Ocean in the 17th century. In the crude diary which he left we may read of his plan for a St. Lawrence seaway. His idea remained a dream for nearly 150 years. Now man's dream is coming true.

My pleasure in being present today is almost unrestrained. We are designating a lock on this occasion as a part of the St. Lawrence seaway and power project and naming it for our great President, President Eisenhower, who did so much to make this day possible. We also recall today his vigorous advocacy of uniting with Canada in the construction of this project, and we will remember that on the 7th of January 1954, in his state of the Union message to the Congress he said:

"Some of our vital heavy materials come increasingly from Canada. Indeed our relations with Canada, happily always close, involve more and more the unbreakable ties of strategic interdependence. Both nations now need the St. Lawrence seaway for security as well as for economic reasons. I urge the Congress promptly to approve our participation in its construction."

There is no comparable area on this earth that includes so many of the requisite qualifications for a master project as the Great Lakes region of the United States and Canada. In it is found a temperate but invigorating climate; unlimited quantities of iron ore; coal in abundance or near at hand; oil and mineral salts; varied but fertile soil conditions; adequate rainfall; immense agricultural areas; numerous industrial and commercial cities; ample labor, skilled and unskilled; boundless tracts of virgin timber; unnumbered square miles of recreational expanse; and in the center of it all, an allwise and generous providence planted five deep blue, fresh-water seas—the Great

Lakes—to provide low-cost transportation for raw materials and fabricated products.

The seaway when completed will be the greatest inland waterway in the world. The same water which flows through the locks at the Soo, in Michigan, will flow unvexed to the sea through the St. Lawrence Waterway. It will be under the joint management and control of the Governments of the United States and Canada. We are nearing our goal, and I am very sure that all of us are happy to observe today the actual construction progressing at a satisfactory pace.

Through the many years that I have served in Congress while working for the development of the navigation and power project of the St. Lawrence, it has been a pleasure to work with so many distinguished citizens of the United States and Canada who contributed so much to a common end, namely, the building of the seaway. Some of them are here today: Senator Alexander Wiley, of Wisconsin; Mr. Lewis G. Castle, of Duluth, Minn., Administrator of the St. Lawrence Seaway Development Corporation, the agency constructing the United States part of the project; the Honorable Lionel Chevrier, President of the St. Lawrence Seaway Authority of Canada; and Dr. N. R. Danielian, who heads up the Great Lakes-St. Lawrence Association. I could name many others if time permitted.

It is no exaggeration to say that the great midcontinent area of Canada and the United States may justly and properly be called the granary, the pantry, and the breadbasket of the world. Nearly half of the food products of the continent are produced in the heartland of the continent.

It is well known that on the breast of the fresh-water seas which contain one-half of the sweet water of the earth moves an enormous tonnage of commerce belonging to the United States and Canada. We all know that through the locks at the Soo even now and before the completion of the St. Lawrence seaway passes every year more tonnage than through nearly all the other great canals of the world combined.

Again I wish to voice my pleasure and happiness on this occasion and for the privilege of being present. We may all look with encouragement to the near future when the seaway and power project will be completed. It will be a day of great achievement for both nations, and it will present to the future the vision of two nations and their faith and confidence in this common undertaking.

I wish to close these brief remarks with a quotation from an address delivered by the Honorable Lionel Chevrier, president of the St. Lawrence Seaway Authority of Canada, in Copenhagen, Denmark, last year. Said he:

"Finally, after many years of hesitation we have decided to act together on the Great Lakes-St. Lawrence seaway. Here is a magnificent example to the world of international understanding and goodwill. Because of this, I believe that in the days to come the Canadian and American peoples will, for their own safety and the good of all, walk together in majesty, in justice, and in peace."

As We See It: To Aid Self-Employed

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Chicago Daily News of May 31, 1956, in support of the Jenkins-Keogh bill (H. R. 9 and 10):

TO AID SELF-EMPLOYED

The prospect of a small surplus in the Federal budget has encouraged one group that is able to make a strong case for a particular tax reduction. Their proposal is to allow some tax exemption on money which self-employed persons invest in a pension fund to provide for their own future.

The equity of this idea, as embodied in the Jenkins-Keogh bills now before Congress, is that salaried persons do, in effect, already have such a tax exemption. Money paid by an employer into workers' pension funds is a cost of doing business, and is nontaxable either to employer or employee. It becomes taxable only when received as a pension.

Lawyers, physicians, and many other professional and self-employed persons pay the entire premium for their annuities, and contend with justice that they should have some of the tax consideration that an employed person receives.

Great Britain's new budget makes such a provision. President Eisenhower, in his 1952 campaign, endorsed the idea. The time would seem to be ripe.

Cedar Shaft Supply Critical

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, recently I received a letter from Mr. Carl Peterson, of Menomonie, Wis., on the critical situation of cedar shafts for archers. The critical situation with respect to cedar shaft results from the sales policy of the Forest Service and Bureau of Land Management.

Mr. Peterson's letter reads as follows:

I am enclosing a copy of an article which was in the last issue of the National Bowhunter in regard to the purchase of cedar from the Federal Government. It would be greatly appreciated if you would take the time to read this article and do what you can for us.

We have an active organization of archers here in Menomonie, with approximately 130 members, and I know that all sympathize with the views of the author of the enclosed article.

The article from the National Bowhunter, titled "Cedar Shaft Supply Critical," follows:

CEDAR SHAFT SUPPLY CRITICAL

(By M. L. McKinney, Oakland, Oreg.)

(EDITOR'S NOTE.—At our request M. L. McKinney, the country's foremost supplier of cedar arrow shafts, has written the following article regarding the critical shortage which has developed in the industry. The problem is urgent for bowhunters who are agreed that the cedar shaft is the proper one for hunting big game. Mr. McKinney has had long experience in working with Government agencies of the Forest Department and knows whereof he speaks. Bowhunters will not want to use substitutes for arrow shafts. Read this article carefully, then help yourself and the rest of the bowhunters to guarantee a sufficient supply of arrow wood by following this advice. Do it now.)

The situation that has developed in the sales policy of the Forest Service and Bureau of Land Management is threatening the very existence of the cedar arrow shaft business, and has very definitely contributed to the critical shortage of arrow shafts now developing.

As explained in my article in Archery, which I presume a great many of you have read, there was no difficulty in getting sales of Government-owned timber until about 3 years ago. Up until that time all an operator had to do was to locate the dead cedar, find the section and quarter sections it was on, go to the appropriate office and get a negotiated sale. This worked very satisfactorily as the shaft manufacturer was assured a supply of cedar as long as he was willing to look for it. The Government was being paid for an otherwise waste material; the fire hazard was being reduced, and the field offices were put to very little time and expense.

About 3 years ago this was abruptly changed by a policy of putting all sales up for public bidding. Now this would not work any hardship in itself, except that it was no longer practical for the operators to go to the expense of hunting up the timber when he had no assurance of getting it.

The sales agencies said they realized this and would themselves work up the sales. Their efforts along that line have been spectacular for their failure.

The first year this was in effect, a considerable quantity of cedar was sold, as operators had located it and given the exact locations to the field offices, expecting to get the sales as previously. Since that time there has been one sale of cedar offered. This was by the Forest Service and the sale was for 30 cords of cedar. This amount would run our plant less than 30 days. Even this small sale was put up only after being specifically requested by a small operator. If any proof of the utter failure of the present policy is needed, all one has to do is to look at the record of sales put up.

After being advised of the conditions by my previous article, a considerable number of archers have been writing to their Senators and Representatives asking them to do something to relieve the situation. I have been privileged to see some of the answers these people have received. Some sound encouraging in that the Senators and Representatives seem to be interested. However, they check back with the Forest Service and Bureau of Land Management and are advised that the respective agency will endeavor to put up more cedar. The hard fact remains that exactly nothing has been done to date; and the time that cutting operations should begin is fast approaching.

From my talks with forestry officials both high and low, I am firmly convinced that the present sales policy will never work. In the first place, the agencies do not have the manpower nor the money to locate sufficient amounts of cedar, even if they had the inclination to do so. If the manpower and money were available, no competent field officer would use it for this type of work when they have so many other places they could use it to far greater advantage. The cost of locating the cedar is often as great as the purchase price, so it is obviously impractical for the field officers to work up enough sales.

I can conceive of no reason for the firm insistence of the present sales policy; and the only explanation so far offered is, "'The rule says, 'If more than one person is interested it must be put up for bids.'" It would appear that any rule that threatened the very existence of an industry as large as archery, should be changed, and quickly.

There has been, and is being, considerable pressure applied to us shaft manufacturers in an effort to get us to use green cedar. We all know that green cedar is not as good as the long-seasoned, fire-killed, cedar we have been using. I feel that we should be encouraged to use the dead cedar rather than

let it go to waste and cut the very limited amount of green cedar now left. It just doesn't make sense that the Government would obstruct our efforts to purchase salvage cedar and try to encourage cutting of green cedar.

No doubt we will some day have to use green cedar for arrows; and every archer should insist that the export of Government cedar be stopped. (It seems rather odd that we should pay taxes for years to maintain a Forest Service to save our timber, only to have it sold for export when it is nearly exhausted, and so badly needed here.)

As I see it, and I have studied it from all angles, the only possible hope of the archery industry's having sufficient quantities of cedar to meet our immediate needs, is for the quick return of the Forest Service and Bureau of Land Management to the old, and satisfactory negotiated sales policy of arrow stock material. The only hopes for sufficient future needs is the stopping of the export of Government-owned cedar. (The export of Bureau of Land Management timber is now forbidden; but Forest Service cedar is being exported in large amounts to Japan.) This can be accomplished only by concerted, and sustained, action of all archers and archery concerns. Archers should write to their Senators and Representatives, the Department of Agriculture (Secretary Benson) and the Department of the Interior (Secretary McKay), asking that these objectives be accomplished.

You who read this can help, not only by writing letters as above; but by bringing it to the attention of your friends and club members. (Clubs should send in petitions signed by their members.) Remember this is your fight as well as the shaft manufacturers fight. We cannot make the shafts you need for your arrows if we cannot get the material to make them from.

When you write to your Senators, etc., you might mention the fact that each cord of cedar used for arrow manufacturing creates from 160 to 200 man days of employment. No other use can even remotely approach this employment rate. (Export logs produce only a day or so of employment per thousand board feet.)

If you shoot wood arrows, this vitally concerns you. Don't sit back and let our source of cedar disappear.

The Communist Inquiry

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the St. Louis Post-Dispatch on Wednesday, June 6, 1956:

THE COMMUNIST INQUIRY

A subcommittee of the House Un-American Activities Committee has been conducting hearings in St. Louis since the first of the week. It is now possible to summarize and appraise its work thus far.

The first thing to recognize is that the investigative powers of Congress are very broad and justifiedly so. Time and again Congress has used its authority to inquire into situations and conditions which urgently needed ventilation in the public interest. There can be no question about the power of a congressional committee to dig into areas of subversive activity. Communist infiltration into defense industry in St. Louis is a proper subject of governmental investigation. Indeed the Government would be grossly derelict if it did not ferret out efforts to undermine the national security.

A second fact to note is that this subcommittee has conducted itself for the most part in a generally quiet and dignified manner. The Tuesday afternoon session did produce a sharp rebuke from the chairman, Representative MOULDER, of Missouri, when Douglas MacLeod, lawyer for one of the summoned witnesses, called for an apology from the subcommittee.

But there has been little to suggest the shouting and recrimination that characterized the McCarthy subcommittee of the Senate. Most of the sessions, held in the courtroom of United States Judge Harper, have been as orderly as a Federal trial. Credit for this goes not only to the chairman, but also to his colleagues, Representatives SCHERER, of Ohio, and FRAZIER, of Tennesee, and the subcommittee counsel, Frank S. Tavenner, Jr.

It might have been expected that a subcommittee so exemplary in its own conduct would enjoy the cooperation of the witnesses subpenaed and questioned. This has not been so. Very few questions have been answered. Witness after witness has refused to reply on the grounds that his answer might incriminate him. Up to now this has handicapped the subcommittee in its efforts to elicit information from those summoned to testify.

A witness is within his rights in refusing to answer if he thinks that what he would say would incriminate him. The Bill of Rights protects a person from being forced to present testimony against himself. The reason is the sound one that in trials it is up to the prosecuting officials to gather evidence on which to base their case. Were it otherwise the State would have an enormous power of coercion over the individual; and law in a free society should protect the individual from such excessive power.

Why so many St. Louisans invoked the fifth amendment has not been explained. Pamphlets distributed in advance of the hearings by a group of those subpenaed appealed to all witnesses to defy the subcommittee. This suggests a pattern of organized noncooperation. Yet even if this is the fact, there may be some instances in which the fifth amendment's protection was invoked fairly and not with intent to abuse a historic right of citizens.

It is for this reason that the Bar Association of St. Louis, greatly to its credit, took steps in advance to help any summoned person obtain legal assistance. Chairman MOULDER showed his appreciation of the need for professional legal advice for each witness when he complimented the St. Louis bar for acting voluntarily to arrange for counsel for those summoned but unable to hire counsel. As Mr. MOULDER said, the appearance of any lawyer with a witness who himself could not obtain counsel "should not in itself be taken as any disparagement against the lawyer for doing so."

But even if a pattern of refusing to answer questions impedes the work of the subcommittee, the sessions ought not to be without their gains. From the questioning it is clear that some with Communist sympathies worked their way into labor unions and that others got into defense industries while some obtained employment as teachers.

As so often stated in these columns, the Post-Dispatch sees in communism a worldwide conspiracy in which no loyal American would now have a part, and in which none should have had a part in the postwar era—certainly not since the outbreak of the Korean war. Many persons who entered the Communist Party by honest mistake withdrew long before communism's armed aggression across the 38th parallel.

Among the men who erred in judgment, particular credit goes to those who have openly confessed their mistake and have since led exemplary and patriotic lives. Society has an obligation to be fair with them and not to punish them for their honesty. Mr. MOULDER stated a fact when he said that in the depression years there were "innocent and loyal" Americans who became "frustrated with economic conditions" and "in seeking a solution to national unemployment and economic problems, were misguided into the Communist Party."

The problem of tracking down subversive activities would be greatly simplified if all those who made honest mistakes were to remove the cloud of suspicion and doubt by full and free testimony. It is to be hoped the Moulder subcommittee can still contribute to that desirable end.

Expeditious Handling of Certain FTC Cases Important To Survival of Small and Independent Businesses

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. ROOSEVELT. Mr. Speaker, our colleague, the Honorable WRIGHT PATMAN, recently wrote a letter of utmost importance. He directly raised the issue of whether the protection of the law will be available to small business by sufficiently swift enforcement on the part of executive agencies. I hope the reply of the Federal Trade Commission will be made available to the Members.

The letter follows:

SELECT COMMITTEE ON SMALL BUSINESS OF THE HOUSE OF REPRESENTATIVES OF THE UNITED STATES,
Washington, D. C., June 4, 1956.

Re Firestone-Shell, Docket No. 6487; Goodyear-Atlantic Refining, Docket No. 6486; Goodrich-Texas Co., Docket No. 6485

Hon. JOHN W. GWYNNE,
Chairman, Federal Trade Commission,
Washington, D. C.

DEAR MR. CHAIRMAN: There has come to the attention of the Select Committee on Small Business, House of Representatives, information to the effect that the Federal Trade Commission has been requested by George J. Burger, vice president, National Federation of Independent Business, that the above-entitled cases be heard by the Commission in the first instance instead of by a hearing examiner. The Select Committee on Small Business, House of Representatives, has been requested to lend its support to that request.

An examination of the provisions of the Federal Trade Commission Act leads me to the conclusion that the Commission may hear these cases in the first instance instead of having a hearing examiner to hear them. Therefore, it being within the power of the Commission to do so, the matter appears to resolve itself into a question of what it should do.

If the Commission should decide to grant the request which has been made of it in this respect, it appears that a change in its Rules of Practice would have to be made. Therefore it appears that two questions are presented. One relates to the feasibility of the Commission presiding over hearings in the above entitled cases. The

other relates to the need for a change in the Commission's Rules of Practice to permit it to act in the public interest by hearing a case in the first instance where the public interest would so require. I cannot believe that the Commission would desire to contend to the Congress that no instance has arisen and no instance will arise in the future where the public interest would be served by the Commisison undertaking to hear a case at the beginning on the matters with respect to which it must ultimately make a decision. If I am correct in that assumption, it would seem to be a matter of prime public importance for the Commission to consider making the changes in its Rules of Practice that would permit it to serve the public interest fully in any instance.

Referring again to the above-entitled cases, I want the record to show and the Commission to know that I concur wholeheartedly in the view expressed by George J. Burger, vice president of the National Federation of Independent Business, when he states that the above-entitled cases are important to the survival of small and independent business enterprises. Therefore, I concur in his view that those cases are of prime importance to the public interest. Hence, in my opinion, any procedure available to the Commission and under which it can feasibly expedite the handling of those cases to an early conclusion will serve the public interest.

Sincerely yours,

WRIGHT PATMAN.

The Silent Watch: It Protects Our Most Precious Commmodity, the American Soldier

EXTENSION OF REMARKS

OF

HON. ALFRED D. SIEMINSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. SIEMINSKI. Mr. Speaker, this is a tribute to the silent watch, the Army's Corps of Military Police. It protects our most precious commodity, the American soldier.

The silent watch. I suppose that is a name one might well apply to one of the least talked of, one of the most respected, one of the least in mind, yet one of the most appreciated although least openly thanked of all our defense personnel—the military policeman.

The silent watch. Eternally vigilant at home and abroad, the American military policeman is a shield for law and order in posts all over the world.

He is America's sidewalk ambassador, easy to see, wise to follow, smart to obey. He represents America's form of justice. He seldom speaks but is quick to act to protect the good and to preserve the right.

The leader of our silent watch is Maj. Gen. William H. Maglin, provost marshal general of the United States Army. His men are stationed all over the world. General Maglin is devoted to his men and they to him. Both inspire confidence in the folks back home. They have a deep concern and a lively care for the security and safety of the American soldiers, be he on post or on holiday.

In a recent issue of the Social Hygiene Papers, a publication of the American Social Hygiene Association, General Maglin has contributed a wonderfully enlightening article that the folks back home, that mothers and fathers of our servicemen all over the United States might well read.

The article tells what is being done; what safeguards have been provided, and what methods are in operation "to protect the most precious commodity—as General Maglin so aptly describes—the American soldier."

There are two other things I should like to mention, Mr. Speaker, before enclosing a full text of General Maglin's article. The first is a note on the William Freeman Snow Award for Distinguished Service to Humanity. It is to be awarded to General Maglin next fall. The second thing is a brief biographical sketch on General Maglin. Both items follow the article which now appears:

PROTECTING OUR MOST PRECIOUS COMMODITY—THE AMERICAN SOLDIER

(By William H. Maglin, major general, U. S. Army, provost marshal general)

The United States Army is the largest repository of youth in America. With over 1 million officers and men in its ranks, 90 percent of them between 17 and 25, the army represents not only an investment in time and money but the certain responsibility inherited from their home communities to preserve and maintain the character of its men.

It is staggering to realize that we are now spending 65 percent of our national budget on the major national security program, including our nuclear bombs and guided missiles, our atomic and electronic ships and planes and guns. The key man to put this mass of material into action is the individual serviceman. He was important to the defense of nations when wars were fought with muskets and pikes. He is even more important today when intricate, technical machines demand legions of highly-trained, clear-minded, healthy men. Without their steady hands and know-how, we might well mothball our equipment.

Today the serviceman is an indispensable investment, and the Army is setting out, as never before, to protect its deposit of American youth so that a dividend in defense may be assured. If this is accomplished, a perpetual return of good citizens to the American community will be the Army's promise to the nation.

THE YOUNG SOLDIER'S GOOD RECORD

How does the young man from the American community get along in his new Army home? I think remarkably well. In fact, the conduct of our young Americans while in the military service leads me to conclude that we may be painting with a broad brush and condemning our youth because of the increase in so-called juvenile delinquency. I do not mean to imply that juvenile delinquency is not a serious problem. I do maintain, however, that it affects only a small segment of our youngsters and that the vast majority of our youth are fine, wholesome, warm-hearted, upright Americans. Our experience with them in the Army convinces me of that.

I am frequently asked to give the crime or delinquency rate of 100,000 soldiers compared to the rate of an American city of 100,000 population. Consistently, our rate is much lower. Yet that is not the real picture, by any means, of how favorable the Army's report is, comparatively. In a city of 100,000, there are women and children and the aged. Of that 100,000, only 7,000 are young men between 17 and 25. Yet that is the segment of the population prone to come to the attention of the police. Remember, in the Army almost 90 percent of our men are 17 to 25.

We took a look into the subject of delinquency in the Army recently, during which we compared a group of Army delinquents to a group of soldiers who had never been in trouble while in service. We came up with the surprising discovery that 13 percent of the second group had committed some type of dereliction which classed them as pre-Army delinquents. I don't know what percentage of young men get into trouble in the average American city, but I can report that the hard figures of the Army show only 1 percent of our soldiers get off the straight track. This indicates to me that our young men have a strong potential for good. Why isn't the Army rate closer to 13 percent instead of its low 1 percent? By all accounts it apparently should be.

Many factors peculiar to Army life introduce stresses not present in civilian life: required conformity (an abrupt change for the average young man conditioned to independence and personal freedom) homesickness, crowded barracks life, and new opportunities to overindulge for the first time without the restraining hand of home and family.

Now on the positive side of the ledger we find certain conditions which add up to part of the answer to my question.

PART OF A GROUP

Military life gives a young man an opportunity to belong to a group. Instead of the Black Dragons or the Ajax Club he now belongs to A Company or B Company. If you have ever experienced company or even squad competition you will agree it can get pretty lively. The realization that his buddies have common interests and gripes brings him out of the depths of loneliness and frustration which lead to trouble.

The greatest reason for the Army's fine record is what we call the "chain-of-care." The chain follows from the commander right down to the corporal in the squad. Each is concerned with the welfare and conduct of the men in his charge. Each cares enough to take an interest in the daily presence of his crew. Competition makes each corporal, sergeant, captain, and major care enough to make his command better than the next.

I think an apt description of an Army man's conception of care for his command is contained in a Portrait of a Leader, written by the widow of Capt. Reginald B. Desiderio. "He loved variety and chance-taking. He had a fling at the Air Corps and with the paratroopers. His first love was the line infantry. In his service with the 70th Division in Europe he won the Silver Star and Bronze Star with three clusters.

"It may seem strange for me to say that he was adored by his men, but then he was adored by everyone. He was courageous even about his day-to-day obligations. He enjoyed taking over a poor organization because he knew that he could more easily put his mark on it and win it to his standards.

"Yet he was a perfectionist in that he would never spare himself. He had tremendous energy, and he led by working harder than anyone who served under him. His characteristic enthusiasm for work was contagious to other men, or at least he so felt.

"His influence as a husband and father was probably much the same as that he exerted over his company. When he was busy, one felt it necessary to pitch in and work alongside of him.

"He was greatly devoted to his duty, but more devoted to his God and his family. His interest in the welfare of his men was absolute; he lived for them even as he lived for us. Even so, he was a strict disciplinarian. He

demanded much, but he demanded fairly and justly."

Yes; the character of Captain Desiderio made him a stout link in the chain of care. Other links are our chaplains, legal aid officers, and welfare officers, all of whom have a marked influence on the soldier.

Until a few years ago the services were confronted with a lack of suitable working agencies to better the conditions of communities serving the soldiers' off-duty recreational needs. Towns near Army camps developed trouble areas complete with unsanitary restaurants, houses of prostitution, B-girls, and the like. These fringe, leech-like elements were no credit to the community and were the prime contributing factors to our AWOL, venereal disease, and delinquency rates.

THE ROLE OF THE AMERICAN SOCIAL HYGIENE ASSOCIATION

Beginning in March of 1950, the Joint Agreement on Armed Forces Disciplinary Control Boards, provided the services with an official working link with the community. One of the original, active agencies cooperating with the boards was the American Social Hygiene Association. Its staff provides invaluable aid in ferreting out and suppressing vice conditions. Through the help of the American Social Hygiene Association the services are forewarned of encroaching vice elements and are able to nip trouble in the bud. Certainly this is a major contribution to the crime-prevention program of the Military Police Corps.

Aid from the American Social Hygiene Association does not end with pinpointing trouble spots. The Army's educational program in suppressing venereal disease has received valuable counsel from ASHA.

Officially recognizing the chain-of-care theory, the Army strives constantly to strengthen it, with good results. To toughen the weak link of a man in transition we are now moving whole outfits, rather than individuals. Thus the entire "care" machinery of the unit moves with him.

For example, Fort Riley's 10th Division was halfway through Operation Gyroscope. Three months previously the 10th Division had begun changing assignments with the famous 1st Infantry Division in Germany, with the assurance that each would have a permanent base for the next 3 years. The 10th Division was moved to Germany in three shiploads, complete with wives and children, and families were settled before husband soldiers went off on maneuvers. At the same time, the 1st Division returned to its new base in Kansas and settled its own families.

In the same direction, the Chaplain Corps plays a far greater role in the Army today than it ever did before, performing innumerable types of personal "care" services. It's incalculable how many youngsters have been diverted from trouble by a few quiet moments with a chaplain.

Also in our Army today, stationed wherever we have American troops, are members of the Military Police Corps. This corps, numbering over 30,000 officers and men, is a permanent part of our Military Establishment and is composed of carefully selected, highly trained soldiers, whose motto is "service to the troops." The objective of the corps is to keep the maximum number of men available for duty.

Those who are veterans of World War I may find it hard to accept the psychology, practices, and procedures of the modern military police. I recall so well the derisive chant of the twenties that the "MP's won the war." Compare that feeling with the expression contained in an article in the Reader's Digest concerning one of our military police functions, the highway patrol in Germany:

"In German eyes, the American MP is United States of America. To the German Haupstrasse he brings the common sense, common courtesy, and common touch of Main Street, America. He's Mr. Democracy, in person." And, I might add, he's another link in the chain extended to the foreign lands in which we perform our duty.

Our modern military police have many functions. They have a major role in the control of military traffic and evacuation of refugees, in the custody, care, and documentation of prisoners of war, in rear area security against guerrillas, partisans, and air drops, in the control of military prisons, and of course in law enforcement and the control of conduct.

The MP's chain of care doesn't even end after a man has been arrested, found guilty, and placed in confinement. Our rehabilitation program offers a convicted man a chance to volunteer for a rigid retraining program which, if he completes it successfully, gives him a clean bill of health in the Army and an honorable discharge if the rest of his service is satisfactory. I recently received the following letter from a soldier who had taken advantage of this opportunity:

"The chance I got at rehabilitation finally opened my eyes to how dumb I'd been. I thought my parents were against me. I thought the Army was against me. I fought anyone who tried to boss me. When I finally got my sentence I figured it was the end of the line for me.

"Then for no reason at all I got this chance. I thought it was a trick at first. I decided I had nothing to lose. Now I am out and with an outfit which is swell. Thank you for caring enough about me to give me this chance."

I said earlier that our objective is to keep the greatest number of men available for duty. That too is the objective of the Medical Corps. A soldier in trouble or in the guardhouse is just as ineffective to the service as a man sick or in the hospital. Our methods parallel those of the Medical Corps to a marked degree. In the way of prevention, the medics give physical examinations and inoculations, and they maintain sanitary regulations. The MP's survey towns and cities for trouble spots, place them off limits, warn soldiers, correct their dress and passes. The doctors hold sick call to prevent minor ailments from becoming major illnesses. Similarly, the MP's issue informal reports for minor infractions so that commanders may take corrective action. In spite of prevention and sick call, major ailments and injuries occur. Then the medics put the man in the hospital. Similarly, in spite of our preventive actions, some soldiers commit serious offenses. Then we issue a formal report and gather the evidence to guide the commander in his action.

But while the medics alone order the soldier into the hospital, in our case we step out of the picture. MP's do not sentence a soldier to confinement. That is done by the courts. But as soon as he is convicted and sentenced, he again comes into our hands, since we, the military police, control the guardhouses, stockades, and disciplinary barracks.

In the hospital the medics exert all efforts to return the soldier to duty in a healthy physical condition. Likewise, through our rehabilitation program we MP's exhaust all our efforts to return the soldier to duty in an honorable status.

CIVILIAN COUNTERPART

If you think of it for a moment, the links comprising the Army's chain-of-care exist in civilian life. The captain has his counterpart in the father and mother team, and the big brother or sister can be likened to the squad leaders. Every community has its chaplain, welfare officers, and the good arm of the law. The links are there and they are forged stronger than some suspect. We have a spirited, fine Army to prove it.

Yes, from the streets of our towns to the barracks of our Army, let's give our youth the understanding and care they deserve. They are, after all, our most precious commodity.

As previously noted, I am also happy to learn that the American Social Hygiene Association's Committee on Awards has voted unanimously to present Maj. Gen. William H. Maglin with the William Freeman Snow Award for Distinguished Service to Humanity.

Dr. Snow, in whose name the award is presented, was the first executive director of the American Social Hygiene Association. The award was established in 1937 on the occasion of his 40th year of distinguished service to education, public health, and social hygiene.

The William Freeman Snow Award is the highest honor of the American Social Hygiene Association and is presented annually to an outstanding person of distinguished career, in recognition of superior service in the field of social hygiene.

As the provost marshal general of the Army, with staff responsibility for the control of conduct and the maintenance of law and order, General Maglin is well known throughout the military and by civil enforcement agencies for his accomplishments in protecting the welfare of the American serviceman.

The award will be presented in New York City in the early fall.

Mr. Speaker, General Maglin, one of our great public servants, has had a distinguished and illustrious career in the Army. He is a fighting soldier. I want to list below a short biographical sketch of General Maglin's career. Through it all, General Maglin has remained a kindly, patient man with a talent that knows how to explain to a mother and father the responsibility of the Department of the Army toward their son:

General Maglin assumed Office of the Provost Marshal General of the Army February 5, 1953.

General Maglin is the first provost marshal general to be appointed from the Military Police Corps. During 30 years of commissioned service, he has spent over 20 in military police assignments.

Born May 4, 1898, in Richmond Hill, Long Island, he went to high school in Richmond Hill; attended Alfred University in New York State; enlisted in the Army April 7, 1917.

First enlisted assignment: Troop L, 5th Cavalry Regiment, Fort Bliss, Tex., and duty in the military police detachment at El Paso.

Appointed cadet, United States Military Academy, West Point, November 12, 1918. While at West Point he captained the boxing team in 1924 and was light heavyweight and heavyweight boxing champ of the cadet corps from 1920 to 1924. Commissioned in Infantry; he is a graduate of the Infantry School and the Command and General Staff College.

In November 1945 he was sent to Korea to organize the Korean National Police of 23,000 uniformed police, 5,000 detectives, and 500 policewomen, who were among the first to bear the brunt of the North Korean attack in June 1950. In 1953 was awarded the Military Order of Taekuk by President Syngman Rhee for his contribution to the new republic.

MILITARY POLICE AND PROVOST MARSHAL ASSIGNMENTS

1924: Provost marshal, Plattsburg Barracks, N. Y.

1929: Hawaiian Military Police Company.

1934–35: Provost marshal, Governors Island, N. Y.

1935–37: Hawaiian Military Police commanding officer.

1939: Commanding officer, 2d Infantry Division, Military Police Company.

1939: Provost marshal, United States Military Academy, West Point.

1941: Provost marshal, General Headquarters, United States Army, Washington.

1942: Commanding officer, Military Police Replacement Training Center, Fort Riley, Kans.

1942: Deputy provost marshal, European theater of operations, England.

1942: Provost marshal, Allied Forces Headquarters, North Africa.

1943–45: Commandant, Provost Marshal General School, Fort Custer, Mich.

1945: Chief, Military Police Division, Office of the Provost Marshal General.

1947–50: Commandant, Provost Marshal General School, Carlisle Barracks, Pa., and Camp Gordon, Ga.

1950: Deputy provost marshal general, Washington, D. C.

1951–53: Provost marshal, European Command.

It is good to be able to report to my people of the 13th Congressional District that General Maglin is doing the best possible job in protecting our most precious commodity, the American soldier.

Comprehensive Manpower Bill Seeks Aid for Teachers—Colleges and Students Included in Provisions

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. HOLLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article by Milton F. Lunch from the June 1956 issue of the American Engineer entitled "Comprehensive Manpower Bill Seeks Aid for Teachers—Colleges and Students Included in Provisions." This has reference to H. R. 11200, a bill designed to regain our world leadership in developing engineers and scientists.

The article follows:

COMPREHENSIVE MANPOWER BILL SEEKS AID FOR TEACHERS—COLLEGES AND STUDENTS INCLUDED IN PROVISIONS

(By Milton F. Lunch)

The most far-reaching and comprehensive legislative proposal to institute some form of Federal program to meet the Nation's needs for engineers and scientists has been offered by Representative ELMER J. HOLLAND, of Pittsburgh, Pa. Almost all of the bills on the subject introduced heretofore, running into the dozens, have dealt primarily with scholarships as a means of getting more students into the colleges and universities. The Holland bill also calls for a scholarship program, but in addition it contains the following unique features:

1. Supplement salary grants to raise the incomes of engineering teachers to the level paid engineers in industry with comparable qualifications.

2. Financial aid to engineering educational institutions by paying the full cost of educating the students holding the Federal scholarships, as distinguished from payment only of the normal tuition, fees, and textbook charges.

3. A two-pronged program under which engineering graduates would teach mathematics and science subjects in the high schools for 3 years, with supplemental salary grants to equalize their pay with that of the young engineers in industry. At the end of the 3-year stint, the engineer-teacher would be eligible for a 3-year graduate fellowship to study for a doctor of philosophy degree, also with an economic grant to keep the grantee's income up to that of engineers working in industry.

Representative HOLLAND told the House at the time he introduced his bill: "We have had enough warnings. We have had enough speeches. But we have had little action. Today I propose action. I propose a concrete Government program that will lick the problem." He said that before preparing his bill he sought to get the best answers to the many questions involved and the best guidance in the kind of legislation which is needed by contacting the deans of all the Nation's engineering schools. At the latest count, 126 deans of the 150 contacted had replied to the Congressman's questionnaire and offered suggestions. He told the House that the deans generally agreed on two main reasons for the present engineering manpower situation: (1) Precious manpower potential is being wasted by the failure of many bright high-school students to continue to college; (2) the shortage of qualified teachers of engineering at the college level, and of qualified mathematics and science teachers at the high-school level.

The scholarship portion of the Holland bill would provide 30 engineering scholarships each year to outstanding high-school graduates from each of the 435 congressional districts, based on competitive examinations. In lieu of tuition, the school would receive "an amount equal to the actual cost to such school * * * without regard to the school's other income and resources * * * of educating such student and providing facilities (other than meals and lodging) in connection therewith." The student would receive $100 a month for living expenses while in attendance at the school. The proposal to pay the institution the full cost of educating the student instead of only tuition is based on the fact that tuition represents only a part of the university's costs per student. Statistics as of 1950 show that in tax-supported institutions tuition accounted for only 29.8 percent of total institutional income, and in private institutions it accounted for 67.8 percent. HOLLAND said that this provision would give the schools some financial help they need and should encourage the schools to enlarge their facilities.

The supplemental salary grants to university engineering teachers are stated in the bill to be for the purpose of encouraging them "to continue in the teaching profession, and to prevent such teachers from leaving the teaching profession to seek higher-paying positions elsewhere." Holland said that the reports from the deans state that many of the best engineering teachers are being lured into industry every year through higher salary offers which the schools cannot match. The criteria for the amount of supplemental pay would be "such amounts as, when added to such teacher's regular salary as a member of the faculty of such school, will make his income substantially equal to the average income of industrial and other nonacademic engineers of comparable qualifications." Periodic checks would be conducted to determine changes in the amount of supplemental pay based on changes in nonacademic compensation levels or changes in the regular salary or qualifications of the teacher. The supplemental pay grants would be paid to the university, to be turned over to the teachers without any reduction in regular salary because of the supplemental grants.

Under the high school teacher-fellowship arrangement for graduate engineers, Holland said the purpose is to hit at the two extremes of the manpower supply situation—both of which were said to be crucial by many of the deans—by providing qualified math and science teachers in the high schools to prepare students for engineering study, and, conversely, to provide the incentives to turn out more highly trained engineers and scientists in the graduate fields. An additional factor in the plan is the hope that many engineering graduates after having been exposed to an educational atmosphere for 10 years (4 to secure B. S. degree, 3 teaching in high schools and 3 in graduate work) would choose to stay in engineering teaching work, thus further alleviating the engineering teacher shortage. The economic side of the dual high school teacher-fellowship arrangement would work as follows: While teaching in the high school the engineer would receive, in addition to his regular high school salary, supplemental grants to bring his income substantially into line with the average income of industrial and other nonacademic engineers of comparable qualifications. When the engineer completed his 3-year high school teaching assignment and moved into his graduate study, the institution would be paid the full cost of providing the advanced education in lieu of tuition. At the same time, the engineer-student would be paid an amount per month (as living expenses) equal to the total amount per month which he had received while a high school teacher, including the regular teacher's salary and the supplementary salary grant.

The Pittsburgh legislator's bill provides a specific prohibition against any agency of the Federal Government exercising any direction, supervision or control over the curriculum or program of instruction of any educational institution or over its administration or personnel. The actual administration of the program would be in the hands of the National Science Foundation and the Foundation would handle the economic studies necessary to determine the amounts to be paid under the several supplemental salary grant provision, as well as the determination of the full cost of educating students at the institutions. The Foundation would be required to consult with the Engineers' Council for Professional Development in the administration of the program, and would file a report with Congress at the beginning of each regular session with respect to the administration of each program, including recommendations for revisions.

In offering his bill, Representative HOLLAND said that the cost should be regarded as an essential expenditure for national defense. He estimated the cost of the undergraduate phase at $183 million for the fourth and succeeding years. The cost of the advanced fellowship program cannot be computed, he said, until it is known how many graduate students will enter the program, but he estimated that it should not cost much more than the undergraduate program. He told his colleagues that in a discussion of costs, "it is essential to recognize that money appropriated for this bill will go to develop our most precious resource, manpower. It will be money spent to meet an imperative need. Nothing is too costly if it is essential."

The Holland bill (H. R. 11200) has been referred to the Committee on Interstate and Foreign Commerce. As the boldest and most all-embracing legislative proposal to cope with the engineering manpower situation it is certain to receive detailed attention and study by congressional groups and Federal agencies concerned with the engineering manpower subject, as well as from professional engineers and professional associations studying the many suggestions advanced in the critical manpower field.

Address Delivered by Mr. Walter V. Chopyk Before the 10th Anniversary Banquet of the John Onufryk American Legion Post, No. 1590, Rochester, N. Y., on May 27, 1956

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. PILLION. Mr. Speaker, I am pleased to insert the following address delivered by Mr. Walter V. Chopyk before the 10th anniversary banquet of the John Onufryk American Legion Post, No. 1590, Rochester, N. Y., on May 27, 1956:

Mr. Chairman, reverend fathers, distinguished guests, members of the John Onufryk American Legion post, and ladies and gentlemen, my address this evening is entitled "Action Now, Later Too Late."

In the past months many fine articles dealing with the cause of liberation have been appearing in newspapers and magazines. Recently one such article, in the form of an editorial by David Lawrence entitled "The Power of the Peoples," appeared in the magazine U. S. News & World Report. The highlight of this editorial can be best stated by the following quotation from it:

"Too often our minds are focused on the power of governments and not on the power of the peoples. Too often we accept the doctrine that peaceful coexistence with gangster governments is a prerequisite to our own survival."

Evidence of the truth of these words was quite evident at the Geneva Summit Conference last year. Mr. James Hagerty, Presidential Press Secretary, hearing of a press conference that had been planned by the many representatives of the enslaved peoples behind the Iron Curtain, among which I was one, who were covering the Geneva Conference which was planned to take place during the Geneva talks, requested me personally to refrain from holding this conference in Geneva and asked instead to hold it in the United States.

In spite of the fact that the feeling of peaceful coexistence dominated the talks in Geneva, we were determined to have the power and the voice of the subjugated people heard and felt, and we held our press conference and made it possible for the feelings of 200 million oppressed peoples of the Ukraine, Poland, Lithuania, Latvia, Estonia, Byelorussia, Slovakia, and Cossakia to be heard at this conference.

While our own representatives from the United States were hobnobbing with the Kremlin's glamour boys who came with their smiles and good manners hiding their sinister and deceptive motives, it was not protocol to disturb the fun by bringing up the murders and oppression going on. Our representatives gave the appearance of condoning Soviet brutality in this way. Were we our brothers' keeper in Geneva? Did we do anything to help those in the Soviet political prisons? Did these actions spell any hope for them?

How long are we to maintain this goodwill with the terrorists of the U. S. S. R.? When are we going to give the underdogs something to hope for?

Mr. Lawrence continues to say, "It is true a gangster government can in its desperation, try to start a war, and fellow Americans, let us avoid complacency regarding this matter of Red Russia decreasing its manpower and armed might and releasing so many doves of peace in Kremlin Square. They can start a war and if it will keep their people united against the "capitalist enemy," as Radio Moscow puts it, they will overnight mass such enormous forces that would make Hitler's armies look like a troop of Boy Scouts in comparison.

Mr. Lawrence continues and I agree 100 percent with him, but at heart, Moscow's rulers are probably more afraid of the very people they might drag into war. What are we doing to stir up the resentment of the Soviet slaves and thus weaken the Soviet regime? Basically, very little. We are giving them a wilting Voice of America which is on the wrong track. People behind the Iron Curtain will not be impressed by two cars in every garage. This is disgusting to their ears. The Voice of Canada and Radio Roma are doing a much better job. We know this from first hand information leaking out. We spoke over the Voice of Canada and Radio Roma of the Ukrainian underground army. The Voice of America has never mentioned the power of the Ukrainian underground army. How long will the Voice of America continue its policy of do-not-disturb while every night, Radio Moscow blasts out at America with shooting words. We must fight fire with fire or not get into the propaganda war at all.

Just the other day, Adm. William Radford, Chairman of the Joint Chiefs of Staffs, declared before the Senate Foreign Relations Committee: "It is in the political and diplomatic fields that we have to worry. The West's situation in long terms is more dangerous than a year ago, because Soviet propaganda has become more severe. We have to improve our performance in the information and diplomatic fields. We should not be complacent. We have a great deal of work to do."

Tell me, Isn't this exactly what Americans of Ukrainian extraction and others have been preaching for a long time? Why hasn't the State Department taken heed of our warnings or are some persons in the Department still wearing blindfolds and are afraid to admit failure in counteracting Soviet propaganda? Are they still blinded to the brutalities committed by the Reds, why have our leaders in Washington ignored these facts? Instead, they have chosen to break bread and sip cocktails with the same men who are responsible for the inhuman treatment of our own brothers and sisters.

Not only is our State Department lax in carrying out an effective counterpropaganda campaign. Even President Eisenhower, at the summit conference, agreed not to discuss the position of the satellites. Later again, in a Miami speech, he returned to the subject, however, he passed over the question of the enslaved peoples of the U. S. S. R. In 1955 Secretary Dulles casually mentioned the existence of 16 national republics of the Soviet Union. However, these remarks and even the speeches of the leaders for the liberation of enslaved peoples are not much help. This state of mind in Washington is not only weak and dangerous, but is directly contrary to the principles of our Nation as expressed by Washington, Jefferson, and Lincoln.

Fellow Americans, let us face it. We are not winning the cold war and we are making less progress in winning the hearts and minds of millions to our side in the struggle against the colonial and imperialistic forces of Russian communism. Unless action is taken, we face the miserable prospect of failure. Joint congressional action is desperately needed to bolster and expand our informational mediums, in order to combat and expose the lies of the well-oiled propaganda machine of Moscow.

A joint resolution now before Congress, which is referred to as Joint Resolution 433, takes a step in the right direction. It calls for the formation of a committee to investigate the propaganda program now in effect in the United States with a view to finding better and more effective ways of combating Russian propaganda and of discovering its most vulnerable points. Some of our leaders, at least, have now realized the importance of having a fighting Voice of America to broadcast, instead of the soft-soap opera approach that has been the case.

For the past several years, I have been speaking before audiences very frequently and in most cases these audiences have been composed of persons of eastern European descent or sympathies. Tonight, however, I have the rare opportunity of addressing a group that is dedicated by its own principles to keeping America strong and free. Every Legionnaire knows from his own experience what it means to fight for freedom and is therefore even more qualified to understand and sympathize with the aspirations and hopes of the enslaved peoples of the world. The Legion has a voice in America that cannot be ignored. It carries the torch of patriotism for all Americans. Through my speech, therefore, the cries of help of the enslaved peoples are brought to your ears. The American Legion is strong and brave enough to do more to help these people now than any other group of citizens in the United States. The cause of enslaved peoples should become a major project of Legion activities. You can help by adopting resolutions in your chapter meetings and in your State and National convention, urging Congress to pass Joint Resolution 433. You should notify your own Representatives of how much this means to you. By thus espousing the cause of enslaved peoples behind the Iron Curtain, you will also be working for the cause of strengthening our own beloved America. You will be giving hope to those who are the natural enemies of communism, a force which seeks to destroy our own democracy.

The hope of freedom is not dead in these people, for they have always maintained an underground organization waiting for the opportunity of liberation. How long can this flame be kept alive if they do not get our moral support, if they do not think we care about them?

Help the enemies of communism and we help ourselves. Remember, action is needed now; tomorrow may be too late.

Why Does the World Hate America?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mrs. ST. GEORGE. Mr. Speaker, recently I read an article by M. Raymond Cartier in the French magazine Match. I would like to point out that this magazine has a very large circulation in France. In fact, it has, in proportion to the population, a larger circulation than Life has in our own country.

We have been discussing foreign aid on the floor of this House, and certainly nothing new or thought-provoking was brought out of our deliberations.

I am, therefore, delighted to find that my friend, Basil Brewer, the publisher of that great paper the New Bedford Standard-Times, has had a translation of the article from the National Review of May 2 printed "as a public service,"

and that it appears in the Washington Post of today:

WHY DOES THE WORLD HATE AMERICA?—A BLUNT STATEMENT OF THE FRENCH VIEWPOINT BY RAYMOND CARTIER, EXECUTIVE DIRECTOR OF THE MAGAZINE PARIS-MATCH, PARIS, FRANCE

If his arrival was not clandestine the word has no meaning. The only crowd was the police, closely guarding the Palam Airport.

Pandit Nehru had disdained to come, on the pretext that he was not only foreign minister but head of state.

And in the absence of an Indian foreign minister, Mr. John Foster Dulles, Secretary of State of the great Republic of the United States, was received at New Delhi by a functionary so minor that the American press agencies were ashamed to mention him.

They preferred to dwell on the fact that the Secretary of State has been gratified by a special and unusual favor—the authorization to fly over the Taj Mahal, in spite of the risk from vibrating motors to its fragile architecture.

A few weeks earlier Messrs. Bulganin and Khrushchev had arrived at this same Palam Airport amid the mobilized enthusiasm of the capital and the whole nation.

Delhi had been as red as a cock's comb—red with pleasure—under a grand array of waving flags which the police themselves had distributed to the people. A million persons, cheering the jovial Khrushchev and the debonair Bulganin, had lined the route along which the closed limousine of Mr. Dulles sped as swiftly as an American hearse.

"The warmth of our reception of the Soviet leaders simply conforms to our national tradition," a slightly embarrassed Indian official had explained. "The Queen of England, or Mr. Dulles, arriving tomorrow, would be received with the same cordiality." Mr. Dulles arrived. He saw.

DULLES ROAMS THE GLOBE IN QUEST OF FRIENDS

It is not always easy to understand the case of Mr. Dulles.

Why, for example, did he choose to expose himself, and his country with him, to inevitable comparison in a Jakarta still vibrating with last year's acclamation of the Chinese President of Council, Chou En-lai? Nothing essential, said official Washington, nothing very important, motivated his conversations in Indonesia.

Mr. Dulles is already, by a wide margin, the recordholder in mileage for his category. If he added to that mileage; if he visited capitals which no longer have any touristic attraction for him; if he incurred a supplementary and superfluous fatigue; he no doubt hoped to improve his contacts, to reduce misunderstandings, to rewarm atmospheres.

In a word, to make himself liked—the very symbol of the aim which America has been pursuing desperately and disastrously for 10 years.

The case of India, alongside that of Mr. Dulles, is edifying.

America powerfully helped India to gain its independence. In the very midst of the war, President Roosevelt pressured Winston Churchill to grant complete political liberty to a country whose sympathies were almost entirely with Japan.

Liberated India became one of America's darlings—the great spiritually enlightened democracy which would follow arm in arm with America the bright road of progress. Material aid was not omitted, even though the Delhi government always refused to undertake the slightest political obligation.

The United States subscribed $20 million to the last 5-year plan of the Indian Republic, and the total of its gifts is some $454 million. When the chronic Indian famine threatened to become tragic 3 years ago, America threw into the bottomless pit 2 million tons of wheat, part of which was lost through inefficiency.

Private aid—the phenomenal American private aid—has been added to this Government effort, representing for the year 1955 alone nearly 25 million pounds of foodstuffs with a value of $18,326,000.

American point-4 teams, and those of several large charitable organizations are at work in every part of the peninsula, helping the Indians to try not to die—while Russia has never offered to Indian distress the alms of a single sunflower seed.

VAST AMERICAN AID FUNDS BRING ONLY DISTRUST AND HATE

The dividends of these two policies are illustrated by the contrast between the reception of Mr. Dulles and that of Bulganin-Khrushchev.

There is certainly not a country in the world where America is more suspect as a nation, and the American more despised as an individual, than in India.

Nehru has never ceased to obstruct every American effort to organize the defense of Asia, but Nehru in this case merely interprets the distrust and animosity of his people.

When the Communists circulated the fable of American bacteriological war in Korea, probably not one Indian in a hundred thousand refused to believe it—just as not one in a hundred thousand doubted that the Americans were the aggressors.

The same quasi-unanimity admits as an absolute fact that the Americans dropped the first atomic bomb on Hiroshima, instead of a German city, because the Japanese are Asiatic and colored.

America could spend billions—and never succeed in effacing from the Indian mind the conviction that, more than any other nation, it represents the white man's privilege of aggressiveness and imperialism, while Russia, whose colonal conquests cover half of Asia and reach to India's very gates, is synonymous with racial equality and emancipation.

Take even England. Theoretically she oppressed India for 2 centuries, fattened on its substance, built on its misery the insolent fortunes of Belgravia and Mayfair, shed Indian blood in cruel represessions.

Nevertheless, today the Englishman—the hard, indifferent Englishman—compared with the American is to Indians a friend and brother.

No lesser person than Gamal Abdel Nasser told me recently that he had learned in conversation with Nehru this enormous difference in the degree of unpopularity of the two nations.

But when I asked Nasser what he himself thought of the Americans he thrust out his chin and answered only: "I like their films."

What applies to India applies to all Asia. America in 1948 literally tore Indonesia from the Dutch—and in his Jakarta press conference John Foster Dulles was reduced to pleading the cause of his country before accusers.

Japan, guilty and beaten, was coddled by America like a newborn babe, reeducated with immense care in democracy and the cult of baseball, presented with $2.5 billion in accordance with the American system of reverse payment of war damages.

All of which resulted in the neutralist Hatoyama Government, Tokyo crowds burning American vehicles, Japanese horror films on the atomization of Hiroshima—as if the Japanese were tender—and the immense bitter resentment of defeat slowly fermenting in this profound people.

ASIAN NATIONS' ONLY COMMON INTEREST IS DISLIKE FOR UNITED STATES

South Vietnam, Korea, and Formosa are border cases; they owe their every breath to America, yet even this does not always suffice to restrain the violence and impatience of their anti-American sentiment.

One could continue this world tour. It is the same everywhere.

Anti-Americanism is often the sole common interest of violently antagonistic nations or groups, as in South Africa where the whites curse America for its anticolonialism and the blacks blame it for its segregation.

Or in the Near East where the Arabs abominate it while the Jews accuse it of egoism and meaness. Latin America has not a single country where the anti-Yankee spirit does not preponderate.

The single fact that United States citizens have practically usurped the name of Americans causes a gnashing of teeth all the way to Canada, where, a foreign minister has said, "The time of automatically easy relations with our southern neighbor is ended, I believe, forever."

In Washington the accounts are kept. They are enormous. Since the war America has distributed to the world $52,287,000,000, of which $45,107,000,000 were gifts pure and simple. With this sum it could have rebuilt every road in the country, or created a superaviation far beyond Russia's ability to compete.

Moreover, what was given away was not merely money but wealth, particularly raw materials of which America, with its intense activity, does not have unlimited reserves.

Strictly speaking, say the economists, foreign aid is national impoverishment. It is acceptable if it buys political advantages.

Otherwise it is lunacy.

Western Europe always heads the list. It has received two-thirds of the 52 billion distributed since the war by the United States Government. England leads with 6 billion in economic aid, followed by France with 5½ billion, Germany with a little under 4 billion, and Italy with two billion eight hundred million.

Countries small in size but deeply shaken by the war, such as Holland, Austria, Greece, have cost the United States more than a billion each.

What is more extraordinary is that 11 years after the end of hostilities, when Europe is completely restored, private American generosity continues to feed a large number of Europeans.

France, an agricultural paradise, still receives from 14 philanthropic organizations almost 4,400 tons of foodstuffs, which is nothing compared with 66,000 to Italy and 33,000 to a Germany bathed in prosperity. The dollars which paid for these gifts, estimated at $160 million in 1955 for the whole world, are collected from individuals, of whom many are mere wage earners.

PROSPEROUS FRANCE, JEALOUS BRITAIN VIE IN ANTIPATHY FOR UNITED STATES

These public billions and private millions have not made Western Europe a much more favorable milieu (environment) for the United States than South America or Asia.

It is hard to say whether anti-American sentiment is stronger in England or in France. In France it is aggravated by Communist influence and at present overexcited by the events in North Africa; but in England it is fed by the intense frustration of a nation recently supplanted in its world role.

In any case it crosses social barriers in the two Western countries nearest to America.

The United States logically should have the sympathy of the working classes because of the condition of its own workers, and of the property-owning classes which it is protecting from annihilation by communism.

Yet more often it meets on the one side only principled opposition and on the other only misunderstanding, flippancy, often disdain.

Germany is not, for Washington, the consolation many Frenchmen imagine it to be.

There were those early days when the GI's felt less foreign in the conquered nation than anywhere else in Europe. But like Japan, Germany restored does not have the unctuous humility of Germany in collapse.

The "go home" campaign began there, and the movement which is alienating the Bonn government from American policy expresses the dominant attitude of the German people.

The idea of an exclusive alliance with an ideologically conquered Germany is no longer one of the variants in American planning.

It is curious to interview American officials on the universal anti-Americanism. In general they act as if the matter were not very important. "We hold," they say, "too much of a place in the world, and we are too rich, for American unpopularity not to be inevitable. No matter what we do we shall be criticized. We are making the best of it—it is for others to change."

But this defensive attitude masks a great perplexity and a serious disillusion. The State Department files are full of studies of the phenomenon and reports on remedial means. In the center of a powerful continental system, surrounded by armies all ready to march, Napoleon could allow himself the illusion of despising with impunity the opinion of foreign peoples. America, in spite of its wealth and power, is not in the same situation.

In Europe, the response to American wealth is an attitude of intellectual hauteur. Outside Europe, it is more simply a burning reaction of antipathy and envy.

America's desperate efforts to disassociate itself from colonial or ex-colonial Europeans, masters of yesterday's world, are in vain.

1. Americans are white.
2. They are rich.
3. They are the richest of the white peoples.

Three indelible facts which insure them, no matter what they do, the unfavorable prejudice of a majority of the world's inhabitants.

Americans do not share the resentment left by white imperialism; they take it more and more exclusively on their own shoulders. Their disinterestedness, even if sincere, does not exempt them from it.

Besides, a people fighting on a world field of battle cannot be disinterested. The Americans make themselves think they are, by considering the purity of their intentions and the quantity of good money which they throw after bad. But on this point the Arabs and Hindus are more perspicacious.

FOREIGN AID CALAMITOUS FOR HELPED AS WELL AS HELPER

Unfortunately there is little chance that America wil change its attitude in the foreseeable future. Urgent voices are heard demanding that it stiffen its anticolonial attitude and increase a foreign aid which, it is becoming clear, is calamitous for the helped as well as the helper.

"Whether we are criticized or not," said one Washington official, "we cannot let Iranian children die of hunger." A boundless idealism; a do-good conception of foreign policy; a conviction that all peoples should be free and all men electors; these ideas still reign firmly in Washington.

In the burning affair of North Africa, the State Department energetically eschews the slightest anti-French intervention, but official as well as public sentiment is categorically declared in favor of total independence for Algeria, Tunisia, and Morocco.

The precedents of the past 10 years; the decline of every liberated country into communism or neutralism; the dizzy growth of anti-Americanism in decolonialized Asia; the fact that liberated North Africa will join an Arab League which is practically Moscow-oriented; the further fact that the loss of North Africa will push France itself—humiliated and desperate—into the Soviet system:

These realistic arguments, these indisputable truths, are unavailing against a sentimental enthusiasm that comes from a misinterpretation of history: the United States was born of a colonial rebellion (which is a false notion), and consequently all colonial rebellions deserve its sympathy.

UNITED STATES FOREIGN POLICY SHOULD BE DICTATED BY REALISTIC SELF-INTEREST

It is terribly difficult to be the dominant power of an epoch. The Washington officials are not wrong in saying that anti-Americanism will exist, no matter what America does, so long as the United States holds its present rank. But anti-Americanism is also maintained by faults in judgment and by grave and avoidable errors. One of the most frequent is America's incapacity for taking sides. Its most general mistake is obedience to ideology, or more exactly to an intellectual confusion in which ideology and egoism blend and obscure one another.

There would be less anti-Americanism in the world if America abandoned its philanthropic aspirations, its vocation of Santa Claus, its transcendental morality, all its missionary trappings, all its Boy Scout gear, and if, at last, it followed openly and intelligently the policy of its own interest.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BOW. Mr. Speaker, in debate last week one of my colleagues said that when a man goes into the Army he quickly loses some constitutional rights that he normally has as a civilian. This is true to a minor degree. The Constitution itself makes an exception of cases arising in the land or naval forces. Is this to be considered as justification for stripping him completely of all constitutional rights when he is serving in the Armed Forces abroad? His brothers in arms who are fortunate enough to remain in this country still have the rights given them by the Constitution, and enumerated explicitly in the Uniform Manual of Courts-Martial.

There are some who still insist that a trial in a foreign court does not deprive an accused American of any of his rights. This is because the enumerated safeguards in article VII of the Status of Forces Agreement are deeeptive. It is unnecessary to belabor this point because the Judge Advocate General of the Army has already determined what rights may be lost. I quote from the study made by him of the laws of France:

Certain guaranties are absent in general or specific terms from French law, and the provisions of the code, with experience derived from practice, reveal that there is some likelihood that they may be denied the accused in certain cases in France. They are:

1. Prompt and speedy trial.
2. Privilege of suspect or accused to be silent, burden of proof beyond a reasonable doubt on government, presumption of innocence.
3. Guaranty of confrontation by witnesses.
4. Involuntary confessions prohibited.

The proponents of the status agreements have been quick to say that an accused does not have a trial by jury in our military courts. They overlook the similarity in procedure, though by another name. Trial is before a board which can be composed of both officers and enlisted men. The accused has the right to challenge any member of the panel for cause. He has one peremptory challenge. There is no such right in a foreign court.

Critics of our court-martial system also ignore the elaborate system of review and appeal, even to the President. The rights of appeal abroad are only apparent. Servicemen hesitate to appeal because their sentence may be increased. Right now, in France, an appeal is pending in an airman's case, brought by the prosecution for the sole purpose of increasing the penalty imposed.

Repatriation of Anti-Communists

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 29, 1956

Mr. BOSCH. Mr. Speaker, the question of forced repatriation is not a dead one and something that is not a matter of the past.

Under leave to extend my remarks, I include an article from the June 7, 1956, edition of the Ledger, Montrose, Calif., entitled "Offers Congress Ample Proof on Delivery of Refugees to Reds" written by Mr. Ed Delaney.

As an example of the problem that is with us today, I include an article from the June 9, 1956, Tablet entitled "Is U. N. Commissioner for Refugees Pro-Red?" written by Mr. Julius Epstein. Mr. Epstein's article points out that this repatriation of anti-Communists is still very much with us.

The articles follow:

[From the Montrose (Calif.) Ledger of June 7, 1956]

OFFERS CONGRESS AMPLE PROOF ON DELIVERY OF REFUGEES TO REDS

(By Ed Delaney)

News headlines of the past week informed us that neutral truce teams in Korea have been ousted because the Communists were flagrantly violating the terms of the so-called armistice in Korea that was dictated by the Communists and signed by the United States.

Some of the most infamous crimes and violations of agreements made with the Reds in Europe, at the end of hostilities there in 1945, have not as yet been blazoned in the metropolitan press. Although those crimes were committed 10 or 11 years ago, great effort is being made to suppress the facts and to shield those who perpetrated the crimes.

The forced repatriation to Soviet controlled countries of millions of anti-Communist prisoners of war and civilians, by American military and civilian authorities in Western Europe in the years 1945–47, has resulted in a bill being introduced in Congress for an investigation and citation of those responsible for it. The measure, House Resolution 137, was introduced by Representative ALBERT BOSCH, of New York.

Many people of the Republic of Slovakia, who fled the Communists and sought sanctuary in the American occupied parts of Germany were forcibly rounded up and delivered

to the Reds for execution, torture, and enslavement.

Because I had the opportunity to personally witness some of these forcible repatriations and had put certain of the incidents in a book which was published 18 months ago, I was invited by refugee organizations to address their meetings in several eastern cities. The additional documented data and information I was able to obtain in connection with those crimes against humanity, will be given to Congressman BOSCH and others who are determined that the truth shall be presented to the American people, regardless of efforts to suppress it.

HANDED TO REDS

My own documentation relates how the American military authorities, in violation of all rules of international warfare and agreements made with other powers, handed prominent political prisoners and religious leaders to the Communists in 1945.

Additional proof of such crimes is contained in statements furnished me by certain refugees now in this country and Canada. For instance: between June 25 and 28, 1945, political refugees, men, women, and children, numbering approximately 300, were rounded up in the American military zone of Kremsmuster, Austria. Their belongings were taken from them. The whole group, with small chilren, some not a year old, were held in an open field for a week, guarded day and night by United States military police. After 1 week they were loaded into freight cars and shipped to the Czech Communists. Many of the group were jailed, tortured and some hanged.

WAR CRIMINALS

On June 27 and 28, at Aurolzmunster, Austria, in the United States zone, about 500 men, women, and children were herded into freight cars and shipped to the Communists, against their protests. Among them were prominent political leaders, priests, members of parliament, professors, teachers and small children—who were listed as "war criminals." The utter inconsistency of listing children as "war criminals" did not seem to deter the United States officials from handing them to the Reds for extermination.

From documents obtained and interviews with persons I had known in Europe and those who knew of my efforts to get facts to the public, much material will be added to the files being accumulated for the congressional committee, if they desire it. It has been indicated the committee will be glad to get the data.

House Resolution 137, notes that the "forced repatriation of anti-Communist prisoners of war and civilians, represents an indelible blot on the American tradition of ready asylum for political exiles."

FIX THE BLAME

The resolution also asks that a committee be authorized and directed to conduct a "full and complete investigation" of the forced repatriation program "carried out by our military and civilian authorities in Germany and other countries." It further stipulates that the committee shall "fix the responsibility for such program."

It is somewhat a shock to many Americans to learn that such inhuman and brutal treatment was meted out to anti-Communists, under direction and at the order of American officials. But among other documentation that is being put in hands of the committee is the official order in their manual of instruction for those handling the displaced persons.

Regardless of the political claptrap being put out by some in the Washington bureaus, tending to show that United States prestige has not suffered abroad, the reports gleaned from visits to some 8 or 9 cities in the past 2 weeks, point the opposite. The damage done can be repaired, but it is doubtful that those who were in any manner associated with the forced repatriation, will now be accepted as liberators of the ones they indirectly, handed over to the benign graces of the Communists.

[From the Tablet of June 9, 1956]

IS U. N. COMMISSIONER FOR REFUGEES PRO-RED?

(By Julius Epstein)

Should the American people support the office of the present U. N. High Commissioner for Refugees, Dr. G. J. van Heuven Goedhart, who—were he an American citizen—would not be eligible for a mail carrier's job because he could not meet our Government's security standards?

That's the question Congress will have to answer when the appropriations for UNREF (United Nations Refugee Fund) for the next fiscal year will come up within a few weeks. The administration is asking for $2,300,000 for the next 18-month period.

The reason why this question must be answered with a clear "No" lies in Dr. van Heuven Goedhart's past record as one of the most outspoken supporters and one of the most stanchest defenders of Stalin's internal and external crimes as well as of the whole Soviet concept in world politics.

QUOTES FROM PRO-SOVIET BOOKS

To prove this very serious accusation which may well lead to the resignation of Mr. van Heuven Goedhart, we have just to look at the introduction he wrote to the book by Michael Sayers and Albert E. Kahn, The Great Conspiracy Against Soviet Russia. The book, which was required reading for American prisoners to be brainwashed in Communist prisoners of war camps in North Korea and China, is probably the most formidable pro-Stalinist propaganda job ever done by American authors.

A few quotations will show the true character of this book. About the famous Moscow framed-up trial against Pyatakov, Radek, Sokolnikov, Shestov, Muralov, and 12 other defendants, page 301:

"The American Ambassador to Moscow, Joseph E. Davies, was profoundly impressed by the trial. He attended it daily, and, assisted by an interpreter, carefully followed the proceedings. A former corporation lawyer, Ambassador Davies stated that the Soviet prosecutor Vyshinsky, who was being currently described by anti-Soviet propagandists as a brutal inquisitor, impressed him as being 'much like Homer Cummings, calm, dispassionate, intellectual, and able and wise. He conducted the treason trial in a manner that won my respect and admiration as a lawyer.'"

On one of the most clear sighted and accurate predictions about the future course of Soviet foreign policy, made in 1944, by our former Ambassador to Moscow, William C. Bullitt, Sayers and Kahn write on page 375 as follows:

"Four years later (1944) as the Second World War was drawing to its close, Bullitt reappeared on the European continent as a correspondent for Life magazine. From Rome he sent a sensational article to Life which was published in that periodical on September 4, 1944. Purporting to give the opinions of certain anonymous Romans, Bullitt repeated the anti-Soviet propaganda which for 20 years had been utilized by international fascism in its drive for world conquest. Bullitt wrote:

"'The Romans expect the Soviet Union to dominate Finland, Estonia, Latvia, Lithuania, Poland, Rumania, Bulgaria, Hungary, and Czechoslovakia. * * * They expect that, besides eastern Poland, the Russians will also annex East Prussia, including Koenigsberg.'

"Bullitt asserted that the menace against which western civilization must unite was Moscow and its Communist agents."

From page 390:

"But the greatest of all surprises of the Second World War was Soviet Russia. Overnight, it seemed, a thick false fog was torn apart, and through it emerged the true stature and meaning of the Soviet nation, its leaders, its economy, its army, its people and, in Cordell Hull's words, 'the epic quality of their patriotic fervor.'

"LAUDS ARMY UNDER STALIN

"The first great realization which came out of the Second World War was that the Red Army, under Marshal Stalin, was the most competent and powerful force on the side of world progress and democracy."

The book concludes with the following statement by Colonel Robins on page 396:

"Soviet Russia exploits no colonies, seeks to exploit none. Soviet Russia operates no foreign trade cartels, seeks none to exploit. Stalin's policies have wiped out racial, religious, national and class antagonism within the Soviet territories. This unity and harmony of the Soviet peoples point the path to international peace."

Quite rightly, the book the Great Conspiracy Against Soviet Russia by Sayers and Kahn was enthusiastically welcomed by the American Communist Party as well as by the Soviet press. One July 1, 1946, the New York Daily Worker wrote:

"William Z. Foster, national chairman of the Communist Party, warmly endorsed the new $1 edition of the Great Conspiracy Against Russia by Albert E. Kahn and Michael Sayers, just off the press, declaring that the new popular edition 'opens up the possibility of reaching hundreds of thousands of workers with the true facts regarding the anti-Soviet intrigues of American and British imperialism from the time of the Russian revolution until the present.'"

This is the book whose Dutch edition carries an introduction by our present U. N. High Commissioner for Refugees (from Communist countries), Dr. G. J. van Heuven Goedhart, a highly praising introduction as we shall see, an introduction from which he has never retracted a single word and which is still distributed in the Netherlands as well as in all other Dutch-speaking areas throughout the world.

COUNTESS TOLSTOY PROTESTS

Only with this introduction in mind are we now able to understand why he so fiercely criticized our Government's program for aiding refugees newly escaped from Communist countries.

Only with this introduction in mind can we fathom the hidden reasons for his continuing participation in Soviet-approved repatriation of refugees from non-Communist countries.

It was this outspoken participation in the Soviet-endorsed repatriation program which caused Countess Alexandra Tolstoy, president of the Tolstoy Foundation, to address a letter on July 5, 1955, to Senator WILLIAM KNOWLAND, of California, in which she strongly and courageously protested against the High Commissioner's activities. In this memorable letter, she wrote as follows:

"I am taking the liberty of bringing to the immediate attention of the Senate Appropriations Committee considering amendments to S. 2090, information confirmed to the Tolstoy Foundation and other American voluntary agencies working with refugees in Austria that the United Nations High Commissioner for Refugees is actively participating in repatriation of refugees from Austria to Iron Curtain countries.

"We have been informed that a Russian-speaking representative of the United Nations High Commissioner for Refugees has been accompanying a Soviet Repatriation Mission in the British Zone of Austria with the knowledge and approval of the United Nations High Commissioner for Refugees.

"It is my understanding that the Congress had never before appropriated funds to an agency which operates in a manner which is directly opposed to the interests of the U. S. A.

"My organization as well as other American voluntary agencies is most interested in this question, and we are bending every effort at the present moment toward minimizing and preventing redefection of refugees.

"Although the United Nations High Commissioner for Refugees claims legal grounds under his statute for participating in repatriation, we still consider that the fact remains that the United States Congress would be defeating its own objectives by authorizing and appropriating special funds for the United Nations High Commissioner whose policies, objectives, and interests are in direct conflict with the United States Government and the policies that are followed by the voluntary agencies working in the field."

SUPPORTS SOVIET PROGRAM

Since then the High Commissioner has not ceased participating in repatriation activities. He is the only official who ever invited repatriation of political refugees to Communist countries and who ever described such repatriation as a solution of the refugee problem.

Under his eyes, these horrible scenes at the Italian-Yugoslav border are daily occurring as documented in the memorandum by the former Yugloslav Ambassador to the United States, Constantin A. Fotitch and Michael Krek, presented to the State Department on March 20, 1956. (The text of this memorandum appeared in the Tablet of April 28, 1956, and was also fully inserted in the record of this writer's testimony before the Senate Subcommittee on Internal Security of May 18, 1956.)

This writer wants to make it abundantly clear that he does not want to deprive the U. N. High Commissioner's office, as an institution, of a single penny, provided that a more suitable man can be found to direct its activities. It is to be hoped that both Appropriations Committees of our Congress will take the same stand.

Should it turn out to be impossible—for some reason unknown to this writer—to remove Dr. van Heuven Goedhart, the man who so praisingly introduced one of the most vicious Stalinist books ever written, then and only then should Congress consider the possibility of giving the funds, originally intended for the U. N. High Commissioner's office, to American Government, as well as voluntary, agencies, such as USEP (United States escapee program), the National Catholic Welfare Conference, the Tolstoy Foundation, Church World Service, and the American Friends of Russian Freedom. All these agencies—and many others, of course—do extremely valuable work in the field, especially in Europe, and all of them are strongly against extending any, however cleverly disguised, invitation to political refugees to be repatriated to the countries of Communist horrors from which they fled.

To Strengthen the Robinson-Patman Act and Amend the Antitrust Law Prohibiting Price Discrimination

SPEECH
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 1840) to strengthen the Robinson-Patman Act and amend the antitrust law prohibiting price discrimination.

(Mr. SISK asked and was given permission to extend his remarks at this point in the RECORD.)

Mr. SISK. Mr. Chairman, I rise in support of this bill. As a cosponsor of H. R. 11 I have been very much interested in it. I feel it will help small business men who are having a most difficult time in this era of big business. We need badly to take steps to curb unfair and discriminatory monopoly and to preserve the competitive, free enterprise system. This legislation is aimed to prohibit unfair price discrimination and give the small dealer a chance to compete with the larger retailer. Recent large increases in bankruptcy of smaller business enterprises are alarming. They clearly show the need for this legislation. This bill has won the interest and approval of small business people in my district and I join in their urgent request that you act favorably on it.

Breathing New Life Into NATO

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. REUSS. Mr. Speaker, the article by Mr. James P. Warburg, of New York, in the current issue of the Reporter should be read by all those who are concerned that our foreign policy meet the realities of today. The article follows:

BREATHING NEW LIFE INTO NATO
(By James P. Warburg)

Although President Eisenhower and his Secretary of State have, until very recently, spoken with pride and satisfaction of NATO's growing strength and its successful role in forcing a change of Soviet tactics, it is now admitted that NATO is in serious trouble.

The obvious immediate cause of declining morale in the Atlantic Community is that since the Russians have stopped making threatening gestures a certain apathy if not a sense of greater security has permeated the people of Europe, dissolving the temporary solidarity created by common fear.

That, however, is by no means the whole story. The Soviet New Look has undermined the alliance's solidarity. The belated comprehension of what happens when both sides fight with atomic weapons has had an even worse effect. The more people think about it, the more irrelevant appears the effort to create a conventional shield against invasion. European nations have been asking themselves more and more frequently:

"If the threat of massive retaliation by the United States can prevent war, of what use are our puny divisions? And if the United States fails to deter aggression, or provokes it, then Europe will be finished, no matter which side ultimately achieves victory." In addition, an increasing number of Europeans are beginning to suspect that a defensive alliance involving the rearmament of a partitioned Germany is more likely to provoke than to prevent eventual conflict.

These, too, are only partial causes of European apathy. In order to consider what remedial action might be taken, it is necessary to recognize that the major weaknesses of NATO go back to its origins. The alliance, concluded in 1949, was the result of two assumptions: that Western Europe was the primary target of Soviet expansionism, and that military means would be the chosen instrument of Soviet aggression.

REARMING WEST GERMANY

It is not necessary to discuss here whether these two hypotheses were ever correct. I for one have consistently questioned their validity. Whatever may have been the original Soviet intentions, it is now clear that the primary Russian targets are southeast Asia and the Middle East—that the Soviet aim is to outflank and undermine NATO by other than military means rather than to attack it frontally.

The European have been quick to grasp the fallacy of the original premises. Yet the European themselves, especially the French, are largely responsible for the misshapen nature of NATO. Originally, the North Atlantic Treaty was designed as a declaration of political and economic as well as military solidarity. Its nonmilitary aspect was, however, overshadowed by the historic decision of Canada and the United States to consider an attack upon Western Europe as an attack upon themselves. Unfortunately, this military overemphasis was increased by French insistence that the United States promise not only to fight an aggressor but to start fighting him at the eastern fronties of Western Europe.

The United States agreed to this far-reaching extension of its commitment without facing its obvious implications. One of these was that an agreement to fight an invader in central Germany would inevitably lead to West German rearmament. The Korean war did not cause the United States to reverse its policy with respect to Germany; it merely provided the occasion for a reversal that had already become inevitable. The American demand for West German rearmament, in September 1950, caused the first wide-open cleavage in European opinion, one segment of which then and there became permanently alienated from NATO. This was true not only in the continental countries that Nazi Germany had overrun but in Britain and in Germany itself. The decision also strengthened Russian fear of NATO as a potentially offensive alliance.

At the Lisbon Conference of 1952, the United States finally persuaded the European governments to accept some form of German rearmament as well as a schedule of forced-draft buildup of their own military establishments. At the same time, the alliance was extended to include Greece and Turkey, two nations traditionally hostile to each other.

The Lisbon schedule turned out to be beyond the capacity of the nations participating. As a matter of fact, the goals set for 1954 have yet to be fulfilled. A cutback in promised American aid and a stretchout in American rearmament were followed by a general slowdown in European efforts. When the incoming Eisenhower administration ordered further reductions, adopted the New Look, and apparently placed its reliance upon massive retaliation, the NATO wheels ground to a halt.

THE CRISIS OF 1954

An equally important reason for the slowdown was French reluctance to ratify the treaty that would authorize German rearmament. When this European Defense Community Treaty was finally rejected in August 1954, NATO faced a crisis of the first magnitude. Rapid British footwork resulted in the development of a substitute plan. Whereas the EDC Treaty would have brought about a considerable degree of political and economic integration in addition to a common defense force, the Western

European Union substitute provided merely for adding West Germany to a strictly military alliance. Since then, however, opposition within Germany to NATO membership at the cost of continued partition has mounted steadily. At best, it will be 3 years before the 12 German divisions will be added to NATO. There is considerable doubt whether they will ever materialize as NATO reinforcements.

Meanwhile, France has now withdrawn the large majority of its NATO forces for duty in north Africa. The building and modernization of airfields is behind schedule. If war were to come tomorrow, there seems little doubt that Russia would enjoy not only immense superiority in ground forces but initial tactical air superiority as well. Small wonder that General Gruenther, NATO's retiring supreme commander, recently told a British audience that his organization was not yet capable of repelling an invasion.

In addition to a glaring weakness on the central front, which would invite invasion if the Russians had any intention to risk that adventure, NATO's Mediterranean flank has disintegrated, largely as a result of the Anglo-Greek quarrel over Cyprus. In the north, NATO's Icelandic base is in jeopardy because of local political opposition. These are the military facts.

The political and economic dangers facing the North Atlantic Community are even more serious. Britain, France, and Germany are its European mainstays. Britain faces bankruptcy and impotence if it loses its now seriously endangered hold on the oil fields of the Persian Gulf area. France faces decline to the rank of a third-rate power through the loss of North Africa. Germany is slowly drifting toward direct negotiation with Russia, which may well mean abandonment of military alliance with the West.

Relations between Germany and France are getting worse rather than better. The French are unhappy over losing the Saar and have angered the Germans by suggesting that disarmament take precedence over German reunification. American influence in Germaney is waning because of the obvious bankruptcy of a policy that seeks to force from Russia what amounts to unconditional surrender in an all-German settlement. Britain, the traditional moderator, is too beset with its own troubles in the Middle East to devise a way out of the German impasse.

All three of our major Allies are openly critical of Washington's overemphasis upon the purely military aspects of the European problem. Italy, too, does not hesitate to voice its dissatisfaction. President Gronchi recently told our Congress that NATO is out of date and "the reorganization of the western world" should be the first order of business. Our good friend and neighbor, Canada, has repeatedly warned that NATO will not survive unless its political, social, and economic clauses are implemented.

BASIC ORGANIZATION

This is the background against which one must consider what remedial action should be taken. If NATO cannot survive as a purely military alliance, what else can it become? This, in turn, raises the question: Is NATO itself necessarily the instrument through which Atlantic solidarity can be revitalized?

The obvious answer is that something must be done not just about NATO but about the basic organization of the Atlantic Community.

If the organized life of the Atlantic Community is to exist only in NATO, then Atlantic solidarity is already moribund.

NATO is obsolete in every respect except that it embodies the undertaking of Canada and the United States to consider an attack upon Western Europe as an attack upon themselves. In all other respects, it bears the marks of the time when it was believed that the United States had a monopoly of atomic weapons. It is doubtful whether even later the significance of Russia's penetration of the atomic secret sank fully into the minds of the NATO planners.

If the Atlantic community is to regain its inner solidarity and recapture the moral leadership of the world, it must present itself to the world in a garb other than that of NATO. We rightly think of the Atlantic community as the breeding ground of freedom. We tend to forget that, in the eyes of many of the world's peoples, the Atlantic community is also the cradle of colonialism and that it has been the breeding ground of many wars. In the view of this observer, it is neither fitting nor expedient that the vital center of western civilization should stand embodied before the world in a military organization—especially a military organization dominated by 3 nations of which 2 have been and still are the world's greatest colonial powers. If it is to revitalize itself and its influence, the Atlantic community must organize and be represented by an entity recognized by all the world's peoples as an instrument of progress toward greater freedom, human betterment, and lasting peace.

NONMILITARY COUNCIL

What needs to be done cannot be accomplished merely by giving NATO new jobs to do or creating a Cabinet charged with the consideration of political and economic problems. It can be accomplished only if the Atlantic community breaks out of its military shell and brings into being a wholly new, nonmilitary Atlantic Council.

This new embodiment of the western heritage would concern itself first of all with developing the political, social, and economic solidarity of the community. Secondly, the new council would seek to develop common policy with respect to other parts of the world. Third, the council would speak for the West in dealing with the Sino-Soviet orbit, instead of leaving such negotiations to be conducted by the American, British, and French Foreign Ministers.

One of the council's chief aims in such negotiations would be to achieve peace settlements and an overall security agreement, effectively enforced by the United Nations. Should it succeed in this endeavor, the need for alliances and counter-alliances would eventually be eliminated. This is the ultimate goal toward which Sir Winston Churchill recently directed attention.

Meanwhile, what of NATO? The alliance would continue to exist as long as necessary but, even as such, it requires drastic reorganization. It needs a moderization of its strategic concepts and, above all, a long-overdue revision of the bankrupt western policy with respect to Germany. Such a revision would aim at the military neutralization of a reunified Germany and the creation of the widest possible neutralized belt across central Europe.

A militarily neutralized Germany, excluded from NATO would not be prevented from joining the new Atlantic Council any more than a neutralized Soviet satellite would be prevented from maintaining its close political and economic ties with the Soviet Union. Germany would not become a vacuum, cut loose from its western moorings. It would, in every sense except that of a military alliance, be a member of the Atlantic Community. Should Russia reject this proposal, the West could still proceed to admit West Germany to the new Atlantic Council, releasing it from NATO and thus placing the onus for continued partition squarely upon the Kremlin.

Finally, since membership in the new organization would require no military commitment whatever, it is quite conceivable that even such determined European neutrals as Switzerland and Sweden might be willing to join and thus to round out the Atlantic Community.

The Atlantic Community needs more than a long-overdue reorganization of NATO. It needs a wholly new instrument to express and pursue its affirmative purposes, until the day when peace is firmly established and even this new instrument can safely be dissolved into a fully functioning world organization. It is encouraging that the study committee recently appointed by the NATO council consists of the foreign ministers of Canada, Italy, and Norway.

Mutual Security Act of 1956

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, I do not think anything need or can be added to what has been just said so well by the gentleman from Texas [Mr. BURLESON], who is the chairman of the ad hoc subcommittee set up by Chairman RICHARDS, of the Committee on Foreign Affairs, to study this problem. All I can do is to underline the fact which is so generally unrealized, or misunderstood, that when the Status of Forces Treaty was entered into by the United States, we did not surrender any sovereignty or any rights our boys had in other countries. Rather, under those agreements, the countries to which these boys are sent, have voluntarily relinquished certain aspects of their own national sovereignty to give us rights which we did not have.

Of course our men abroad do not find it as good as it would be at home, in this as well as many other respects; but, actually, they are a great deal better off under the Status of Forces Treaty than they would be without it.

Since no independent, self-respecting government is going to relinquish all of its sovereignty within its own borders, for us to insist on full sovereignty over every American soldier off duty wherever he is would require us to withdraw United States troops from all foreign bases. It would mean abandoning the world to the Kremlin. That has been its No. 1 objective all these years—to get the United States isolated and its allies pulled away so that we stand alone. The adoption of the Bow amendment would force us to give up the whole program of world security and withdraw from all our foreign bases. At one stroke the Kremlin would have won.

If we will think coolly about the perilous situation we are in today and the only reason for this bill at all, we will see that to pass the Bow amendment would simply wreck the program and leave the United States in a position where no Americans, whether military or civilian, and whether abroad or at home would

have the security that it is our purpose in this bill to try to build up.

Mr. DEVEREUX. Mr. Chairman, will the gentleman yield?

Mr. JUDD. I yield to the gentleman from Maryland.

Mr. DEVEREUX. Mr. Chairman, I think I inadvertently said I urge the committee to vote against the treaty. I urge the committee to vote against the Bow amendment, because, in my judgment, we have greater protection of our men under the Status of Forces Treaty than otherwise.

Federalist Papers a Best Seller in Italy

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, May 17, 1956

Mr. O'HARA of Illinois. Mr. Speaker, it will be interesting to my colleagues on both sides of the aisle to learn of the enthusiastic reception among the people of Italy that attended the publication of the Federalist Papers translated in Italian. Strange as it may seem, this classic of American democracy never before had been translated into the Italian language and made available in the language that they could understand to the people of Italy.

Most heartening it is to know that no sooner was this work off the presses than the sales were so large that within a matter of a few weeks the Federalist Papers translated into the Italian language was second on the list of best sellers in Italy. I say this is heartening because we in the House only a few weeks ago provided for a program carrying the classics of American democracy to all parts of the world. These classics that inspired our forefathers are now to be translated into 25 or 30 different languages and made available to peoples everywhere in inexpensive editions selling for 10 or 15 cents a volume.

If in Italy a translated edition of the Federalist Papers in a relatively expensive edition could meet with such a tremendous public response what, Mr. Speaker, can we expect from the program that will carry translated editions of our American classics to people everywhere in editions selling for 10 or 15 cents a copy?

Knowing of the interest of my colleagues, I have thought it worthwhile to compile some of the book reviews in the leading publications of Italy that attended the publication of this translated edition of the Federalist Papers.

STRESS NEED FOR TRANSLATIONS

But before proceeding with the presentment of these Italian book reviews, I wish to bring to attention a letter from Dr. Max Rheinstein, professor of law of the University of Chicago, to whom I had sent a copy of the Italian edition of the Federalist Papers. Dr. Rheinstein is a professor of comparative law and a scholar whose reputation is international. Dr. Rheinstein's letter follows:

DEAR MR. O'HARA: This is to express to you my best thanks for the copy of the Italian edition of the Federalist Papers, which you were kind enough to send me.

May I congratulate you on the achievement of having this work published in Italy and thus having started an enterprise which I very much hope will be continued. From my knowledge of Europe, where I have traveled extensively during the last few years and where I have a great many friends in academic life, I know how little known the classics of American democracy are there. There is a real need for making these works available to European readers, especially students and among them quite particularly the students of law, who are likely to occupy future positions of leadership in their nations.

The Italian edition of the Federalist is a beautiful achievement. The author of the introduction, Professor Ambrosini, is one of the most highly respected men of Italian public life. In his introduction, he combines high scholarship with a fine gift of presentation.

The format of the volume is beautiful and dignified. It will have a great appeal on the Italian book market. Acquaintance with the work could be greatly increased, however, if it would be possible also to bring out a cheap paper-back edition which would be available at a small price to students. The idea of publishing such a series is likely to bear rich fruits.

Sincerely yours,

MAX RHEINSTEIN,
Professor of Law.

ITALIAN EDITION OF FEDERALIST

The following is from the October 26, 1955, edition of Il Messaggero of Rome:

Yesterday, on the premises of the Association for International Organization, in the presence of the Prime Minister, of Minister of Public Education Rossi, of Mr. J. D. Zellerbach, former Marshall plan director for Italy, of Dr. Remsen Bird, of Minister-Counselor Jernegan, of the American Embassy, and of represenatives from other official agencies, the announced presentation of the first Italian edition of the Federalist was made. Hon. Gaspare Ambrosini, professor of constitutional law at the University of Rome and scientific editor of the work, presented a summary of American constitutional development from the Revolution to the Philadelphia Convention, analyzing the admirable contribution of the authors of the Federalist, three great American statesmen: Hamilton, Madison, and Jay. The fundamental problems of society and state, the position of the citizen confronted by a political power, the organization and operation of the public authorities, the tasks of the legislative, the efficiency of the executive, and the independence of the judiciary [branches of government], Professor Ambrosini said, has been thoroughly discussed in the American classic, not only with reference to the positive institutions of the American Constitution but also on the plane of the general principles governing society.

The first edition of the Federalist contains an introduction by Prof. Gaspare Ambrosini, with appendixes edited by Guglielmo Negri and Mario d'Addio. The work was translated by Bianca Maria Tedeschini Bosco, and the volume, in elegant print, was published by the publishing house of Nistri-Lischi of Pisa.

FIRST ITALIAN TRANSLATION

The following is from the Libri e Riviste—Notiziario Bibliografico Mensile—of November 1955:

Hamilton, Alexander; Jay, John; Madison, James. Il Federalista. (Comment on the Constitution of the United States.) Introduction by Gaspare Ambrosini; appendixes by G. Negri and M. D'Addio; translation by B. M. Tedeschini Lalli. Pisa, Nistri Lischi, 1955, 8°; pp. CXXXXVI-662, with 16 tables. f.t., 1,600 lire.

This is the first Italian translation of the original comment on the Constitution of the United States of America, The Federalist, a collection of 85 essays written by the authors between 1787 and 1788 addressed to the people of the State of New York in defense of the Philadephia Convention of September 17, 1787, and requesting ratification by the convention of the State of New York. G. Ambrosini remarks in the introduction that the work, which is still considered the most authoritative comment on the American Constitution and one of the alltime classics of political literature, points up, through what may be called authentic interpretation of the institutional concept, the obvious difference between the American Constitution and that of Great Britain which is unwritten and flexible. He then outlines the genesis of the Declaration of Independence of 1776, and subsequent political and constitutional developments up to the Philadelphia Convention and beyond, leading up to the Federal Constitution. The middle portion comprises analysis. A large portion of the work is devoted to illustrating the position of the Federalist in the struggle for ratification of the Constitution. The middle portion comprises the essays devoted to the fundamental problems of society and state, to the position of the citizen confronted with political power, the operation and organization of the public authorities, the tasks of the legislative, the efficiency of the executive, the independence of the judiciary (branches of government). The two appendixes examine the influence (exerted) on politico-juridical literature and the excellence of the jus naturae which it came to represent.

AFTER 170 YEARS

The following is from the October 31, 1955, edition of the Giornale della Libreria:

After 170 years, Italy has issued the first [Italian] edition of Il Federalista (The Federalist).

The Federalist is a collection of 85 essays written between 1787 and 1788, by A. Hamilton, J. Madison, and J. Jay, to defend the Federal Constitution approved by the Philadelphia Convention on September 17, 1787, and submitted for ratification to the New York State convention.

It is a survivor of the political upheavals out of which it was born and is considered even now as the most authoritative comment on the American Constitution and an all-time classic of political literature.

The Federalist treats of the problems relating to that peculiar State figure [phenomenon] created by the Philadelphia Convention, the Federal State, which not even the Europe of the "age of enlightenment" had succeeded in conceiving in concrete form, and which the Europe of today may bear in mind to good advantage if it wants to solve the crisis, into which its internal strife has led it, and to speed up its unification process.

The fundamental problems of society and State, the position of the citizen confronted with political power, the organization and operation of the public authorities, tasks of the legislative, the efficiency of the Executive, and the independence of the judiciary [branches of Government], are thoroughly discussed not only with reference to the positive institutions of the American Constitution but also on the plane of the general principles governing society.

In Italy, at the end of her period of recovery, The Federalist has been published in Italian for the first time, with an introduction by Prof. Gaspare Ambrosini, professor

of constitutional law of the University of Rome, with appendices edited by Guglielmo Negri, and Mario d'Addio, and translated by Bianca Maria Tedeschini Lalli.

A classic of all-time political literature—Nistri Lischi (cxxxvi—682 p. with 16 tables; [price] 1,600 lire).

PRIME MINISTER PRESENT

The following is a translation of an article appearing in Il Popolo di Roma on October 26, 1955:

Yesterday, on the premises of the Italian Association for International Organization, in the presense of the Prime Minister, Honorable Segni; administrative secretary of DC, Senator Magri, Senator Ceschi, Honorable Pella, Honorable Piccioni, Ministers Gonella, Mattarella, Rossi, Cassianai, United States Minister-Councelor Jernegan, and Honorables Ruini and Scoca, other deputies, professors, and judges, Prof. Gaspare Ambrosini spoke on the subject of The Federalist in the History of Modern Constitutionalism.

The speaker began by tracing the historical pattern of events leading to the formation of the United States of America and the Federal Constitution of 1787, which is still in effect, in support of what A. Hamilton, J. Jay, and J. Madison had written in their essays which had been collected and published in one volume, under the title The Federalist. This work should be considered one of the most typical expressions of American mentality and temperament, and the most authoritative comment on the Constitution of the United States, and, at the same time, an admirable treatment of [a] political science [subject].

In illustrating the institutions of the Constitution, the authors of The Federalist discussed, in a general way, philosophical and legal problems so as to bring out the reasons for the profound innovations contributed by the Constitutional Convention of Philadelphia to the previous state order, with particular regard to the politico-territorial structure of the State, to the three-power [executive, legislative, judiciary] system, and to their reciprocal [mutual] relations. As to the separation of power, the speaker illuminated the peculiar characteristics of the legislative and the executive pointing up the reciprocal [mutual] [instances of] interference [* * * overlapping of functions, etc.].

Professor Ambrosini then passed on to the most radical inovation: the adoption of the Federal system. The innovation consisted in the liberation ["divorce"] from the principle of indivisible sovereignty which in those days was regarded as a dogma of absolutist [totalitarian] as well as democratic currents. The fathers of the American Constitution created, in fact, a new order of two coexisting sovereign systems—Federal State and member States—both equally endowed with sovereignty in the power orbit and [equally] limited by the precepts of the Constitution. "Who would not appreciate," the speaker remarked, "the importance of this system and its potential advantage, especially with respect to the maintenance of peace, to strengthening the powers of the U. N., and to the unification of Europe?"

Professor Ambrosini concluded by summarizing the characteristic traits of the American Constitution, pointing out that it still answers in every way the purposes for which it had been created by the constituents of Philadelphia.

At the end of his discourse, Professor Ambrosini received warm and repeated applause and congratulations.

Professor Preassi opened the conference by speaking for the Italian Association for International Cooperation; United States Minister-Counselor Jernegan and Honorable Rossi, Minister of Public Education, offering the closing remarks.

For the Facts on Foreign Aid

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. ABBITT. Mr. Speaker, we are fortunate indeed to have in Virginia two newspapers each of which has an outstanding editor. These two men have rendered a real service to Virginia. They are continuing to keep our people informed on matters of importance. There appeared in the Richmond Times-Dispatch of Saturday, June 9, 1956, an editorial entitled "For the Facts on Foreign Aid." There appeared in the Richmond News Leader of Monday, June 11, 1956, an editorial entitled "Parsimonious, the Man Says." Each of these editorials is brief, to the point, and points out very cogently the weaknesses in the foreign-aid program being espoused by the present administration.

I also would like to point out at this time the contribution that the Honorable BURR P. HARRISON, of Virginia, has made in clearing up some of the facts about foreign aid. Congressman HARRISON is one of the outstanding Members of the House of Representatives. He has rendered, and is rendering, a real service, not only to his constituents of the Seventh Congressional District of Virginia but to all of the people of this great country of ours. I hope that the Congress will follow through on Congressman HARRISON's suggestion and have a comprehensive study made by a joint congressional committee to evaluate this country's foreign-aid programs and thereby let our people know just what is going on and the true facts about the program.

Mr. Speaker, I commend the two editorials mentioned heretofore and, under leave to extend my remarks, include them herewith:

[From the Richmond Times-Dispatch of June 9, 1956]

FOR THE FACTS ON FOREIGN AID

A great many Members of Congress are out of sympathy with the Eisenhower administration's plans for continued large-scale foreign aid, as evidenced by the onesided vote by which the House rejected the President's plea for restoration of $600 million of the $1,109 million cut from the administration's bill.

We ourselves are out of sympathy with the program to a considerable degree. This thing of dishing out billions indefinitely to foreign countries impresses us as something which has got to stop sometime. We have been at this for many years now, and we have fewer friends in the world than at almost any time in the past.

Take the case of Comrade Tito. We have provided this gentleman with about $1 billion in the past decade. For a time he seemed to be fairly firm in his commitment to the West, but that was only while the late Josef Stalin lived. As soon as Stalin died, or was murdered, his successors began determined efforts to woo Tito back. They seem to be making considerable headway at the moment.

Should we, then, continue to aid Tito? It is certainly debatable.

The whole case of the neutral nations of Asia needs to be reexamined. Are they likely to be won to our side by further handouts of money? When we indulge in such handouts, we seem to get less good will in return than the Soviet Union gets with a much smaller outlay. Why is this? Somebody in Washington ought to find out.

Representative BURR P. HARRISON, of Virginia, has come up with a constructive suggestion in this connection. He has joined with Representative MARGUERITE S. CHURCH, of Illinois, in proposing a joint congressional committee to evaluate the country's foreign-aid programs.

Mr. HARRISON is an able and knowledgeable critic in this field. He is no isolationist, but a realist. He went on a trip to Europe a couple of years ago to study these foreign-aid programs, and he studied them intensively. He came back with some hard-headed conclusions which were by no means altogether favorable to what the United States was doing in this field.

He and Representative CHURCH now point out that the Hoover Commission and task force have directed attention to broad areas of bad planning, extravagant programing, and wasteful operations which have cost the American taxpayers appalling sums of money over an 8-year period."

Mr. HARRISON and Mrs. CHURCH say that the Hoover Commission was unable to complete its inquiry for lack of time, and that Congress ought to complete it. Their plan makes sense. It should be adopted.

[From the Richmond News Leader of June 11, 1956]

PARSIMONIOUS, THE MAN SAYS

"We must continue to wage peace," said Mr. Eisenhower at his press conference last Wednesday. "We must not be parsimonious. We must support such programs as the Mutual Security Act."

Parsomonious, the man says.

Since July 1, 1945, the United States has paid out $51,752,000,000 in grants to foreign countries. The figure means nothing; no one can comphehend 51 billion of anything. But that is the fantastic total, and two points should be made clear about it: The figure does not include wartime aid; it includes only grants since 1945. Secondly, it does not include loans; our loans to foreign government have amounted, net, to $13,420,000,000 more.

Mr. Eisenhower's statement came as a part of his administration's effort to win congressional approval of an additional $4,900,000,000 in foreign aid for the fiscal year that begins July 1. The House Foreign Affairs Committee recommended only—only!—$3,563,000,000.

It is earnestly to be hoped that the House of Representatives will hold fast against every effort to restore the cuts made by the committee. Better yet, of course, would be House action to impose still further reductions.

Three considerations prompt us to this view: (1) An enormous sum in "carryover" appropriations, remaining unspent from previous years, is available for foreign aid in the coming fiscal year; (2) recipients of this aid are in a far better position than they have been since the war's end to carry a larger share of the load themselves; (3) foreign aid is getting to be a habit, and a bad habit, and the sooner this Nation breaks the habit, the better.

The first consideration alone should be compelling: As of June 30, the administration will have available to it—in funds already appropriated and ready for expenditure—no less than $6,800,000,000, of which $5 billion is for military purposes and $1,800,000,000 is for nonmilitary, or economic aid. In addition, almost $200 million already has been appropriated in earlier bills for foreign aid spending in the coming fisal year. Isn't $7 billion enough?

On the second point, a study by the International Cooperation Administration offers such clear evidence of European recovery since the war's end that many of the former arguments in support of foreign aid no longer seem valid. An analysis of the gross national product in European nations reflects this picture: Italy's economy has gained from an index of 70 in 1948 to an index of 108 today; Greece has gained from 64 to 106; West Germany from 47 to a lusty 110; France from 73 to 106, and Spain from 67 to 103. On the same basis, the United States' economy has gained from 81 to 107. It is apparent that a fresh appraisal needs to be taken of our allies' ability and willingness to support their own defense programs.

But in a broad sense, it is the third point that concerns us most. While "aid" from one government to another is historic—it dates at least from the time of the Hellenic wars—it is only in the past decade that such aid has come to be regarded, in the case of the United States Budget, as an automatic, recurring item. Foreign aid no longer is regarded as something special or temporary; it is viewed now as a normal part of the Federal Government's spending program, as routine as the pay of postmasters or the salary of Senators. There is no disposition to decrease the annual requests year by year, until they vanish entirely. On the contrary, Mr. Eisenhower's request for the coming fiscal year is more than $2 billion greater than Congress approved in 1955 and 1956.

This seems to us a bad thing from several standpoints. It serves to impose upon American taxpayers a vast additional burden at a time when the total tax load is dismayingly heavy. Secondly, it serves to foster in our allies a sense of continued dependence. But in actual practice, what this means is a sense of continued resentment. The United States should have learned by this time that we cannot buy allies and we cannot gain firm friends by handouts.

This newspaper does not want to be put in a position of opposing all foreign aid, of every description, in season and out, now and forever. Commonsense suggests that a particular foreign air base, in some hour of crisis, could mean life or death for the United States. What we do urge, however, is that such military aid be kept to a frugal—to a parsimonious—minimum, and that all authorizations be annually reappraised by Congress. In the field of economic aid, it seems to us that greater emphasis should be laid upon help from private capital and voluntary charity, and that government's activity should be confined merely to creating a climate in which private resources may work effectively.

On the basis of Virginia's share in Federal tax payments, it may be computed that the President's request for foreign aid next year would cost the people of this State $72 million. That is a figure more reasonably within comprehension. And put in short and simple words, we don't believe Virginians will get $72 million worth of value received if this immense sum is taken from us and sent abroad.

Hon. Sherman Adams

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. HESELTON. Mr. Speaker, those of us who had the good fortune of beginning our congressional service with the 79th Congress take particular pleasure and pride in the tremendously important contribution to the success of the Eisenhower administration which has been made by one of our former colleagues in that Congress, Sherman Adams, of New Hampshire.

All of us know of the great confidence in him President Eisenhower has expressed frequently and publicly, but those of us who served with him here in Congress, quite irrespective of party affiliation, are especially conscious of the fine work he has done as the chief assistant to the President.

Consequently, I am more than glad to place in the RECORD the following brief editorial which appears in this evening's edition of the Washington Daily News:

SPARKPLUG ON THE TEAM

Almost all executives, no matter the size of the organizations they head, have understudies, aids, and deputies who can run the show when the boss is on vacation—or, say, recovering in a hospital from an operation.

It is not so easy with the President of the United States.

But he, too, couldn't do his job unless he were surrounded by a competent staff. And one way to measure an executive is by the caliber of his staff.

Ike's top staffer is an ex-Governor of New Hampshire—Sherman Adams. He is exceptionally fitted for the job, occasional bleats from disappointed politicians notwithstanding.

Mr. Adams is the detail man. He keeps all the wheels turning at the right times. He does the spadework. He is the No. 1 channel to the President. He is buffer and go-between and alter ego. He is one of the ablest men in government.

The operation is not keeping the President out of the picture. He was back on the job, to a quite limited degree, of course, within a short time. He will take on more work as his convalescence progresses.

And his recovery will be infinitely eased and encouraged—and the Government's business adroitly directed—because the guiding hand of Sherman Adams is fulfilling its role.

On the Understanding of Aging, by Hon. Edith Green, of Oregon

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. METCALF. Mr. Speaker, on May 31 our colleague the gentlewoman from Oregon [Mrs. GREEN] presented an important and timely address on one of the major problems of this generation—that of our aging.

She spoke at a community meeting sponsored by the Arlington Soroptomist International Club and the Silver Age Club.

As Mrs. GREEN points out, we are undergoing a "quiet revolution." There are four times as many Americans over 65 today as there were 50 years ago, and the number of people over 65 is increasing twice as fast as the total population. There are 14 million people over 65 in America today. There will be 21 million by 1975.

Until recently, far too little attention was paid to their special problems, which include inadequate average incomes, job discrimination, housing and medical care.

But there is a growing awareness of the needs of our older people and of our responsibility to them. Mrs. GREEN's bill to set up a special agency devoted to comprehensive study of and action on the problems of aging is evidence of this.

Because we all share Mrs. GREEN's concern for what is rapidly becoming our neglected generation, I call my colleagues' attention to her address, which follows:

ON THE UNDERSTANDING OF AGING

Members of the Soroptimist and Silver Age Club, when your chairman invited me to join you tonight I was very glad indeed to have the opportunity, even though it commits me to stand before you for a few minutes and talk on a subject of which, very honestly, I know far too little. I'd be more embarrassed to admit this if knowledge of the real facts and problems of aging were widespread. But my ignorance is, I'm afraid, shared by young and old across the country. We just don't know much—not nearly enough—about one of the biggest things that is happening to us; as former speakers have said, we, as a nation, are growing older. But because we have so much to learn and since this is an occasion for learning together, I was very pleased to come and willing to display my scanty understanding of the subject. I am told, too, that there is to be a question and answer period after I finish. That is what I came for—I have a lot of questions to ask.

I understand I'm to talk, for a few moments, though, before the questions start. Let me say frankly, that my experience in the short time I have been in Congress has made me much more aware of the problems of the elderly citizens. The most vivid single lesson I have learned came this past fall and winter after the end of the session, when I was in Portland and working in my office there. Day after day, there in Portland, the reality of this subject unfolded itself to me in the real, living people who came through my door—a steady stream of older people, coming to talk to me about their specific problems and, sometimes (more generally), about the challenges facing older people. In those months, as I talked with these friends and neighbors, I think I learned a great deal. First of all, I learned how little I knew, and how much needs to be done and how little I or any of us have so far been able to do. Many of these people had problems on which, I am sorry to say, I could offer little help. With some, I was gratified to be able to do something. But when I came back to Washington, I came back with a new awareness of how much there is to do, and how urgent it is that we begin to do some of these things—to start now.

It seems to me that a gathering like this one, a few years ago, would have been a rarity. Today, thoughtful people are increasingly thinking about, discussing the puzzling questions raised by the facts of growing older. In a few more years, I hope, such conversation will become commonplace; and by then, we will understand a great deal more than we do now.

Of course, we have made progress. We've even got some shiny new words—like gerontology. And, because words are the coin of discourse, new ones are a sign of educational prosperity—not, I hope, of educational inflation. They mean, I trust, that we are learning something. It's high time. Twenty-five hundred years ago, in the brilliant culture of classical Greece old age was given comfort and honor—Plato entrusted the leadership of his ideal society, for instance, to a council of elders (to whom a 40-year-old vice president would have been unthinkable, if you will pardon a little cam-

paigning). In some primitive societies, whatever the time and place, special reverence and privilege for old age has been a frequent characteristic. So, as our 20th century high civilization begins a belated concern with old age, we are only catching up with 400 B. C. and with the civilization of darkest Africa.

What I would like to do, however, is not to survey our progress in dealing with this tremendous upsurge of longevity in our Nation, encouraging as progress is. Instead, I would like to dwell for a moment on the basic condition on which progress, now and in the future, depends. Beyond that I want only to examine briefly some of the major fields in which local and nongovernmental groups are at work—like the Soroptimists here and across the Nation, and many groups of older people like your Silver Age Club who have joined together in many cities for mutual pleasure and usefulness—projects like the recreation centers that are in successful operation in New York, for instance, and in my own city of Portland, Oreg., or the retired businessmen's group in St. Louis that has done such fine work in counseling and advising young businessmen out of their own experience and wisdom. And I want to say a word about the role and responsibility of government, as I conceive it, in this great human and social adventure that is overtaking us.

THE DIMENSIONS OF UNDERSTANDING

I say "great human and social adventure." I think that's what it is. We live in an age when life expectancy has increased explosively. We live in an age in which more and more of us are living longer and longer. Children being born today can expect to live a third again as long as their grandparents born in 1900. Those new years—this gift of added life—are the stuff of a great adventure. Along with them we are gaining new knowledge of the meaning of growing older. We are learning, for instance, that getting old and old age are purely relative notions; that modern gerontology bears out the old proverb that "you are only as old as you feel," for the facts are that aging is a process that begins in youth; that psychologically and physically we begin to slow down in the late twenties and early thirties. So in a sense most of our life is spent aging; and the added years we are being given in our contemporary society are simply a prolongation of the best years of our lives, our maturity. And these are not simply rose-colored views. They are what the experts say aging can and should mean if we understand it and if we age wisely and gracefully.

But if growing old is to be a rewarding adventure—if we are to use well these added years we are gaining—a great deal of change needs to be made in our social and individual outlooks. More than that, of course, there have to be some drastic changes in some of our habits and institutions—in some of the facts of life. We have to begin to live and plan our lives around the change in life span.

But the facts of life are usually a product of our understanding of life—in the field of aging as in other fields. It seems to me that, in confronting the challenges of growing older what we need now, above all, is new and greater understanding. That is what I meant a little earlier by referring to the basic condition on which progress depends. We are all going to school (in a sense) and the name of our course is on the understanding of aging. Sometimes I think that as a society we are dangerously near flunking the course. But I'm an optimist—I think we'll learn. People like you here tonight who are actually doing something—learning at first hand—are at the head of the class. We all have much to learn from you.

I say that our progress depends on understanding. Well, what is it we have to grasp, to comprehend? It is, I think, what I have sometimes called the quiet revolution. That's part of the trouble, of course—it's the noisy revolutions that get attention—and this is a quiet one. I don't want to repeat to you a lot of statistics—I am sure you know them as well or better than I do. Yet, I think we all have to learn them, relearn them—repeat them over and over until we genuinely understand them in the fullest sense. Until they have become for us facts with the urgency they warrant and the kind of urgency only facts felt and understood really have for us.

THE FACTS OF UNDERSTANDING

So at the risk of repeating the familiar, let us go over together a few of the familiar facts that mark this quiet revolution—for quiet though it is, it is truly a revolution. There are four times as many Americans over 65 today as there were 50 years ago. In fact, the number of people over 65 is increasing twice as fast as the total population. If over 65 is old people (and that phrase itself needs some reunderstanding) then there are 14 million old people in America today—by 1975 there will be 21 million. Those figures and the millions of older Americans they stand for are the ultimate reality of the situation we are dealing with.

Yet ours is a society too much geared to youth in its values, its habits, its prejudices and fashions, its allocation of resources. It is a society that has delayed too long its adjustment to the quiet revolution. Old age is becoming more and more important to more and more of us—yet we have neglected, to a truly shocking extent, to adjust our society to that change.

Let us simply review some of the inventory of facts that bear out that statement. Our older people have far too little money income. Their average family income is only about two-thirds that of younger families. In recent studies, the figure for an emergency budget—not even a minimum, decent standard, mind you, but an emergency standard of living—the figure for an emergency budget for a city couple to exist on has been estimated at $1,200 a year. Yet among older people, over a fourth of all couples, a third of all single men, and a half of all single women, live on incomes below even this emergency figure.

There are other facts to be learned and learned again. We know that the homes of older people are, consistently, inferior to those of their younger neighbors. We know that for older people with no homes of their own, living circumstances are often difficult or even desperate, spiritually as well as physically. Yet even the inferior homes that so many of our older people must live in are beyond their means. The cold, hard figures indicate that the cost of housing, for most of them, consumes a third or more of their income. Contrast this with the familiar rule of thumb that no one should spend more than a fourth of his income on housing. The obvious conclusion is that older people are spending far too large a share of their scanty incomes just to obtain a home, however inferior it may be.

We know that too often the position of older people in the community reflects our out-of-date understanding and our outmoded values and prejudices. Too often, older people do not get the respect and social recognition they deserve—too often, they are ignored and shunted aside. Their needs for recreation and social life are sometimes neglected, their willingness and ability to contribute to the community wasted. Medical care and group medical insurance are limited and expensive. Although older people are only one-twelfth of the population, they occupy one-fifth of the hospital beds. Yet 2 of every 5 older people cannot meet their medical bills even for present inadequate levels of care. Voluntary medical insurance plans include hardly a third of our older citizens. Yet, in the face of these sad statistics, it is precisely our older people who most need adequate medical care and have the least financial resources for obtaining it. With the problems they face and their inability to meet their needs, is it any wonder that mental illness among older people is increasing more than three times as fast as the national average?

JOB DISCRIMINATION: AN OBJECT LESSON

And to this audience of all groups, I need not spell out the shortcomings of job opportunity, the sad facts of job discrimination. We all know that the number of older people in jobs is declining drastically; and that the obstacles of discrimination are geting higher and harsher at ever earlier ages. In 1890 more than two-thirds of all men over 65 were gainfully employed. Today, only 4 in 10 hold jobs. Able and experienced workers find too often that they are automatically barred from a new job at 45, even at 35 or younger. These prejudices are far too widespread. Many school systems, in spite of the shortage of qualified teachers, will not hire a teacher over 40 or 45. In Government, which should lead the way in elimination of discrimination, I am sorry to say such policies are far too common. Some of us in Congress have been trying for several years successfully to write into law prohibitions against discrimination on account of age in civil service. For when the schools, the armed services, the civil service, in their hiring, discriminate against the older worker, we can hardly expect private employers to lead the way.

It is precisely here, though, in an area we are most familiar with and whose facts we know most about, that my point about the importance of understanding can be brought home most clearly. For the job problem of the older worker is, to a very great extent, a product of poor understanding and poor education. Here is one of the crucial sectors in which the breakthrough of the quiet revolution must come. Not only is job opportunity an ideal point for understanding and education to strike—it is a very important barricade, morally and psychologically as well as economically, that must be stormed and captured if the quiet revolution is to be won.

Job discrimination is for the most part a product of poor education. Why do employers discriminate against older workers? You have had some experience with this and I will be interested to know if your experience bears me out. It is said that older workers lack physical steadiness and dexterity. But there are ample facts to show that workers as old as 70 can be as steady physically as the young. It is said that older workers are more prone to injury. The facts show just the opposite. It is said that they have poorer absentee records. The facts show just the opposite. Their efficiency and their reliability, contrary to misunderstanding and prejudice are equal or even superior to those of younger workers. In an economy in which skill, reliability and maturity grow constantly more important than sheer physical energy, the older worker should be more and more sought after.

If he is not, why not? The answer is simple. There is a job of education to be done, understanding to be communicated. This is, I think the most important single job presently to be done in our education for aging, as a society. And you are doing it. If I can presume to advise you as to what you can do—and I think it is presumptuous, in light of your interest and achievements—I would tell you to go on just as you are. What you are doing is the great job of education of yourselves and your community—and crucially, of employers who must themselves learn the facts about the value of older workers. As they learn those facts, they will learn others. They, and you, and others like you across the country, as you continue to interest yourselves in these is-

sues, will bring about that "understanding of aging" which is the basic condition of progress. In the best sense you are propagandists—persuaders propagating important and much needed facts, promoting understanding of our quiet but enormously significant revolution.

And that is what we need—to make these important and pressing facts familiar facts of our existence; to develop a sense of shock at the facts of neglect and underprivilege; to become so aware of and impressed by these facts that, grasping them, we are immediately impelled to act vigorously to do something about them. That is what I mean by "understanding of aging."

I do not want to dwell further on this subject of understanding. But I do want to take a few moments to apply it. Where does understanding as we acquire it, lead us?

In the field in which you have done the most, it is leading us, I think, toward some substantial progress. We know, of course, that educating employers is not the whole of our problem. Often, older people have real problems of adjustment or retraining to prepare for new jobs. In a pilot study in New York State for instance, a special section was set up in the employment service, to give better and more intensive job counseling and retraining to older people than was ordinarily done in the employment service. The results were impressive: Of the older people who went through this special placement service more than twice as many found jobs as among those who went through only the regular placement service. Plainly, this indicates a need for improved job placement service.

Also, we know that industrial pension plans, for instance, sometimes discourage an employer from taking on older workers. So studies are being made to learn how, without damaging pension systems, older workers can be brought in to the job and into the pension system. These are details, of course. There are many others. But I believe we are on our way to reversing the trend—the doors of job opportunity, which for decades have been closing, are going to swing open again. People like yourselves, doing the work and gaining the knowledge, all over the country, are going to bring this about.

I would like briefly, too, to mention an activity in which the Soroptimists of my own city of Portland have been doing some fine work. Working with the city's bureau of parks and public recreation they have for some time been maintaining and operating a recreation center for Portland's older women. A variety of special social events and a regular program of craftwork are among their activities. Every month, the center has become a more important part of the social life of its members. Every month the center serves nearly a thousand women and monthly attendance in craft classes runs to several hundred with activities that range from making lampshades to aluminum artwork. The Soroptimists recreation center fills a real place in the social life of our older women. And again, let me point out it is doing more than filling a present social need—it is serving as a center for building understanding, for educating, for propagandizing. And so, it is contributing to the massive social adjustment that we must make. It is significant that the center, in Portland, has drawn visitors, who come to observe and learn, not only State officials working in related fields, but observers from Germany, the head of a working girl's program in Greece, an adult education director from Singapore.

THE PLACE OF GOVERNMENT

The programs and experiments we have talked about are primarily local—the people of the community, young and old together, working to adapt to the new society. And this is as it must be. We live locally, after all, our needs and our problems are local. Adjustment and acceptance of this revolution must be molecular—a change in every community, and every neighborhood—and must depend on genuine local understanding and effort. But there is a role for government, too. And before I end I would like briefly to touch on that, because, as a Member of Congress, it particularly concerns me.

Of course, anything that government does is, in the last analysis, only possible and only worthwhile if it promotes and cooperates with local activity. But there are many ways in which government has a very special and important role to play. In the field of housing, for instance, there is an obvious need for government. The size and scale of our housing needs and the problems of financing them have long been admitted to require government participation. But only this year, for the first time, it looks as though we will get what has long been overdue—a Government housing program that clearly and specifically recognizes the housing needs of older people. Housing bills in both the Senate and the House deal with this. The housing programs of the past have simply not been designed for the needs of older people; the conditions for FHA-guaranteed mortgages, for instance, have not been suitable for older people to buy homes; the limitations on single people in public housing projects have kept the many older people who live alone from taking advantage of this low-cost housing they should be eligible for. Now, however, the proposals call for mortgage terms adapted to the circumstances of older people; for special Government loan programs for building nonprofit housing especially designed for older people, with few or no stairs, nonskid floors, handrails, and the other conveniences that can make so much difference. Provision is to be made for older people, single or couples, in low-cost public housing. And increasingly, the designers and the builders are giving thought to the special needs and problems of older people and some real advances are being made.

Now here is one good example of a responsibility Government can and should accept. It is an example, too, of the interdependence of Government and local action. For in housing, success depends on cooperation between local housing authorities and local builders and the Government. But this is only one example. We should think of the role of Government in broader terms. I think we are beginning to do so. In a social change as great and complex as this one we need thinking and planning, and coordination on a large scale. Government should have a major responsibility here. We need, too, a kind of nationwide conversation—a national classroom—in which this understanding of aging can be stimulated and promoted. When problems get national attention focused on them—when they begin to occupy the attention of Government and, so, the news of politics and Government—that kind of national education is greatly stimulated. We are beginning to get this now, and the housing debate is only one example. Of course, there are differences of opinion and arguments in Government on how to proceed. That is understandable and all to the good. Argument is the road to education. For example, the administration is opposed to this expanded housing program for older people; it wants a much more limited concession to the housing needs of the aged. The majority in Congress, however, seems inclined to move more boldly, recognizing, I think, the real size and importance of the problem. And, of course, being part of the majority in Congress, I take that view.

THE NEGLECTED GENERATION

This present concern with the housing problems of older people is encouraging—but it is late in coming. All our concern with the aging is on a badly delayed schedule. The fact is, we are in a painful transitional stage in our social policies and we have not yet cought up with the realities that make transition necessary. My mail bears this out—and I am sure every Member of Congress has the same experience. Letter after letter brings me the problems of the older people whose circumstances have left them unprovided for in our current programs—often very bitter problems indeed. These are people whose primary earning years are behind them—whose middle years came while our social policies were only beginning and were even more inadequate than now. For most of them, health insurance and other such benefits now becoming available were simply not to be had when they might have established eligibility.

Even now, less than half of all men, a third of all women over 65, are covered by social security. And the benefits many of them draw are based on the low schedules of past years, completely out of tune with present high living costs. My mail tells me over and over of the difficulties of getting by with scanty benefit payments—or even worse, of people who, through technicalities or their special circumstances, simply do not qualify. It is all very well to say that these probems will be eased after a few more years of operation of the social-security program and of expanded private-pension programs. This is cold comfort to the many people who are trapped in the shortcomings and the failures of our present benefit programs, here and now. And even for the long run, there must be substantial improvements in the social-security system to make it live up to its name and provide real security for our older citizens. The current effort in Congress to lower retirement age for women to 62 and to authorize disability payments beginning at age 50 is an example of what we must do—and more—if we are to have real social security.

Meanwhile, the present generation of older people, the first wave of the quiet revolution, suffers from our delay and neglect. They are in danger of being a lost generation. One of the most pressing burdens on our conscience should be the special problems of these people, now, quite apart from long term plans. Here is a special responsibility of government—for it will take wise and vigorous government action if we are to help them in time. They cannot wait; the policies of 20 years from now will do them little good.

A PROGRAM FOR ACTION

My own thinking about all these problems has led me, at least at this stage of my understanding, to a more comprehensive approach, which reflects the things I have said here tonight and which is embodied in a bill I, along with several others, have sponsored in this session of Congress. What we propose to do is set up, in the Department of Health, Education and Welfare, a special agency devoted to comprehensive study and action in the total field of the problems of aging. We feel that such an agency, staffed by professional people who can combine study with practical experience and experiment is the best and quickest way to make progress. It is, we think, a way to promote that basic education and understanding and at the same time to set in motion some of the practical programs that understanding must produce. Because the field is new and complex, we are willing to make a modest start—but above all, we want to make a start. Here again, we disagree with the administration. It has appointed a "Federal Council on Aging" to study the field. We feel that, too often, these study groups are only a way to postpone serious action and tend to have the effect only of discouraging the kind of specific, concrete action we are urging. This Federal Council, for instance, is simply an

additional duty for men who have regular jobs in the different Federal agencies concerned. They expect to hold a conference of Federal and State officials this June. Now we don't object to conferences—we think the more discussion and publicity and exchange of ideas there is the better. In fact, our bill calls for a major conference, after several years, to evaluate our experience from the actual working program we propose. For instance, we want to provide some limited funds—a few million dollars for the first 5 years—for grants to the States, working with the Bureau of Older Persons—to get some expanded action and programs stimulated, so that we will have more experience on which to confer—real knowledge as the basis for a conference. But we disagree with the administration in its position that part-time councils, and conferences are a substitute for action and experience. We don't feel that they have given sufficient serious consideration to the need for such an agency and program, any more than we feel they are sufficiently bold in moving to meet the housing problem for older people.

But the important and encouraging thing here is, in spite of disagreement and what we feel is the administration's lack of vigor and imagination—the important thing is that interest in this quiet revolution is growing. We are all learning more and more, talking and experimenting more and more—we are moving toward that "understanding of aging" which—I come back to it again—is the first great step. I think the signs are abundant. And so I am hopeful that we are slowly but surely moving to that great—and overdue—social adjustment to these new facts of life. Your presence and interest here tonight—and your activities, are a further and a very important and heartwarming evidence of that same fact.

I have talked far too long for a person who admits that she knows little about this big and difficult topic. But I hope you will forgive this as simply an indication of my real interest—and because, I hope, I have talked with the purpose of promoting, as far as I can, that understanding of aging that I call the basic condition of progress.

Mutual Security Act of 1956

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

Mr. JUDD. Mr. Chairman, I rise in opposition to the amendment.

Mr. Chairman, I do not like to find myself in disagreement with my friend from Ohio [Mr. FEIGHAN], who has done so much work on this whole question. He has told me about his experiences and his observations in the Far East since his return last fall, but while many of the circumstances regarding these White Russian refugees from Communist China are as he describes them, I do not think some of the conclusions he has drawn regarding them are accurate.

First, let us look at this group of refugees. These are the first real anti-Communists in the world. These are people who fled Russia in 1917 when the Communists took over. A lot of them were members of the Czarist nobility, the Russian intelligentsia and aristocracy, and officers of the Czarist armies. They fled into Manchuria, down into Tientsin, Peking, and Shanghai. They lived in unspeakable circumstances. I have never seen refugees, even in IRO days in Europe, who suffered more than these people. Yet, they were so opposed to communism by religion and by tradition that almost none of them wavered. They had no legal status. They had no passports. Later they obtained so-called Nansen certificates of identification issued by the League of Nations to stateless persons. Many of the women lived in indescribable ways in order to support themselves and their families until they could get on their feet and reestablish good homes.

When the Chinese Communists in 1949 and 1950 took over the big cities in China, one of the first things the Russians who came with them tried to do was to get these persons to redefect to Red Russia. They offered them Soviet passports. They offered to transport them back to the Soviet Union. All sorts of promises were made, of immunity, of jobs, of reunion with their families. Some, especially among those born in China, decided to accept the promises and went back to the Soviet Union. Most of them disappeared, in the sense that the relatives heard nothing from them. To my knowledge none of them ever got back to China. They were just lost in the Soviet Union.

The great majority of the refugees refused to go back to Russia. Since they had no hopes for the future in Red China, they tried their best to get out of the country. The Soviet Union had given them passports as part of the inducements to go back to the Soviet Union, but they were foreign passports. They permitted the refugees to return to Russia but would not allow them to travel in the Soviet Union. The passports did, however, give identity to the refugees and allowed them to go from Communist China into Hong Kong, where the British would accept them for transit to other countries.

Second, what about security investigations and tests? Well, the real security clearance for these people is the one given by their fellow White Russians. This little group of anti-Communist exiles has survived only by being most closely knit together. They know each other. They know the enemy and his agents. They know who is anti-Communist, and who is a saboteur or a spy. I would much rather have the testimony regarding one of their number, of that group of individuals who have proved their dependability by almost 40 years of unwaivering anticommunism, than the findings of an American investigator who could not get any real evidence from inside China on which to base his testimony anyway.

Third, look at the record. Several thousand have been resettled and only 1 or 2 have ever caused any trouble. One was in Brazil on his way to Brazil. They have gone to a score of countries, including our own, all over the world, but no group of refugees has been taken care of by IRO or any of its successor refugee agencies has had a smaller percentage of its number go bad or prove unworthy than this tragic group of people, who are, I repeat, the original anti-Communists.

Mr. Chairman, I think it is only decent for us to go ahead and help resettle them, realizing that an occasional impostor or agent will get through. That happens under any refugee operation today. I fear that the gentleman in his commendable concern to prevent Communist infiltration is taking a position like that of the surgeon who is so anxious to save the patient's blood that he does not do the things necessary to save the patient's life. Our big concern is to save lives. I recognize we take a certain hazard, but the occasional mistake need not do too serious harm. These persons will remain under scrutiny wherever they are. It is a small risk, considering the gains. Their record of proved anti-Communism is so extraordinary that it seems to me that we should vote down the gentleman's amendment which would close the door of all hope to these unfortunate victims of almost four decade of Communist tyranny. It would sentence them to the guillotine or whatever is its modern equivalent. The fact that they have again declared their strong anti-Communist stand by their efforts to escape, means they are condemned unless they do escape.

Important City of South Gate, Los Angeles County, Calif., Resolves That Air-Pollution Control Is National Problem

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present the text of a resolution just received by me from the city council of the very important city of South Gate, Los Angeles County, Calif. This is my city of residence and has a population of well over 50,000, as related by its chamber of commerce. Its municipal boundaries on the northwest are contiguous to Los Angeles.

As you know, Mr. Speaker, I have been vitally concerned with the very subject of this resolution for a considerable time, and I ask the effective and active cooperation of all my colleagues in the premises:

A communication transmitting for councilmanic action a resolution of the Southern California Planning Congress which urges Federal participation in the smog-control program. Councilman Peckenpaugh stated that this resolution has not been brought to his attention but that it is his opinion that it would be perfectly all right to adopt such a resolution, following which it was moved by Councilman Dellmann and seconded by Mayor Hardy that the following resolution be adopted:

"Whereas the Southern California Planning Congress is interested in the promotion of constructive planning principles in harmony with the orderly growth and physical improvements of communities; and

"Whereas the smog problem is by no means limited to the Los Angeles area but constitutes a matter of nationwide concern so that a greater knowledge of the contributing factors and the ability to develop means for remedying it is of growing interest to many communities; and

"Whereas technical knowledge depends upon able research and experimentation such as that which is being excellently done locally by the Air Pollution Control District in the Los Angeles County area, as well as by a program sponsored by the Federal Government; and

"Whereas the efficacy of these efforts could undoubtedly be increased by a cooperative program by both agencies in this area where the intensity of the problem provides a more effective environment for conducting such research; and

"Whereas the local circumstances constitute an emergency that portends disaster of a degree normally recognized by the Federal Government when it is known to exist, thus making possible a program of both prevention and cure both locally and nationwide: Now, therefore, be it

"*Resolved*, That the Southern California Planning Congress urge its Representatives in the United States Congress to take appropriate steps to have the Federal Government supplement and broaden the work already accomplished by the Los Angeles County Air Pollution Control District by establishing a smog-control agency in this area to attack the problem in a cooperative, comprehensive, and realistic manner by building upon the foundation already laid by the local expenditure of $14 million on a program of research which represents a local contribution by the citizens of Los Angeles County for the purpose of solving the serious and urgent problem of preserving the health, safety, and welfare of the public, not only locally but nationwide; and be it further

"*Resolved*, That a certified copy of this resolution be mailed to each of the following: Congressman CLYDE DOYLE and Senators WILLIAM F. KNOWLAND and THOMAS H. KUCHEL."

On rollcall the motion to adopt the foregoing resolution carried by the following vote: Ayes, Councilmen Weaver, Dellmann, Hutchinson, and Peckenpaugh; and Mayor Hardy.

I, Dorothy McGaffey, city clerk of the city of South Gate, Calif., do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the city council at its regular meeting of May 14, 1956.

[SEAL] DOROTHY MCGAFFEY,
City Clerk of the City of South Gate, Calif.

What Will the St. Lawrence Seaway Mean to Seafarers?

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. LESINSKI. Mr. Speaker, the following article from the Seafarers Log interprets rather graphically the many sidelights of the ultimate development of the St. Lawrence seaway.

It also points out vividly the lack of incentive for people to build the ships that will be necessary for transportation on the Great Lakes when this project is completed. The same thinking prevails in Detroit where no action but a lot of talk is going on about the development of port facilities in the area which would mean tremendous savings for the industry because the area is just a little over 500 miles closer to Europe than are the cities on the eastern seacoast.

The article follows:

WHAT WILL THE ST. LAWRENCE SEAWAY MEAN TO SEAFARERS?

Two years from now, according to present schedules, the St. Lawrence seaway is supposed to be open to navigation by deep-sea ships drawing 25 to 26 feet. The seaway, which was bitterly opposed by United States Atlantic ports and shipping interests, is bound to take some business away from current east and gulf operations—just how much remains to be seen.

The Maritime Administration seems anxious to get United States shipowners interested in the seaway run, now serviced exclusively by shallow-draft foreign ships capable of drawing 12 feet or less. United States shipowners are at present reluctant to embark on the service for a variety of reasons. However, chances are in the long run they will get into the trade after a period of "wait and see" on how the trade turns out.

There is no question but that foreign-flag operators will completely dominate the seaway trade at its inception and perhaps for years to come. They have the ships of proper size, and they are well established in the lakes-to-Europe service.

United States operators will start from scratch on both scores.

In view of the potential effect of the seaway on United States shipping and on the jobs of seafarers, the Seafarers Log has surveyed current information on the subject. The following is a summary of its findings:

1. STATUS OF JOB

Work now going on to dig the seaway and build locks. United States Congress has also authorized deepening of Detroit, St. Clair, and St. Marys Rivers. Many major ports on lakes still have to be deepened to 27 feet or more. Welland Canal must be improved to carry more traffic, could be major bottleneck. Chicago, Milwaukee deepening harbors, other ports not so active.

Thousand Islands section: United States removing scattered shoals to get 27-foot depth, width 450 to 700 feet. Rapids section near Massena: United States and Canada building canals and locks 27-foot minimum, 440 feet wide. Canada will dredge 27-foot minimum through Lake St. Francis and will build new canal from Lake St. Francis to Lake St. Louis. Another part of the job is a new channel outside Montreal. There will be seven locks in all on river plus additional locks on canals and rivers between the lakes.

Other dredging jobs on rivers between Great Lakes will provide 25½ feet during navigation season. Welland Canal can handle 30-foot depth at sills but its traffic capacity is believed to be limited to about 27 million tons a year. The Seaway Authority is far more optimistic about Welland's capacity.

For practical purposes, ships with a 25-foot draft are desirable. No present American flag ships are suited to this trade.

2. WHAT KIND OF CARGO AN HOW MUCH?

Estimates of traffic potential range from 10 million to 83 million tons a year.

Consultant professor, John L. Hazard, University of Texas estimates 36.5 million tons in 1959, 52 million tons by 1965. Low figure is more than Panama Canal's best. Package cargo estimates are: Under 2 million tons, 1959; 6 million tons by 1965.

Maritime Administration estimates are pretty close to these figures.

Cargo will consist in main of bulk items with iron ore and grain accounting for two-thirds of tonnage; oil, lumber, coal most of remainder. Also a brisk traffic is expected in automobiles, finished steel products, farm machinery.

A good deal of bulk trade will be internal rather than trans-Atlantic; for instance, ore from Seven Isles, Quebec, which now goes exclusively to steel mills on United States east coast ports, will be shipped inland to Middle West steel mills when Minnesota ores are exhausted. This will be a good portion of overall traffic.

3. WHAT EFFECT ON PRESENT DEEP SEA PORTS?

Most effects will be on bulk cargo ports like Albany, Norfolk, Baltimore in the grain trade; also New York, New Orleans.

Port Authority, New York, originally estimated loss would be 6 to 7 million tons of grain and general cargo yearly, about 3½ million from New York alone. Big grain ports are in order of importance: Baltimore, New Orleans, Galveston, Houston, Albany, Philadelphia, Norfolk. New Orleans estimated its loss as 6 million tons when Calumet River is deepened, providing direct Mississippi-to-Chicago-to-Europe trade via the seaway.

Later estimates have been watered down considerably, but there will be some loss of bulk cargo. Baltimore estimates that maximum loss will be 10 percent on bulk cargo during shipping season.

Indiana University School of Business survey concluded cargo would be in following order: Iron ore, grain and petroleum; coal, wood pulp, ores, general cargo. Already in 1953 4.2 million tons of grain moved via St. Lawrence, more than the grain tonnage of Baltimore and New Orleans together. "Inroads upon export grain traffic now enjoyed by Baltimore, Albany, Philadelphia, Norfolk, New York are likely to be especially severe."

Port reactions: Norfolk and Albany building new elevators; New York making massive pier development program; New Orleans working on tidewater channel; New York digging out tanker channels.

4. WHAT EFFECT ON DEEP SEA SHIPPING?

United States-flag tramps may suffer as they depend on bulk cargoes. Liner operations also concerned, although less affected.

5. WHAT REACTION OF SIU SHIPPING COMPANIES?

Universally uninterested in seaway at present. Example, Alcoa has run into Halifax and parent company operates aluminum plant in Massena, N. Y., on St. Lawrence, but Alcoa has "no plans at present" to participate in Seaway trade. Other companies consider it entirely too remote to consider right now.

6. REACTION OF OTHER COMPANIES (NON-SIU)?

Maritime Administration offered subsidy on seaway route. Only one company, Isbrandtsen, applied. Other subsidized companies being prodded by MA to apply but appear most reluctant. United States shipping companies reluctant for several reasons:

(a) Shallow draft foreign ships have monopolized and developed Lakes to Europe route. United States company would have to enter trade as newcomer and build from scratch.

(b) Seaway can only operate eight months a year. Ships would have to lay up four months. Can only accept ships of 25-foot draft. New, smaller ships would have to be built by United States companies. Would not care to make heavy investment in smaller ships when trend for ocean service is to larger

vessels. Smaller ships mean same operating overhead, and are uneconomical. Foreigners have many such ships and are equipped to go in with fast-modern carriers.

(c) Smallest of MA prototype ships are too big and with too much powerplant for narrow-channel operation. For example, MA wants companies subsidized on this route to use 18-knot freighters on run. Ship operators consider this ridiculous speed for this kind of run where they are operating in narrow channels.

(d) Shipowners have good deal of inertia about seaway. If someone else goes in and makes a go of it, then they will clamor for help from Government. But they are unwilling to be the pioneers.

(e) Tramp ship operators would probably go for seaway trade if they can get tramp subsidies. Their first concern is subsidies to keep alive. Their present Libertys useless on seaway.

7. MARITIME ADMINISTRATION OUTLOOK

Essential route: United States must participate. MA will give company entering trade charters on N3 ships so they can enter trade immediately before seaway is completed. Will give 8 or 9 N3 ships to meet minimum sailing requirements of 4 or 5 sailings a month. After opening of seaway, 11 to 16 sailings with 18-knot freighters, 18 to 26 ships. Sailings would be to United Kingdom and north Europe, as well as Baltic-Scandinavia area.

N3 ships are 2,700 tons deadweight, 11-knot speed, and draw 18 feet, but will have to go light and carry only 1,000 tons of cargo to make present 14-foot locks (run with 12-foot draft).

MA claims that United States operators can utilize seaway ships in winter months by (a) annual inspections, (b) final voyages outside lakes to overesas areas, (c) loading at ocean ports for voyage into lakes at start of new season, (d) lay up remainder of time except for trip charters.

MA says its protoype ships and some C-type ships could be used in seaway; claims 80 percent of ships entering United States Atlantic ports draw less than 25 feet "indicating that high percentage of ships that operate on lakes will be able to transit seaway." MA did not indicate what percentage of ships drawing less than 25 feet are foreign-flag vessels.

And that's the picture of the St. Lawrence seaway at present. A mighty industrial waterway is aborning, but a look into the crystal ball shows little need for seafarers to be concerned over any wholesale loss of ships and jobs. The deep-sea ports are a long way from becoming ghost cities.

Resolution by the Missouri Senate

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 26, 1956

Mrs. SULLIVAN. Mr. Speaker, supplementing the remarks of Hon. MELVIN PRICE, of Illinois, in yesterday's CONGRESSIONAL RECORD, relating to the Honorable CLARENCE CANNON, I would like to refer to 1 or 2 other notable incidents in which he has rendered exceptional service to the country.

Promptly at the first news of the cessation of hostilities at the close of the Second World War, which came during the recess of Congress, he flew back to Washington and notified the Bureau of the Budget to submit at once a statement of all agencies holding uncommitted funds. The result was to freeze all such funds and by the time the House convened in the next regular session the committee had completed hearings and brought in a bill rescinding $64 billion of appropriations, the largest amount ever reclaimed in the history of the Congress.

During the consideration of the farm bill in the 70th Congress, when a surprise motion was carried in the Committee of the Whole completely vitiating the bill, his point of order compelled the adjournment of the House and saved the bill.

In the last session of the present Congress a bill reported by him from the Committee on Appropriations saved the REA cooperatives from bankruptcy.

Many other instances could be cited of invaluable aid to agriculture, economy of appropriations, veterans, school-lunch programs, roads, and so forth.

It may also be noted that Mr. CANNON'S service as chairman of the Committee on Appropriations is the longest since the establishment of the committee in 1865, and that his service in Congress is longer than that of any other Missourian in either the House or Senate since the admission of the State to the Union.

Recently in appreciation of Mr. CANNON'S service the Missouri Senate unanimously passed the following resolution:

"Senate Resolution 28

"Whereas today, April 11, marks the 77th birthday anniversary of the dean of the Missouri delegation in the National House of Representatives, the Honorable CLARENCE CANNON, Congressman from the Ninth Congressional District of Missouri; and

"Whereas Congressman CANNON has ably served the citizens of his congressional district and the State of Missouri for many years; and

"Whereas Congressman CANNON is now chairman of the Appropriations Committee of the House of Representatives and is recognized as one of the leaders of that body; and

"Whereas Congressman CANNON is also recognized as one of the world's authorities on parliamentary law and has served as Parliamentarian of the House of Representatives under both Democratic and Republican administrations, and has published many works on such subject; and

"Whereas one of his publications, entitled 'CANNON'S Procedure in the House of Representatives,' is one of the handbooks of the Members of this body who are interested in parliamentary law and procedure; and

"Whereas through Congressman CANNON'S many years of attention to the duties of his office he has won for himself the respect, admiration, and affection of the citizens of Missouri, and he can be truly regarded as one of Missouri's distinguished sons: Now, therefore, be it

"*Resolved*, That the members of the senate of the 68th general assembly, special session, express to Congressman CANNON their felicitations on the occasion of his birthday anniversary and wish for him many happy returns of the day, and many more years of public service, filled with health, happiness, and prosperity; and be it further

"*Resolved*, That the secretary of the senate be, and he is hereby instructed to send a suitable floral bouquet to Congressman CANNON at his office in Washington, D. C., together with a copy of this resolution."

STATE OF MISSOURI,
City of Jefferson,
Senate Chamber, ss:

I, Joseph A. Bauer, secretary of the senate, do hereby certify the above and foregoing to be a full, true, and complete copy of Senate Resolution No. 28, offered into and adopted by the senate on April 11, 1956, as fully as the same appears of record in my office.

In testimony whereof, I have hereunto set my hand and affixed the seal of the State of Missouri this 11th day of April A. D. 1956.

JOSEPH A. BAUER,
Secretary of the Senate, 68th General Assembly.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

The Future Is Our Assignment

EXTENSION OF REMARKS
OF
HON. CARL T. CURTIS
OF NEBRASKA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. CURTIS. Mr. President, there are many people who feel that the long-range economic welfare of agriculture depends upon the finding of new uses for products of the farm not needed for human or animal consumption. We think we are plagued with a great surplus at the present time. It is a surplus of about 5 percent. The best authorities indicate that in a few years, notwithstanding our population growth, we shall have a surplus of 10 percent.

The answer seems to lie in greater uses of farm products. The Congress has already taken important steps to give due consideration to this subject.

My attention has been called to an address delivered by Dr. Lawrence R. Hafstad, vice president and director of the research staff of the General Motors Corp., at the dedication of the General Motors Technical Center, at Warren, Mich., on May 16 last. Dr. Hafstad said, among other things:

We are concerned about our dwindling natural resources—iron, petroleum, coal, and so on. We wonder what succeeding generations will do.

* * * * *

Already we have, as an example of what succeeding generations may well do to solve their problems, the free-piston engine, on display here today.

In this engine we have a particularly happy marriage of the best features of both the conventional piston engine and the gas-turbine engine. Its torque characteristics and efficiency are ideal for large automotive units, but its outstanding characteristic is no doubt its complete indifference as to the kind of hydrocarbon fuel on which it is asked to run.

Looking to the future, this engine can be expected to become increasingly popular as our fossil fuel reserves diminish. Ultimately, direct energy from the sun stored up in last year's corn or cotton crop may, in the form of alcohol or cottonseed oil, fuel this year's automobiles.

Mr. President, I ask unanimous consent that the very fine address delivered by Dr. Hafstad be printed in the Appendix of the RECORD in its entirety.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE FUTURE IS OUR ASSIGNMENT

(Remarks of Dr. Lawrence R. Hafstad, vice president, General Motors, director, research staff, at dedication of General Motors Technical Center, Warren, Mich., May 16, 1956)

Here at the Technical Center of General Motors the future is our assignment.

This wonderful institution which we are dedicating today is much more than a place to work. It is truly a symbol of the faith of General Motors management in the future.

There can be little doubt that such a magnificent facility as this will substantially contribute to our industrial progress. In these laboratories, as in others, scientists are at work extending the frontiers of our knowledge of the physical universe. Their procedure is first to observe and record, then to contemplate and understand and, finally, to utilize the forces of nature. Thus, the abstruse basic research of one generation has successively become the commonplace technology of the next.

Scientists describing their work are invariably asked, "Of what use is it to me?" This is the inevitable question. Here is where applied science and engineering, or for short "technology," comes in. From basic research we learn what nature will and will not permit us to do.

Nature cannot be coerced, but with cooperation she has proven lavish with her gifts. The invention of agriculture, the invention of tools, the first use of fire, the age of copper, the age of iron, the invention of the wheel, the invention of printing, the steam engine, electricity, internal combustion engines, radio, aeroplanes, television, atomic energy, guided missiles, and now looking toward the future even earth satellites, and space ships—the very listing of these achievements of technology indicates both the generosity of nature and the breathless acceleration of the pace of invention. Where will it all end? Why should it end at all? Nature is infinite—infinite beyond the comprehension of man.

But just where is all this technology and industrial progress taking us? Does anyone know enough about the long-range operation of an industrialized society to forecast precisely the future of this very recent innovation? As of the persent moment the honest answer must be "No," and this is the basis of the fears of the pessimists.

On the brighter side, however, is the fact that our industrialized society will almost unavoidably increase leisure and with it the opportunity for study and contemplation. It may, therefore, be hoped, that with proper distribution of this new leisure there may come understanding of our admtitedly difficult social problems. We need, in other words, the development of an entirely new discipline, one which has been called technological humanism. This, then, is the reason for optimism; technology based on research is the sine qua non of a continuing industrial expansion, but this industrial expansion itself provides the leisure for more research and more technology, and, above all, more contemplation, more understanding and more wisdom.

To me, our continuing technological revolution is in many respects surprisingly like the atomic chain reactions with which I have been concerned in recent years. In both cases there is now reason for optimism, because we begin to feel that we have these seemingly limitless forces under control and, therefore, disposable in our service.

In modern technology mankind has at its disposal a tool so powerful and so infinitely variable and responsive, that as engineers we can face with equanimity the fantastic task of upgrading the living standards of the entire world.

For the United States and for the immediate future the prospects are bright indeed. We have over the years accumulated the capital represented by our physical plant and equipment which has enabled us to reach criticality, the point where a reaction is self-sustaining. We have further had a century of experience with large-scale industry and its problems.

But most important of all, we in the United States have a new feature, a strictly American invention, the provision of continually increasing purchasing power for the consumer. Our potential market is large enough to permit manufacturing operations on such a large scale that costs can be reduced by a really significant amount. This cost saving, which we can call the technological gain, is of such magnitude that under our system it has proved to be sufficient to provide both additional purchasing power to the consumer and additional incentive for more production.

It is important to note that this technological gain is just as basic to a socialistic economic chain reaction as to a capitalistic one. Under neither system can the distribution of benefits exceed the increment or dividend without stopping the chain reaction. This is important to emphasize for the benefit of those who have been misled to believe that a socialistic society can, contrary to all the laws of nature, miraculously produce "something for nothing."

The remarkable and long-continued economic well-being of the United States, reflected in the prosperity of the whole Western World, seems in large measure due to the presence in the American formula of proper relative amounts of incentive and consumer purchasing power. Thus the chain reaction of progress remains sustained.

These facts have not been lost on students in the U. S. S. R. As early as 1948 Vargas, the Russian economist, pointed out that the United States economy had developed into a modified capitalism which avoided the extreme business cycle oscillations predicted by Marx. This was considered heresy and under Stalin he was forced to recant. But Vargas and his students survived. Today we know that there are many in the U. S. S. R. who accepted the Stalin dogma with tongue in cheek.

The increasingly wide spread in salaries between worker and technical expert in the the U. S. S. R. indicates that the Russians themselves now are beginning to recognize the extreme importance of the incentive factor. Much of their recent remarkable industrial progress is no doubt due to this fact.

We find ourselves in a race with the U. S. S. R. for continuing technological supremacy. In this race, how do we stand in regard to the education of the large numbers of engineers, scientists, economists, and managers our society will need? Here are some unpalatable facts. In Russia all elementary students take mathematics and basic science courses. Those with special aptitudes are given every encouragement to proceed to advanced study. Laggards are promptly eliminated and attention is focused on the leaders. In this country basic science and mathematics are merely elective courses—and unpopular ones at that.

We are in a merciless struggle for survival, freedom against regimentation, self-

discipline against coercion. We are being challenged from an ideological and technological point of view as well as from a military one. Our choice is brutally clear. As a society, we can either learn mathematics and science—or Russian.

Personally I am convinced that as a people we shall make the right choice. The reason for my confidence lies in the very nature of our society and our political system, as opposed to the Communist system.

The American political system has been particularly designed to preserve individuality. The perils of conformity and regimentation on the other hand have been amply demonstrated by recent revelations of the devastating effect of Lysenkoism and Stalinism on the U. S. S. R.

Despite the obvious superiority of our system, many continue to worry about the conditions that we and the generations coming after us will face. We worry about where the food is to come from to feed another 50 or 100 million Americans. We are concerned about our dwindling natural resources—iron, petroleum, coal, and so on. We wonder what succeeding generations will do.

I am quite convinced that such concern is in the main misplaced. It will prove to have been as academic as was any concern that farmers of 50 years ago might have felt about where to get the oats to feed 50 million more horses.

Already we have, as an example of what succeeding generations may well do to solve their problems, the free-piston engine, on display here today.

In this engine we have a particularly happy marriage of the best features of both the conventional piston engine and the gas-turbine engine. Its torque characteristics and efficiency are ideal for large automotive units, but its outstanding characteristic is no doubt its complete indifference as to the kind of hydrocarbon fuel on which it is asked to run.

Looking to the future, this engine can be expected to become increasingly popular as our fossil fuel reserves diminish. Ultimately, direct energy from the sun stored up in last year's corn or cotton crop may, in the form of alcohol or cottonseed oil, fuel this year's automobiles.

And now let's look beyond the next generation. The paramount question is, how to assure ourselves adequate energy and material resources.

Assuming adequate technology, limitations on the attainments of an industrialized society are set ultimately only by these two factors. Even today, with our present standard of living here in the United States, our requirements for both energy and materials have become enormous. The average United States citizen has at his disposal roughly 13 horsepower or 100 mechanical slaves. Still more significant, this figure is currently doubling every 10 years and can be expected to increase faster still. Every American, a generation or two hence, may well rival the pharaohs of ancient Egypt in the power at his command.

The current consumption of materials by our society has reached staggering proportions. To support 1 individual for 1 year requires, for example, 1,260 pounds of iron, 18,000 pounds of fuels of all kinds, and 400,000 gallons of fresh water. These requirements will continue to expand.

How does research and technology help meet these mounting needs? A dramatic example is given by the sudden change in our situation with respect to energy reserves. Our present assured fossil fuel reserves as represented by all deposits of coal, petroleum, oil-bearing shale and natural gas amount to a combined fuel supply equivalent to more than 360 billion tons of coal. At predictable rates of consumption, however, these fuel supplies would meet our requirements for only a matter of decades.

Fortunately, these energy resources, vast as they are, are dwarfed by the energy now becoming available from a source that has come into the picture only within the last few years. Our presently known resources of uranium and thorium—from which we shall derive atomic energy—add up to more than 25 times the energy reserves presently represented by our assured reserves of conventional fuels. In other words, at expected rates of consumption the energy available from fissionable materials alone would take care of our needs for several centuries. This at least would allow future scientists ample time to learn to tap the inexhaustible energy reserves from the sun.

To get a measure of the amazing new economies available to us in atomic energy, it is well to remember this: that from 1 pound of fissionable uranium one can get as much energy as from 2,600,000 pounds of coal. Because of this large factor, and especially with a breeder-type reactor, which can be made to produce more fuel than it consumes, the fuel cost per se can be made vanishingly small, and hitherto undreamed-of energy supplies become available.

With low cost energy in prospect, the materials supply problem is also more or less automatically solved. The most critical material for the future will probably be water. As technology advances, more and more fresh water is required for industrial purposes alone. Our Great Lakes area has this priceless asset in essentially inexhaustible quantities. But other areas, even in the United States, are not so uniquely blessed.

Fortunately, in these areas, with low cost power available, it becomes conceivable to extract mineral salts from sea water, say by evaporation. The resultant fresh water supply can be used, first, for industrial cooling operations and then ultimately for irrigation. Vast areas of the earth now arid deserts can be made to bloom again.

With ample energy the sea can be mined for other substantial resources. Magnesium is even now being produced from sea water with the expenditure of 10 kilowatt-hours of energy per pound. There are 5.7 million tons of magnesium in each cubic mile of sea water. Thus, several cubic miles of sea water could provide the entire metal requirements of the automobile industry.

Similarly, in the case of many other materials, it will become possible to process progressively lower grade reserves or develop satisfactory substitutes.

Such developments are not now economic, but economics is a relative thing. With increasing population pressure it must be expected that more and more borderline processes and new materials will come into use.

With such possibilities in long-range prospect, the reasons behind the current wave of interest in the peaceful uses of atomic energy are obvious. Here at the Technical Center, through an access agreement with the Atomic Energy Commission, and through participation in the Detroit Edison breeder reactor project, developments in this field are followed with great interest.

It is the business of the Technical Center to be aware of and prepared for the results of major new basic trends of this kind. Thus, we provide insurance against the unexpected and unknown.

The field of materials, however, is the one which touches General Motors in the most places and most intimately. In the never ending quest for lower cost and better performance in all of our divisions, the physical properties of available materials are utilized to their very limits. Even for our regular automotive activities we need steel that is stronger, copper that is a better conductor, and insulators that pass even less current. For the newer fields of aeronautics, guided missiles, and atomic energy, such demands are increased many fold. In these areas we will need a whole new category of materials which will operate continuously at really high temperatures.

At speeds now being contemplated for aircraft, the wing surfaces themselves, due to skin friction, attain bake-oven temperatures which neither the pilot nor the complex electronic control gear can stand. Accordingly, in future planes the power that will have to be provided for refrigeration may well exceed that provided for propulsion.

Similarly with respect to the structural elements of engines of all types, it is the physical properties of available materials which set the limit on performance. For chemically powered engines, materials to operate continuously in the range of 2,500° to 5,000° F. are urgently needed. For really efficient use of nuclear reactors we need even now materials which can operate in the range from 5,000° to 10,000° F. The highest temperatures attained in current operating practice, specifically for turbine blades, is in the neighborhood of 1,650° F. With the current scale of materials research effort this figure has been rising steadily at about 100° F. per year for the last decade. There is every reason, therefore, to expect that it will continue to rise in proportion to the research effort expended. Any abrupt advance in materials technology, providing increased operating temperatures of even 100° or 200°, can mean the complete obsolescence of an engine type and therefore of an entire air fleet. Herein lies the true significance of the importance of materials research. The stakes are high indeed, between nations as well as between companies.

This field of materials and their uses is thus one of several in which we are particularly interested here at the Technical Center. New alloys, perhaps even entirely new metals from among the rare earths, will be needed for uses which now can be foreseen. Metals such as hafnium, zirconium, lithium, and niobium now are hardly known outside the laboratories. They may soon become as familiar as aluminum, magnesium, and zinc are now.

To be prepared for developments in new fields such as these, we at the Technical Center are continually broadening and expanding our programs in physics, chemistry, metallurgy, electronics, mathematics, and engineering. Thus today we are dedicating more than these marvelous facilities. We are dedicating ourselves to the never-ending task of advancing technology.

The technological chain reaction can provide for all our material wants. Wisely used, the byproduct, leisure, can provide time for the study and solution of our social problems. Training for leadership in both technical and nontechnical fields must be much improved. The foundation of scientific knowledge, both in the physical and biological fields on which the entire physical structure of our current civilization rests, must be further strengthened, and deepened by patient basic research.

These are exciting times in which to live. We are in the middle, or more likely in the beginning of a second industrial revolution. Insofar as technology is concerned, the road ahead is clear. With wisdom brought to bear upon all the problems of our society, this second industrial revolution will not stop until the standard of living of the entire world has been raised to undreamed of heights.

This, then, is the meaning of this great technical center: A symbol of faith in the future and of confidence in our social system; an instrument and a tool for increased production and an even higher standard of living—an insurance policy against ignorance and fear of the unknown and unexpected—a center of knowledge—a home for the inquiring mind—this is the General Motors Technical Center. May we live up to our opportunities.

Appraisal of Air Force Public Relations

EXTENSION OF REMARKS
OF
HON. THOMAS H. KUCHEL
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. KUCHEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a most excellent speech entitled "Appraisal of Air Force Public Relations," which was delivered by our colleague, the distinguished junior Senator from Arizona [Mr. GOLDWATER], before the Air War College, Montgomery, Ala., on June 12, 1956.

I commend to my colleagues in the Senate the thinking of the junior Senator from Arizona with respect to the problems of the Air Force in its public relations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

APPRAISAL OF AIR FORCE PUBLIC RELATIONS

(By United States Senator BARRY GOLDWATER, delivered before Air War College, Montgomery, Ala., June 12, 1956)

Boiled down to its basic requirements, public relations is a simple practice. It calls for a measure of clear thinking to develop the problem, the application of common sense to its presentation, and a great deal of energy all of the time.

I would add one more dimension to this operation: a recognition of the faith and confidence of the American people in the truth. The greatest lie-detector ever devised is the American mind in its constant search for the truth and the facts that are involved in the truth. Be phony about solving your problem and 165 million Americans will point a finger at you, and your public relations explodes like a tatooed bubble. Be factual and honest and these people will buy your product.

Our product is our Air Force. Our problem is how better to sell it to our citizens. With your permission, I should like to apply the public relations approach I have outlined to this problem. We can break it down into its several parts; look at each one separately; and, then, reassemble them into a whole to find conclusions that will strengthen our position.

This effort, in my opinion, encompasses an understanding of, one, the proper role of the military in shaping national policy; two, the development of airpower as the dominant force in our national military strategy; three, the effectiveness of the Air Force in interpreting the potentialities of airpower; and four, the public relations measures which could and should be taken to develop better understanding and support of airpower as the dominant factor in modern war.

Proceeding then, to a discussion of the next part of our problem for today, the obstacles to the development of airpower as that dominant force, it is necessary to recall certain fundamentals. These are, of course, familiar to you, but to the American people they are news; for we have been too busy publicizing the speed of our planes to tell the people why that speed is needed. We have been too busy selling the glamour of flying to explain the hard, strenuous, and back-breaking work that goes into creating an air force of which glamour is only an incidental byproduct. Having great faith in the fable of the tortoise and the hare, I shall now assume the role of the tortoise in attempting to develop this broader viewpoint for our people and, at the same time, to offer some thoughts as to how we can overcome the existing obstacles to our goal.

The role of the military in the conduct of our national and international affairs has, in the past, been confined to the actual conduct of the wars in which we have been involved. During periods of peace, when a nation should be building up and maintaining its military strength, and reviewing carefully the role of the military in the formation of any national policy, our military, until recently, has been subservient to the needs of peace. That relationship is a historic one in this country, and I do not argue at this time that it is wrong, or that it should be changed. Rather, my discussion today will be along the lines of reconsidering the historic role of the military in the United States, and its relationship to our national and international policies, to the end of determining how we can best approach the problems that confront the military today as it accepts its responsibilities in the formation of these policies.

Prior to World War I, the United States was not particularly concerned with the impact of wars that raged in other parts of the world. In fact, those wars had only an economic impact on the United States and we grew up in our history as an island, separated from the troubles of Europe and Asia. With the exception of the war with Mexico, our relationship with our neighbors in North America has been on an exceedingly friendly basis, so we have not had to be concerned over the possibility of conflict with either Mexico or Canada.

Because of our isolated position, we never considered the necessity of alliances with other nations far removed from our shores. In contrast to this situation, we know that in Europe it has been a long-established practice for the various countries to give assurances of mutual assistance to each other or to give direct aid by the signing of offensive and defensive alliances.

After World War I we began to be concerned about the international aspect of war and its impact upon our own country; and by the conclusion of World War II it was obvious to our leaders that alliances of the kind long practiced in Europe should be entered into by this country with friendly nations in order to combat the growing threat of communism.

Alliances involve international politics and hence strongly affect national politics. Consequently, there are signs of a growing awareness in this country of the true nature of war itself and of war's position in our planning and strategy. Despite alliances with countries far removed from our immediate proximity, however, the understanding of military force as an instrument of national policy has as yet been too slowly and too narrowly developed.

War enters the field of politics again when we realize the need for unity among our allies. This unity is achieved in a large measure by the machinations of politics; therefore, war is only a part of political intercourse and is by no means an independent and isolated thing in itself. It is important that we realize this truth at this point in our discussion, because we are concerned with what you, as Air Force officers, and I, as a politician, can do to bring home to the American people the place of the military in forming and promulgating our national policy. To my mind, it is of the utmost importance to tell the American people—and the sooner the better—that military force is not an isolated thing, as we have in the past considered it to be, but that it is an integral and intimate part of our national policy—in fact, an instrument of national policy.

Now I do not propose that we create a hysteria among our people in connection with this program of education. Quite to the contrary, I suggest that we follow sane and sensible methods to bring home to our citizenry the realization of war's position today and the fact that we must be constantly alerted to its dangers as well as to its potentials for peace.

Having recognized that military force is an instrument of national policy and, because of the need for unity, that war is only a part of political intercourse and, therefore, is not an isolated thing, we must recognize, too, that the business of war has become the business of everyone. We must also admit that the conduct of war has become the business of everyone. This does not mean, of course, the actual direction of the military in the field, on the sea, or in the air, but the conduct of war insofar as the citizenry works in unity with the military to create the continuing sinews of war and to provide the giant manpower pools needed by the military, and the understanding needed for unity. Since war is everybody's business, the military joins the team and assumes an active part in the formation of national policy in times of peace as well as in times of war. In fact, we can say today that the recognition of the proper role of the military in the shaping of our national and international policies might well be the instrument by which we can maintain peace.

We have been discussing the broad role of the military in the formation of national policy. We have touched briefly upon the definition of war which I feel is the chief part of the problem under discussion today. If there can be accomplished through education a broad acceptance of these definitions and the logical conclusions they give to the military's role in forming national policy, then we in this Nation will be fully receptive to the place of the Air Force as the dominant force in our national military strategy.

In order more fully to develop the role of air power in this regard, it is necessary to revert to history—to that portion of the history of transportation and the development of weapons systems that brought about sea power. Great Britain, you will recall, mastered ocean navigation and likewise mastered the weapons system of the sea when, in 1588, she defeated Spain in the first modern naval battle. Great Britain continued to be dominant in this new field of transportation and to be dominant, also, in the utilization of this new weapons system. By the judicious use of both, she was able to maintain a peaceful situation for many years.

In the air age, however, Great Britain no longer dominates the world as she did when seapower was her strength. The thesis of Admiral Mahan is now only valid as it applies to a new element—the air. Great Britain was quick to recognize this change, and accepted the fact that, with this new dimension in the element of power, surface forces and surface strategies were vulnerable and obsolete. The Royal Air Force replaced the Royal Navy as the key to her military doctrine. History having overtaken the British Navy, that country's air force has assumed the dominant role. The reasoning of Billy Mitchell now applies. Just as it once was necessary to bring matters to an issue upon the broad sea, it is now possible to resolve conflict only in the medium of the limitless skies.

We should now examine our military policies to see how we can best bring matters to an issue in the vast expanse of the sky and, by so doing, maintain peace throughout the world, as England so successfully did when following that concept by the proper use of seapower. On January 12, 1954, Secretary of State Dulles made a speech which I feel was not too thoroughly understood by the American people. It was entitled "The Evolution of Foreign Policy," and it became controversial because it stated that the President had made a decision to depend primarily upon a great capacity to retaliate, in-

stantly, by means and at places of our choosing. What people failed to notice was the continuing statement which said, "Now the Department of Defense and the Joint Chiefs of Staff can shape our Military Establishment to fit what is our policy instead of having to try to meet the enemy's many choices." In the past, the enemy's many choices were reflected in such areas as Greece and Turkey, Berlin, Korea, and Indochina. In the past our actions have been emergency actions which, while effective, were inadequate because, as Mr. Dulles said, "What we did was, in the main, emergency action, imposed on us by our enemies."

One of the basic concepts of warfare as expressed by Clausewitz is that a defensive position is strongest particularly when the defense has strong means of retaliation. Following this concept, what Mr. Dulles' statement implied was that the United States had decided to place more reliance on deterrent power and less dependence on local defensive power. Mr. Dulles went on to explain this by saying, "What the Eisenhower administration wants is an * * * international security system."

I see in that January 12, 1954, speech of Mr. Dulles the first official recognition by any person in a position such as he occupies that airpower has replaced seapower and landpower as the dominant force for peace in the world. What Mr. Dulles said, in effect, replaces a Mahan theory for the seas with a Mitchell theory for air, in that air, having developed as the strongest means of transportation, and the United States being dominant in this field, we can well accept airpower as our national strategy and build around it the organizations of the land and sea forces.

Just as England, when she had control of the seas, maintained a highly mobile and effective sea force, so must we today maintain a highly mobile and increasingly effective Air Force. The truth of this doctrine cannot be doubted with the results of World War II and Korea freshly in our minds. We have seen that military operations on land and sea cannot proceed without air superiority. We know, too, that transportation can be denied on the surface of the seas and underneath the sea by airpower. We know that land transportation can be completely destroyed by airpower. Knowing these things, we can generalize as follows: "Airpower is the national strategy which relies for force on a weapons system in which the land and sea forces are organized around the air forces."

At this point, let us inject the thinking of Douhet so that we might see what one of the pioneer thinkers in aerial warfare had to say on the subject: "Viewed in its true light, aerial warfare admits of no defense, only offense. We must therefore resign ourselves to the offensive the enemy afflicts upon us, while striving to put all our resources to work to inflict even heavier ones upon him. This is the basic principle which must govern the development of aerial warfare."

His thesis was based on the argument that command of the air would be won very quickly in any war and that the side that obtained this mastery would then have little to fear from enemy airpower. We know from experiences in war that there never has been, nor is there any hope in the foreseeable future for a one hundred percent defense against enemy air attack. Therefore, we must aak ourselves what it is we resign ourselves to when we talk of the offensives of the enemy. What damage could 50, or 25, or even 10 Russian planes inflict upon the American economy and the American people were they the only ones of fleets of thousands to penetrate our aerial defenses and drop their hydrogen bombs upon strategic targets in this country? We would then be resigning ourselves to possible complete destruction, or at least a destruction that could seriously disrupt the lives and the economy of our people.

Even Douhet admitted that control of the air could never be complete; but the introduction of nuclear bombs into modern warfare, particularly those launched by aircraft, must cause us to wonder just how resigned we can become. It seems plausible to me, therefore, to argue that, in the absence of any complete defense against aerial attack, and with the admission of nuclear weapons into our weapons system, the only deterrent to war will rest in an Air Force kept at a level of proficiency, both from the standpoint of equipment and of men, that will forever deter an enemy from making an offensive move against this country.

That is true, I believe, because if a handful of Russian planes could inflict major damage on our country, certainly the Russians would realize that, their defensive abilities being no greater or no less than ours, a similar handful of our planes could wreak comparable damage upon their homeland. It seems to me, then that massive retaliation is the deterrent power we must rely upon, at least for the forseeable future; and I do not think that, in this discussion, we should get into the probabilities of what might be developed tomorrow weaponswise.

Thus, airpower becomes the primary manifestation of national power in war and in peace because of its direct influence upon the social structure and warmaking potential of an enemy nation. If we, as a people, are willing to accept this new doctrine that peace can be maintained through airpower, then we will not be like the professional soldier of old who was most reluctant to give up his particular weapon or his particular pet strategy. We will become, instead, a people fully aware of the problems of war and a people determined to support this kind of an approach to peace—psychologically, industrially, and in every other way that is incumbent upon us. Such an attitude will better enable us to understand the necessity of evaluating existing and contemplated weapons systems.

This is not a question of subjugating one service at the expense of another. Rather, it is a matter of obtaining the greatest possible return from our dollar investment in the military forces as a whole. Once this is done, the force requirements can be determined accordingly and phased to meet the time requirements of our strategy.

It is hardly necessary to remind ourselves that nuclear weapons and modern delivery systems have become the cornerstone of modern military power. We all recognize them to be the key to American security. Military tasks, therefore, primarily consist of maintaining armaments in such a state of readiness and in such quantities that the Communists will find it disadvantageous to solve their problems by the use of nuclear weapons. They must no only be faced with the impossible task of neutralizing our retaliatory effort, but also must be made to realize that should retaliation on our part be necessary, such an action will be instant and complete.

Unfortunately, many in this country, both military and civilian, do not realize the full scope of these military responsibilities. These are the people whose thinking is clouded by historical prejudice. These are the proponents of balanced forces, supercarriers, duplications in military effort, conflicting service roles and missions. These are the wearers of the old-school tie in a day and age when a new school has been founded.

It is not suggested that we do away completely with surface forces merely because we are in a nuclear air age. It is difficult to understand, however, why many still do not see the need to tailor service needs and requirements to conform with modern patterns of political and military reality. This is not simply a question of money—although I believe that billions of dollars could be saved if forces were designed around service missions—but, more important, it is a recognition that nations control war, and therefore peace, by their dominance in modern weapons and the expeditious means of delivering them. We must accept the influence of powerful air forces upon international behavior. An understanding of the implications of this new weapon is not a matter of choice—it is the very condition of national survival.

Now, having determined that the military has a definite role in the shaping of our national policy, and having traced briefly the development of air power as the dominant force in our national military strategy, we have proceeeded through two of the four points in our discussion prior to setting forth a final conclusion.

At this point, we can peek under the tent to see how effective the Air Force has been in getting these two and related points across to our people. I am a salesman and in this profession we have always had a good axiom, "To sell the steak, sell the sizzle." If we apply this to the efforts of public relations in the Air Force, then I would say that the Air Force has done a better than average job of selling the sizzle. However, I don't think that the Air Force has done the job that needs to be done to sell the steak, which is the more important item in this particular instance.

We might liken the sizzle to the glamour of the Air Force, the speed of its planes, the drama of rescues, the excitement of air combat, and the other things which have always been readily associated with flying. The steak, in this instance, is airpower and what airpower means, as well as the two points that we have already developed in this discussion.

There certainly is a definite need for selling the sizzle of the Air Force steak and we must continue to do that, but the important thing in public relations at this time is to sell the meat, or the steak, of our whole problem, so that people will not so much associate airpower with beautiful formation flying or high-speed jets or rescues, as with its true nature and its place in our national strategy.

I am not critical of Air Force public relations when I recognize a failure in its past performances, because I don't believe that we can ascribe this failure to the Air Force alone. Rather, I think, it should be placed upon the entire military establishment, upon the Congress of the United States, and upon others in high position who can and should interpret for the American people the role of the military in shaping national policy and explain to them what war really is.

Much of the current misunderstanding stems from an historic general disinterest on the part of the American people in the subject of war itself. You and I know that war in this country has always been looked upon as an isolated thing. We have gone into them unprepared materially because in periods of peace between the wars there has been a general disinterest in the Military Establishment and its upkeeping. We have gone into them unprepared mentally because the people of the United States, having a natural and understandable abhorrence of war, have never concerned themselves with the true relationship of war to our national policy. It is well to recognize at this point, also, that we have gone into these wars weak in manpower because of a general apathy on the part of the youth of this country to participate in military training during the times of peace. Washington said something about this when he remarked: "The American people never sense danger till the bayonet is at their chest."

Generally, I think we can sum up this portion of the problem by recognizing that the American people, at all levels, do not under-

stand war and do not yet understand the basic reasons for airpower being the force around which we must construct all of our military strategies.

While these obstacles have been discouraging, and at times frustrating, there are indications abroad in our country today that are encouraging both to the military and to those of us who are not in the military, but who are concerned with national defense and the maintenance of peace. Most important of the encouraging signs was the statement by Secretary Dulles earlier this year which inferred that we had the ability to go to the brink of war and return. In that statement, we see the first general recognition by a man in high position that military force is an instrument of policy and a weapon that can be used for the maintenance of peace even without its application in the accepted form of the word.

At the outset of this discussion I said: "Boiled down to its basic requirements, public relations is a simple practice. It calls for a measure of clear thinking to develop the problem, the application of commonsense to its presentation, and a great deal of energy all of the time."

We have developed the problems as I see them, so it is now necessary to approach their solution in the most logical way possible. This I would like to do by presenting to you gentlemen a list of suggestions which I think will help to solve the problems we are discussing today.

The first of these should certainly be an intensive campaign of education starting immediately. This campaign should embrace the schools of our country from the high school level, or even lower, on through, so that the students might have a complete opportunity to study the relationship of military force to our national policy, thereby enabling them to better understand the problems of the military when they become voting citizens.

This same program of education should be directed at the personnel of the Air Force. It should likewise be spread to include citizens of adult ages who can be reached through the media of luncheons, club meetings, and visits to air bases. In other words, let's take the public in on what we are doing. Trained and intelligent officers and enlisted men should be sent to talk before these various organizations about the very problems we are discussing today.

One of the finest means of accomplishing this, in my opinion, would be to downgrade the classification of briefings of the various major commands in the Air Force and send them around to the organizations just mentioned. A person could learn more about the problems involved in global air power by listening to one of General LeMay's briefings than by reading many books on the subject. These briefings would necessarily have to be changed to eliminate some of the necessarily secret material that is passed on to officers; but, nevertheless, if we started with the mere assumption that people today do not realize that the globe no longer is measured from east to west and west to east, but rather from north to south and over the poles, we would lay a basis for a better understanding of air power.

Air Force personnel, from the privates to the generals, should be imbued with the idea that air power is our dominant power and they should speak of it on every occasion; but they should speak of it intelligently and speak of it not in terms of the speed of our aircraft, or the accuracy of our weapons, but, instead, in terms of the true concept of air power and how it has reached its rightful place as the dominant force in our military strategy. I understand that a dozen officers out of this class are scheduled to travel throughout the country after graduation and speak on air power. This is a good idea. It is a healthy thing. I know you are qualified to do this great public service.

The second suggestion that I wish to make depends entirely upon the success of the first, in that I will suggest that public relations should "trickle down." I mean by this that the top brass of our Air Force must be thoroughly cognizant of the problems which we discuss and must be able to transmit this understanding to their junior officers, and on down to the lowest grade of enlisted man. You have a very valuable program in the Air Force called Commanders' Call, I understand that once every month each commander talks to his people about air power. He shows them films of top Air Force leaders who cover the subject. Keep this program going. Use it to best advantage. It is necessary that, in the Air War College, we teach the officers the extreme importance of public relations. We take away, by so doing, the stigma that has always been attached in one way or another to the Public Information Office. That office should become one of great importance; it should be occupied by men thoroughly trained in all aspects of public relations.

A vital point to remember in discussing public relations, and particularly in discussing the people engaged in public relations, is that if a job is done properly, by properly trained men, many of the attendant problems are taken care of before they start. For instance, if the citizenry were fully cognizant of all of the issues that we are discussing here, and understood them, there is a strong possibility that the difficulties that have developed over sound around jet air bases would long ago have been overcome. Objections raised by some of our citizens to the high expenditures necessary to maintain an Air Force would likewise be eliminated if the people were told how this money is spent, not just in a general way, but in a detailed way, having explained to them the needs as they relate to air power and as air power relates to peace.

We long ago discovered that the glamor of flying has pretty much worn off—that it is looked upon today as a job, as a hard and arduous job to which dedicated men are attracted. If this is true, and we know it to be true, then public relations directed at the young, with the objective of educating them along the lines we have been discussing, will develop in them a patriotic fervor for the Air Force and for military service in general, and cause them to come into the Air Force in increasing numbers. It is not a healthy thing for the Air Force, or any of the military, to have to rely on draftees to build up its manpower. It would be a much better thing for this country if our youth were so imbued with patriotism that they looked forward to their period of service with the Armed Forces, and, of course, we would hope, particularly service in the Air Force. That, I feel, would be one of the results of a public-relations program following the course that I have outlined.

The third suggestion that I would like to make will primarily aid public relations people, and the public only indirectly. This suggestion has to do with the classification of material. When a national aviation magazine, or any magazine, for that matter, publishes a detailed account or report of a modern airplane or a modern piece of equipment, it is to be assumed by the public that the material is not classified. How many times, though, have you public relations men been asked by local newspapers for information based on these magazine articles only to have to say that you cannot release it because it is still classified. The newspaperman goes away with a peculiar feeling that the Air Force's right hand does not know what its left hand is doing. This, of course, can only be accomplished from the Washington level; but a thorough check on releases before they are made to see that there will be no conflict with existing classifications would certainly be appreciated by your public relations men, by the press, and, I know, by the public, as well.

The fourth suggestion that I make is one which I direct to all officer personnel, whether they be in public relations or not. It is this: Have an open-door policy toward the press, and particularly toward the public. Do not build a fence around your office through which citizens, or their representatives, cannot pass. Being in public life, and having been in the military, I realize that this is easier to say than to do; but remember that one unhappy customer can undo the good of hundreds of men working to better your position and the position of the Air Force. Particularly is this important as far as the press goes, because I can assure you that nothing makes a press man madder than to be continually denied access to an executive's office, whether that executive be a Senator, a general, or the president of a corporation.

The fifth suggestion that I make is a rather basic one, but I make it because I feel that it is not being followed too wisely at the present time. The public information officer must be in the know. He must sit in on policymaking meetings; he must be kept informed of the latest developments in air doctrine, air plans, aircraft, and everything about the Air Force. As a commander, include your information services officer on your personal staff. You write his efficiency report. Get a sharp, intelligent man who has some commonsense for the job. Give him free access to your office and your confidence.

Sixth in the list of suggestions that I make to you gentlemen this morning concerns a failing that many of our public relations people seem to have which does not show up in the corresponding efforts of our sister forces. This is the tendency of a public relations officer to seek to be a public relations person for his own particular outfit—that outfit alone—and not for the Air Force in its entirety. I know that many times this is the fault of the commander; so if any of you gentlemen here, going out to assume command posts, have the tendency to seek publicity for your outfit above the Air Force as a whole, you would do well to bury those feelings immediately and allow your public relations man full rein in his development of a better understanding of air power for the total Air Force. I might say that this is a rather common disease among all new institutions, whether they be in the fields of economics, in the professions, or in the fields of the military, as we have witnessed in the last 10 years during the swaddling days of the Air Force. It is a weakness and a tendency, as I say, but it is one that must be overcome before the organization as a whole, regardless of what field it is operating in, can go ahead and assume its rightful place of leadership in that area. Remember you are selling air power, you are not selling the glamour of any particular outfit.

The seventh suggestion which I offer today is that the Public Information Officer work closely with the aircraft industry. The aircraft industry has probably done more to promote the Air Force than the Air Force has done itself; and these people continue to do so, and their efforts can be coordinated with the efforts of the Air Force to a degree that the public relations of both the industry and the Air Force will greatly improve. The Air Force can very well tap the vast reservoir of experienced public relations men who are connected with the aviation industry and they can also enjoy the fruits of the large amounts of money spent by this industry to promote their aircraft, and, at the same time, airpower.

The eighth and last suggestion that I want to leave with you gentlemen today is that the Air Force should make a more concerted effort to educate the Members of Congress

concerning the true meaning of airpower and airpower's natural position as a pivotal force in forming our military strategies. How can this be done? Of course, you will say that Senators and Representatives are busy people. Well, I would suggest that you bring the briefings of the various commands of the Air Force into Washington, into the Senate and House Office Buildings, and stay there 2 weeks if necessary so that each and every Member of Congress could have the opportunity of being briefed, not on the glamour of flying, but on the basic essentials of airpower. Remember, gentlemen, that Congress is the legislative body of this Government which decides upon your appropriations—the body that can be openly critical of you—harmful to you, or helpful to you, depending on the attitude that it holds.

I can tell you from experience that Congressmen are interested in airpower and the problems of airpower; but not too many of them have had the opportunities that I have had to become intimately associated with the subject, and I feel that if more of them have that opportunity one of the great obstacles in your path today will be overcome. The Navy and the Army have sold their concepts in a wonderful way, chiefly because they've been at it longer; and then, too, because they have been associated in the peoples' minds with power, and with power in war. Now, however, we are locked in an argument as to whether the pivotal force will remain on the surface or go to the air, and we are not going to win that argument by continuing public relations efforts that merely "sell the sizzle." We must, as I have said before, "sell the steak."

Lastly, I want to remind you again that public relations takes a great deal of energy all of the time. The job of selling is not one that is done periodically, or spasmodically, or with a half-hearted effort. Selling is something that you gentlemen will be engaged in for the rest of your careers; in fact, you've been engaged in selling all of your lives, whether you know it or not. Your very first cries as babies were selling arguments to your mothers that you wanted to be fed. Your attempts to improve your dress and your appearances as you reached the age when you began to look at girls were only an effort to sell yourselves to some particular girls. The things you do through your careers as airmen and officers are attempts to sell yourselves to those people who are above you or to those people with whom you associate.

Apply exactly this same technique, then, to the issues we have discussed today, and the problem of public relations in the Air Force will improve rapidly and the people of the United States will develop a better understanding of airpower and will give it the proper support which it deserves as the dominant force in modern war.

The Student Exchange Program

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. NEUBERGER. Mr. President, the interchange of people among nations is one way to wipe out hostility and misunderstanding. If we know one another, we usually are friends with one another. The American Field Service program has helped to bring into homes in the United States hundreds of outstanding young people from other lands, who have become bosom companions of American boys and girls, and who thus have helped to promote international understanding and friendship.

One such young person is Jan Stoltz, of Sweden, who was an exchange student, under the American Field Service, in the city of Pendleton, in Umatilla County, in my home State of Oregon.

Jan Axel Stoltz lived with the family of Mr. and Mrs. J. W. Forrester, of Pendleton. He shared classroom experiences with the Forresters' older son, Michael, whom many Senators will remember as a Senate page during the year 1955.

In order that some of the beneficial results of this student exchange program may be known to Members of the Senate, I ask unanimous consent that a fine editorial from the Pendleton East Oregonian of June 7, 1956, which includes a portion of another editorial from the Albany, Oreg., Democrat-Herald, be printed in the appendix of the RECORD. Its title is "It Has Been Good for Him and Us."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT HAS BEEN GOOD FOR HIM AND US

The round of applause given Jan Axel Stoltz when he received a Pendleton high school diploma at graduation exercises last week spoke as adequately as words of the place he has earned in this community.

Jan was brought to Pendleton in August of last year by the Pendleton Rotary club through the American Field Service program. The Rotary club paid for his transportation from Sweden to the United States and return, and arranged living accomodations for him in a Pendleton home.

Jan is one of some 650 students who came to the United States last summer through the American Field Service program to study for a year in American high schools. The students were selected by AFS and were recommended to such organizations as the Rotary club throughout the country. The AFS program was started in 1948 and has grown rapidly. In another year it is possible as many as 1,000 students will be in United States high schools under AFS.

The AFS program works two ways. A high school that has had an AFS student may send one of its students to a foreign country for the summer months. Bill Clarke, a senior at Pndleton High School, will go to Germany this summer.

During the year that Jan Stoltz has been in Pendleton a great number of people have become acquainted with him. He has spoken to a countless number of organizations, has been active in youth activities at the Lutheran Church and has participated with other Pendleton High School students in many community activities. It has been good for Jan and for all who have associated with him.

Jan's presence at Pendleton High School has been as advantageous for the students as for him. It wasn't long after Jan came to Pendleton High when Principal Don Fossati told us, "I have to look twice to identify Jan in a group of students. He has become one of them. They accept him as one of the gang and he measures up in every way."

We have long been convinced that many of the problems that seem biggest in this world would dissolve if it were possible for all students in foreign lands to come to the United States for a year of high school and all our students could go abroad for a year of study.

Jan Stoltz convinces us it would be the answer when he says, "I can understand now why you do many things in this country that I used to think were entirely wrong. The greatest lesson I have learned from this year in Pendleton is to be tolerant."

Racial prejudice, intolerance, and bigotry are not born in people. But it isn't long before they are acquired. The AFS program blots them out in young people whose convictions are not yet formed to the point that they cannot be changed. The things those young people learn about the United States will benefit them, and the United States, through the rest of their years—benefit them particularly because the young people selected by AFS are future leaders of their nations.

Every community that has had an AFS student would like to have another. We're sure Pendleton will.

The Albany Democrat-Herald takes an interesting look at the student exchange program in its community:

"We've often thought that 'foreign student' is a misnomer for the thousands of young internationals who each year come to America to 'learn.'

"More correctly they should be called 'foreign teachers' because they teach us about their country and to a degree about the whole world. Then they go back home and teach their friends and relatives about us—and the whole world.

"But the misnomer must stick because we and everyone else prefer to learn by being the teacher.

"Bodil Normose illustrates our point. She is the young Danish student who has spent the school year at Albany Union High School. Those who know her have only to ask themselves whether their views of Denmark and 'foreigners' have changed at all in the past 9 months. If the answer is yes, then Bodil has been a teacher.

"She has taught those around her tolerance at least, and probably more.

"Another illustration of our point comes from an Albany man who several years ago was a foreign student in Denmark. About that important matter of ideologies of government, he says, 'I now see why they have their socialized system; I don't think it would work here, but I can see how it benefits them.'

"This is tolerance and it is a thing we need plenty of in a world split down the middle.

"The many foreign student exchanges aren't going to mend this international fracture. The principal reason they won't, we think, is that they have not been going on long enough, have not included enough students, and have not extended into the sealed-off portions of the world."

The One Hundredth Birthday Anniversary of Woodrow Wilson

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. STENNIS. Mr. President, this year we commemorate the 100th anniversary of the birth of Woodrow Wilson who boldly committed the United States to a mission of world service and who gave his life in an heroic effort to dispense justice to a world maddened by wartime hatreds.

Viewing man as a responsible moral agent, he demanded the same high standards of integrity and impersonal dedication to service of other men and

nations which he imposed upon himself.

The moral idealism which enabled him to hold so tenaciously to what he believed were principles of international justice, even after his countrymen had listened with dull ears to his 14 points and rejected his beloved treaty, was the same moral idealism which gave him his driving zeal for public service in national and community affairs.

His character has withstood the assaults of his detractors and today Woodrow Wilson is recognized as a great statesman and a great educator.

The faith which guided and sustained Wilson throughout his years in the Nation's service was a faith acquired in childhood as he sat in the pew and heard his father bring the word to the people. Wilson was always an active participant in the affairs of his church and, even in his most trying days in the Presidency, he did not fail to attend weekly worship services.

I ask unanimous consent to have printed in the Appendix of the RECORD a sermon delivered at Staunton, Va., on April 22, by the Reverend Graham Gordon Lacy, D. D., pastor of the Central Presbyterian Church of Washington the church in which Wilson served as a ruling elder during his years in the White House.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

WE HAVE THIS TREASURE

As we are gathered here in the house of God to remember before Him one of His servants, and to thank Him for the life of Woodrow Wilson, I am reminded of some words written by Lord Byron. The poet is remembering all the grandeur of Rome, and he imagines how one would feel when viewing its monuments by moonlight. After telling how the moonlight softens its "rugged desolation" and fills up the "gaps of centuries," he says: "The place became religion and the heart ran o'er with silent worship of the great of old—the dead but sceptred sovereigns, who still rule our spirits from their urns."

It is now a hundred years since our great World War I president was born, yet he rules our spirits now more than when he was alive. He is dead, yet he is more than ever a "sceptred sovereign," especially in the councils of United Nations, and the hearts of people who long for peace.

It is fitting that, as Ecclesiasticus says, we should "Praise famous men, and our fathers that begat us." They are a people's treasure. More than all the gold buried at Fort Knox, they are our treasure. More than in its armies and navies and strategic air command, the treasure of America lies in its memories of great men—Washington, Adams, Franklin, Hamilton, Jefferson, Jackson, Lincoln, Lee, Woodrow Wilson. Memories of these and other constitute our hope for the greatness of sons now growing up, and of children not yet born. Truly we can say today, thinking of Wilson, "We have this treasure."

But we shall want to say it—even as Wilson himself would insist that we say it—under the control of the New Testament. Says Paul: "We have this treasure in earthen vessels, that the excellency of the power may be of God, and not of us."

I

As you pay homage to Wilson through the events of the coming week, distinguished authorities will call to mind his many sided service. They are qualified, as I am not, to assess the full value of his legacy as an educator and a statesman. My desire is, rather, to speak of his Christian faith, that we may not only mark its power in his life but claim such power for living today.

You know well the gracious influences of home and church that began to shape this faith in early childhood. Born here in Staunton a son of the manse—his maternal grandfather and two of his great grandfathers, as well as his own father being Presbyterian ministers—Thomas Woodrow Wilson was a "child of the covenant" if ever there was one. He moved away at the age of two; but other faithful churches, in Georgia and the Carolinas, nourished the faith of the growing boy, and always there was a wonderful home. Said Wilson later: "My father was a very lively companion and seemed to provoke and draw out liveliness in other people. * * * He was the best instructor, the most inspiring companion, I venture to say, that a youngster ever had."

It has been said that although most of our Presidents have been conventional churchgoers, few have been unusually religious men. Washington and Lincoln, however, as Perry Laukhuff noted, "hold a special place in our history and our hearts because of their inner faith and their reliance on a divine providence." And Wilson became the soul of a vast idealism which he himself inspired and which was first inspired in him by the Christian convictions he held. These were not assumed for political advantage; they had always been a part of his life.

The religion of Woodrow Wilson is part of the Capital of America. Let us be thankful that "we have this treasure."

Wilson became an elder of the Presbyterian Church at Princeton. When he came to Washington as President, he continued the habit of a lifetime by regular attendance at church. For 12 years he was a member of the congregation I now have the honor of serving. Some of our present members have vivid memories of his presence. Dr. James H. Taylor was Wilson's pastor during those momentous years, and he has given us a fascinating description of the President as a churchman. "He was deeply reverential in his worship," says Dr. Taylor, "desiring always that he might occupy his place in this church in a simple, unostentatious manner. He came to the services regularly and enjoyed the fact that he was permitted to worship quietly and without display. He gave the most careful attention to the reading of the Scripture and to the preaching of the sermon. In fact, it was often quite disconcerting to a visiting minister to discover suddenly that the sermon was being listened to with such concentrated attention. He always joined in the singing of the hymns and would often step out of his pew to give a hymnbook to someone who may have come in late.

"He himself was always punctual. His punctuality was an example to this entire congregation. During the period of the war, when our city was crowded and our churches taxed beyond their capacity, he insisted that his pew should be divided with the soldier boys, and often soldiers, sailors, and marines were seated next to the Commander in Chief of the Army and Navy. * * *

"He was interested in the work and progress of the church and took time from the arduous duties that were resting upon him to come to the meetings of the congregation and of the presbytery to emphasize his interest by his presence.

"He went to church to worship, not merely to observe a custom, but to find comfort and strength for his spiritual life." [1]

Dr. Taylor will never forget that on the Sunday following the declaration of war with Germany Wilson came as usual to the morning service looking "as calm as a summer sea."

[1] Dr. Taylor's book, pp. 39, 41.

And later when the treaty of peace was under attack—and the Covenant of the League of Nations—Wilson would come on Sunday mornings and "sit in his place in the house of God, apparently oblivious to all the storm and tempest on the outside." Dr. Taylor says that he seemed to have "just one great absorbing thought—that he had come to the house of God to worship."

II

I do not mean to suggest that the religion of Woodrow Wilson was confined to his behaviour in church. Heaven forbid. This was only the most obvious expression of a faith that permeated his life.

How can we bring into focus here a faith so far-reaching as his? I believe we can do it through two of the strongest convictions Wilson held. One was his belief in the supremacy of the spiritual. The other was his confidence in the providence of God.

A suberb expression of the former conviction, the supremacy of the spiritual, may be found in a message entitled "The Minister and the Community." Here Wilson says: "It seems to me that the minister should try to remind his fellow men in everything that he does and in everything that he says, that eternity is not future, but present; that there is in every transaction of life a line that connects it with eternity, and that our lives are but the visible aspect of the experiences of our spirits upon the earth; that we are living here as spirits; that our whole conduct is to be influenced by things that are invisible, of which we must be constantly reminded least our eyes should be gluttonously filled with the things that are visible; that we should be reminded that there lurks everywhere, not ungraciously and with forbidding mien, but graciously and with salvation on its countenance, the image and the memory of Christ, going a little journey through the earth to remind men of the fatherhood of God, of the brotherhood of men, of the journey that all spirits are taking to the land that is unseen and to which they are all to come." [2]

This way of looking at life is the very fountainhead of freedom; for if we are spirits responsible to God alone, we need have no anxious fears about what man can do to our bodies. Here is a faith of untold worth. It is ours—we have this treasure.

Speaking about the Bible, Wilson said that it "reveals men unto themselves, not as creatures in bondage, not as men under human authority, not as those bidden to take counsel and command of any human source. It reveals every man to himself as a distinct moral agent, responsible not to men, not even to those men whom he has put over him in authority, but responsible through his own conscience to his Lord and Maker. Whenever a man sees this vision he stands up a freeman, whatever may be the government under which he lives, if he sees beyond the circumstances of his own life." [3]

Again, Wilson asserted the supremacy of the spiritual in an address in Washington when he said: "I believe that the glory of America is that she is a great spiritual conception and that in the spirit of her institutions dwells not only her distinction but her power. The one thing that the world cannot permanently resist is the moral force of great and triumphant convictions." [4]

The force of this conviction freed Wilson from toadying to selfish men. During his second campaign for the presidency certain minority groups tried hard to get him to make concessions, but in a letter to the leader of one such group he made his position very clear. "I would feel deeply mortified," he said, "to have you or anybody like you vote

[2] The Minister and the Community, by W. W., 1909, Y. M. C. A., pp. 9, 10.

[3] The Bible and Progress, Denver, 1911, Pub Pap., vol. 11, p. 292.

[4] Address at Washington, D. C., 1915, Pub. Pap., vol. 111, p. 381.

for me. Since you have access to many disloyal Americans and I have not, I will ask you to convey this message to them."

Wilson made mistakes in judgment, and for them he paid dearly; but his loyalty to principle was never questioned. It grew out of his faith that the spiritual was supremely important. The mistakes were human, the frailty of what Paul calls "earthen vessels." But the faith was a treasure possessing the power of God.

III

Equally strong was Wilson's faith in the providence of God, whose judgment and mercy appear in history, ruling and overruling the actions of freemen.

The other day a mother was rejoicing with her son about an honor that had come to him in high school. Reminding him of some duty he had neglected, she asked him to do it now as an expression of gratitude for the honor. To her surprise, he saw no connection between gratitude for a privilege and performance of a duty. "But honors can be lost," she reminded him. "Much depends on how we receive them and use them. We live in God's world, where spirit and character have a lot to do with our destinies."

Such a faith is not obvious to young people, but there is no finer legacy we can leave them. It is never subject to proof, but neither is it subject to disproof. It's a matter of moral decision alone, but it makes for great men and great women.

We like to chuckle over an extreme expression of this faith in the life of Woodrow Wilson. As President he had no more use for the machine politician than he had shown when Governor of New Jersey. To one who had campaigned for him and who was suspected of seeking favors from him, he said: "I wish it clearly understood that I owe you nothing. * * * God ordained that I should be the next President of the United States. Neither you nor any other mortal could have prevented that."

Such a faith was no easy fatalism, however. I am indebted to John Huffaker, a member of Central Church, for pointing out that "If any one characteristic stands out in Woodrow Wilson, it is his emphasis on contributing his maximum effort to meet each challenge." Mr. Huffaker cites the time when Wilson refused to cancel an important engagement because of a painful cut on his head. Said he: "I never feel the slightest concern over the outcome of anything when I have done all that I could do. It is only when I feel that I haven't done my part that I worry about results."

It was faith in the overruling providence of God that made Wilson's patriotism so free from any selfish chauvinism.

"The way to be patriotic in America," said Wilson, "is not only to love America, but to love the duty that lies nearest to our hand and know that in performing it we are serving our country."

On Memorial Day at Arlington, 1917, he expressed the servant ideal for our Nation, even as the servant ideal had been Christ's conception of His own proper role. "In the providence of God," said Wilson, "America will once more have an opportunity to show to the world that she was born to serve mankind."

Such patriotism is always subordinate to the Kingdom of God.

Recently a distinguished Virginian expressed the same sentiment in a group that included the president of Virginia Union University. The colored man pressed him on the point. "Do you mean that your loyalty to the Kingdom of God transcends your loyalty both to the Nation and to your State?"

The answer was unequivocal: "I do."

The Library of Congress has a centennial exhibit of Wilson materials—photographs, medals, notebooks, letters.

It includes a letter written by Wilson to his pastor, Dr. Taylor, showing that his faith in Providence was strong to the end of his life. One paragraph reads: "I sometimes get discouraged at the exceedingly slow progress of my recovery, but I am ashamed of myself when I do, because Gad has been so manifestly merciful to me, I ought to feel much profound gratitude. I believe that it will turn out well, and that, whether well or ill, it will turn out right."

In the darkest hours of his life, when his strength failed and opponents mocked him, there was always the light of God to lead him on. "For God, who commanded the light to shine out of darkness, hath shined in our hearts, to give the light of the knowledge of the glory of God in the face of Jesus Christ."

The Christian faith of Woodrow Wilson was his greatest treasure, and it may be ours. We have this treasure in earthen vessels—frail vessels of clay—but this only points to the comforting truth that its power lies in God and not in us.

If this was not so, our heroes would discourage us. How could we, unaided, hope to equal their towering genius? But if the power in them is God's, there is hope for every one of us. Filled with the power of God, as the earth is filled with spring, we can rejoice that "He cometh in the spring to redeem us all."

CONCLUSION

Let us close with a poem that is strangely prophetic. Wilson was standing on the seashore at Bermuda talking to a friend on a sunny day. But he chose to express his thoughts by quoting this somber poem from the Oxford Book of English Verse:

"In the hour of death, after this life's whim,
When the heart beats low and the eyes grow dim,
And pain has exhausted every limb—
The lover of the Lord shall trust in Him.

"When the will has forgotten the lifelong aim,
And the mind can only disgrace its fame,
And a man is uncertain of his own name—
The power of the Lord shall fill this frame.

"When the last sigh is heaved, and the last tear is shed
And the coffin is waiting beside the bed,
And the widow and child forsake the dead—
The angel of the Lord shall lift this head.

"For even the purest delight may pall,
And power must fail and pride must fall,
And the love of the dearest friends grow small—
But the glory of the Lord is all in all."

Let us pray:

Our Father, even as today we hold in grateful remembrance a high-statured leader of our country and the world, turn us, we pray, toward the tasks of the future with a patriotism as pure, a virtue as sound, and a faith as serene as his.

May Thy will be done in our corner of the earth that Thy love may be known through the breadth of it, for the sake of Jesus Christ our Lord. Amen.

The Tide Has Turned Against Internationalism

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 13, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine statement made by that distinguished statesman, the Honorable Hamilton Fish, of New York.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE TIDE HAS TURNED AGAINST INTERNATIONALISM

(Statement by former Representative Hamilton Fish, New York, May 28, 1956)

This is an answer to the veiled implications that Nazi money was given in 1940 to the National Committee To Keep America Out of War. I was chairman of the committee, composed of 50 Members of the House of Representatives and a few former Members, and I welcome the opportunity to defend its actions and all of its members.

We had only one objective: to keep America out of the European conflict, representing the sentiment of 85 percent of the American people according to public opinion polls at that time. We raised approximately $4,000, sufficient for our purposes of using every legitimate means to keep us out of war, including one advertisement in the New York Times just prior to the Republican Convention in 1940. We never received, and never were offered any Nazi money. There is not an iota of evidence of any kind that a single cent was ever given to the committee.

I have been asked why the State Department released this "dead cat" 16 years afterward, and whether it was routine procedure or premeditated for political purposes. If I thought it was a political release made in desperation to head off the rising tide of Americanism, I would denounce Secretary Dulles without reservations, and the New Deal internationalist holdovers in the Department, for another attempt to smear the 1940 Republican noninterventionists who represented 85 percent of the people, and who in 1952 still constituted one-half of the Republican Party under the leadership of Senator Taft.

In the last year, the pendulum has swung back and I believe today that once again a large majority of the Republican Party is opposed to our huge foreign handouts, to making the NATO a world government, and are in favor of the Bricker amendment. If Secretary Dulles wants to debate our foreign handouts and one-worldism, without dead cats, I accept the challenge. The overwhelming rejection of Senator WILEY by the Republican convention in Wisconsin, where the Republican Party was born; and the withdrawal of Senator GEORGE because of opposition to his intense internationalism and support of foreign handouts, are significant political-opinion straws indicating distaste of our extreme internationalistic policies. Public opinion is now once again in favor of placing our own American interests first.

I was proud to be associated with such Americans in 1940 as Senators Taft, Vandenberg, Wheeler, Reynolds, Walsh, Nye, Clark of Missouri, Clark of Idaho, Johnson of Colorado, and a host of Congressmen, including Representative Joseph Martin, who realized that the lend-lease bill was a phony war measure—the money and arms to be followed by soldiers and war. Today, many of the supporters of the lend-lease bill admit it was a war measure, including Editor Sulzberger of the New York Times. It was forced through the Congress by the most outrageous use of patronage and political influence. I denounced the presidential campaign of 1940 as the grossest fraud ever perpetrated on the American people. President Roosevelt proclaimed his love of peace by promising the American fathers and mothers again and again and again that their sons would never have to fight in foreign lands. And Willkie afterwards called his own speeches mere campaign oratory. After FDR

won, he exerted his vast powers to incite us into war. I agree with Ambassador Claire Luce that President Roosevelt maneuvered and lied us into war against the wishes of the American people. I know nothing about the dead-cat release of the State Department except what I have read in the newspapers.

Senator MUNDT, then a Representative, led 20 Members of Congress to the Republican National Convention in 1940 to urge an anti-war plank and succeeded in having a very strong one written. No Member of Congress was paid his traveling expenses to Philadelphia. Our committee had ample funds if anyone had required $20 for such expenses. It is obvious to me that the Nazi telegraphic suggestion to provide $60,000 for numerous newspaper ads was rejected, as no such ads were ever published except in the New York Times, which our committee paid for. There would have been nothing legally wrong if our committee had taken money from any source, a year and a half before Pearl Harbor—but it did not. For every dollar Germany spent to keep us out of war, Britain spent millions to drag us in. I wonder why the State Department release contained no reference to the vast sums, amounting to many millions of dollars, spent for British propaganda in the United States in order to drag us into World War II? How much of these huge sums came from lend-lease money or actually from our own taxpayers to involve us in a war against the wishes of our taxpayers and of most of the American people?

I am proud of the fact that up to Pearl Harbor I did everything in my power to keep us out of war. I voted for war after Pearl Harbor, but what a tragedy it turned out to be. We had a million casualties, spent $300 billion to destroy Germany and Japan—the only powerful barriers to the spread of world communism. A mad Hitler was replaced by an even madder Stalin, and 70 million Germans by 700 million Communists. Now we are trying to placate West Germany, Japan, and Spain, and make military allies of them. We have spent over $50 billion since the war in foreign handouts and the more we spend the more we are hated because Britain, France, and Italy fear we are trying to drag them into world war III. The truth is that the result of the Second World War, which we entered to save the liberty of Poland and the smaller nations, was that we threw them to the dogs and communism, which has taken over half of the world. What a tragedy and travesty it has all been. The American people are just beginning to realize the ghastly blunders of our warmaking internationalism. We are now confronted by world communism, a frightful, evil, dangerous, and powerful force which is determined, by fair or foul means, to communize the entire world.

In my opinion, the members of the National (Congressional) Committee To Keep America Out of War should be awarded medals for meritorious service for their efforts to keep out of war instead of being subjected to snide smear attacks 16 years later. If it had not been for the activities of this entire antiwar committee, President Roosevelt would have involved us in war 6 months or a year before Pearl Harbor, and then Germany would never have attacked Russia on June 21, 1941. In all probability, we would have been fighting Germany and Soviet Russia, and might have lost the war, or it might have been a deadlock, with millions of American soldiers sacrificed in vain.

I am reminded of other unfair and untrue smear attacks made on me. I was accused of renting my house in New York to Otto Von Keip, the German consul general, and raising the rent twice. The fact is that it was my father's house, and the rent was reduced twice, and some years later Otto Von Keip led the conspiracy on Hitler's life and was tortured to death. He was never a Nazi.

Again in 1938, when I was chairman of the military affairs committee of the New York State Constitutional Convention I introduced a bill to outlaw the Bundists and Communists from arming, parading, and marching in uniform. Fritz Kuhn, the Bundist leader, came up to Albany to oppose the bill. I never had met him before or seen him since, but someone took a picture of him asking me at the hearing for an opportunity to oppose my bill, and thereupon circulated 100,000 copies, stating that I was affiliated with him.

There are other smears that I remember, but time will not permit discussing them. But one thing is positive: There is not one word of truth in any of them. No one has ever questioned my integrity or Americanism, except possibly some fanatical Communists. However, I am not interested in making any defense of myself except to keep the record clear that I and my noninterventionist colleagues fought a valiant fight to keep America out of war in 1940 and 1941, and only lost when we were maneuvered into war through the back door by President Roosevelt issuing a secret war ultimatum to Japan 10 days before Pearl Harbor to get out of China and Manchuria. Secretary of War Stimson called it a war ultimatum in his memoirs.

The repudiation of Senator WILEY and the withdrawal of Senator GEORGE will have a discouraging and terrifying effect on the internationalists and one-worlders. The time has come for a complete revision of our foreign policies, no matter how agonizing it may be to some misguided internationalists and one-worlders.

The Magic Factor

EXTENSION OF REMARKS
OF
HON. JOHN E. MOSS, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. MOSS. Mr. Speaker, the attached editorial, which appeared recently in the Record-Searchlight, of Redding, Calif., deals most interestingly with the magic factor in the nonprofit utility system. This illuminating editorial points out that a rate cut in a nonprofit utility system actually results in a profit that brings another rate cut—which brings another profit and another rate cut.

Obviously a practical limit would ultimately be reached in the reducing of costs—but the editorial touches upon important facts which defy contradiction.

The editorial follows:

THE MAGIC FACTOR

There's a magic growth factor in a nonprofit, publicly owned electric system that seems to work like yeast in a dough. The annual report of the Sacramento municipal utility district, which we've just received, shows that the magic factor is at work there.

Here's how it works: The publicly owned utility lowers its rates. The lower rates encourage people to use more electricity, so that the utility system makes more profit on the lower rates than it did on the earlier, higher ones. But in a nonprofit utility system, the profit is used to improve the system and to lower rates. So, a rate cut results in a profit that brings another rate cut—which brings another profit and another rate cut. This can go and on. Municipal electric systems that have been operated for a long time on a nonprofit basis show a history of rate reductions every few years. Tacoma, Wash.; Eugene, Oreg., and Winnipeg, Manitoba, Canada; are good examples.

Sacramento's municipal utility isn't so old, just 9 years, but even in that time it has managed to reduce rates twice and increase both total use of electricity and use per customer.

On October 1, 1954, SMUD cut its rate to consumers. But instead of this meaning less revenue, it meant more revenue. Use of electricity gained 11½ percent, from 732 million kilowatt-hours in 1954 to 817 million in 1955. This brought in $12,344,802 for 1955, as compared to $11,631,605 the year before.

The average cost per kilowatt-hour for residential users dropped from 1.96 cents to 1.85 cents, and the use per residence went up from 2,688 kilowatt-hours to 2,817 kilowatt-hours.

Despite the lower price to consumers, SMUD's net operating revenue (which a business would call an operating profit) went from $3,649,338 in 1954 to $4,028,952 in 1955.

This magic factor can work in Redding, too. It has, in fact, worked several times in the past, but not as often as it should. The trouble here is that there has never been a policy established to devote electric system profits to rate reductions. Instead, various amounts are withdrawn from the electric fund and spent for other city activities. The amount depends not upon some sensible formula or fixed limit, but on how badly the council needs money for something else.

So it's a poor bargain, really, when the council transfers $100,000 from the electric department to the general fund. Assuming that it buys a full $100,000 worth of services, that's all it provides. The same $100,000 put into a rate reduction would save Redding people that amount, so they'd get full value. But the reduction would result in increased use of electricity and bring about another, future rate reduction—a something for nothing that we're now passing up.

Mason's Declaration of Rights

EXTENSION OF REMARKS
OF
HON. JOEL T. BROYHILL
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 24, 1956

Mr. BROYHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Alexandria (Va.) Gazette of June 11, 1956:

THE FEDERAL CORNER SPECTATOR

George Mason and Gunston Hall will furnish much "wire copy" tomorrow when Thomas E. Dewey, former Governor of New York, speaks at the observance of the adoption of Mason's Declaration of Rights, by the Virginia Legislature 180 years ago.

It is predicted here that the speech will touch off a reexamination of the role played by George Mason in the early shaping of the United States.

Such an appraisal, though belated, could only end in additions to the stature and prestige of the man of Gunston in the eyes of his beneficiaries—all citizens of the free world.

Strictly speaking, George Mason was not among those illustrious first Federal employees from the State of Virginia. The closest he came to being a Government worker was when he turned down the post of Senator from Virginia.

But the part he took in sifting out the essences of liberty, freedom, and the rights

of man from the taglines and emotional outbursts, and stating them in practical, workable charters for a new nation is great. The part is also unrecognized in relation to its worth. Mr. Dewey undoubtedly will have much to say about this.

The term unrecognized is used because somehow George Mason has always been on the fringe of the assemblage of well known and hallowed figures of the Revolution. Whether this is because of his personality, his stand against ratification of the Constitution, or his firm denunciations of slavery in company of those for whom it was a way of life is not known. It is to be documented by the historians and the politico-social theorists and scholars.

The fact remains that though the name Mason has not been on the lips of school children through the years as has Patrick Henry and Tom Paine, the final analysis may show Mason's contributions to be greater than either of these.

In terms of titanic milestones along the journey to a free world, there must be included Christ's Sermon on the Mount, the Mangna Carta in the days of King John, the American Bill of Rights, and the Charter of the United Nations.

There is little doubt that the American Bill of Rights has its genesis in the Fairfax Resolutions which George Mason handworte and hand-carried to George Washington in 1774. The resolutions were later adopted almost unchanged as the Virginia Declaration of Rights. The profound influence of this document upon the Bill of Rights, upon the Declaration of Independence, and upon the United States Constitution is the gist of Mason's legacy to free peoples.

Much of the worth of that legacy was in its practicality and workability. It dealt not only with the stating of inviolate rights of man, but dwelt much upon the procedures and the governmental means for preserving them—hence a "practical" piece of paper. Hence its extreme value in a time when a whole world was stirring with notions of certain sanctities deep within all individuals, but with no written requirements for action.

Since that time, these individual sanctities have become for us, constitutional dignities.

The Secretary General of the United Nations, Dag Hammarskjold, has already pointed out the significance of George Mason's work in terms of the aims of the U. N., and in terms of being the beginning of a chain of documents that has its latest manifestation in the blueprint for united free nations.

It is hoped that Americans soon take Thomas Jefferson at his word when he said that George Mason was one of the "really great men" of the Revolution.

It is hoped that Americans do this before, like many other greats of this country, the firm reputation of Mason has to reach these shores by way of London, Paris, Rome or Copenhagen.

GTA Daily Radio Roundups

EXTENSION OF REMARKS
OF
HON. WILLIAM LANGER
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, June 13, 1956

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two radio reports of Mr. M. W. Thatcher.

There being no objection, the broadcasts were ordered to be printed in the RECORD, as follows:

WEDNESDAY, JUNE 6, 1956

How big should farmers' regional marketing and supply co-ops be? Are they too big now? There you have a couple of questions discussed in the current issue of the Missouri Farmer. It's the magazine of MFA—the Missouri Farmers Association. MFA has built both marketing and supply co-ops, and it's been successful at the job. It's doing an important service for the farmers who patronize and own it. Nevertheless, as the Missouri editor says, there is occasional talk heard around the State about MFA getting too big.

To meet this argument, the editor suggests that every MFA member read an article carried recently by the Associated Press. It was entitled simply, "Biggest Businesses Still Grow." It had this information: "The biggest businesses continue to grow. Today there are two more American corporations reporting their total assets as in excess of $1 billion than a year ago. And, with only three exceptions, the lengthening list shows assets valued higher than a year ago. In all, 34 industrial, railroad, and utility companies report themselves in the bigger-than-$1-billion class. There are 17 banks in the country whose resources top the billion-dollar mark. Thirteen insurance companies and three finance companies are also in the list."

A look at the 34 industrial, transportation and utility giants—and ignoring the financial institutions whose resources are of a different kind—shows Bell Telephone System leading the list as usual with total assets of $14½ billion. Next comes Jersey Standard Oil with $7 billion, and General Motors with more than $6 billion. Three carry their assets at more than $3 billion—United States Steel, Pennsylvania Railroad, and Du Pont. And, so on down the list of corporation giants.

Now, the farm editor from Missouri wasn't complaining or deploring all of this. In fact, he praises the big corporations for having raised our standard of living to the highest in the world. What he warns about is the need to guard against monopoly control by these growing giants. Then, he turns to comparing them with Missouri Farmers Association's co-op enterprises. What a difference. All of MFA's assets amount to around $78 million. The editor says just put that figure alongside any of the figures on the list of big corporations, and this outstanding farmers' co-op enterprise is made to look almost like a pygmy. But you don't hear our critics talking about the size of the giant corporations.

And then the editor concludes with this statement: "When you consider that agriculture is the State's biggest business, the Missouri Farmers Association is certainly not nearly big enough to adequately serve the farmers of our State, who, incidentally, are its owners."

Farmers in the Midwest have built their regional grain marketing cooperative. That's GTA. It's grown—been highly successful too in working for the farmers who own it. It's the largest regional grain marketing co-op in the Nation, but it can do a lot more for farmers if more and more farmers ship their grain GTA, the co-op way, and thus make sure that their bushels are working to help win better farm prices and a better living for farm families.

THURSDAY, JUNE 7, 1956.

"How To Make Farmers Buy More." We just saw that title on an article in a trade magazine for lumber dealers. So, we looked into that report, to find out what's the magic answer to this question that Main Street merchants keep pondering. We came away—we must confess—with some confusing and contradictory ideas of just how farmers can be made to buy more. First of all, the article takes a completely defeatist attitude on the outlook for farm income. It says that "agricultural experts are inclined to agree the farm-income slide will probably continue, at least for the majority of farmers."

Thus the magazine hangs the black crepe on the farm market and mourns that what it chooses to call the "easy" days of selling to farmers are gone forever. So, what's the answer? The building supply publication comes up with two. First, as you'd expect, there's the old plea to get on with the "hard sell" and the magic word is "hustle." Instead of waiting for the farmer to come into the lumber yard, get out on his farm and turn on the salesmanship. Be aggressive—hustle.

But, all the powers of salesmanship aren't likely to make a farmer the customer for a new barn, or shed, or for anything else, if he hasn't got the purchasing power necessary. That's certainly one business fact of life. However, the article sees great hope for building supplies in concentrating on the big farms. It extolls the sales possibilities that it sees in the trend toward larger farms. It takes up the subject of selling to what it calls the "right farmer," noting that the "market situation for rural dealers is changing beyond any doubt" with the emphasis on bigness, on more corporation-type or commercial operators "practically industrial in scope." The magazine throws its literacy hat in the air, and cheers loudly this development. This is the simple and complete answer to the rural lumber yard operator.

The magazine puts out the answer in a single sentence. "The larger the farm, the more materials and labor-saving buildings can be sold, but in many cases these operators will demand newer materials, or economical structures." There you have it. The accelerating trend to bigness will pump up sales, provided the dealer gives better services to more discriminating buyers.

What about the market lost by farmers squeezed off the land? No word on that market. And another matter that's overlooked is this: The corporation farms may—very likely will—bypass that retail lumber yard out in the country. They'll be buying their lumber and other building supplies at wholesale, and leave the local dealer dying on the vine. We'll bet there are plenty of merchants who've seen and felt this blow to sales already.

So, it seems to us that the lumber dealers' magazine ought to take another look, and realize that the local merchant's welfare depends on maintaining family-operated farms. Help those families get enough income, and they'll be wonderful customers again. One of the first steps in doing that is for merchants to throw their support to the campaign for a big, landslide "yes" vote in the July 20, wheat referendum. That will be one way to help farmers keep a farm program on which to improve and bolster farm income. That's what GTA, the Coop Way is working for.

High Court Ties President's Hands

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following article from the Washington Star of June 12, 1956:

HIGH COURT TIES PRESIDENT'S HANDS—MAJORITY RULING IN JOB-SENSITIVITY CASE SEEN OPENING DOORS TO SUBVERSIVES

(By David Lawrence)

Three Justices of the Supreme Court of the United States say emphatically that the six other Justices have just issued a decision which has stricken down the most effective weapon against subversive activity available to the Government.

This decision must be good news to Moscow. It must be good news to the thousands of hard-core Communists in America who are trying to get inside the Government of the United States through agents, stooges, and dupes. It must be good news also to the groups of misguided individuals in certain so-called liberal circles who have been striving in recent months to break down the whole security program.

For, by a single stroke, the Supreme Court majority—Justices Harlan, Frankfurter, Douglas, Black, Burton, and Chief Justice Warren—has practically opened the doors to Communist subversives inside many agencies of Government. Unless the Congress acts immediately by legislation to erase the Supreme Court's tortured concept of what it thinks is the law, the entire security program will be endangered. For the Congress still makes the laws—even though the Supreme Court has the power to frustrate their enforcement by extraneous technicalities.

The point at issue relates to a law passed in 1950 by Congress which designated certain agencies of the Government as sensitive, but left it to the President to make, in his discretion, that designation for other agencies. The Supreme Court says that, when the President sought by Executive order to designate additional agencies as sensitive, he didn't have the power to do so because he didn't spell out the actual relationship of those agencies to the national security. Also the Court argues now that it is not only the individual but the position he occupies which must be declared sensitive and the relationship defined. The minority opinion by Justices Reed, Minton, and Clark, however, says:

"It is not realistic to say that the Government can be protected merely by applying the act to sensitive jobs. One never knows just which job is sensitive. The janitor might prove to be in as important a spot securitywise as the top employee in the building * * *.

"The President's standard is complete and unswerving loyalty, not only in sensitive places but throughout the Government. The President requires and every employee should give no less. This is all that the act and the order require. They should not be subverted by the technical interpretation the majority places on them today."

It seems incredible that six Supreme Court Justices should be living in such a vacuum that they do not know the technique of Commmunist infiltration as it has been uncovered in case after case and in the hearings of committees in Congress. An employee in a railroad retirement bureau, for example, may be said not to be working in a sensitive agency but, if he can furnish the names of key employees in transportation centers in certain sections of the country and overnight the Nation gets into war, the enemy would have a valuable list for its sabotage.

Likewise, with the right to send out letters on Government stationery, all kinds of seemingly innocent information, valuable to the enemy, can be acquired. One day a food inspector can be working in a nonsensitive agency, but overnight that same agency can be highly sensitive if it is discovered that bacteriological warfare is being conducted through the distribution of the food supply to the Armed Forces. The cases of dangerous subversion possible in so-called nonsensitive agencies are limitless, and that's why the President's Executive order covered all Government employees.

The six Supreme Court Justices, however, do not seem to take account of the clear and present danger doctrine which Judge Learned Hand espoused in his famous decision. He wrote:

"The question before us, and the only one, is how long a government, having discovered such a (Communist) conspiracy, must wait. When does the conspiracy become a 'present danger'? The jury has found that the conspirators will strike as soon as success seems possible, and, obviously, no one in his senses would strike sooner."

But the Supreme Court majority evidently argues now that the Government must wait till the conspiracy is consummated. The Government cannot take precautions in advance—at least, the six justices say that existing law doesn't permit dismissals because it doesn't require the President to spell out in advance in a special memorandum in every case the exact risk to national security involved in every potential case of sabotage in which a known and proved security risk might operate.

Plainly, the Supreme Court majority has set an impossible task for the Government, and even the writers of remedial legislation will have a hard time drafting a law that suits the judicial whim of the six Justices who insist that the President of the United States cannot be trusted to render a judgment as to which employees may be retained or dismissed or to set up proper procedures to ascertain whether their continuous employment in a Government job constitutes a risk to the safety of the Government.

Proclamation Declaring the Week of June 24-30 Food and Drug Law Anniversary Week in Montana

EXTENSION OF REMARKS
OF
HON. JAMES C. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. MURRAY. Mr. President, Food and Drug Law Anniversary Week will be observed across the Nation June 24 to June 30, to commemorate 50 years of consumer protection from misbranded, fraudulent, adulterated, and dangerous foods, drugs, and cosmetics.

Dr. G. B. Carlyle Thompson, executive director of the Montana State Board of Health, has directed my attention to the fact that we shall also be observing the 45th anniversary of Montana's food and drug act.

Administration of the food and drug laws is an outstanding example of State-Federal cooperation and use of State and Federal powers to supplement each other.

I ask unanimous consent to have printed in the Appendix of the RECORD the proclamation issued March 23, 1956, by Gov. Hugo Aronson, of Montana, declaring the week of June 24–30 Food and Drug Law Anniversary Week in our State.

There being no objection, the proclamation was ordered to be printed in the RECORD, as follows:

PROCLAMATION BY THE GOVERNOR

Whereas June 30, 1956, will mark the 50th anniversary of the signing by President Theodore Roosevelt of the first Federal Food and Drugs Act, amended and reenacted in 1938 as the Federal Food, Drug, and Cosmetic Act, and the Federal Meat Inspection Act; and

Whereas 1956 marks the 45th year of enactment by Montana's first Food and Drug Act; and

Whereas the purity, integrity, and abundance of our food, drug, and cosmetic supplies are unexcelled in the world today and stand as a tribute to the industries producing them; and

Whereas the maintenance and protection of the purity and integrity of our food, drug, and cosmetic supplies are essential elements of our national strength, safety, and economic welfare; and

Whereas for this protection we are indebted to Dr. Harvey W. Wiley, who, as crusader for the first Federal legislation, became known as the father of the pure food and drug law; to the distinguished and dedicated public servants at all levels of Government who have administered these laws over the years; and to the leaders in industry who have supported the enactment and improvement of these laws and have cooperated in their enforcement: Now, therefore,

I, J. Hugo Aronson, Governor of the State of Montana, do hereby proclaim the week of June 24–30, 1956, to be Food and Drug Law Golden Anniversary Week, and I request the appropriate officials of the State of Montana and all citizens of Montana to cooperate in the observance of that week.

I also urge all industrial, business, professional, labor, agricultural, educational, and civic groups, and the people of Montana generally, to observe 1956 as an anniversary year with gatherings, discussions, exhibits, and other appropriate commemorative activities to foster public recognition of the benefits derived from Federal, State, and local food, drug, and cosmetic laws.

In witness whereof, I have hereunto set my hand and caused the Great Seal of the State of Montana to be affixed. Done at the city of Helena, the capital, this 23d day of March, in the year of our Lord, one thousand nine hundred and fifty-six.

J. HUGO ARONSON,
Governor.

Attest:

S. C. ARNOLD,
Secretary of State.

McKay Politics Repudiated

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a cogent editorial entitled "McKay Politics Repudiated," from the June 5, 1956, issue of the Medford (Oreg.) Mail Tribune.

This editorial, written by the editor of the Mail Tribune, Robert W. Ruhl, a former winner of the Pulitzer prize for journalism, emphasizes that the selection of ex-Senator Fred A. Seaton to be Secretary of the Interior was a renunciation by President Eisenhower of the McKay policies in that Department.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MCKAY POLITICS REPUDIATED

Word comes to us from Washington, D. C., that President Eisenhower did not accept Secretary of the Interior McKay's resignation with such alacrity solely because he believed he was so sure-fire to defeat WAYNE MORSE. The President also opposed retaining him in the administration, for he believed him and his giveaway record to be a definite political liability. In other words while the President and his advisers did believe Secretary McKay to be the logical opponent for MORSE, they would not have exerted so much pressure and so suddenly, had they not believed also the sooner they got rid of McKay as a member of the administration, the better for their 1956 campaign.

We have been given no absolute proof this is correct. But from the first we suspected it. And we firmly believe that if the administration had really wanted Mr. McKay and his giveaway doctrine retained, "Dear Doug" would still be having his picture taken with that most august body, the Cabinet.

Comparing the records of Secretary McKay and that of his successor, strengthens this assumption.

For if the President had searched his party for an anti-McKay type, he could scarcely have been more successful than his choice of ex-Senator Seaton, of Nebraska.

Here we have the GOP antipodes politically speaking—McKay the ultra conservative, Seaton the genuine liberal; McKay the big business worshipper who believes—and we think sincerely—that what is best for General Motors is best for the country; and the gentleman from Nebraska a public power State, who believes that what is best for the country should come first.

It was rather pathetic in fact when the Seaton appointment was announced to hear that still small voice from Salem claim that the appointment was a confirmation of Secretary McKay's views and record.

The only evidence presented was the Seaton endorsement of the power-partnership plan. But former Senator Seaton did not endorse it as a ruse to block public power development for he believes in public power, he only gave his O. K. when public power was impossible or impractical either for financial or engineering reasons.

Quite a difference.

A few of the important issues involved in the administration of the Interior Department show a similar fundamental difference.

Tidelands oil for example. This notorious "give away" of billions to 3 or 4 States and passed on (by lease) to half a dozen of the largest oil operators, when it should have gone to the people of the country as a whole.

Secretary McKay was for this deal 100 percent, while Senator Seaton spoke and voted against it.

Mr. Seaton also was for Alaska statehood, which Secretary of the Interior refused to favor. He likewise was in favor of Niagara Falls power development by the State of New York, McKay, of course, wasn't.

In short the administration of the Interior Department under Secretary Seaton regarding oil and timber conservation, public against private power, wildlife development, Indian lands administration, etc., practically everything of importance but the single item of partnership-power, promises to be as different from that of former Secretary McKay as black is from white.

Whether it is literally true or not, that one of the main reasons for selecting Secretary McKay to take on Senator MORSE in the fall, was to get rid of a definite political liability we don't know, but there can be no denial that the selection of the former Senator from Nebraska was—and is—a complete repudiation of the basic political philosophy of his predecessor.

Finally lend an ear to this, quote:

"The Republican Party must be a positive party. * * * We Republicans will find success in the solid middle ground between a spendthrift left and reactionary right. * * * It does us no good whatever at the polls to cry 'socialism' every time a measure is offered to combat or correct an evil. * * * Certainly it is not socialism to abolish the sweatshop, to regulate hours and put a floor under wages. Neither is it socialism to regulate the stock exchange or the dealings in agricultural commodities, to assure the farmer of parity between the prices of what he sells and the prices of what he must buy. Nor is it socialism to conserve our natural resources, to build dams for flood control, for irrigation, and for electric power, or to bring electricity to the farmer."

Shut your eyes and try to imagine that being part of a speech ever delivered by former Secretary of the Interior Douglas McKay.

Hard to do?

Exactly.

But it is an extract from a speech delivered by his successor in Topeka, Kans., when he was a Member of the United States Senate.

Tribute to Prof. Albert Lee Thomas

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. HILL. Mr. President, this month Prof. Albert Lee Thomas is retiring after 52 years of devoted service and teaching at the Alabama Polytechnic Institute, at Auburn, Ala. He was born in the town of Auburn, and joined the college faculty after his graduation from the institute; and, except for military service, his entire professional career has been spent at Auburn. In addition to his teaching duties, he is an accomplished musician, and has been an outstanding leader in Boy Scout work.

Professor Thomas organized the South's first Boy Scout troop at Auburn; he was president of the Central Alabama Area Council of the Boy Scouts of America for 5 years, and for 11 years served on the national executive board of directors of Alpha Pi Omega, the national organization of former Boy Scouts attending college.

I ask unanimous consent to have an article about Dr. Thomas, which appeared in the Birmingham News for May 24, 1956, printed in the Appendix of the RECORD; and I take this opportunity to add my warm congratulations to Professor Thomas for his devotion to the teaching profession and his rich, outstanding, and distinguished service in the field of education and to the youth of our country. He is an American of whom we may all be proud.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFESSOR THOMAS RETIRING AFTER 52 API YEARS

AUBURN, ALA., May 24.—Albert Lee Thomas, professor of engineering drawing and design at Alabama Polytechnic Institute, will retire in June after 52 years of teaching at Auburn.

Professor Thomas, a native of Auburn, joined the college faculty as an instructor in mechanical engineering in 1904 after his graduation from Auburn with a bachelor of science degree in mechanical and electrical engineering. He also holds a master of science degree and a professional mechanical engineering degree from API.

From 1906 to 1921, Professor Thomas was director of the Auburn band and manager of the college picture show, which was operated in Langdon Hall for the benefit of the band, orchestra, and glee club. During this time, he was serving as an instructor in physics and electrical labs, and machine design and drawing. For 7 years, he was director of the orchestra and glee club as well as the band.

Professor Thomas, the entire Auburn band and Chief Musician P. R. Bidez volunteered for Army service in 1917. The band went overseas, but Professor Thomas served as bandmaster at Fort Sheridan, Ill., 3 months before returning to Auburn.

In 1920, he was appointed to a full professorship in engineering drawing and design and served as acting department head for the first 3 years.

The South's first Boy Scout troop was organized in Auburn by Professor Thomas, who served as Scoutmaster from 1911 to 1918. He also served as president of the Central Alabama Area Council, Boy Scouts of America, for 5 years.

In 1926, Professor Thomas organized the API chapter of Alpha Pi Omega, a national organization for former Boy Scouts attending college. For 11 years he served on the national executive board of directors of APO.

He is a member of the Montgomery Symphony Orchestra; organized and served at first president of the First National Bank of Auburn, is now a director of the bank; served as first president of the Auburn Chamber of Commerce; a member of the American Society of Engineering Education; American Society Motion Picture Engineers; Rotary Club; Phi Eta Sigma; Phi Kappa Phi, Eta Kappa Nu, and Phi Mu Alpha Sinfonia, and is a registered engineer, No. 711.

Prayer by Rabbi Daniel Lowy

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. BEALL. Mr. President, the people of Maryland are particularly fortunate in having among them a man like Rabbi Daniel Lowy, of Cumberland. Knowing the exceptional character of this man, we were greatly pleased, therefore, when the American Legion magazine paid a special tribute to him in the issue of June 1956 by including a prayer by Rabbi Lowy in the publication's Chaplain's Corner. I ask unanimous consent that the prayer be printed in the Appendix of the RECORD.

There being no objection, the prayer was ordered to be printed in the RECORD, as follows:

CHAPLAIN'S CORNER

(By Rabbi Daniel Lowy, Congregation B'er Chayim, Chaplain, Post 13, Cumberland, Md.)

Almighty God, unto Thee we turn in prayer in these crucial times. Grant us wisdom and understanding so that we may

continue to pursue the paths toward brotherhood and peace. Help us remove all intolerance and bigotry from our midst. Fervently we invoke Thy blessing upon our country and all who are entrusted with its welfare. Inspire them to continue their valiant and noble efforts to guard this great land from every enemy, pestilence, and sorrow. Fortify us with determination, a better world in our time, and Thy kingdom of truth, justice, and peace shall prevail over all the earth. Amen.

Washington and Jefferson's Rose Bowl Iron Men Gather Again

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. MARTIN of Pennsylvania. Mr. President, 35 years ago, the little college of Washington and Jefferson played the mighty California team in the Rose Bowl. The result was a no-score tie game. The members of that famous Washington and Jefferson team met at a dinner on June 8, commemorating the 35th year of their having left college.

Mr. Chester L. Smith wrote an article concerning the team, which appeared in the Pittsburgh Press on June 7, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON AND JEFFERSON'S ROSE BOWL IRON MEN GATHER AGAIN

(EDITOR'S NOTE.—The following article was written by Sports Editor Chester L. Smith and appeared in the June 7 edition of the Pittsburgh Press. Smith went with the Washington and Jefferson 1921–22 football team when it played California to a 0–0 standstill at Pasadena, Calif. In actuality, the 35th anniversary of the team is next year, since the class graduated in, and the game was played in 1922.)

It's about time to say that there's a monumental struggle going on between the Washington and Jefferson College team that played at Pasadena on January 2, 1922, and the Rose Bowl to determine which will outlast the other.

And don't be too quick about betting against the Jeffs. They're a hardy crew.

In 1946 they held their 25th reunion, and everybody showed up. Tomorrow night, in little Washington, they'll sit down to celebrate their 35th birthday as a squad. The center, Al Crook, will be missing. He has been ill at his home in Detroit. Otherwise the team that numbed the West by playing California to a 0–0 tie remains intact.

"Mother" Murphy, the graduate manager, is long gone and Dave Morrow, who helped "Greasy" Neale and "Honest" John Kellison with the coaching, died a few years ago.

Actually, the Jeffs never played in the Rose Bowl, which did not take shape until the following year. The site of their game was old Tournament Park, the splintery forerunner of the present stately oval in the Arroyo Seco. But that is a technicality that can, and should, be overlooked.

The story of how they got there is involved. The tournament folks had their eyes on Yale, with Cornell second in the running. But the Elis lost caste when they were beaten by Harvard and the Cornelians were lukewarm. Now Pasadena began making passes at Iowa, Lafayette, Penn State, and Centre.

The Big Ten, still mortified by the 28–0 whipping Ohio State had taken from California the previous January, discouraged the Hawkeyes from even considering an invitation. Centre, for reasons never closely explained, agreed to meet Arizona at San Diego. Little enthusiasm could be stirred up for either Penn State or Lafayette.

But the tizzy that came in the wake of the announcement by Chairman Frank Creller of the tournament football committee that Washington and Jefferson was the choice could not have been surpassed, no matter what team had been chosen.

"So Willie and Jake are coming out to be murdered by the Golden Bears," a coast writer typed twittingly. California was so mortified that it delayed its decision to go through with the game for a week.

There were very few critics who had taken the trouble to analyze Wash-Jeffs record. It had won all nine of its regular season games and had defeated strong opponents in Carnegie Tech, Lehigh, Syracuse, Pitt, and West Virginia. On December 2, it had defeated the University of Detroit, 14 to 2, in a postseason match at Detroit.

Of all the teams in the East none was more eligible than the Jeffs.

Their durability was their trademark, a perfect answer to the proponents of the free substitution that was still years ahead.

When they lined up for the kickoff the ends would be Herb Kopf and Karl Konvolinka, Capt. Russ Stein would be at one tackle and Chet Wiederquist at the other, although Stein, a tremendous performer, might be found at end or over in the backfield during the course of the game.

There would be Ralph Vince and "Farmer" Neal for guards and Crook centering the ball.

The backfield? Well, there you could find Wayne Brenkert, Charley West, Hal Erickson, and Joe Basista.

West and Erickson were exceptional breakaway runners. Defense was Basista's forte. Brenkert was handy to have in any situation.

Washington, Pa., was considerably more distant from Pasadena, travelwise, then, than it is today. The Jeffs caught up with heat and sand in the desert, cold in the mountains and across the plains. They spent Christmas Day in Kansas City and worked out there. During the practice, Coach Neale welcomed a couple of visitors whom he had come to know in the National League. They were Casey Stengel and Cotton Tierney.

Along the way they lost 1 of their 179 players when Lee Spillers went down with appendicitis, but as it turned out he wasn't missed. The team that started the game also finished.

That W. and J. lost the winning touchdown on a wide run by Brenkert when Stein was called offside is well remembered. Also that California was at no time in command.

The Jeffs were expert jockeys, a knack they must have picked up from their baseball-playing coach. When Charley Erb, the Cal quarterback, who weighed 143 pounds, chided Stein because Erickson had lost a sizable gain by stepping out of bounds, the W. and J. captain snapped, "Why, you little squirt, back East we don't even allow boys your size to put on a football suit."

"Out here, brawn doesn't mean much," Erb shot back.

A moment later there was a lull. Stein looked around.

"Where's Erb?" he called out, then pointed at his victim. "Oh, there he is—over behind that blade of grass."

There is sure to be more of the same tomorrow evening when the indestructible Jeffs huddle again.

The Problem of East Prussia

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. SHEEHAN. Mr. Speaker, the Lithuanian American Council in America has furnished me with the following facts which I feel are noteworthy.

In his speech of February 8, 1956, the gentleman from Tennessee [Mr. REECE] called attention "to one of the great tragedies and gross injustices in the wake of those agreements of Yalta and Potsdam, resulting in the present separation from Germany of East Prussia and the expulsion of its population of 2,519,000 people."

I wish to draw the attention of the House to the vital interests of one nation in the problem of East Prussia which the gentleman from Tennessee has omitted in his remarks; namely, those of the Lithuanian nation. East Prussia was, at Potsdam, not only separated from Germany, but also divided into two parts—the southern part being placed under the administration of the Polish state, the northern part under that of the Union of Soviet Socialist Republics.

Although this decision was only provisional "pending the final determination of territorial questions at the peace settlement," the Soviet Government has, one-sidedly and illegally, incorporated that part of East Prussia into the Russian Socialist Federated Soviet Republic, naming it "Kaliningradskaja oblast."

Furthermore, it has completely russified and bolshevized a territory which never belonged to Russia and was never inhabited by Russians. Having murdered, deported, and expelled that part of the original population which did not succeed in escaping the horrors of war and Russian occupation, the Soviet Government deliberately depleted the country of a population which had been living there for centuries and, as far as the population of Lithuanian origin is concerned, even since immemorial times. This population has been replaced by Russian soldiers and settlers, forcibly driven into a country to which they have no title except that of Russian inhumanity and brutality.

This is, of course, no final settlement of the problem of the northern part of East Prusia. On the contrary, a new human and political problem of particularly great dimensions has been created which one day has to be solved at the peace settlement.

Whatever the decision may be—the solution will not be found in the maintenance of the present status or in the restoration of the status prior to World War II. The conditions have already been changed—and probably will change—too radically.

Whatever the implications and elements of the decision may be—no solution will be just and definite which satisfies only one-sided revisionistic aims of one party concerned. The solution will have to take into account the interests

of all parties directly concerned with the problem. The Lithuanian nation has so definitely the most vital concern in what the final settlement of the problem is going to be.

Since immemorial times, this part of East Prussia has been inhabited by the Old Prussians—Borussians—and their kinsmen, the Lithuanians. It was conquered and subjugated by the German Knights of the Order of the Cross in the 13th and 14th centuries. It was under the vasallage of Poland and the Lithuanian-Polish Commonwealth for 2 centuries before it became part of the German Empire.

Through many generations the Lithuanian nation was a direct and active participant in the fight of the inhabitants for their freedom and independence. By united Lithuanian and Polish forces the knights were crushingly defeated at the battle of Grunewald in 1410, which stopped the German Drangnach Ostem for centuries. Subsequently Lithuania, under the leadership of its ruler Vytautas, settled her old border problem with the knights in 1422, drawing a kind of a demarcation line through Lithuanian territory which became the eastern boundary of East Prussia for 500 years until it, in 1919 at Versailles, was partly changed in favor of Lithuania; the territory north of the River Nemunas—Memel—was separated from Germany because of its still predominantly Lithuanian character and its close economic ties to Lithuania proper.

During centuries of their struggle for freedom and against slavery the old Prussians disappeared as a nation, leaving only their name to their conquerors. But the ethnic character of the northern part of East Prussia, now under Russian administration, remained Lithuanian until World War II. First in 1938, Hitler, under a supposedly final attempt to eradicate the most evident and significant proof of the Lithuanian character of the territory, changed the names of cities, localities, rivers, and so forth, into German ones.

The greater part of the territory surrounds the estuary of the River Nemunas flowing from Lithuania proper into the Baltic Sea. It connects Lithuania economically and geographically with the world. The economy of the country, its system of waterways and railway lines, is most closely connected with that of Lithuania and vice versa. It is the most vital part of Lithuania and its immediate vicinity as a geographic unit.

The problem of the northern part of East Prussia, therefore, directly affects the vital interests of the Lithuanian nation by reason of its history, its ethnic character, its economic relations, and its geographic vicinity. The Government of the United States, as well as any other Government responsible for the just solution of the problem of East Prussia, will be well advised to recognize these vital interests of the Lithuanian nation, and consequently her natural and undeniable right to actively participate in any consideration and decision concerning the political fate of East Prussia.

On Massive Countersubversion

EXTENSION OF REMARKS
OF

HON. JAMES J. DELANEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. DELANEY. Mr. Speaker, I want to call to the attention of our colleagues an article which was published in the New York Herald Tribune on Sunday, June 10.

In this article Mr. Ansel E. Talbert, military and aviation editor of the New York Herald Tribune, writes on the subject of massive countersubversion.

Mr. Talbert has called to our attention the tremendous potential for countersubversion within Soviet Russia. He points out that there are already indications of uprising in the Ukraine and in Georgia. This movement toward independence and freedom by the non-Russian peoples who have been captives of the Communist dictatorship should be encouraged.

It is significant that Mr. Talbert reminds us that there are 1,500,000 Americans of Ukrainian descent in the United States and Canada and that nearly all of these people support movements for an independent, democratic Ukraine.

I particularly want to call my colleagues' attention to that part of Mr. Talbert's article which commends our colleague, Congressman THOMAS J. DODD, of Connecticut, for having taken the lead with Senator PAUL DOUGLAS in this effort to kep alive and make a matter of active interest the liberation and the independence of the Ukrainians and other non-Russian captive peoples.

In his article Mr. Talbert praises our colleague, Congressman DODD, not only for his current activities in Congress with respect to the captive peoples, but as well for his distinguished record at Nuremburg.

I think this article should be read by every Member of the House. It reads as follows:

UNITED STATES DEFENSE AND AVIATION—ON MASSIVE COUNTERSUBVERSION

(By Ansel E. Talbert)

The rapid, and frequently surprising, march of events in Soviet Russia is revealing to the West a potential new weapon against Communist imperialism which conceivably could become more effective than even massive atomic retaliation. This is the now well-documented and unquestionable existence, within the vast Soviet slave empire of an active prowestern underground.

It is drawn from a variety of freedom-loving peoples and nationalities, which clearly have not been terrorized or propagandized into complete submission to communism. The non-Russian peoples of the Soviet Union, entirely apart from the East European satellites—actually constitute a majority of the Soviet population.

OFFICIAL SLIP

The Communist Government of Poland, militarily most powerful of the satellites, has just let slip officially that more than 30,000 security police, Communist Party members and state bureaucrats, have lost their lives since World War II in actual armed conflict with the anti-Soviet underground. Seweryn Bialen, an important Polish Government official, is a new defector to the West.

A month ago this column called attention to unprecedented official references in the Soviet and Red Chinese press to armed uprisings in Tibet, central Asia—presumably Soviet Turkistan—the Baltic States, and the Ukraine, second largest "republic" in the Soviet Union, as well as to recent conflicting stories by top Soviet officials on disorders in Georgia.

Last week other reports which American intelligence experts believe to be completely authentic in substance told of new anti-Soviet guerrilla activities. These included the derailing of a Soviet troop train last month at the Ukrainian rail center of Shepetovka—on the main line between Lvov and Kiev, the old Ukrainian capital—and the plastering of Tiflis, capital of Georgia, with posters reading: "Long live the independent Georgian republic."

The 26th of May, when the posters made their appearance, is the anniversary of the proclamation of Georgia's last independent government after the fall of Czar Nicholas II—a government which the Red army later attacked and crushed.

All this information is of the highest importance to Western strategists. It acts to destroy the widespread idea of the military invulnerability of the Soviet empire of captive states, and points the way to soft spots in the superficially hard Iron Curtain. Even more heartening to such planners is the implication that an alternative Western strategy to possible nuclear holocaust, having high chances of success, may well be a psychological one based on "massive countersubversion."

There are approximately 1,500,000 Americans of Okrainian birth or descent in the United States and Canada today; nearly all support movements for the establishment of an independent, democratic Ukraine. President Eisenhower repeatedly has told them that the struggle of the Ukrainian people "has significance for every lover of freedom everywhere in the world."

Senator PAUL H. DOUGLAS, of Illinois, and Representative THOMAS J. DODD, of Connecticut, are among the leading Democrats in Congress who have acted to make this support of Ukrainian freedom bi-partisan. A few days ago, Representative DODD, who as associate prosecutor at Nurenberg confronted Baldur von Schirach and other Nazi war criminals with official records showing mass murders of Jews at Buchenwald, submitted to the House of Representatives a list of recent Soviet crimes, including religious persecution in the Ukraine.

AMBUSH RECALLED

Representative DODD and others familiar with the history of the Ukrainian "freedom movement" recall that in 1944 its partisan fighters ambushed and killed the Nazi SS chief Victor Lutze near Brest-Litovsk. In 1947—in much the same manner as they are reported to have acted last month at Shepetovka—they derailed the train of the Kremlin's famous agent, Gen. Karol Swierczewski, and machinegunned him to death with every member of his staff. Gen. Swierczewski—the mysterious "Gen. Walters" of the Spanish civil war—then was Poland's Vice-Minister of Defense.

Gen. Alfred M. Gruenther, retiring commander of North Atlantic Treaty Organization forces, made a significant statement recently in Munich—site of the Free Ukrainian University, and home of some 30,000 Ukrainian refugees from communism. He told a group of newspapermen that the Ukrainian people initially welcomed the German Army in World War II "as liberators—with bread and salt," but that the vicious Nazi administration turned them into "partisans." He added: "We would not have done this."

A Bill To Require the Automobile Industry To Live Up to Fair Business Standards

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. DODD. Mr. Speaker, I have today introduced a bill to amend the Federal Trade Commission Act so as to require the automobile industry to live up to fair business standards.

The necessity for this legislation arises out of abuses which have grown up over a period of many years in the distribution of motor vehicles in interstate commerce. For some time, I have received complaints from automobile dealers in my district and in my own State about unfair business methods in the automobile industry. I also know of the way in which some automobile manufacturers have intimidated and threatened dealers with a cancellation of the dealer's franchise. In some cases dealers' contracts have been canceled in a most heartless way. In some instances many who have been faithful and loyal and competent have lost their automobile dealerships and have been without recourse under the law.

Lately automobile manufacturers are overloading the automobile dealers with new cars and if the dealer refuses to take the cars, which they know they cannot sell, some of these manufacturers and their agents threaten to cancel the dealership contracts.

The fact of the matter, Mr. Speaker, is that the automobile industry is overproducing and overloading its dealers.

A committee of the Senate has been studying this problem for more than a year and automobile manufacturers have known about this study. If they intended to clear up this bad situation in their own industry, they have had ample time to do so. Although it is probably fair to say that in some instances some effort has been made but it has not been successful.

Unless these bad practices in the automobile industry are corrected, our whole economy will suffer. Small-business men in the automobile sales field will be destroyed and, ultimately, the American people will suffer as well.

Mr. Speaker, in my judgment this is must legislation for this session of Congress, and I urgently ask my colleagues to join with me and with others who have introduced similar legislation to see that this problem is handled by this session of Congress well before adjournment.

The bill which I introduced today reads as follows:

A bill to amend the Federal Trade Commission Act, with respect to certain unfair methods of competition and certain unfair practices in the distribution of new motor vehicles in interstate commerce

Be it enacted, etc., That sections 17 and 18 of the Federal Trade Commission Act, as amended (15 U. S. C., secs. 57 and 58), are renumbered as sections 18 and 19, respectively, and such Act is further amended by inserting after section 16 thereof the following section:

"SEC. 17. (a) For the purposes of section 5 it shall be deemed an unfair method of competition and an unfair act or practice in commerce:

"(1) For any manufacturer of motor vehicles to induce by means of coercion, intimidation, or discrimination any of its dealers to order or accept for delivery any product of any kind.

"(2) For a dealer knowingly to sell, other than to another dealer of such manufacturer, a new motor vehicle for resale as a new motor vehicle in competition with other dealers of such manufacturer without first affording such manufacturer an opportunity to repurchase such motor vehicle at the price paid therefor, and for such manufacturer to refuse to repurchase such motor vehicle at such price under a plan adopted by such manufacturer which is equitable to all dealers and consistent with the financial resources of such manufacturer.

"(3) For any manufacturer of motor vehicles to hold out or require that warranties will be fulfilled and services rendered by all of its dealers, without effectuating a reasonable system of compensating all of its dealers, for maintaining the personnel and facilities required to fulfill such warranties and render such services.

"(4) For any manufacturer of motor vehicles to execute a dealer's franchise after the date of enactment of this act which shall include any provision for its cancellation or termination at the option of the manufacturer of motor vehicles without the consent of the dealer, for any cause not specifically described and provided for in the franchise unless such franchise provides for the payment by the manufacturer to the dealer, upon the cancellation or termination thereof by the manufacturers without the consent of the dealer for any cause not so specified in the franchise, of a sum equal to the reasonable value of such franchise to such dealer, as determined by 3 appraisers, of whom 1 shall be selected by the manufacturer, 1 shall be selected by the dealer, and the third shall be selected by the manufacturer and the dealer, respectively.

"(b) For the purposes of this section—

"(1) The term 'manufacturer of motor vehicles' includes any corporation which acts for such a manufacturer in connection with the distribution of new motor vehicles in commerce.

"(2) The term 'dealer' means a franchised retail seller of motor vehicles."

SEC. 2. This act shall take effect on November 1, 1956.

An Ill-Advised Presidential Veto

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 13, 1956

Mr. MURRAY. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an editorial from the June 10 issue of the Great Falls (Mont.) Tribune, commenting on the "ill-advised Presidential veto" of the Yellowtail Dam resolution.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AN ILL-ADVISED PRESIDENTIAL VETO

We think President Eisenhower was the victim of some hasty political counsel in his exceedingly ill-advised veto of the Yellowtail Dam site bill which came to him with approval of the Congress and the endorsement of Governor Aronson, of Montana.

Lone opponent of paying the Crow Indians a reasonable price for the site was Representative FJARE of the eastern district. Whatever his reasoning, he has succeeded only in seriously impeding the construction of a badly needed Montana development for which funds had already been recommended by the Senate Public Works Committee. He has succeeded only in throwing a distressing roadblock on a project which up to now had been free of political barnacles.

Congressman FJARE presents his own solution, to cut the heart out of the price, and says his bill will avoid political log-rolling. We think he's still on the wrong foot.

If anyone introduced politics into the question, it is the Congressman from the eastern district. He stuck his neck out, and the Republican administration has now moved trying to save it.

The Civil Rights Decision

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. YATES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Sixth District Council of the American Legion:

RESOLUTION URGING SUPPORT OF THE CIVIL-RIGHTS DECISION OF THE SUPREME COURT OF THE UNITED STATES

Whereas our great American democracy was founded upon the basic concepts of equality and liberty for all, which principles are embodied in our Constitution and cherished as the supreme law of our land; and

Whereas these doctrines of equality and freedom have been fountainheads of strength to our Nation which have borne us through our times of trial, nurtured us as a free people who have matured a mighty and thriving civilization, and brought up to an ascendency among the nations of the earth; and

Whereas the American Legion is dedicated among its avowed objectives to uphold and defend the Constitution of the United States and to maintain law and order; and

Whereas the Supreme Court has decided that the school system be integrated among all races and peoples and that segregation be abolished; and

Whereas pursuant to article 4, clause 2, the Constitution of the United States provides "This Constitution and the laws of the United States * * * shall be the supreme law of the land * * * anything in the Constitution or laws of any State to the contrary not withstanding": Now, therefore, be it

Resolved by Harold A. Taylor Post, No. 47, the American Legion, That we concur in the logic and reasons for said Supreme Court action and pledge our support and our aid in bringing about compliance therewith within the framework of the United States Constitution; and be it further

Resolved by Harold A. Taylor Post, No. 47, the American Legion, Department of Illinois, That it petitions the executive branch and Congress of the United States to take the necessary action to support the recent deci-

sions of the Supreme Court on civil rights; and be it further

Resolved, That copies of this resolution be sent to the President and Vice President of the United States, Speaker of the House of Representatives, United States Department of Justice, and to each Senator and Representative of the State of Illinois in the Congress of the United States; and be it further

Resolved, That copies of this resolution be forwarded to the Sixth District Council, the executive committee, and the department convention of the American Legion for further action consistent herewith.

Adopted at a regular meeting of Harold A. Taylor Post, No. 47, the American Legion, at the regular meeting held this 6th day of April A. D. 1956.

JOHN E. STRONG,
Commander.

Attest:

DOMINICK P. CUPURO,
Adjutant.

The above and foregoing resolution was adopted at a meeting of the Sixth District Council of the American Legion held on the 25th day of April A. D. 1956.

ELSTON G. BRADFIELD,
Acting Commander.

Attest:

CHARLES H. SCHMITZ,
Adjutant.

Alert in the Pentagon

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mrs. KELLY of New York. Mr. Speaker, I want to bring to the attention of the Members of the House the article, "Billion-Dollar Gamble That Failed?", which appeared in the June 15 issue of the U. S. News & World Report. I ask that particular attention be given the closing paragraphs of this article, subtitled, "Alert in the Pentagon," which follow:

ALERT IN THE PENTAGON

Tito's game, whatever it is, has shaken the United States. Senators heard Yugoslav exiles testify that Tito has helped Moscow all along. The House banned all aid to Tito unless the President orders that it be continued.

The Pentagon's experts, when United States military aid first went to Yugoslavia, had trouble finding out just how the aid was used. Now, however, several hundred United States military men are moving about in Yugoslavia checking up on United States equipment and providing the United States with valuable intelligence on the whole area.

Yugoslavia's Army, these observers report, now has so much United States equipment that it is dependent on a $50 million flow of parts and supplies from the United States to keep going. Tito, once again, would become completely dependent on Russia if United States aid ended.

Tito himself, in Moscow, coolly said: "Our relations with the United States will not suffer." And Tito's friends say he knows he will be in trouble with his own Yugoslavs if he breaks his United States ties.

In the weeks just ahead, however, American policymakers will be taking another look at Tito. They must decide whether Tito has enough independence left to warrant any United States aid, or whether he is back on Moscow's side after a billion-dollar buildup from the United States.

Mr. Speaker, I wish the foregoing statement that the United States has several hundred military men moving about in Yugoslavia were true. However, in the testimony before the House Foreign Affairs Committee on the Mutual Security Act of 1956, it is brought out that we actually have 55 people assigned for this purpose in Yugoslavia. Following is a transcript of the committee testimony:

Mr. WILLIAMS. Mr. Chairman, I just wonder whether the question of Yugoslavia's cooperation in compliance with the law of inspection has come up. I would guess that came up for discussion.

Chairman RICHARDS. It hasn't come up, and it is a good question to raise.

Mr. WILLIAMS. Last year that formed quite an important part of the legislative history.

(Discussion off the record.)

Mr. MCGUIRE. That is right. General Waters, I believe, in the first week in February went out and made a complete inspection trip, which is the first time that has happened to our MAAG in Yugoslavia.

Mrs. KELLY. How many military are in our MAAG mission in Yugoslavia? I want to know that. I want to know how many are in all the countries.

Mr. MCGUIRE. Mrs. KELLY, don't hold me to this figure, I am doing it from memory. That is one of the other questions, that we could have people in there. They did raise that ceiling.

I think, if I recall correctly, we had 45 and we now have 60.

Mrs. KELLY. How many have you in Turkey?

Mr. MCGUIRE. That I can't answer you. I will say you have a little different mission in Turkey; a substantial amount more. Because in Turkey you have a training mission along with the MAAG activity.

(The following information was supplied for the record:)

"As a result of the visit by Deputy Under Secretary of State Murphy last summer, the Yugoslavs have authorized an increase in the size of the MAAG to a total of 60 United States nationals. As of November 30, the following United States personnel were assigned: 27 Army, 8 Navy, 14 Air Force, 6 civilians—total 55.

"The strength of JAMMAT Turkey as of November 30, 1955, was as follows: 97 Army, 35 Navy, 51 Air Force, 34 United States civilians—total 217. These figures do not include 368 United States personnel engaged in training activities with the Turkish armed forces."

(Discussion off the record.)

Mrs. KELLY. Do you know how many personnel we have in the United States Embassy in Yugoslavia, and how many has Russia been permitted to send in Yugoslavia?

Mr. MCGUIRE. I don't know.

Mrs. KELLY. Will you find that out?

Mr. MCGUIRE. I think the State Department will have to answer that.

Mr. ELBRICK. I will find out. I am not sure that we have information here. We can give it to you.

Chairman RICHARDS. Will you provide that information?

Mr. ELBRICK. Yes, Mr. Chairman.

(The information requested is as follows:)

"The total number of United States Government personnel stationed in Yugoslavia at the present time is 172 persons, including Embassy and military personnel, ICA personnel, marine guards, USIA employees, etc. Of these, 55 are connected with the MAAG mission, 8 are stationed at the United States consulate in Zagreb, and the remaining 109 are connected with the Embassy in Belgrade.

"The exact number of Soviet Government personnel stationed in Yugoslavia is not known. The number of Soviet personnal with diplomatic status is known to be 16, which would indicate a total complement of approximately 50 persons. We have no information indicating that there are any Soviet military personnel in Yugoslavia in a status similar to our MAAG mission."

Chairman RICHARDS. Do you want to ask a question, Mr. Byrd?

(Discussion off the record.)

Mrs. KELLY. I was going to ask, Mr. Chairman, did you ever think—I am sure you did—of the other side of the equation, of their attitude of playing both sides against the middle. This attitude hurts the anti-Communist world to a degree where those nations we are trying to align with the West become neutral. They can say, "Well, look what you do for Yugoslavia. Twice as much. We will do the same thing, play both sides against the middle." We are coerced into being blackmailed all along the line.

Stalin's Ghost as Scapegoat

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, nations which are resisting the conquest by the Communist conspiracy of the free world are on notice that we cannot trust the dictators in the Kremlin.

On last May 12, in Human Events, an outstanding authority on the Russian conspiracy, Mr. Eugene Lyons, submitted a statement regarding the trick behind the false face of those dictators. His article was entitled "Stalin's Ghost as Scapegoat."

Under leave to extend my remarks I am including the article that appeared in Human Events:

STALIN'S GHOST AS SCAPEGOAT

(By Eugene Lyons)

Any attempt to understand the sensational purge of Stalin's ghost, its causes and its implications for the future, must begin with a grasp of the enormity of the action.

The new Soviet dictators have only the prestige of their regime and its ruling party to give a semblance of legitimacy to their rule. Yet their indictment of the Stalin period is the kind that a victorious opposition, rather than legal successors, normally makes. Khrushchev and his associates have deliberately blackened and disowned a quarter of a century of the history of both party and regime, the whole of their heritage.

This they have done in full awareness that every accusation against Stalin is a confession of their own complicity in error and crime. They knew that their obvious guilt by association would far outweigh the pretense of innocence by dissociation. The only alibi the chieftains of a militant revolutionary movement could muster was abject fear of their master and patron. The humiliation must rankle—this is probably the first time in history that a group of rulers pleads cowardice as its warrant for leadership of a great empire.

In branding Stalin as a depraved blunderer and mass murderer, his heirs acknowledge the truth of the worst slanders, through the years, by "enemies of the people" at home and anti-Communists abroad. They cancel out 25 years of indoctrination and planned education, along with all textbooks, encyclopedias, and official histories.

There are few families in Soviet Russia which have not suffered heavy casualties first in the purges and liquidations, then in the war. Now the survivors are being told that the terror was largely unjustified and that much of the death and destruction in the war derived from Stalin's stubborn blunders. The long decades of suffering and sacrifice are thus turned into a macabre of mockery. In stripping Stalin of glory and conceding their own corruptions, the successors have provided deadly ammunition for opponents abroad and, more important, at home. They destroy the last illusions of the Kremlin's honor, veracity, and infallibility.

Such is the magnitude of their action. To explain it in terms of clever tactics is therefore absurd. Khrushchev and company would not have besmirched the Stalin period in which they are rooted merely to placate Tito or to improve relations with neutralist countries, or to promote united fronts with leftwingers, or even to raise the productivity of Soviet economy. Such considerations seem trivial when appraised in relation to the risks and humiliations involved.

The new oligarchs are, after all, the cream of the crop of Stalinist tough boys, trained and hardened to yield only to insuperable force. Clearly the repudiation of Stalin must have been an act of desperation, forced upon them by terrific and irresistible pressures.

It was "no easy question," one of the collective leaders, Lazar Kaganovich, said at the 20th party congress. For 3 years, the inheritors blew hot and cold on Stalin. Times when he was played down or ignored were followed by sudden renewals of ritual eulogies. The coup de grace was delivered after long delay and with heavy hearts—recall Khrushchev's tears and the fainting delegates—under compulsions that ruled out half measures. Neither the downgrading of Stalin—the attempt to let his halo fade out—nor the execution of Beria, as the terror symbol, had sufficed.

Foreign analysts seem agreed that the anti-Stalin drive somehow clears the road to united fronts and facilitates the wooing of neutralist and uncommitted nations. But this assumption is a shallow fallacy. Actually the admission of frauds, frameups, anti-Semitism, and the rest, all on a horrifying scale, shears the last shreds of idealistic pretensions from the Kremlin. It makes Stalin's long-time collaborators not more but less attractive as partners and comrades.

Pious talk of excesses and promises to behave more decently hereafter would have been enough for the Nennis, Corliss Lamonts, and Bevans of the world. The Kremlin's problem is to win over Socialist parties and uncommitted liberals—but these must be embarrassed and even revolted by the striptease revealing Soviet reality in all its moral nakedness. The cool reception Khrushchev and Bulganin met in England, especially in Labor circles, very likely was influenced by official Soviet confirmation that the worst suspicions about the Kremlin are quite true.

Naturally, the Soviet leaders will try to exploit their break with Stalin to gain some advantages abroad. But those who seek clues to the smearing of Stalin in Moscow's foreign affairs are in the writer's view, on the wrong track. These will be byproducts of a decision forced upon them by deep ferments inside their own country.

Only pressures menacing the very life of the dictatorship could explain the reluctant decision to jettison Stalin. The angers and despairs, always boiling under the artificial calm of a police state, threatened to break through to the surface. Anti-Kremlin sentiment has always been rife in the Soviet land, as witnessed by the maintenance of a colossal apparatus of surveillance and repression, the endless purging, the inhuman security laws and censorships. That sentiment must have reached explosive dimensions to force the rulers to offer Stalin himself as scapegoat.

Clearly the collective leadership found itself in deep trouble. We can only speculate, though with a large measure of assurance, where the pressures came from:

1. THE ARMY

In the last war the Armed Forces and their commanders reaped the blame for terrible defeats, while Stalin hogged the credit for the ultimate victories. The ghastly slaughter of the flower of the officers' corps left wounds that would not heal. Moreover, the millions of conscripts—drawn from the general population, most of them sons of the badgered peasants—have always mirrowed the moods of the populace. In the early 1930's, for instance, it was primarily grumbling in the ranks of the army that finally forced the Kremlin to call a halt to collectivization terror.

After Stalin's demise, his successors moved swiftly to conciliate the armed forces. The elevation of Marshal Zhukov was to signalize the change. But evidently a lot more drastic measures were required. The first of the major Stalin atrocities spread on the record at the 20th Congress was the murder of 5,000 officers in the Tukhachevsky purge. (In truth, several times that number perished.) The myth of Stalin's military genius was deflated with unsparing irony; the blame for inadequate preparedness and shattering losses in the war was laid squarely at the Kremlin's door; Pravda, on March 28, underlined the harm done by the Stalin cut to "works of art and literature devoted to military topics."

2. THE COMMUNIST PARTY

Restiveness in the ruling party itself unquestionably entered into the complex of pressures. In the Stalin era, the party was reduced to awed silence and utter impotence; its supposed policymaking organs became rubberstamps for one man's arbitrary will. In ratio to their numbers, Communists had more purge victims than any other segment of the citizenry. Though despised by the masses as the instruments of their ordeal, party members and secondary leaders alike felt themselves no less oppressed than nonparty neighbors.

Moreover, at least the more self-respecting among them were distressed by hypocrisy and mass murder. They winced as the traditions and revolutionary mystique of their party were dirtied and bloodied, as its founding fathers were reduced to the status of foreign spies.

A recent Warsaw broadcast in connection with the anti-Stalin campaign exclaimed: "How monstrous and pathological must the thoughts of a person have been who could have imagined that many members of the central committee, most of them old Bolsheviks, could have been enemies or imperialist agents." Late in the day, it was voicing the despair of myriad Communists compelled to believe just such monstrous nonsense.

It is significant that the denigration of Stalin is coupled with fulsome pledges of some inner-party democracy and restoration of the original powers of the central committee and other party agencies. No less significant is the fact that the first people to take advantage of the new dispensation seem to be Communists. Already Pravda has several times threatened "rotten elements" in the party, who allegedly are exploiting the anti-Stalin campaign to launch "anti-party views." If ever there is an uprising against the regime, it will not be astonishing to find dissident Communists in its forefront. Better than most of their countrymen, they know the extent of the Kremlin's corruption and inhumanity.

3. THE TECHNICAL INTELLIGENTSIA

The Soviet industrial supertrust is increasingly dependent upon its engineers, scientists, managers, and bureaucrats. Though educated along narrow technical lines, their intellectual growth could not be wholly prevented. Education has given them access to dangerous ideas despite censorships.

Materially this new class is well rewarded, but on terms that are galling to many if not most of them. They have seen scores of thousands of their colleagues dragged off to prison camps or execution cellars, and do not know when their own turn is coming. They represent the paradox of a privileged elite which is at the same time insecure and suspected. A curb on terror—the terror so long personified by Stalin—is surely intended to assuage the fears and win the allegiance of this group.

4. YOUTH

Former inmates of Soviet concentration camps now in the West are unanimous in reporting that the average age of inmates is well below 30. The great majority of some half million Soviet citizens who, at the war's end, refused to go back to their homeland, were young people. Now, as in Russia's past, "idealistic" university students are a thorn in the flesh of the rulers; the incidence of arrests has normally been much larger on the campus than in the population at large. Even the muffled reports of the riots in Tiflis and other areas made it clear that the leading role was played by students.

Youth's immemorial hatred of injustice has reasserted itself in terrorized Russia. The spread of what we would call juvenile delinquency, about which the Soviet press is frankly alarmed, is not without political overtones. The cutting of classes (in political indoctrination courses especially), the refusal to work, drunkenness and mischief are primitive protests against the boredom and drabness and insecurity of Soviet existence.

In the early period of the Russian Revolution, its glowing promises fired the imagination of young people. This spring feeling dies hard. It flared anew, as this writer saw, under the impact of bold slogans of industrialization and a happy life to come in the early 1930's. But thereafter youthful ardor was rapidly eroded by Stalin's ruthlessness and contempt for life. Factories and electric stations are not enough to feed the hungers of the soul-searching minority that has always set the pace for Russia's youth.

Recently the head of the Komsomol (Communist youth) organization, Shepilov, held forth on the need to revive the old fervors of the young. "The spirit of revolutionary romance and the spirit of pride in the great deeds of old generations of revolutionaries," he said, "are being lost in Komsomol and pioneer youth work." He was offering a more plausible explanation of the attack on the dead despot, and the rehabilitation of some of the victims, than any of the guesses of foreign experts.

These groupings, of course, overlap and intermesh. Nearly all officers of the Armed Forces and large portions of the new managerial elite are also party members. The grumblings of youth are echoed in the Armed Forces and in the party's auxiliary, the Komsomol. Vast discontents in the mass of the Soviet humanity, especially acute in the peasantry—still half of the population—provide the background for the more focused rebelliousness in the groups listed above. There is a prevailing unease, a sullen fed-up mood, among the common people. All of this adds up to a smoldering opposition, vague and inchoate as yet, but one which the new masters could no longer ignore. They live under the fear that it may suddenly flare into flame.

The dethronement of Stalin has more to do with the slave revolts in Vorkuta and other forced-labor regions than with Geneva or Belgrade or New Delhi. The riots in Soviet Georgia and elsewhere, in which at least 100 were killed, were explosions of long pent-up indignations.

Interviewed by a New York Times correspondent, the rector of the Tiflis State University, Victor Kupradze, remarked that in the 1930 purges, Georgia had suffered more than any other Soviet republic. He blamed the disturbances on "dark elements" composed of "former students, relatives of liquidated kulaks and liberated victims of the 1937 purges." But why would such persons risk their freedom and their lives to shield the reputation of the Great Purger and Liquidator? It makes no sense. The pretext for the demonstrations was illogical, but the motivating angers were all too genuine. The demonstrators were not so much defending Stalin as attacking his cynical henchmen and successors.

The important and encouraging fact is that four decades of police terror have not destroyed the capacity of Kremlin subjects for protest, and that the lead was taken by students who could have no memory of the pre-Soviet past.

Apparently a real measure of relaxation is today being allowed in the U. S. S. R. to underline the retreat from Stalinism. The milder political climate can be expected to break up the icepacks of fear. More and more millions, who only sighed and groaned, will find the courage to articulate their griefs and despairs. Already ordinary people, one reporter has cabled, are speaking "far more freely than they used to."

How far will this process go? Even a little freedom can be intoxicating. The oligarchs will become increasingly scared by the evidences of the intensity of popular hatreds of their regime and can be expected to resort again to the only medicines they know—purge, liquidation, shootings. The old-style threats against "unstable elements" in the ruling party, so soon after the renunciation of Stalin, are straws in the wind. The supposed break with the Stalinist terror is likely to prove the prelude to a new terror.

But the pressures which compelled his successors to disown their Stalinist heritage will remain to plague them. What the present bosses need most in this, their troubled hour, is prestige and acceptance abroad to bolster their positions at home. And the free world, alas, is providing these things in heaping measure. We fraternize with the Khrushchevs, Bulganins, Mikoyans, and their pisorted delegations and missions. We confuse their military might with political strength vis-a-vis their own people.

By every test of commonsense we should act today to undermine the legitimacy of the new leaders ,to emphasize their deep complicity in Stalin's crimes, to make clear our detestation of the whole Soviet nightmare and our understanding sympathy for the Kremlin's domestic enemies.

Instead we are doing the very opposite—receiving the hierarchs as honored guests, enlarging trade with them, underrating the Soviet people whom the dictators hoped to propitiate with a supreme scapegoat. A civilization not merely willing but eager to coexist with evil openly dedicated to its destruction has lost its will to survive. Should it be saved notwithstanding, it will be despite its own apathy and blindness, through developments within the Communist empire.

The Rogue River of Oregon

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article written by Mr. Kenneth A. Reid, noted conservationist and honorary president of the Izaak Walton League of America.

Mr. Reid has been an ardent conservationist for more than 30 years. For 10 years he was executive director of the Izaak Walton League. His article in the May-June 1956 issue of Outdoor America, the official publication of the Izaak Walton League, is entitled "The Rogue River of Oregon." In the article he mentions the need for screening the fish destroying turbines and pumps in the Savage Rapids Dam. Mr. Reid, as well as all conservationists in America, will be pleased to know that the Savage Rapids fish screen problem is taken care of in the Public Works appropriation bill which was passed by the House recently.

The article referred to follows:

THE ROGUE RIVER OF OREGON
(By Kenneth A. Reid)

The Rogue River is the most famous, and probably the best steelhead river in the United States. Some other rivers have larger fish, and a few may have more steelheads ascending from the Pacific to reproduce their kind, but all things considered, none holds a stronger appeal to the angler seeking the ultimate in sport than the famous Rogue.

For reasons that are imperfectly known, the steelhead in one river may be quite different in their feeding habits from those in another. No one who has ever caught a steelhead questions the outstanding game qualities of this sea-run rainbow trout. But, unfortunately, in far too many river, one must resort to salmon eggs or hardware to get this splendid fighter on the line. In the Rogue he regularly takes the fly without encumbrance of spinner or other hardware and, on occasion, I have seen good fish taking floating insects off the surface.

For well over a hundred miles from its mouth at Gold Beach winding up through the timbered valleys and rugged canyons of the Siskiyou Mountains to the more open valley above Grants Pass, the Rogue affords superb steelhead fishing for the discriminating angler in a delightful and varied environment. And while they do not compare from a sporting standpoint, the salmon runs of the river have considerable commercial importance.

Through the years both fish have suffered considerably from widespread irrigation diversions and other developments of man. Now they are threatened with virtual extinction through the big annual loss of seaward migrants at the Savage Rapids Dam because the intakes to the turbines and pumps are not properly screened.

Federal appropriation of approximately $200,000 is needed to correct this situation. Each year since 1949 Congress has shirked its responsibility and failed to appropriate the needed money while the runs of salmon and steelhead have diminished year by year. Again the House Appropriations Committee has before it an item of $208,000 for screening these intakes to save an irreplaceable capital asset worth many times that amount. Commonsense thrift demands that this deplorable situation be corrected.

Economy in congressional appropriations is very much needed today. But we don't want or need the pennywise and pound-foolish type of economy that striking out this item would signify. Pleading economy as the reason for failure to protect the fisheries of the Rogue does not make sense when we consider the traditionally lavish policy of the same body on much greater appropriations for great dams which have often destroyed the salmon and other anadromous fish runs by blocking their essential spawning migrations. A very small fraction of the colossal sums being approved for these extravaganzas will suffice for the needed protection on the Rogue. Impartial application of the same yardstick of economy to the big appropriations will recover many times the funds needed here and effect overall savings. We are in favor of that type of economy.

Disruptive Increases in Imports of Foreign Oil

SPEECH
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. VURSELL. Mr. Speaker, I am glad the gentleman from Oklahoma has raised this question this afternoon. I had a chance to read a copy of his speech that he was kind enough to mail me, and I was impressed with the factual information and logic it contained. As you know, for many years I, along with the other gentlemen here and many other Members of this Congress, have been interested in trying to see that the small independent oil producers of the great oil industry have thrown around them the proper protection so that they could continue to explore and continue to widen the development and the production of oil, and that they could have reasonable protection against excessive imports, so that they could prosper and continue to find and develop new fields which is so necessary to industry and the economy of our Nation, and so necessary to our national defense.

The gentleman from Oklahoma and others here know that we have had this problem up on the floor of this House many times and we held a number of conferences with those in the executive branch of the Government seeking to slow down the constant increase of imports at a time when only 10 percent of our market was being taken by imports.

Notwithstanding our efforts, imports have continued to increase to the point where probably 18 or 20 percent of our market for oil consumption in this country is going to foreign countries, because certain big major oil companies have somehow or other refused or at least failed to comply with the wish expressed by this Congress, and by the committee that was set up to determine what the limitations on oil imports should be. That Cabinet-level committee, after making a thorough study, decided that oil imports into the United States in the future should be held to a level not to exceed imports of the year 1954, and that any significant amount of increase above that would be looked upon as excessive.

They asked these big oil companies to comply. They have not fully complied. Dr. Flemming wrote them a second letter urging them to voluntarily comply with the order.

They still have failed to comply, and imports by these companies have increased.

Some 3 weeks ago I was in touch with Dr. Flemming over the telephone, complaining of the present situation which we are discussing this afternoon. He told me that it was his intent and that of his committee finally to reach the objective laid down in the order. I feel sure he made that statement in good faith. I hope he reaches the objective of lower imports in the very near future.

I am hoping that our discussion of this problem today will again serve notice, not only on the major oil companies which are responsible for most of the excess imports, but on the executive branch of the Government, because, unless there is compliance on the part of the powerful importing interests in oil, there is no alternative, in my judgment, except to protect the independent oil industry that is so necessary to the economy of our country and the defense of our Nation, by legislation, which we reluctantly decided not to press at that time, in the belief they would ultimately comply with the order and we could gain the objective sought in the interest of our people.

I commend the gentleman for bringing this matter to the floor of the House and to our attention this afternoon.

Mr. JARMAN. Mr. Speaker, I thank the gentleman for his remarks. The gentleman from Illinois has long been active in the consideration of this great problem, and I appreciate his contribution to our discussion.

1955 Big T Irrigation Water Spelled Success to Farmers

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. HILL. Mr. Speaker, I wish to enclose in the Appendix of the RECORD an article taken from the Loveland-Reporter Herald, Loveland, Colo., on June 5, 1956, entitled "1955 Big T Irrigation Water Spelled Success to Farmers."

This is a very interesting statement and is an illustration of what can really be done with western irrigation projects when properly organized.

The article follows:

NINETEEN HUNDRED AND FIFTY-FIVE BIG T IRRIGATION WATER SPELLED SUCCESS TO FARMERS

(EDITOR'S NOTE.—Following is an informative article on the Colorado-Big Thompson project that will be of especial interest to the people of the Loveland area. Colorado-Big Thompson water in 1955 accounted for $17 million in crops. The 240,000 acre-feet of diverted water was 34 percent of the total supply.)

(By Robert E. Struthers, agricultural economist, Denver, Colo., region 7)

For the third successive year, Colorado-Big Thompson project supplemental irrigation water in 1955 spelled the difference between success and failure of crops in many parts of northeastern Colorado.

Drought began in 1953, the same year when project construction, started in 1937, reached the stage of permitting delivery of large quantities of western slope water diverted through the Alva B. Adams Tunnel.

In 1954, the project was ready with water to combat what had become the most severe drought Colorado farmers ever experienced. The 301,000 acre-feet of project water used in that year meant an estimated $22 million boost in crop value.

The drought cycle continued into the 1955 season—again calling for emergency water delivery from the project storage system. The 240,000 acre-feet of transmountain water furnished in 1955 represented one-third of the total surface irrigation water in the area served by the Northern Colorado Water Conservancy District. And it likewise accounted for one-third of $51,210,000 in crops, or $17 million.

SUPPLY MULTIPLIED

Normal inflow to the district averages about 900,000 acre-feet annually. By the reuse of return flows this initial supply is multiplied to the extent that actual measured diversions throughout the district total 2,200,000 acre-feet. Another half million acre-feet are supplied by well irrigation, all of which arises out of the initial inflow.

The average supplement to be provided by the Colorado-Big Thompson project is estimated at 257,000 acre-feet. Approximately the same rate of recurrence is expected of this water, and the beneficial effects will thus be felt throughout the district as well as in the area of initial application.

The project is expected to furnish about 22 percent of the district's annual supply. In 1954, however, the project water was 45 percent of the supply and in 1955 it was 34 percent.

Availability was even more important in 1955 than quantity. Throughout the unusually dry spring months project water was heavily used. For the season the Colorado-Big Thompson supplied 58 percent of the stored water used.

The same drought conditions that multiplied the uses at the same time prevented replenishment of storage. At the end of the year the 804,000 acre-feet of project storage capacity contained only 239,000 acre-feet of water. As the spring of 1956 approached, however, a heavy snow pack in the mountains held forth hope that total storage may increase even while full demands are met for supplemental irrigation water.

The water content of snow on the Colorado River drainage above Granby Reservoir, the project's main storage, was 160 percent of the 20-year average at the end of January. Should the rains be scant and the suns hot again in the summer of 1956, there still is assurance that near adequate supplies will be available for the district and the seven towns served with municipal water.

Crop production within the district increased about 8 percent in 1955 over the previous year, offsetting a 6-percent price decline. Farmers were not entirely spared the expenses and frustrations of drought, seeing sugar beet and corn plantings lost and having to replant to beans and sorghums.

The Big Thompson farmers commiserated with their fellows elsewhere in Colorado who had no means of supplementing their irrigation, or had no irrigation at all. Winter and spring moisture deficiencies destroyed the plantings on thousands of acres. The production of wheat, the major dry-land crop, was only 40 percent of the past 10-year average.

Abandonment of croplands over the State amounted to 43 percent of the cropped acreage. These failures, coming on the heels of 1954 when 39 percent of the crop acreage was abandoned, had an extremely depressing effect on the Colorado farmers' economic status. Business was down in drought-stricken communities and mortgage debts increased.

SALES TAX UP

Retail sales tax collections are an indicator of general business conditions and volume of spending. In the northeastern and southeastern irrigated valleys of Colorado, widely divergent trends in retail sales tax collections are evident, although both areas have been affected similarly by drought.

In the northeast, where supplemental water has been available, a progressive growth trend has been established. In the southeast, where drought-induced water shortages remain uncorrected, retail sales have declined with serious effects on the valley towns.

Such indirect effects are well known and accepted in irrigated communities. The Northern Colorado Water Conservancy district, contracting agency with the Government for construction of the Colorado-Big Thompson project, is organized under a pioneering law passed in 1937; under the law, the general population of 160,000 is helping to support the project through ad valorem mill levies. This form of support recognizes that the project means added stability and new wealth, not only for farmers but also for townsmen. Many similar conservancy districts have now been formed throughout the West.

The project provides an important service to western slope irrigators. Western slope project reservoirs include storage sufficient to replace any project-induced shortages among irrigators on that side of the continental divide. In addition, 95,000 acre-feet of storage capacity was provided on the west side for future irrigation expansion.

In 1955, western slope irrigators drew 39,000 acre-feet of water from this storage to offset shortages in their own supplies. This was water that otherwise would have been lost in the surplus spring flows, and it was provided without cost to the western slope irrigators.

A Flag for Members of the House of Representatives

EXTENSION OF REMARKS
OF
HON. JOHN J. ALLEN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. ALLEN of California. Mr. Speaker, I have just introduced a House resolution which would provide for a flag for Members of the House of Representatives.

All of us, particularly those who have been members of the armed services of the Nation from time to time and even more particularly those Members of the House who own small boats and pleasure craft, are conscious of the use of flags to designate the high civilian officials in a great variety of Government departments and to identify the presence of the flag officers in the military service on ships, on boats, on other conveyances, and over headquarters such flags are constantly used to indicate the presence of the persons which they respectively represent.

The conversations and suggestions of a number of Members of the House aroused my curiosity concerning the subject. I wrote to Mr. Griffith, Director of the Legislative Reference Service of the Library of Congress, and learned that there is no official flag for Members of Congress in existence. He suggested that if it were desirable to have one the purpose might be accomplished by a simple

resolution of the House. I will include as a part of these remarks his letter to me of August 22, 1955.

At Mr. Griffith's suggestion I got in touch with the Heraldic Branch of the United States Army, which handles such questions for the executive branch of the Government. Colonel Laux and Mr. DuBois of that agency furnished me with a study explaining how flags for the United States Government officials are designed and including a statement concerning the background of the suggested designs for flags for Members of Congress. I will include, as a part of these remarks, the letter, dated August 9, 1955, which was written to me by Colonel Laux and the statement which he entitled "Schematic Philosophy in Creating Flag Designs for United States Officials." The flag suggested would have a red or blue background on which would appear the shield of the coat of arms of the United States, in the usual red, white, and blue, encircled by a wreath of oak and all surrounded by 13 gold stars. The finial piece, which is the ornament on the top end of the flagstaff, might be a reproduction of the Capitol dome in gold color metal.

Either red or blue as a background would be appropriate to either House of Congress. Having in mind that the House Chamber is decorated in blue and gold while the Senate Chamber is decorated in red and gold, I concluded to use the blue background in describing the color of the flag for Members of the House of Representatives in drafting the resolution which I introduced.

With his letter Colonel Laux also furnished me with designs and sketches of the proposed flags in color and of the proposed finial piece. These I will submit to the chairman of the committee to which the resolution is referred if such is his desire.

The resolution which I have introduced is based upon a draft which was furnished to me, at my request, by the Office of the Quatermaster General.

The drafting service was very much appreciated as the subject is a technical one, and I express my thanks therefor. It was, I should note, a drafting service only and did not necessarily represent a policy position of the Department of Defense.

The letters and documents to which I have referred above read as follows:

THE LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
August 22, 1955.

The Honorable JOHN J. ALLEN, Jr.,
House of Representatives,
Washington, D. C.

DEAR MR. ALLEN: Reference is made to your letter of July 19, 1955, concerning an official flag for Members of Congress.

So far as we have been able to ascertain, there is no such flag now in existence.

Regarding the appropriateness and symbolism of the proposed design which you mention; this is a fairly technical subject upon which we would prefer to refer you to a recognized authority. We suggest that you get in touch with the heraldic branch of the United States Army, which handles such questions for the executive branch. (Mr. DuBois, Code 131, Extension 52901.)

The third point which you mention concerns the necessity of legislative action for adopting such a flag. We have found no instance where a flag of a Government official has been adopted by means of a public law. The President's flag and that of the Governor of the Panama Canal are based upon Executive order. Those of the other officials are based upon departmental action. It would seem that comparable authority for a congressional flag would be found in a concurrent resolution (assuming that the Senate were asked to join) or by simple resolution of either House. Such authorization, however, would apparently not carry with it any legal obligation to official recognition by other Government agencies. If it is desired to insure official recognition, it would seem that it should be accomplished by a public law.

We are forwarding a copy of Lloyd's Register of American Yachts, containing a section in which the private signals of yachtsmen are reproduced, which indicates anyone or any group may adopt a private flag.

Sincerely yours,
ERNEST S. GRIFFITH, *Director.*

DEPARTMENT OF THE ARMY,
OFFICE OF THE QUARTERMASTER GENERAL,
August 9, 1955.

Hon. JOHN J. ALLEN, Jr.,
House of Representatives.

DEAR MR. ALLEN: Reference is made to your letter, 19 July 1955, and letter from the Office of the Quartermaster General, 1 August 1955, concerning a proposed flag design for Members of Congress.

Careful study has been given to your request, and suggested designs are enclosed for your consideration. (See enclosure 1.) Also enclosed is an explanatory statement concerning the concept of this Office in creating the designs for flags for United States Government officials. This statement includes the background of the suggested designs for the flags for Members of Congress.

It is hoped the proposed designs are satisfactory. If they are approved, action will be taken, at your request, to prepare manufacturing the drawings for the flags.

Respectfully yours,
RAY J. LAUX,
Colonel QMC, Executive Officer.

SCHEMATIC PHILOSOPHY IN CREATING FLAG DESIGNS FOR UNITED STATES OFFICIALS

1. DESIGN (STAR ARRANGEMENT)

(a) Circle of stars around central design of the flag is reserved for the President and Vice President of the United States.

(b) Four stars in bend direction appear on the flag for the Chairman, Joint Chiefs of Staff.

(c) Corner stars on flags are reserved for civilian appointive Secretaries of Departments and Governors of States.

(d) Deputies, Under and Assistant Secretaries of departments use the same design as that for Secretaries, but the colors are reversed.

(e) Rank for naval flag officers is indicated on vertical center line or extremity of imaginary geometrical figures.

(f) Army and Air Force military personnel have stars on horizontal center line and extremity of a geometrical figure.

2. DESIGN (COLOR OF BACKGROUND)

(a) President's flag: Dark blue.

(b) Vice President's flag: White.

(c) Chairman, Joint Chiefs of Staff: Red and white; diagonally divided.

(d) Secretaries of departments: Various colors, with white stars.

(e) Deputy Secretary, Under Secretary and Assistant Secretary of departments: White with colored stars.

(f) Navy flag officer: Dark navy blue, white stars.

(g) General officers of the Army: Scarlet, white stars.

(h) General officers of the Air Force: Ultramarine blue, white stars.

NOTE.—Military grade is indicated on uniforms by silver stars; it is symbolically represented on flag designs by white stars.

3. FLAGS FOR MEMBERS OF CONGRESS AND PRESIDING OFFICERS

(a) Vice President or President of the United States Senate (already adopted): White (Executive Order No. 10016, November 10, 1948.)

(b) President pro tempore of the Senate: To be determined.

(c) Members of the House of Representatives: Blue background, honor color from the flag of the United States, representing vigilance, perseverance, and justice.

(d) Speaker of the House: To be determined.

(e) Members of the Senate: Red background, color from the flag of the United States, representing hardiness and valor.

(f) Design: Inasmuch as the military ranks are represented by silver stars on the uniform and white stars on the flags, it is suggested the flag designs for Senators and Representatives have gold (or yellow) stars which will be distinctive to the legislative branch of the Government as distinguished from the executive branch. The shield of the coat of arms of the United States as described in RS 1793 (4 U. S. C. 4) is composed of 13 palys argent (white) and gules (red) alternated, a chief azure (blue). The 13 palys represent the Original Thirteen Colonies with the chief uniting the colonies and representing Congress. Therefore, this design encircled by a wreath of oak representing strength, all surrounded by 13 gold (yellow) stars, is most appropriate for use on flags of the legislative body. This central design would appear on both the Senators' and Representatives' flags. This central design could also appropriately be reproduced as a lapel button for wear by Members or former Members of Congress.

(g) Sizes: The flags should conform in size to the normal Armed Forces systems and for private boat use they should be appropriate for the boat on which displayed.

(h) Finial piece: Inasmuch as the eagle is prescribed as a finial design for the President's flagstaffs (the gilt halberd ball, gilt star are used by the Navy, and acorn and spearhead by the Army and Air Force) it is suggested that a reproduction of the Capitol Dome in gold color metal be used by Members of Congress as their distinctive finial piece.

H. R. 5550

EXTENSION OF REMARKS
OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. KEARNEY. Mr. Speaker, H. R. 5550, the bill which would authorize United States membership in the Organization for Trade Cooperation—OTC—is currently pending in this Congress. The controversy which it is raising throughout our land is increasing in intensity and I believe all Americans have a stake in this issue.

Recently the United States Chamber of Commerce evidenced its interest in the OTC. During its 44th annual meeting held here in Washington recently, there was submitted to the assembled delegates of chamber members a policy

statement prepared by the United States Chamber's Foreign Commerce Department Committee. This statement endorsed United States participation in multilateral trade agreements. Rather than gaining the quick acceptance of the chamber delegates, the statement loosed a controversy. It soon became evident that many of the delegates did not think too highly of the statement. So strong was their attitude, in fact, that they voted to submit the policy statement on multilateral trade agreements to a membership referendum by a vote of 227 to 163.

This referendum is now being conducted. I am proud to call the attention of the House to the role which is being played in this referendum by the Gloversville Chamber of Commerce of the 32d District of the State of New York.

After receiving numerous letters urging local members of the United States Chamber of Commerce to vote in favor of the policy statement, the Gloversville chamber decided that it had to do something. The members of the Gloversville chamber just could not believe that these letters spoke for any but a small number of chamber members. They felt that if they did not seize the initiative, many local chambers of commerce and trade association members of the United States chamber would be presented with a distorted picture.

The people in Gloversville were very aware of the damage which our participation in the multilateral tariff-cutting accord, the General Agreement on Tariffs and Trade—the so-called GATT—had caused in their region. They knew of the many sectors of our economy which labored under the threat of cheap imports.

Led by their able president, Mr. Richard B. McNamara, the members of the Gloversville Chamber of Commerce felt it to be their responsibility to redress the balance. They addressed letters to local chambers of commerce and trade association members of the United States Chamber urging them to vote down the policy statement on multilateral trade agreements, and they enclosed a very persuasive 12-point argument to support the letter.

Mr. Speaker, I urge the Members of the Congress to take note of the letter and the supporting argument from the Gloversville Chamber of Commerce:

GLOVERSVILLE CHAMBER OF COMMERCE,
Gloversville, N. Y., June 5, 1956.

To Local Chamber of Commerce Executives:

As you know, local chambers are being asked to vote by June 18 on referendum No. 95, and are receiving numerous appeals to support the declaration involved.

A favorable vote on the declaration would place the national chamber on record as supporting H. R. 5550, a bill authorizing United States membership in the Organization for Trade Cooperation (OTC). It would also be taken as approval of the General Agreement on Tariffs and Trade (GATT), with all its ramifications, even though it has never been submitted to Congress and many people do not realize its implications for American business.

There are many valid reasons why the chamber should not take this position and why local chambers should vote "No" on referendum No. 95. The enclosed statement sets forth a number of these reasons. Also enclosed is a copy of "Willoughby and the Lorelei," which tells the story of GATT–OTC in a light and understandable way.

We in the Gloversville Chamber of Commerce are convinced that H. R. 5550, if passed, would adversely affect our community and the business climate which we want to maintain. We think other local chambers should share our concern, and should vote "No" on referendum No. 95.

Sincerely yours,

RICHARD B. MCNAMARA,
President, Gloversville Chamber of Commerce.

WHY AMERICAN BUSINESS SHOULD VOTE "NO" TO CHAMBER OF COMMERCE REFERENDUM NO. 95

Appearing in the guise of a general endorsement of an international approach to trade problems, the policy statement contained in referendum No. 95 is actually an endorsement of the Organization for Trade Cooperation (OTC), the General Agreement on Tariffs and Trade (GATT), and H. R. 5550 (a bill now before our Congress which would authorize United States membership in the OTC).

The chamber's policy statement, taken by itself, reads more like a general endorsement of an international approach to trade problems: It states:

"The chamber favors participation by the United States in international organizations which deal with international commitments for the relaxation of trade restrictions; provide mechanisms through which arrangements for trade negotiations would be facilitated, and serve as forums for the discussion of trade problems and the amicable adjustment of problems involving commercial rules and commitments mutually agreed upon by the members. Under no conditions, however, shall the United States surrender its sovereignty or submit to control or domination by any supranational organization."

But after the unsuccessful bid for adoption at the 44th annual meeting of the chamber, the real purposes behind the statement have been revealed in the background material for the referendum:

OTC-GATT CONFLICTS WITH STAND OF AMERICAN BUSINESS

American business has always sought to retain within our own shores responsible control over American trade policy. It has held to the principle established in the Constitution: that the power to regulate foreign commerce be vested in the Congress and the Congress alone.

American business has sought to establish efficient and effective foreign-trade controls within our Government and to make them responsive to the needs of the American economy. It has opposed moves which would weaken American control over our own economy. Because our foreign-trade policy has played such a great role in shaping the flourishing economy of our Nation, American business has a continued and active interest in it.

In 1950, American business joined in opposing United States participation in the International Trade Organization (ITO). Opposition was so pronounced that the ITO never came up for a vote before Congress.

But now the charter of the ITO, which has already suffered one smashing defeat, has been rewritten and served up anew under the OTC label.

Our Government has been participating in the General Agreement on Tariffs and Trade without any explicit authorization from our Congress. GATT supporters are so wary of opposition that they decline to make United States participation the subject of a congressional vote.

POLICY STATEMENT ENDORSES GATT-OTC—RUNS COUNTER TO AMERICAN BUSINESS

In submitting its policy statement on multilateral trade agreements at the 44th annual meeting, the chamber too tried to make the GATT-OTC combination more palatable by using vague and general terms. Nevertheless, this declaration, if passed, would have had two effects:

1. It would be taken by Congress and the State Department as a businessmen's endorsement of H. R. 5550, OTC and GATT, an effect which is acknowledged in the background information supplied by the national chamber on referendum No. 95.

2. It would be a blank check endorsement of the planned economy approach to trade toward which GATT-OTC is trending, indeed an endorsement of the discredited ITO, which the chamber earlier disapproved.

It would be difficult to reconcile such endorsement by the chamber with its attempts to reform the ILO (International Labor Organization) and prevent its drift toward socialism. If the voice of free enterprise has been limited at Geneva in the ILO, is it safe to expect that it will be any greater at the secret OTC sessions at Geneva?

WHY OPPOSE GATT AND THE OTC BY OPPOSING THE CHAMBER'S POLICY STATEMENT?

1. The objectives of GATT permit and encourage a drift to socialism, as evident from paragraph 1 of GATT article I, Objectives:

(1) The contracting parties recognize that their relations in the field of trade and economic endeavor should be conducted with a view to raising standards of living, insuring full employment and a large and steadily growing volume of real income and effective demand, developing the full use of the resources of the world and expanding the production and exchange of goods, and promoting the progressive development of the economies of all the contracting parties.

2. GATT and OTC, as presently created, already go beyond the description of international instrumentalities in the proposed chamber declaration.

3. GATT not only deals with "interantional commitments for the relaxation of trade restrictions" it actually contains the rules under which the United States is expected to conduct its tariff and trade policies, and the exceptions under which most other countries can continue their restrictive trade practices.

4. GATT is already more than a forum. It is a codification of trade rules and exceptions. Supporters of the OTC constantly assert that it is "entirely administrative." However, the Secretary of State has admitted under cross-examination before the House Ways and Means Committee that the OTC is quasi-judicial. It could determine facts in disputes and mete out retaliation or penalties. These actions would be by vote, with the United States having but 1 out of at least 35 votes. The United States would either have to conform or quit the OTC.

5. GATT and OTC each comprise the same membership. Each can amend itself. The fact that OTC cannot amend GATT does not prevent either from expanding its own scope and influence.

6. OTC, in its present form, can determine whether member countries, such as the United States, are violating their GATT obligations. Whenever any member country accuses another of such violation, OTC, under its article 14, "shall promptly investigate the matter and * * * make appropriate recommendations * * * or give a ruling * * *." OTC may consult with the UN, or "with any appropriate intergovernmental organization." If OTC "considers the circumstances are serious enough" it may authorize member countries "to suspend * * * such concessions or other obligations * * * as it determines to be appropriate."

7. The United States has already been accused of violating its obligations under GATT, through our agricultural import quotas. The United States obviously can be outvoted. But, under OTC rules, we might not have the opportunity of casting

even our single vote, since, according to OTC Art. 8, "the rules of procedure may require that parties to a dispute shall abstain from voting."

8. Of course, we need not submit to an adverse decision of GATT-OTC. In the case of the agricultural import quotas our State Department delegates agreed to a GATT waiver which commits us to end the violation as soon as possible, and, in the meantime, to make an annual report of progress. In some future case GATT-OTC might not be willing to grant us a waiver, or the terms might be too degrading. In those cases we would either have to knuckle under or quit the organization with the stigma of disrupting international amity.

9. While we would theoretically retain our sovereignty and legal freedom of action, the realities of the situation would effectively infringe that sovereignty and freedom.

10. Congress will have no voice in GATT-OTC. Our voting delegate to GATT will be answerable, after his appointment is confirmed, only to the State Department and the President. Congress would usually have an opportunity to act only after a GATT-OTC action were taken.

11. By approving the declaration the chamber would be telling Congress to pledge its solemn good faith to abide by GATT-OTC. The chamber cannot effectively say to Congress: "Go ahead and agree to abide by those obligations you think proper and avoid the improper."

12. In this whole setup, the ordinary citizen would be lost in the shuffle—without knowledge of what was going on behind the closed doors of Geneva; without any direct voice in the decisions affecting him.

A FINAL IMPORTANT CONSIDERATION

By issuing the policy statement on "multilateral trade agreements" with little prior notice, a committee of the United States Chamber of Commerce sought overnight to reverse the position of American business on American foreign trade policy. Now the membership is given only 30 days to make the momentous decision.

A vote of "yes" will commit the chamber to this reversal of policy. A vote of "no" will not endorse a negative stand; it will merely cause the chamber to stand above the controversy.

What New Soviet Plans Mean to United States

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. SHEEHAN. Mr. Speaker, frequently in our daily reading we come across articles of such significance as to merit sharing them with fellow Members of Congress. The Chicago Daily News long noted for its foreign news coverage and excellent commentaries, has printed a personal letter of foreign news correspondent Mr. Ernie Hill, as a climax to a series of dispatches which Mr. Hill sent in from Moscow. Mr. Hill, who has been reporting foreign news for the Chicago Daily News since 1945, intended his comments as a guide to the thinking of the men who edit this paper. The editors found the letter so informative and provocative that they felt the contents should be shared with their readers.

I am heartily in agreement with the editors regarding Mr. Hill's viewpoints, and feel his remarks offer much food for thought.

The article, which appeared in the May 29 issue of the Chicago Daily News, is as follows:

WHAT NEW SOVIET PLANS MEAN TO UNITED STATES—HILL CONFIDENT WE CAN WIN GLOBAL ECONOMIC STRUGGLE

(By Ernie Hill)

DEAR BOSS: I feel somewhat better about the state of the world as a result of my visit to the Soviet Union.

The Soviets need another generation of intensive construction work on living quarters, schools, and hospitals. Today there is only a beginning.

They are so proud of what they have accomplished that I feel certain they will think a long time before having it all blown up.

The Soviets, at the same time, are not nearly so efficient as we have been led to believe. Such a vast bureaucracy is cumbersome. Decisions are hard to come by and delays are interminable. Building construction is generally mediocre to bad.

The Soviet people most certainly want peace.

I wish I could report that the liberal changes now taking place mean that the Communists have given up the idea of world domination. Or at least that the Russian people are becoming fed up with the whole business of communism. But neither is true.

RUSS ARE STILL SOLD ON COMMUNIST GOALS

The Communists of Russia have convinced themselves that they must extend the dictatorship of the proletariat to the entire world for the good of the world.

And instead of being fed up, they are becoming more confident and enthusiastic over communism because of the material progress of the last generation.

Let's not kid ourselves. This is true. But I still feel we have grounds for optimism.

The most hopeful thing that can be said now is that the Russian people and the present leadership appear convinced that they can expand communism through economic competition without resorting to war.

They believe that the United States and its allies will soon go into an economic depression of such magnitude that the working classes will turn to communism as a way out.

The cold war is being turned into an economic war. Yet we have no choice but to stay strong and unified just in case the men in the Kremlin discover that capitalism is too formidable an economic opponent to defeat peacefully. We have to stay ready for war.

UNITED STATES MUST BEAT REDS AT ECONOMIC GAME

Our best course, it would seem, is to join in their new game and beat them at that too.

The Soviets talk big. But there is every indication that they are more afraid of us than we are of them. We have the bases, the planes and the bombs surrounding them.

President Eisenhower is highly regarded in the Soviet Union. He is considered a great general, a reasonable man from his Geneva statements and one who wants peace.

Secretary of State Dulles not only irritates all of our friends in Europe but is considered by the Soviets as the spokesman for irrational elements in the United States. His statements over a period give him a reputation as a shrill voice.

Some of the more intelligent Russians believe that Dulles is forced to do this to frighten congressmen into voting appropriations and to chill our allies into line. This looks like a fundamental weakness both in our country and in our alliance.

The best-informed Americans say Russia wants a sort of peace that is something like a quiet afternoon in a boiler factory.

The Soviets expect Communist parties in every country to keep stirring trouble, to be prepared for redoubled activities when signs of economic depression show. They are expected to engage in all activities short of war to press their ideology. It is a religion with them.

HOPE TO TRIUMPH WITHOUT BIG WAR

Why do the Russian Communists insist upon giving everybody such a hard time?

Why don't they relax, quit spending so much on armaments and allow the world to enjoy the fruits of automation and atomic energy?

I asked a number of Communists this question. They contend with considerable conviction that the last thing they want is war.

All they ask is an opportunity to have Communist Parties everywhere preach the Marxist-Leninist doctrine and try to attract enough followers to win an election or a civil war.

Marx and Lenin, they say, never made any provision for a great international war to subdue capitalism.

Each party in each country takes its own action to obtain power. They were doing very well with this formula in Eastern Europe and Asia until we stepped in and stopped the rot from spreading.

There can be little question but that Italy, France, and perhaps the rest of Europe would have succumbed through coups and civil wars had it not been for American aid and leadership.

Now that the lines are drawn, they want to settle it through economic competition which would suit us a lot better than war.

There is a good chance, I believe, that the opening of the Soviet Union to tourists and ideas from the West is going to produce some changes. Russia's historic isolation and secrecy is being modified. It is bound to work for the good.

If the loosening-up process continues for another 10 years or so, some experts feel that militant communism will begin to lose force.

Failing to bring about the economic collapse of the West, there may be greater reluctance to launch the horrors of atomic warfare.

There are some indications that fervor of the Communist zealots may be at a peak; that it may soon start to wane. The white-hot temperatures of the last third of a century cannot be maintained.

Other countries have gone through such periods of fanatical idealism. The Crusaders spent two centuries trying to capture and hold Jerusalem and convert the Moslems to Christianity. Then the move lost force.

Christianity gets along just fine today with Jerusalem divided between Mohammedans and Jews, the birthplace of Christ in the hands of the former and the place where He lived held by the latter. We have learned tolerance, to respect the religions of others.

WE NEED PATIENCE FOR YEARS AHEAD

Not long ago we tried to force all Latin American countries to become democracies. Today we are less intolerant of dictators. So, too, the Communists must realize eventually that they cannot force the rest of the world to worship Marx and Lenin.

Americans and Europeans going to Russia can help to break down the myth that western capitalism is on its last legs. Russian tourists to other countries will verify this.

It is going to take patience and intelligence to steer a peaceful course during these years of peak Communist fanaticism.

Let's talk softly, carry a big stick, and remain confident that we can hold our own militarily or economically. And that like the Crusades, militant communism will blow itself out.

Heart Disease and Soybeans

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. GATHINGS. Mr. Speaker, the expanding field of research as applied to agricultural products is producing the happy union of added markets for these products with increasing benefits to the comforts and the needs of humanity. One pleasing example of this work is found in the added use of soybeans in the diet and the health benefits which accrue from this product of medical research.

In the June 1956 issue of the Soybean Digest appears an article written by Dr. Philip S. Chen, professor of chemistry of Atlantic Union College at South Lancaster, Mass., which shows the importance of new medical discoveries concerning use of soybeans. The article, entitled "Heart Disease and Soybeans," will be of interest to all citizens and I wish to commend it to the attention of the Members.

The recent heart attack of President Eisenhower has brought renewed alarm to most Americans regarding the seriousness of this No. 1 killer, which, with other circulatory ailments, accounted for 52 percent of the deaths in the United States last year—more than all other causes of death combined. It has been estimated that 2 out of every 3 Americans of 55 years of age will die of this disease.

What is the chief cause of coronary heart disease? An explanation of this malady appeared in an article by Blake Clark in the November issue of Reader's Digest from which we quote:

"The arteries which distribute food and energy throughout the heart muscles are called coronary arteries. Doctors have long known that the greatest danger to the heart is an accumulation in these arteries of a fatlike substance called cholesterol. * * * It may be deposited within the walls of a coronary artery, narrowing down the channel for the blood to flow through and starving the cells of the artery itself. If this process continues, the artery may be closed by a blood clot. Since the heart muscle depends upon the blood and oxygen brought to it by the arteries, the result may be a weakening of the heart. In the end the heart may simply stop for want of this vital fuel."

Cholesterol is produced in the liver. It is also contained in the fat of animal source—including meat fat, egg yolk, butter, cream and milk. It has been shown that the higher the fat consumed by people, the higher is their cholesterol content of the blood, and the higher their incidence of coronary heart disease. The following are but a few illustrations:

Forty years ago fat constituted only 30 percent of the calories in the American diet; now it provides 40 percent. There are proportionately more cases of heart disease today than 40 years ago.

The Italians consume only about half as many fat calories as Americans do. Their death rate among men from heart disease is less than a third of ours. In England and Spain, the amount of blood cholesterol and the incidence of coronary heart disease were found to have a direct relation to the proportion of fat in the diet.

Dr. A. R. P. Walker and J. Higginson, of Johannesburg, South Africa, found that the Bantu natives, who get only 15 percent of their calories from fats, had little cholesterol in their blood. Only one death from coronary heart disease was found among 224 autopsies on men 50 to 70 years old.

QUALITY MOST IMPORTANT

While the quantity of fat in the diet is a contributing factor to the coronary disease, according to most of the reports published, the quality of fat is of even greater importance, according to the author, for of food fats only animal fats contain cholesterol. Fats of vegetable origin—fruits, vegetables, cereals, nuts—do not contain cholesterol. They contain phytosterol instead of cholesterol, and phytosterol, though closely related to cholesterol, does not cause coronary disease.

That there is a correlation between the kind of diet and the cholesterol content of the blood is made clear by a recent survey made by Dr. Merwyn G. Hardinge, of the College of Medical Evangelists, and Dr. Frederick J. Stare, of Harvard University (the Journal of Clinical Nutrition, 2.73, 2.83, 1954). A brief résumé of their survey is as follows:

Their study included 201 persons using the following 3 types of dietaries: (1) Lacto-ovovegetarian, a plant diet, plus milk and eggs, but no meat, fish, or fowl; (2) pure vegetarian, a diet of plant foods, excluding milk and eggs; (3) nonvegetarian, the average American diet of milk, eggs, meat, and foods of plant origin.

An analysis of the diets of the three groups was made to determine the average daily consumption of calories, protein, fat, calcium, phosphorus, iron, vitamins A, B_1, B_2, C, and niacin. All of the three dietariaes came within the limits of the daily allowances of the various nutrients as recommended by the National Research Council. Also, there were no significant differences in the height, weight, blood pressure, red-cell count, and hemoglobin concentration among the three dietary groups. It was found, however, that the blood-cholesterol levels of the three types of adults were significantly different. The nonvegetarians had the highest blood cholesterol, the pure vegetarians the lowest, the lacto-ovovegetarians fell in between.

Probably there is no other group of people in the world that is more enthusiastic about soybeans in their diets than the Seventh-Day Adventists. They are the originators of health foods and meat substitutes, many of which contain soybeans.

Among the Seventh-Day Adventists who have helped to popularize soybeans in this country and abroad are Dr. P. A. Webber, a former secretary of the American Soybean Association, now a missionary to Japan, and Dr. H. W. Miller, the originator of the soy milk powder, Soyalac. Dr. Miller has been a frequent contributor to the Soybean Digest and is now a missionary in free China.

It is true that a pure vegetarian may find it hard to get enough high quality protein to meet his body requirements. But thanks to the soybean, a plant food which contains all the essential nutrients for the human need, this is no longer a problem.

NO PROBLEM WITH SOY

What is true of coronary disease is also true of arteriosclerosis, namely, cholesterol is the chief offender. Stephan Jamyn reported in Revue Internationale du Soja of March 1946, that hardening of the arteries in rabbits can be artificially produced by including cholesterol in the diet.

The use of soybeans in the human diet not only does not contribute to coronary disease and arteriosclerosis, but the soybeans also contain a factor which aids in the cure of these diseases. This is clearly indicated in the work of Pottenger, Jr., and Krohn as published in the American Journal of Digestive Diseases of April 1952. Contrary to common medical practice of giving the patient a low-fat diet to relieve hypercholesterolemia (high content of cholesterol in the blood), these doctors gave their patients the opposite diet—one high in fat and cholesterol—plus soybean phosphatides, which are used in the food industry under the name of lecithin.

One hundred and twenty-two patients were put on a high-fat regimen that included raw liver and raw brains—foods that are rich in cholesterol. Ninety-nine of the patients took a teaspoon of soybean phosphatides with each meal. The remaining 23 served as controls.

The blood cholesterol showed a marked decrease in 79 percent of the patients who took the lecithin, but not in the patients who did not take lecithin.

This indicates that it may be possible to correct hypercholesterolemia in those individuals who are on a high-fat, high-cholesterol diet with the use of soybean lecithin. The administration of soybean lecithin may also be applied to coronary disease and arteriosclerosis with beneficial results.

At a recent meeting of the Federation of American Societies for Experimental Biology held at Atlantic City, it was reported by University of California researchers that by using a synthetic butter made from soybean sterols, 10 grams of soy sterols in this butter each day effected a 10-percent reduction in cholesterol levels in the blood of the experimental animals.

CAUSE OF GALLSTONES

Besides causing coronary disease and arteriosclerosis, cholesterol causes yet another human malady, namely gallstones. These stones are formed either in the bile duct or in the gall bladder. They consist of cholesterol or cholesterol mixed with calcium salts of bilirubin, carbonate, or phosphate.

According to Dr. Louis F. Fieser of Harvard University who has been working in cancer research for many years, cancer-producing substances might be derived from cholesterol. The following excerpt is taken from Dr. Fieser's lecture delivered in Paris, November 13, 1953, under the auspices of the Societe Chimique de France and the Societe de Chimie Biologique: "Consideration of the correlation of chemical reactivity and biological potency points to delta 5-cholestene-3-one as the one substance derived from or related to cholesterol most likely to possess carcinogenic activity * * * but the evidence that such a substance has indeed been responsible for tumors evoked in mice by preparations from cholesterol has seemed to me more convincing than the theoretical argument to the contrary." (Science, May 21, 1954, vol. 119, No. 3099, pp. 710–716.)

Thus it is seen that the cholesterol in the animal fat is responsible for these common diseases which take a heavy toll of human lives each year and cause untold misery and suffering.

As people become cholesterol conscious as they are now calorie conscious, the author believes the following dietary changes will take place in which soybeans are bound to play a prominent role:

1. A decreased consumption of animal fat, especially lard, fatty meats, and organs, such as brain, heart, liver, and kidneys. In their place will be substituted protein-rich soybeans and soybean meat substitutes.

2. A greater consumption of margarine in place of butter.

3. Mellorine, a frozen dessert made of soybean and other vegetable oils, taking the place of ice cream.

4. Skim milk, buttermilk, nonfat milk powder and especially soy milk and soy milk powder consumed instead of whole milk containing the milk fat, cream.

When that time comes, a breakfast consisting of eggs and bacon (especially when fried in lard), heavily buttered toast, and coffee

with rich cream—now a common American breakfast—will become very unpopular, especially among those who are particularly susceptible to coronary and other diseases in which cholesterol is the chief offender. It is, therefore, to be anticipated that the consumption of soybeans in the human diet will be greatly increased in the very near future.

It's the Veterans Turn

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. VAN ZANDT. Mr. Speaker, the following editorial, which appeared in the June 7, 1956, issue of the National Tribune, Washington, D. C., concerning the Bradley Commission recommendations affecting the Nation's veterans should be read by every Member of Congress.

This article reveals that the attack on veterans' benefits as contained in the Bradley Commission report is nothing more than a repetition of similar attacks launched years ago by other anti-veterans groups.

The editorial follows:

IT'S THE VETERANS' TURN

The first week in June 1956 is now history and, if present plans are followed, the Congress will have adjourned by the end of July so that Members may attend the August national conventions of our two great political parties. That means there remain only 7 more weeks to complete congressional action on all of the essential legislative proposals still pending, among them some terribly important relief bills for veterans and their dependents.

We would hesitate to believe that the apparent reluctance to approve veterans' relief is part of a plan of strategy to resist the enactment of needed measures demanded through their national conventions by the major veterans' organizations of the country, but events certainly appear to be shaping up that way. Fewer than 10 legislative measures for the veteran class have gone through the House of Representatives during the final session of this 84th Congress, far less than the usual score at this point of the year; most have been of a comparatively minor character and relate principally to the younger and newer veterans; only a couple of them have as yet received the approval of Senate committees, and this, be it remembered, is an election year.

Long ago this column pointed up the deterrents. First, there were the unscrupulous and unreasonable requests of two Hoover Commissions that would in a great measure wipe out certain rights of the veteran class. Then came the single-package Hardy committee recommendations for survivors of veterans that do violence to every nationally accepted principle of dealing with the dependents of service dead and apply a new concept of rank and length of service to legal benefits that would create added inequalities. And, finally, there was the long-delayed Bradley Commission report with proposals that rocked the country from one end to the other and which are in almost all instances unacceptable as a means of treating with the men and women who throughout our national emergencies have sacrificed most for the Nation's cause.

It is fitting, now that legislative time is running out, to look to the weeks ahead. Having been combed over thoroughly, most of those Hoover suggestions that relate to veterans and their care have been rejected by responsible Members of Congress and have been relegated to the pigeonholes where they belong. The Bradley Commission recommendations have been given a thorough airing by the House Veterans' Affairs Committee, and, if we are able at all to judge congressional reactions, they, too, are disagreed to by the lawmakers in almost all respects. Certainly it is obvious that even if President Eisenhower and his kitchen cabinet want any part of them and send their demands to Capitol Hill before adjournment, they will receive scant attention before a new Congress comes into session next January. During the present week the Hardy bill is receiving Senate committee attention, but even though this measure is supported by the White House and by the high brass at the Pentagon, it will be examined as though with a microscope and we would be surprised if it goes the rest of the way through the legislative mill without considerable debate and major amendment.

Our conclusion is, therefore, that if anything else is to be done for veterans and their loved ones than might conceivably be achieved through these sources, those committees of the Congress that are cloaked with the responsibility of legislating for the veteran class had better get down to business quickly. We have already declared our understanding of the desire of many Congressmen to know what these several investigations were all about and how they reacted on veterans' rights, both existing and pending. They know now, and they realize that there is nothing very helpful to be found in them. It was suggested that the information made available recently to the Congress be gotten to the people to offset their seemingly ready acceptance of new and untried philosophies of veterans' care. We think that regardless of the well timed and vicious load of anti-veteran propaganda that was so generously broadcast by the administration has served its purpose by now, that regardless of tremendous newspaper, magazine and air coverage it has failed abjectly and that the Congress itself, judging from the communications received by Members, must realize that the campaign to belittle war veterans and downgrade their services to the country has been thoroughly debunked.

Even those younger former servicemen, who were weaned on the pap that war service is only a citizen's privilege and that the real rights won by victory are "the right to say what you think, work where you please and raise your kids as you see fit," have been strangely silent since it has been made clear to them that they accepted far more intrinsic privileges than those, great as they are, and that they were not merely handed out to them on a silver platter by a grateful Congress. These extended hearings to examine into the proposals of philosophers, psychologists, socialists and impure crackpots have shown above all else that truth is the best vindication against slander. So they have served a good purpose. But now it is time to get down to business.

As we stated earlier, very little along the line of what we call veterans' legislation has gotten serious attention so far this session, and regardless of some observations by carefully calculating Congressmen, it is fair to draw comparisons when the question of expenditures is made a vital issue. Very properly there has been little serious debate on the expense required for national security. Before the legislators conclude their work for the session a billion dollars or so may be shaved from requests for continued foreign aid for which the White House wants $5 billion to add to the $51 billion given away since World War II, $37 billion of it nonmilitary in nature. And we think that a total of some $66 billion in spending for the next fiscal year will be approved, including well over a billion to go to farmers for not planting crops, a deal that will cost everybody about 10 bucks apiece to say nothing of what they, including veterans, must resultantly shell out for higher food prices. "Comparisons," we admit, "are odorous," but they do have their place, and we feel certain that no legislative demands for veterans that are reasonably legitimate will put much of a crimp in the country's Treasury.

So the organized veterans of America—that great segment which takes the time and utilizes its energy to aid the rest who are unable to help for some reason, or who are too lazy to do their part in helping their less fortunate—feel that it is time to do something about veterans' legislation. There is still time to do the job that must be done if congressional committees will act without delay. If, after bills are reported, the powerful House Rules Committee through which most veterans' bills presumably pass, fails to act, the rules of the House provide a fortunate bypass. All the chairman has to do is call them up, a system that is seldom resisted by the leadership. And if that causes too much delay, there is the little-used but effective petition route. We hesitate to offer a suggested means of actiton that reflects on the judgment of regularly constituted committees, and we do recommend it only as a last resort, but we consider some of the pending measures are vital to the needs of the Nation's veterans and their dependents, and they are the people who come first with us.

We, therefore, make this appeal to those on Capitol Hill who hold the fate of the veteran class in the palms of their hands. They can move, if they will, and we are sure that a majority of the Congress is ready to do something, even by signing petitions if that be necessary. We are not selfish. Abraham Lincoln once said, "If we do not make common cause to save the good old ship of the Union on this voyage, nobody will have a chance to pilot her on another," and he added, "I go for all sharing the privileges of the Government who assisted in bearing its burden." That philosophy saved this Nation. It holds good in the existing crisis that faces our veterans. It's their turn now.

Tribute to the Honorable Charles Rozmarek, President of the Polish American Congress

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of Saturday, June 2, 1956, which pays tribute to Attorney Charles Rozmarek, a native of Wilkes-Barre, who was recently reelected for the fourth time as president of the Polish American Congress:

MR. ROZMAREK CARRIES ON

It was no small compliment to attorney Charles Rozmarek of Chicago, formerly of Wilkes-Barre, when he was elected president of the Polish-American Congress at the convention in Philadelphia yesterday for the fourth time. He has been the organization's only president since it was founded in Buffalo in 1944.

Last year, for the fifth time, Mr. Rozmarek was elected president of the Polish National Alliance, the largest fraternal and beneficial organization of Americans of Polish extraction.

Thus, Mr. Rozmarek has the distinction of heading the two outstanding bodies of their kind, making him the spokesman for 6 million of his fellow countrymen. It is an unprecedented personal tribute as well as an endorsement of his vigorous leadership.

Mr. Rozmarek has gone a long way since leaving this city. He has become an outstanding figure, consulted by three successive Presidents of the United States and other world leaders like Sir Winston Churchill. On his shoulders has rested not only the cause of Poland, but much of the burden in the continuing struggle against communism. It has been a heavy load, but he has not shirked responsibility.

In view of his background and experience, it is understandable why the Polish-American Congress has retained his services. On the other hand, it has been at no small personal sacrifice that he heads this crusade for liberty year after year in the interest of humanity. Only a truly dedicated man could carry on so long and so successfully.

Report of the Resolutions Committee for the 26th Annual Meeting of the Middle Atlantic Conference of Congregational Christian Churches, May 8–10, 1956

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. ADDONIZIO. Mr. Speaker, it is a privilege to direct the attention of our colleagues to the following report of the resolutions committee for the 26th annual meeting of the Middle Atlantic Conference of Congregational Christian Churches. I know the membership will give careful consideration to the views of the conference on these important issues.

RESOLUTION NO. I—CHRISTIAN HUMAN RELATIONS

Whereas the precepts of Jesus proclaim the Fatherhood of God and the Brotherhood of His human creations; and

Whereas the conscience of this Nation has been awakened with regard to its failure in affirming belief by action in the area of race relations; Be it therefore

Resolved, That we, the delegates to the Middle Atlantic Conference of the Congregational Christian Churches, affirm our concurrence with those decisions of the United States Supreme Court dealing specifically with the relationships of Americans one to another and affirm our willingness to move "with all deliberate speed" towards the realization of the goals thus set forth; be it further

Resolved, That the individuals and churches of this conference be urged in all heartfelt sincerity and sympathy to lend their efforts to the forces now laboring for truth, justice and unity in all sections of the country; be it further

Resolved, That copies of this resolution be sent to all ministers, church clerks, and chairmen of the boards of deacons of the churches of the Middle Atlantic Conference.

RESOLUTION NO. II—FOREIGN AID

Whereas the world situation remains serious, with a continuing tension between East and West, especially with the political future of Asia, Africa and the Middle East still to be determined; and

Whereas it is to our Nation's interest to strengthen other nations to grow toward political and social health, that they may have the will and the strength to maintain and enlarge their freedom; and

Whereas these things represent our fundamental Christian convictions: Be it

Resolved, That we commend and support the President of the United States in his appeal to Congress for an expanded foreign-aid program, with greater emphasis upon economic and technical aid; and be it

Resolved, That copies of this resolution be sent to the President of the United States, the Honorable John B. Hollister, Director of the International Cooperation Administration, the Senators and Congressmen who represent the areas in which the churches of the Middle Atlantic Conference are located, the chairman of the House of Representatives Committee on Foreign Affairs, the chairman of the Senate Committee on Foreign Relations and the chairman of the House and Senate Committees on Appropriations.

RESOLUTION NO. III—MIGRANT LABOR

Whereas we recognize the urgent need for coordinated educational facilities for children of migrant laborers who move from State to State; and

Whereas we recognize the urgent need for co-ordinated health inspection and clinical medical facilities for migrant labor and their families: Be it therefore

Resolved, That we, the delegates to the Middle Atlantic Conference of Congregational Christian Churches, urge support of the President's "Committee on Migratory Labor in its efforts and proposals to coordinate State programs and activities in these fields; be it further

Resolved, That copies of this resolution be sent to Dr. Samuel M. Brownell, United States Commissioner of Education, Department of Health, Education and Welfare, and to Henry K. Arneson, Executive Secretary of the President's Commission on Migratory Labor, and the Honorable James P. Mitchell, United States Secretary of Labor.

Sad Suspicion Confirmed

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. HALEY. Mr. Speaker, there is a growing sentiment that prevails in this country that the Communists are getting smarter every day, while our American diplomats are sinking into a form of lethargy. We continue to build up our enemy with American tax dollars, while our own people keep digging into their pockets to pay the bill.

Are we trying to build Tito into the world's first air power, when it is very apparent that he is not our friend? Or are we going to let Yugoslavia remain as the fifth largest air force, already made so by American taxpayer dollars? It is apparent that we are evidently going to help Tito and his cohorts build into the world's largest air power, not knowing where he would stand in case of a struggle with the Soviet Union.

Consequently, I am pleased to insert in the RECORD, an article that appeared in the Sarasota (Fla.) Herald Tribune on June 10, 1956. The writer's voice is but one voice crying out in the wilderness. He certainly is speaking for many Americans who are disturbed about where we are going and the reason for the necessity of these large outlays of money in this huge giveaway plan that has not bought us one friend and can never buy one.

The article follows:

CRACKER BARREL

(By John Henderson)

SAD SUSPICION CONFIRMED

The suspicion long entertained by many Americans that the top-level Communists are smarter than our boys of the same rank is rapidly assuming the proportions of solid fact. The latest evidence is Tito's triumphal entry into Moscow after being kicked out of the Cominform a while back. While Tito was still nursing his bruises, the giveaway do-gooders foregathered and told the country that now is the time to bind the Communist marshal to us with bands of steel, meaning dollars. And forthwith we gave him half a billion dollars of goods and services produced by American workmen.

A few editors, columnists, and Congressmen warned that Tito was a Communist and that no Communist could be trusted. But their voices were drowned out by the chorus of the idiots who have been preaching for two decades that we can buy friends with cash.

Now you hear from every direction the wail that "We been robbed" by Tito who has returned to his first love, taking along with him the half billion bucks we gave him. But have we been robbed? We have not. The five hundred million we gave Tito went far in sustaining our present glorious prosperity. But for that giving thousands of automobiles, TV sets, and washing machines now in use would be gathering dust in the dealers' warehouses.

We shouldn't be too rough with Tito. Our present fabulous standard of living requires that we give away large quantities of goods and services. And wasn't it cheaper to give Tito the tanks, planes, et cetera than to store them at, let us say, 50,000 smackers a day? The reason is not far to seek. We have 60 million workers who are as busy as bees tending Aladdin machines so marvelous as producers that some of our leaders are enthralled, some appalled. We must keep these workers busy or some of our best economists will be shamed. We are making more of everything than we need. We can't sell it abroad even at cutrate prices. And sometimes we can't even sell the stuff at bargain basement prices. An example of that is to be found in Mr. Benson's recent effort to place 5 million bales of American cotton on the world market for what it would bring. The State Department fairly screamed its objections. Said it would bring down upon us the wrath of our foreign friends who produce cotton. But he didn't say who these friends were. But we can give tanks, guns, planes, and ships to our foreign friends—many of which are in the Tito class.

We shall, no doubt, find someone to take Tito's place—maybe two or three—and everything will be hunky-dory. That is, until we reach the last pea in the dish. There won't be any last pea in the dish because money grows on trees? Brother, who do you think you are kidding? If you don't know, it's about time you were told: Nobody but yourself.

Saw a picture of some of the underground caves built for protection against the time when the Devil shall be loosed upon the earth. Reminded me of Ruben and his wife Ca'line who lived on the yon side of the hill in a little white cove while I was growing up. Both were of pure English ancestry. Hard-shell Baptist in faith and never been inside a schoolhouse. But Ca'line defected and joined the liberal Baptists, a sect which, among other things, allowed a cottage organ in its churches. Ruben said the organ was what led her into the paths of unrighteous paths.

Anyway, Ca'line demanded a "storm pit" into which she could go when a black cloud appeared above the horizon. Rube built her one, covered with discarded crossties from a railroad 9 miles away. Thereafter, every time there was a clap of thunder, Ca'line made a beeline for the pit and rolled into the far distance. Rube clung to his faith that whatever was to be would be come heck or high water and remained in the house. But according to his neighbors, he did make one concession. On the occasions when his wife was in the pit, he would fall upon his knees and pray: "Easy, Lord, my wife's afraid o' thunder."

Wonder what would be Rube's reactions were he here when the brimstone begins to shower down.

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. BOW. Mr. Speaker, several times in debate recently mention has been made in the House of the case in Japan in which the Fuquoka District Court ordered Capt. Lincoln MacKay, liaison officer of the Itazuke Air Base, to reemploy four Japanese who had been discharged for security reasons, and later rendered judgment against Captain MacKay for the amount of their wages had they been working.

I have been fortunate to receive a copy of the court's opinion, and I wish to call attention to one paragraph therein.

(a) An armed force constitutes the fighting power of a country and is a symbol of its dignity. Consequently, it is a well established rule of international law that an armed force stationed in a foreign country in accordance with a treaty, is not subject to civil or criminal jurisdiction of the receiving state. Neither are members of the armed forces subject to the jurisdiction thereof for acts performed in furtherance of official duty, that is, the acts done in the performance of official duty whether such acts were done within the area of their station (barracks) or outside such area. However, stationing of a foreign armed force has considerable effects upon the sovereign rights of the receiving state, and upon the rights of the people thereof. Therefore, it is customary that the fundamental rights, duties and obligations are provided for in detail in agreements concluded at the initial stage. Such agreements are often revised.

The proponents of the status of forces agreements have been saying that without such agreements our servicemen abroad would have been subject to the criminal jurisdiction of foreign governments even for offenses when on duty. I think it is notable that even the courts of Japan have recognized the correct rule of law which would have applied to our troops when off duty, without the so-called administrative agreement with Japan.

This agreement apparently has lost us the dignity which that court thinks a fighting force should have. Instead of protecting our men, the courts are emboldened to ignore our rights under international law and to see how much they can get away with in spite of the terms of the agreement.

Racketeering and Pickles

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks I should like to include an article by Edward Ranzal which appeared in this morning's New York Times and an Associated Press story from this morning's Washington Post and Times Herald.

This case indicates the extent to which racketeering in various forms appears to have developed. The reports state that 12 men have been indicated for using violence to extort about $150,000 annually from the pickle and condiment industry. This racketeering is said to have caused a $1 million increase in consumer prices.

As in some other racketeering cases, there appears to have been collusion between a union and an industry association.

Mr. Speaker, I wish to express once again my hope that we shall soon see an all-out investigation of this type of racketeering, either by Congress or a special commission.

The articles follow:

[From the New York Times of June 13, 1956]

UNITED STATES INDICTS 12 IN PICKLE RACKET LINKING DEALER UNIT AND UNIONS—PLOT TO MONOPOLIZE $10 MILLION INDUSTRY IN REIGN OF TERROR IS CHARGED BY JURY—INQUIRY CONTINUES

(By Edward Ranzal)

Management and labor were described yesterday as associated in a reign-of-terror conspiracy to monopolize the $10-million-a-year pickle and condiment industry.

Such a conspiracy was sketched in a four-count indictment returned by a special Federal grand jury charging 12 men with violating the Federal antiracketeering laws.

By means of extortion and coercion, United States Attorney Paul W. Williams said, the conspirators mulcted the industry of $150,000 a year. He estimated the ultimate cost to consumers as $1 million annually.

Mr. Williams said the New York Pickle & Condiment Dealers Association, Inc., had attempted to monopolize the industry with the cooperation of local 1648, Condiment and Table Suppliers Union, and Local 120, Pickle and Condiment Workers Union of America.

Seven of the 12 men who were indicted have police records. The principal was said to be Morris (Moishe) Malinsky, 46 years old, of 56–20 175 Place, Flushing, Long Island. A charter member of local 1648, Malinsky was business manager of the association from 1952 to 1955. His salary was $400 a week.

Malinsky has a police record going back to 1937 for assault and robbery. In 1942 he was convicted of killing a policeman. He spent 2½ years in the Sing Sing death house. The United States Supreme Court reversed his conviction on the ground that his confession was obtained illegally.

The association controlled the industry by dividing up customers and territories, Mr. Williams said. When an independent dealer refused to join the association, he declared, the unions were used to picket and put pressure on him.

The grand jury charged that part of the conspiracy was "to use force and violence and inflict bodily injury upon those in the pickle industry who would not conform to the dictates imposed by the association."

The panel asserted that the defendants "would create throughout the pickle and pickled products industry, a feeling of fear and terror in order to prevent resistance to the operation of the conspiracy."

Myles J. Ambrose, assistant United States Attorney in charge of the investigation, said money was extorted from businessmen through dues paid to the association or to the unions.

Mr. Williams said that the indictment gave a significant picture of "what is going on in New York in the case of some small businesses." He added that the investigation was continuing.

The inquiry was instigated more than a year ago by the Federal Bureau of Investigation. The grand jury questioned 157 witnesses. The books and records of 2 trade associations, 9 labor unions, and 40 companies were examined.

Mr. Williams said "Fortunately we had the cooperation of a lot of witnesses. However, if we had had even more cooperation there might have been more persons indicted."

Nineteen persons were named in the indictment as coconspirators but not as defendants. Seventeen were associated with management and two with unions.

Besides Malinsky, the other defendants were:

Louis Rapkin, 43, of 8911 Avenue B, Brooklyn, past president of the association.

Irving Greene, 38, Eastchester, N. Y., past president of the association.

Albert Pfeffer, 44, 131–06 234th Street, Laurelton, Queens, who held various positions in both the association and local 1648.

Milton Tillinger, 42, 56–36 175th Place, Flushing, Queens, vice president of local 1648.

David Lustigman, 38, 226–69 129th Avenue, Laurelton, Queens, secretary-treasurer of local 1648.

Isidore Schwartz, 175–15 North Hempstead Turnpike, Flushing, L. I., trustee of local 1648.

Robert Barbieri, 40, 184 East 32d Street, Brooklyn, association member.

Robert Felt, 35, 57–50 240th Street, Little Neck, L. I., sometime picket for local 1648.

Joseph Meglino, 40, 135 Ridge Street, former business manager of the association.

Sam Vogel, 36, 132 East Seventh Street, former president of local 120.

Sam Stolzenberg, 43, 720 East Sixth Street, former secretary-treasurer of local 120.

The defendants will be arraigned before Federal Judge John F. X. McGohey on June 20. If convicted, each could receive a maxi-

mum prison sentence of 20 years and a $10,000 fine on each count.

[From the Washington Post and Times Herald of June 13, 1956]

TWELVE ARE INDICTED AS EXTORTIONISTS IN PICKLE TRADE

NEW YORK, June 12.—Twelve men were indicted by Federal rackets grand jury today on charges that they used violence to extort about $150,000 annually from the pickle and condiment industry. This allegedly caused a $1 million boost in consumer prices.

Those indicted included industry officials, members of the New York Pickle and Condiment Dealers Association, Inc., and officers of local 1648 of the Condiment and Table Supplies Union.

United States Attorney Paul Williams said the association tried to get all manufacturers in the $10-million-a-year industry as members. Force and violence were used to bring balky businessmen into line, Williams said.

Metropolitan Amateur Athletic Union Gold Medal Award Dinner Honoring James A. Farley, Chairman of the Board, the Coca-Cola Export Corp., Waldorf-Astoria Hotel, New York City, April 24, 1956

EXTENSION OF REMARKS

OF

HON. JAMES G. DONOVAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. DONOVAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following presentation address by Hon. Robert Moses, New York City park commissioner, Mr. Farley's response, excerpts from address by Mr. Louis Nizer, and tributes by sports writers:

PRESENTATION ADDRESS BY HON. ROBERT MOSES

This is no conventional tribute. It is not what Governor Smith used to call "a piece of flowers," meaning a wreath or anchor of tired blossoms propped up at a sick bed, a birthday party, a wedding or a wake.

If I were a psalm singer about public life, or a professional pleader for good works, I would raise a hymn to character and courage, a prayer for the most precious, the most indispensable and by far the rarest qualities to be found in that crowded field.

I like to quote John Drinkwater in this context, because he saw the dilemma in a flash, as poets do:

"Grant us the will to fashion as we feel,
Grant us the strength to labor as we know,
Grant us the purpose, ribbed and edged with steel,
To strike the blow."

Many a young Lochinvar has come charging into the city from points as far north and west as Rockland County to raise his white banner and burnished shield briefly, to triumph for a while in the lists and leave us finally nothing but the echo of a name and a suit of rusty armor. Now and then, however, a man comes along who gets toughened in battle, and hardened by victory and adversity. Though his banner may be frayed and his shield dented, his head is bloody, but unbowed.

We can't remain as romantic in middle age as in youth. No one can continue to be Sir Galahad. The fickle crowd may for a while cheer other heroes. Nevertheless a wedding of character and courage is so unforgettable that in the end the man is rediscovered and somehow, somewhere brought back into the field. For character and courage, like matter, are indestructible. It has been proven before. It will be proven again.

Democracy, given plenty of time, catches up with the mean, the shabby, the cheap, the shoddy, the synthetic, and looks not for leaders, not for manners but for men. Unfortunately, it often takes so long for the democratic process to be vindicated that the proud grow impatient and some become embittered. The best of the breed, however, emerge from the fire of experience tempered and unscathed.

This then is an impartial tribute to a remarkably durable and respected public figure. I offer it not because of the old-school tie which binds all of us public characters, not because of close friendship, not because I owe him anything, or because I want anything from him, or because I must sing for my supper, but because he has earned our respect for his contribution to the public welfare, his interest in youth, his devotion to clean and honest competition, and for the example of sportsmanship and character he has set the rising generation.

Here is a man who studiously avoids the cool sequestered vale of life. He likes people. He remembers them and their names, not as a stunt but because they mean something to him. He has no doubt earned leisure, but when the trumpet sounds, he takes up the broad sword rimmed and edged with steel, as he does this evening, to strike a blow for youth, for competitive athletics and for those who will finally pick up the sword when he lays it down.

I have the honor, on behalf of athletes, past, present and future, to present the gold medal of the Metropolitan Amateur Athletic Union to the Honorable James A. Farley.

ADDRESS BY HON. JAMES A. FARLEY

I would like to touch on the recent criticisms of the AAU. The integrity of officials on both national and local levels has been attacked.

Let me say with all emphasis that I would not be here had I not firsthand direct personal knowledge that the AAU officials—local and national—whom I have known for many years, are gentlemen with the highest moral standards. I have known many and have yet to find one who is venal—who is dishonest—who is motivated by anything but a desire to help the boys and girls of our country to develop athletically.

From my long experience in the sports world and public life I know that any large organization will have its share of bad apples. Press reports indicate that out of the tens of thousands of young athletes competing under AAU rules a minute fraction, by their own admission, have gone wrong. Have played for pay. Well, that handful is not representative, in my opinion, of the AAU.

We also have heard that AAU officials have condoned these play-for-pay athletes. This charge has not as yet been substantiated. Investigations are underway. But here again we have the integrity of gentlemen like Judge Jerry Mahoney, Eddie Eagan, Harry Henshel, and a host of others being smeared. These men have never condoned dishonesty.

I have every confidence that should the investigations verify the charges, the guilty officials will promptly be thrown out of the AAU and branded as having violated their trust—betrayed the youth of America.

There's one group of AAU officials to whom I want to pay particular tribute. These are the men and women who on the local level are in direct contact with youth. Day after day, we find them creating athletic meets—directing them—and in general making substantial contributions toward making the youth of this Nation conscious of the advantage of a sound body—a healthy mind—and sportsmanship.

There's no compensation of any description for this devoted group. A job well done is their reward. They do not receive even expenses when serving as officials at meets.

But what of the expenses allowed athletes when traveling? The AAU now authorizes actual railroad or airplane fare plus $15 per day. Until recently this sum was felt to be adequate. Then an athlete under investigation raised the point that it wasn't enough. Perhaps this issue was created as a smokescreen but it did attract considerable attention.

May I call your attention to the big league baseball player. During the season he is on the road about half the time. His travel allowance is precisely the same as that of the AAU—$15 per day.

Furthermore this figure is far above the $12 authorized by the Federal Government for a 4-star general when traveling. It would appear that $15 is adequate and that criticism is unjustified.

Yet we must be realistic about these financial problems of the amateur athlete. If he is married, and quite a few of the outstanding stars are, can he afford to take time off from his job or profession to enter the various bigtime meets around the country. In order to achieve stardom he must compete against the strongest possible rivals. This means much travel.

We are in accord that this young man will never achieve financial independence on the AAU allowance. Much as the young man or woman may love their particular athletic specialty there comes a time when the question arises, Can I afford to give so much time and energy to training and competition? Eventually the answer is "No." And with that decision arises the possibility that we have lost a possible world-record breaker.

Possibly the time has arrived when a study should be made not only of the financial phases of the AAU program but also its other rules and policies. Perhaps a special committee could be appointed to survey the situation. How do our codes compare with those of other Nations?

Amateurism in the United States is an important activity. It affects the lives of tens of thousands of boys and girls. Amateurism even has its impact on the international scene. I feel sincerely that the time has come when an exhaustive survey should be made to determine whether or not our various rules and policies are sound and practical.

Such a survey should be worldwide in scope but from my knowledge of AAU finances is beyond their means. As a suggestion a special commitee might be organized to study the advisability of interesting one of the large foundations in undertaking this responsibility.

Such a committee should bring to the attention of foundation executives the importance of amateur sport and its impact on the physical and character development of the youth of this country.

EXCERPTS FROM ADDRESS BY MR. LOUIS NIZER

Jim Farley is the decathlon champion. When he was in Washington, despite the obstacles placed in his path by Republicans, he broke the hurdle records. Perhaps you will recall that he broke the Gallup pole vault record. After 30 years of achievement in the political realm, his stamina is well recognized and he is the long distance running champion. Recently, he broke the discus throwing record. As you know, he uses a red disk with the initial "C" on it.

There is a more serious reason why we honor him. It used to be the tradition that a politician was a devious man who was Machiavellian in his principles and was a little proud of his lack of scruples. Those were the days when a politician bragged that he was a self-made man, and a citizen replied that that relieved God of a terrible responsibility. And those were also the days when, I am afraid, we took political corruption with indecent composure.

Then, came a new era, ushered in by Al Smith and Jim Farley. Farley made the politician's word as good or better than a bank president's word. He established the tradition of forthrightness and honorable dealing, and lifted the word "politician" to its finest meaning—a man who practices the sicence of government. This is why we honor Jim Farley. This is why he is universally popular and appreciated. It is not because we agree with everything he has done or said, but because we admire the purity of his motives, the scrupulousness of his conduct, and the integrity of his position. Perhaps you can sum it up in one word—he stands for incorruptibility.

TRIBUTES

John Barrington, sports editor, International News Service:

"It is a great privilege to participate in a tribute to Jim Farley, who for so many years has done so much for athletics, both professional and amateur, and for the cause of good sportsmanship. We know him as a guiding spirit and an inspiration in sports, and one who always is ready with the helping hand for the youth of our country."

Tim Cohane, sports editor, Look magazine:

"Jim Farley is the best example I know of to fit the old adage, 'If you want a job done, ask the busy man.' He has devoted much of a full life to help kids and is certainly deserving of the Gold Medal award from the Metropolitan Association of the AAU."

Bob Considine, columnist, International News Service:

"Unlike old generals, old Haverstraw (N. Y.) first basemen not only never die but they don't fade away, either. Take Jim Farley, for example. There isn't a more industrious, harder working, get-up-and-go traveling man in the world than James Aloysius. He's been that way for a long time. I would give odds that he'll be that way in A. D. 2000.

"It's more than fitting that Jim's contribution to sports should be recognized. Jim Farley is the prototype of the sportsman, in the purest sense. His decency, his keen understanding and appreciation, his impeccable conduct, and his warmth lend a certain enchantment to any scene. He wrought what one day may be called a miracle; he emerged unsullied from both boxing and politics."

Arthur Daley, the New York Times:

"Long before he became Postmaster General, Jim Farley seemed to have adopted for himself the departmental motto to the effect that neither snow nor rain nor heat of day could stay that carrier from the swift completion of his appointed rounds. One of his appointed rounds was sports events and Big Jim has been a genuinely devoted follower of every form of athletics.

"I've seen him huddled in a cold rain to watch the football giants; in scorching heat to take in the baseball Giants or the Yankees; in the dark of night for boxing or other sports events. To us in the sportswriting business, Big Jim has always been "one of our guys." And our esteem and affection for him has grown throughout the years.

"It's our boys whom the metropolitan association of the AAU is honoring tonight and the press-box tenants are mighty proud of him."

Ike Gellis, sports editor, New York Post:

"To me the highest praise anyone could be paid is being paid to Big Jim Farley tonight. A pro is being honored by an amateur organization. Big Jim always has been a pro. As an athlete, as a commissioner of boxing, and as a spectator, he always has conducted himself with class. The AAU should be proud of its choice."

Whitney Martin, sports columnist, Associated Press:

"Whenever the conversation concerns true sportsmen, the name of Jim Farley will be among the first to be mentioned. An athlete in his youth, Big Jim has retained his avid interest in sports, both as a fan and as a man willing to give of his own time and energy to promote fair play and to make possible the keen, wholesome competition which is part of our way of life. A more worthy recipient of the gold medal award could not be elected."

Dan Parker, sports editor, New York Daily Mirror:

"All I claim for Jim Farley is that he could fill successfully any office in the United States from the presidency down.

"Jim can play first base on my all-American good-citizens team anytime."

Westbrook Pegler, King Features Syndicate:

"I won't presume to endorse Jim Farley, who is in no need of the approval of the likes of me. However, all of us remember times when someone off by the piano started yipping jolly good fellow and the chorus swelled and swelled with all present bawling fervently in an outburst of devotional feeling.

"So I am singing with Jim's friends on this occasion and always. His virtues remind me of Granny Rice's and vice versa."

Leo H. Petersen, sports editor, United Press:

"James A. Farley is America's elder statesman of sports. No other man can count on more genuine friends from the fields of friendly combat. And he has earned these friendships. He has been a true inspiration to many a discouraged young athlete, spurring him with the determination to carry on. All that is clean and decent in American sports is represented by Big Jim Farley."

Jimmy Powers, sports editor, New York Daily News:

"I congratulate the AAU in selecting James A. Farley to receive the 1956 gold medal award. His record of consistent service to his fellow man warrants the award.

"May a grateful America continue to recognize his talents."

Red Smith, Herald Tribune:

"On my job I have met many big wheels and a few truly big men—Grantland Rice, Connie Mack, Jack Dempsey, Jim Farley. In an overprivileged life, the privilege I have treasured most is that of having a man like Jim as a friend."

Ted Smits, sports editor, Associated Press:

"Here is a sportsman in the best sense of the word; dedicated to athletics of all kinds as a means of cleansing the mind and the body both by participation and by the simple act of watching and applauding; friend of youth and champion of fair play—Jim Farley."

Joseph P. Val, sports editor, New York World-Telegram:

"Jim Farley, the old Haverstraw first baseman, was noted for his stretch and reach. Then, as now, he was sure death on 'foul balls.'

"It was only natural that his influence should stretch and reach into many phases of sport, to the undoubted benefit of the sport concerned. Remember, in boxing, Jim said 'there shall be no fouls' * * * and he made it stick.

"It would be hard to find a man more deserving of honor from a sport group."

Very Rev. Msgr. Harold S. Engel, director, Catholic Youth Organization, Archdiocese of New York:

"From the earliest days of the Catholic Youth Organization in the Archdiocese of New York, the Honorable James A. Farley has been a distinguished member of its board of directors.

"His long experience in athletics, education, and government administration qualified him expertly as a director for youth.

"His firm belief in the axiom that a sound body make a sound man prompted him always to give a high place to supervised recreation in the character formation of youth.

"Mr. Farley's personal leadership in every field of endeavor he encountered makes him the ideal for countless youth."

Four-Billion-Dollar Saving

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the Appendix, I would like to have included in the RECORD an editorial by Mr. Jack W. Gore, of the Fort Lauderdale (Fla.) Daily News, one of our finest Florida newspapers. Mr. Gore comments on a measure which I have introduced in the House, H. R. 11526. This measure proposes changes in executive-branch accounting and formulation of budget requests for appropriations, and it proposes changes in congressional authorization of the expenditure of money on Federal programs. This legislation, which carries out the recommendations of the second Hoover Commission, would result in some $4 billion savings, and I think Mr. Gore's comments reflect the widespread acceptance of such a revision in governmental accounting and budgeting processes.

The editorial follows:

A $4 BILLION SAVING

Representative PAUL G. ROGERS, a legislator who believes in something more than mere lipservice to the principle of Government economy, introduced a bill in the House of Representatives last week which, if enacted, could be the means of saving taxpayers some $4 billion annually.

Representative ROGERS' legislation carries out the recommendations of the Second Hoover Commission in regard to revising the governmental and budgeting processes and is a companion bill to one already introduced in the Senate.

Representative ROGERS, like a number of other conscientious legislators and taxpayers, is quite concerned over the sloppy budget and accounting processes now being used by the Federal Government and which act to give Congress only limited control over Government spending.

For instance there is now a backlog of some 80 billions of dollars of unexpended authorizations on the Government's books. In simpler terms this means that if Congress were suddenly to shut off all further appropriations the various and sundry governmental departments and agencies would still have some 80 billions of previous appropriations to spend before they would run out of money.

Representative ROGERS thinks this is far too big a backlog of unspent authorizations. So does the Second Hoover Commission and a host of other people who know a little bit

about corporate and governmental budget procedures.

So what Representative ROGERS is seeking to accomplish is to put in a system of budgetary control which would place the entire governmental structure on an annual accrued expenditures basis as opposed to the obligations system now in operation.

The effect of this would be to permit a much closer supervision by Congress over the expenditures of the executive branch of the Government, and it would also give the top management of the executive branch a more complete and more meaningful understanding of the financial operations of the Government.

The way things are handled today very few people know what's going on. Previous Congresses have approved the expenditure of vast sums of money much of which won't even be spent for several years yet. The Defense Department, for instance, already has authorization to pay for aircraft, ships, uniforms, and a host of weapons which aren't even yet in the process of being manufactured.

No well-managed corporation could operate economically under the budget and spending procedures followed by the Federal Government. The current system breeds a terrific amount of waste and confusion and while exact savings are difficult to measure it is conservatively estimated that at least 4 billions could be saved through the revisions in budgetary and accounting procedures contained in Representative ROGERS' proposed legislation.

This legislation would do away with the system of Congress providing money for expenditures more than 1 year in the future. Governmental agencies would still be given authority to incur obligations extending over a greater period than 1 year, but Congress could only provide the money for 1 year's operation at one time. Thus, in submitting their budgets to Congress the agencies would ask only for the actual funds to be expended in the budget year in contrast to the system now in operation wherein the agencies may ask for funds to be spent over several years.

This business of agencies asking for and receiving funds which won't be expended within a 1-year period is the basic reason behind the current 80 billions in unspent appropriations. Some 8 billions of this total is for foreign economic and military aid yet with 8 billions in the kitty unspent from previous appropriations, the executive branch of the Government is still asking Congress to authorize another 4½ billions in expenditures this year the major part of which won't even be needed to meet commitments coming due this year.

It's necessary, of course, for any government to plan ahead and to make contracts calling for future expenditures. But it is just plain silly for Congress to appropriate the money to pay for future commitments long in advance of the time the money will be needed. Nothing breeds more wasteful practices in Government than to give bureaucrats almost unlimited funds to spend with no easy way to check up on their spending and that's one reason Representative ROGERS would like to see his proposed bill put through in quick order.

Labor's Racketeers

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I would like to include the following editorial, from the Newark (N. J.) Evening News of June 11:

LABOR'S RACKETEERS

That ample justification exists for thoroughgoing investigation of labor racketeering is conceded. Within the space of a few days last March two labor figures were shot down in Newark streets. Subsequently, Victor Riesel, labor columnist, was blinded by an acid-throwing thug amid reports of a new gangster invasion of trucking, food, garment and like fields. Thereafter a lot was heard about prospective investigations, congressional, quasi-official and by union labor itself.

In Washington, Representative FRELINGHUYSEN, Republican, Fifth District, proposed a congressional investigation. Reportedly the Senate Investigations subcommittee, headed by Senator MCCLELLAN, Democrat, Arkansas, is in the preliminary stages of an inquiry into waterfront criminality as it relates to installations used by the Federal Government. President Eisenhower is credited with volunteering the support of administrative agencies in a private conversation with George Meany, president of AFL–CIO. Whether he did or not, labor's executive committee suddenly voted new house-cleaning powers to its heretofore inactive committee on ethical practices.

These are signs of an increasing awareness of the criminal infiltration of the labor movement. But the frontal attack on union exploiters and what Federal Judge McLaughlin called "economic blackmailers" in the assorted trades is yet to come. Indeed, except for a few sporadic convictions here and there, it has been so long in arriving that skeptical victims of the rackets will believe the promises of official action when they see it.

Effect of Interest Rates

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 5, 1956

Mr. HIESTAND. Mr. Speaker, the Honorable George M. Humphrey, Secretary of the Treasury, appeared yesterday before a subcommittee of the Joint Committee on the Economic Report. At that time he was questioned closely on the subject of increased interest rates by the gentleman from Texas [Mr. PATMAN], a Member of this body.

Mr. Humphrey's testimony concerns the livelihood and welfare of every person in America. His words are of interest to business and commerce throughout the world.

So much misinformation is bandied about concerning the rise and fall of interest rates, the rise and fall of prices, the rise and fall of employment, the increase and decrease in installment buying, and the effect of these concerns on the poorer people, that I include an article from the Washington Post concerning Mr. Humphrey's testimony.

Mr. Humphrey speaks, of course, as a high official of our Government and a member of the Cabinet of the President of the United States. His testimony corrects some of the canards circulated all too often by persons who should know better and should think twice at least before talking.

The article follows:

HUMPHREY SAYS ECONOMY IS IN REFRESHING PAUSE

(By Bernard D. Nossiter)

Treasury Secretary George M. Humphrey yesterday depicted the economy as enjoying a refreshing pause and forecast that the unemployment-ridden auto industry would soon be out of the woods.

With wages and jobs generally at record levels and "relatively full employment" of resources, Humphrey said, "it is just as well to hesitate a little." Otherwise, he warned, increased buying would merely bid up prices.

On autos, where layoffs have reached 200,000, Humphrey declared "conditions now are proceeding in a very satisfactory way. In a relatively short time" the industry's "difficulties will be behind us."

He gave this appraisal to a subcommittee of the Joint Economic Committee. Called to testify on his differences with the Federal Reserve System's mid-April discount rate increase, he wound up defending higher interest rates and credit curbs.

MARTIN DISAGREES

The Treasury head said he was not worried about tight money now and was glad that installment buying "has slowed somewhat." But credit shortages, he said, were one of several factors that have held back car sales. Auto makers have also blamed Reserve System credit tightening for their woes.

Reserve Board Chairman William McC. Martin, the day's other witness, however, disagreed. "I question very much," he said whether higher interest rates have reduced car sales. He said one dealer told him the industry was losing cash, not credit, customers.

The 1-day hearing was conducted by Representative WRIGHT PATMAN, Democrat, Texas, to lay bare the details of the administration's advance warnings against the latest discount rate rise. But it soon wandered all over the economic map.

LIFTED RATE IN APRIL

In April, 10 Reserve banks lifted the discount rate, the price at which member banks borrowed from the Reserve, to 2¾ percent. The other 2 Reserve banks raised the rate to 3 percent. This was the fifth boost, aimed at restraining borrowing, since April 1955.

PATMAN asked Humphrey if the rising rates over the year had not cost every American $40 and slowed down the economy.

GIVES TONGUE LASHING

"You are wrong as you can be," retorted Humphrey. "Only new borrowing, not outstanding debt," he said, "has to pay the higher price."

This was one of several tongue lashings Humphrey gave the subcommittee chairman. Asked if he weren't obligated to keep interest rates down on Treasury borrowing to reduce the burden on taxpayers, Humphrey shot back, "My responsibilities extend to a much broader field than your questions indicate." Too low rates, the Treasury head said, would be disastrous for the economy because they would breed inflation and discourage the savings needed to finance investment.

PATMAN also wondered whether Humphrey would blame Federal Reserve if business slumps.

"I never passed the buck in my life" answered Humphrey. "And I'm not going to start now."

"Would you blame the Democrats?" PATMAN asked.

"If I found a way I'd be glad to," Humphrey replied to a roar of laughter.

He repeated his previous statements that he had advised Federal Reserve against raising the discount rate in April because he thought inflation and deflation forces were in balance.

He said the biggest worry now was accumulations of inventory because if they pile up faster than sales, business will stop ordering and workers will lose jobs.

Civil Service Barbering Requirements Too Low

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. BEAMER. Mr. Speaker, a condition that may involve a comparatively small number of people has come to my attention. However, whenever inequities appear, it should be our duty to bring the matter to the attention of the proper agencies and authorities in order to make the necessary correction.

There is a Veterans' Administration hospital located in the district that I have the privilege to represent. As usual, its employees are under civil service, and their salaries are determined by the grade classification for their work. This particular hospital is occupied by psychoneurotic patients and special care must be given the patients.

The barbers employed in this institution have only a GS–2 classification which does not provide either a reasonable living wage or an income comparable with incomes of barbers in State institutions or in privately owned barbershops.

It is hoped that the Civil Service Commission will give early and favorable consideration to the upgrading of this group.

Under unanimous consent, I include a letter written to the Civil Service Commission in behalf of this group and which appeared in the Direct From Washington section of the Journeyman Barber of June 1956:

HYATTSVILLE, MD., *May 14, 1956.*

Hon. PHILIP YOUNG,
Chairman, Civil Service Commission,
Washington, D. C.

DEAR SIR: It is the opinion of the Journeyman Barbers' International Union, AFL–CIO, that wages paid to and qualification requirements for barbers employed under civil service are far below salaries and standards of barbers who do not work under civil-service regulations.

In support of our opinion we submit the following data:

Wages: Under civil service, GS–2 classification, $2,960 to $3,470 annual salary.

In the State of Illinois where this international union has a contract with the State on behalf of barbers employed in State institutions, the contract calls for a minimum annual wage of $4,440 which the $970 more than the maximum paid under civil service. Recently in the State of Indiana, this international union made a survey of 15 cities and found the average annual wage to be $4,038-.32, or $568 more than the maximum paid under civil service.

CIVIL SERVICE BARBERING REQUIREMENTS TOO LOW

Requirements: Under civil service, the Civil Service Handbook (1955) on Qualifications-Standards states: "One year practical experience as a barber is required."

Forty-six States, the District of Columbia, and the Territory of Hawaii require barbers to be licensed. Forty-four of these political units require, before licensing, at least (some more) 1,000 hours in a recognized barber school which must teach a prescribed course of instructions in the following subjects: Scientific fundamentals of barbering, hygiene, bacteriology, histology of the hair, skin, muscles and nerves; structure of the head, face, and neck; elementary chemistry relating to sterilization and antiseptics; diseases of the hair and glands, and cutting, shaving, arranging, dressing, coloring, bleaching, and tinting of hair. An eighth grade minimum education is required by 25 States. Most States also require an apprenticeship of 18 months in addition to the 1,000 hours in barber school.

LICENSE REQUIREMENTS PROVE ABILITY AND SKILL

After schooling is completed, an examination is required and after apprenticeship is over a second examination must be passed before a license is issued. In the State of Illinois, institutional employees must have an Illinois barber's license. The State of Illinois requires a 10th grade education, 1,872 hours in a recognized barber school and 27 months apprenticeship and examination before a license is granted.

We believe we have proved beyond doubt that conditions for barbers under civil service are far below standards elsewhere. This situation attracts unskilled and incompetent barbers which results in poor service to those who are compelled to submit to their attendance. In the Federal service we find a majority of barbers under civil service employed by the Veterans' Administration in neuropsychopathic hospitals. Patients so hospitalized are helpless to complain. This appears to make matters worse and the Government cannot justify its treatment to these unfortunate wards.

The Journeyman Barbers' International Union requests the Civil Service Commission to review the status of barbers and to bring barbers under civil service up to the standards comparable to those of barbers not in the Federal service. The data set forth in this letter could be used as a guide.

Please be assured that the Journeyman Barbers' International Union will at all times be happy to assist the Commission in any way in this matter.

Sincerely,

VICTOR HOOD,
Washington Representative,
J. B. H. C. and P. I. U. of A.

Amending Communications Act of 1934

SPEECH
OF
HON. JAMES I. DOLLIVER
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4090) to amend part II of title III of the Communications Act of 1934, so as to require the installation of an automatic radio-telegraph call selector on cargo ships of the United States carrying less than two radio operators, and for other purposes.

Mr. DOLLIVER. Mr. Chairman, I am opposed to this legislation. I opposed it in the committee and I oppose it here. The only qualification I claim for any information about this is what I heard in the committee. I am not a seafaring man. I come from the interior of the United States, from the State of Iowa, which while it is bounded by two great rivers has no maritime interest within the State and, certainly, there is no maritime interest within my own district I did attend, I think, all the hearings on this bill before the Committee on Interstate and Foreign Commerce. I must say despite the very persuasive testimony of the majority leader and others, it has completely failed to convince me that this is desirable legislation. On the contrary, I am well convinced that this legislation is not in the interest of the country. To begin with, it is not the interest of safety at sea.

Before going further, I would like to clarify one point which was made by the gentleman from Massachusetts [Mr. MCCORMACK] and others in the debate relating to the number of devices that have already been installed on ships. There was some testimony about that before the committee, but when the witnesses were pinned down, the device that is now under consideration turns out not to be the same device that was referred to as having been installed on this multitude of ships. Further, the other devices which may in some respects be related to the present device now under consideration was installed on the ships of the Moore-McCormack Line, but was withdrawn and the Moore-McCormack Line is opposed to this legislation. Of course, the question of safety at sea is one of great importance. The men who go down to the sea in ships certainly deserve the consideration and the help of the Congress of the United States. But, on the contrary, we should not pass legislation here which would be an impediment to safety. Mr. Chairman, it is my considered opinion, after listening to the testimony before the committee, that this would not contribute to the safety of the people who go to sea. But, on the other hand, as has been pointed out in debate, it would destroy safety at sea or at least have a tendency to make it worse for seafaring people.

Mr. PRIEST. Mr. Chairman, will the gentleman yield?

Mr. DOLLIVER. I yield.

Mr. PRIEST. Will the gentleman explain a bit more fully his own opinion why he believes this would contribute not to safety but to less safety?

Mr. DOLLIVER. My reason has already been summed up by what has been said in the debate. Here is a device that has not been proven.

The Federal Communications Commission representative, Mr. Webster, who spent a long time in the Coast Guard, testified that the thing had not proven satisfactory. As was pointed out by the gentleman from California, if you have a device on board ship which has not proven satisfactory, what is going to happen? The crew will not pay any attention to it. The radio operator will say, "That equipment is no good," and he will turn it off or cut the wires. In other words, it is not a piece of equipment that would help safety at sea. It would destroy it.

Mr. HARRIS. Mr. Chairman, will the gentleman yield?

Mr. DOLLIVER. I yield.

Mr. HARRIS. Is it not true that this bill does not become effective until the Federal Communications Commission has found that the automatic radio-telegraph call selector is and will continue to be available, and may be installed at reasonable cost to shipowners?

Mr. DOLLIVER. Yes. That is in the bill.

Mr. HARRIS. That is part of the bill itself.

Mr. DOLLIVER. That is part of the bill itself, and I am glad that safeguard is in the bill, but this bill is putting the cart before the horse. Let them get the approval of the Federal Communications Commission and let them establish a market for their product before they come here and ask us to require that their device be put on board ship.

The CHAIRMAN. The time of the gentleman from Iowa has expired.

Mr. DOLLIVER. Mr. Chairman, I yield myself 5 additional minutes.

Mr. HARRIS. Will the gentleman yield further?

Mr. DOLLIVER. I yield.

Mr. HARRIS. I do not want to interrupt the gentleman unnecessarily, but I think if we can talk about this we will get a better understanding. Is it not a fact that Commissioner Webster is one of the most able men in this field that we have in our Government?

Mr. DOLLIVER. Unquestionably.

Mr. HARRIS. He takes the position that he is against this bill. He calls it a dignified statute, as I recall. His principal objection is that it would be contrary to the agreement reached by the International Radio Conference. Is that not true?

Mr. DOLLIVER. Of course that is one of the reasons he is against it, and that is one of the reasons I am against it, because these matters of safety at sea go beyond one nationality. That is one of the reasons this law should not be adopted, because it puts a handicap restriction and extra burden upon American shipping which is already under certain handicaps in relation to competition with other maritime nations.

A great deal has been said about the question of the operators being opposed to this; the operators of shipping have been attacked in a very unfavorable light. There have been times in the history of the country when that was justified. However, I do not believe in this instance it is based upon any such crass and diabolical attitude on their part. They came before the committee in a very fair and unbiased manner and told their opinions, and without exception the shipowners, ship operators, were in opposition to this bill. For example, on page 54 of the hearings, in a letter from the Association of American Shipowners, they say:

> The association opposes this bill for a number of reasons, and we would appreciate it if you would include this letter in the record of hearings.

Then they give four very cogent reasons for their opposition to it. On page 108 of the hearings, the telecommunications committee, American Merchant Marine Institute, makes this statement:

> We oppose H. R. 4090 for the following reasons:
>
> We believe it both inappropriate and premature to consider the mandatory installation of an unknown and untried piece of equipment, even if the purpose of such a device should be found to be desirable.

Again, on page 122, the Moore-McCormack Lines, which has been referred to, said this:

> We do not feel that any selective calling equipment should be mandatory inasmuch as existing autoalarm equipment fulfills the safety requirements involving distress at sea, and we feel that the telegraph call alarm is purely a device of some commercial value which cannot be relied on implicitly but which offers the chance for the saving of operational expense, when operative.

In addition, this testimony before the committee is replete with witnesses who say that the equipment is experimental; it has never been proven in actual operation. It actually is the one prototype that has ever been manufactured in this system.

Why in the world should this body go ahead and make a compulsory market for a product which has not been approved, for a product which will produce only illusory benefits to the seafaring men?

Here is another perhaps minor item: A good share of the merchant marine of the United States is provided with a subsidy by the United States Government, and many people think justifiably so. Add this additional expense which will range according to some witnesses from $12,000 to $25,000 per year per ship, add that additional expense on these American ships and who is going to pay for it? It is going to be the taxpayers through a subsidy.

I ask that the bill be defeated.

Norway Independence Day in Brooklyn, N. Y.

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter addressed to me by Mr. Einar Bredland, chairman of the Norwegian-American 17th of May Committee of Greater New York, 1956, which arranged a splendid and colorful parade and celebration on Sunday, May 20, in the section of Brooklyn which has become commonly known as Oslo Heights:

> THE NORWEGIAN-AMERICAN 17TH OF MAY COMMITTEE OF GREATER NEW YORK, 1956,
> *Brooklyn, N. Y., June 1, 1956.*
>
> Hon. JOHN J. ROONEY,
> *New House Office Building,*
> *Washington, D. C.*
>
> DEAR MR. ROONEY: Tusen takk for sist. It was a wonderful day and a successful arrangement. The parade itself was grand and the ceremonies went off well. Our part of the city was decorated and festive and the Norwegian-American people were honored by the highest officials of the city. We shall always remember and cherish these words of Borough President John Cashmore: "If everyone were like the Norwegians, the police department wouldn't have anything to do.
>
> While the 17th of May Committee can take pride in its accomplishment this year, I am certain that all of us understand that our success was the result of many interacting forces. We are grateful to everyone who participated in the parade or made the arrangement possible. Our appreciation goes out to every man, woman, and child, to every church, lodge, club, or society, to every official or businessman who in one way or another helped to make this day a success. It was the combined effort—the cooperation of all—that made this day one we shall long remember.
>
> As your chairman, this year, I should like to express my appreciation to every one of you and thank you for your interest, for your effort and for your loyal support. These are the qualities that made this a great day long to be remembered, these are the qualities that will make next year's 17th of May a great day.
>
> Sincerely yours,
>
> EINAR BREDLAND,
> *Chairman, 1956 Committee.*

Statement of Henry C. Oakey, Prominent Wisconsin Attorney

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. O'KONSKI. Mr. Speaker, today I received a statement from a very prominent attorney in my district concerning the plight of the disabled veterans in our Nation.

I think that this is one of the most effective and truthful statements ever made on this subject and I ask unanimous consent that it be inserted in the RECORD:

STATEMENT OF HENRY C. OAKEY, PROMINENT WISCONSIN ATTORNEY

Recently I attended memorial services for those who gave their lives in our country's wars. However, being of a somewhat practical persons, I could not help but think more of what our country is doing to aid those who were handicapped by loss of time and impairment of health by such service.

In World War I the enlisted men used to think it a mark of a good officer that he tried to obtain fair treatment for his subordinates. If that is any sort of criteria, it seems we have no good officers among our generals in Washington for as far as I know none have made any effort to receive equitable treatment for those whom they ordered into battle.

As on all previous occasions it seems that if fair treatment is to be obtained for those who were handicapped by this war service we cannot rely on those who gained fame or profit from the war, but must rely on the rank and file to obtain it.

One problem before Congress at the present time is that of raising the compensation and pension rates to offset somewhat the rising cost of living. The other is to determine whether those who were handicapped by loss of time and health should because of that receive something to compensate them for this.

From the fact that General Bradley lived in Washington and knew of the great increase of the cost of living, but did not attempt to help disabled veterans to offset this, I do not think we can consider too seriously any statement by him that he has tried to deal fairly with the veteran.

The cost of living has increased considerably since the present rates were fixed. With the exception of certain agricultural segments, nearly everyone is insisting on

more than they received at that time. Should the disabled veteran because he is a small minority group without physical and financial means to help themselves politically, receive the same consideration as others?

As to the question of whether a disabled veteran should continue to receive something additional because of his service, I think there are many facts to indicate that they should.

I heard considerable evidence to indicate that when an enlisted man answered sick call he often went before a doctor who considered him a malingerer, who did not have the personal interest of a family physician and who, if he did attempt to do a thorough job, was handicapped by the fact that the Government furnished him inadequate facilities and medication. The impact of disease on them would normally be much more serious than those who had the care of a physician with a personal interest in his patients.

Those who served at the front spent many days and nights in damp dugouts or in a field covered only with a blanket in all types of weather. I believe this often resulted in serious sinus conditions showing up at a later time when weather conditions were bad.

Few were not subject to gas in their lungs to some extent although perhaps not seriously enough to leave their posts.

No medical unit put up "impotable" signs at the front so that many were weakened by dysentery.

Conditions were so that some times there was no food for several days.

As casualties mounted there was always a shortage of men so that duty times had to be lengthened and rest periods seriously shortened to take care of the duties required.

Normally 50 minutes of marching and 10 minutes of rest is considered good procedure. On one particular occasion men marched from 7 in the morning until midnight carrying about 40 pounds and with only 1 hour rest period for breakfast. I believe the exigency of circumstances in many cases required similar efforts.

The expression "If you can walk it is nearer to the front than the hospital" was not uncommon.

The nervous tension of many men while awaiting and during attacks was very great.

A statement of the effects of these conditions are perhaps not within the province of a layman, but from my observation I believe they did have considerable effect on the general health and the ability of combat diseases.

The examination at discharge was not thorough and many signed releases because they had learned as soldiers to not complain and were anxious to obtain their freedom.

From my observation a wide divergence between the number with legally service-connected disability and those of actual service connection.

One reason perhaps is that the disabled veteran is in many ways an underprivileged class.

When he files a claim he finds that the defendant makes the laws, and the attempt to build up the morale of the people at home by misinforming people of the medical attention received in the service tended to prejudice the public against him legislatively. His lack of finances and health to affect legislation made it necessary for him to depend almost entirely on voluntary disinterested help in securing suitable laws.

He could not as in accident cases pay counsel to see that his case is properly prosecuted.

He was not given an opportunity to have a trial by a "jury of his peers," but was tried by judges hired by the defendant.

A personal appearance at his hearing would require in the case of people in our area 700 miles of travel.

He must rely on the testimony of others who are scattered all over the country to remember things that happened years ago. Medical reports of the Army were often inadequate and incorrect.

If he does finally prove his claim he is awarded a small amount which generally would not compensate him for his inability to work and nothing for "pain and suffering."

Because of the uncertainties involved, there is perhaps not much more that can be done legislatively to give him more justice in individual cases, but because of the disadvantages he labors under, it seems only just that he should in general receive some additional consideration for his loss of time and health.

From the point of view of national defense it might be well to remember that the French raised many memorials to their dead, but did little for those who were disabled in World War I. Likely this had something to do with the fact that the French soldiers did little to resist the German Army in World War II and the French could muster only one division to help drive the Germans out of their homeland.

The matter of national economy seems to be one on which there is a great divergence of opinion. Some feel that to collect a great amount of taxes from individuals and use the money to furnish more Government positions and to grant huge contracts to contracting firms is the best way to better the national economy. Personally from observing such matters from the hinterland I believe the national economy would be better promoted by paying out additional sums to those who are needy and have earned it and will spend most of it to buy themselves the necessities of life.

In conclusion my observation from my services in World War I, as Post Service Officer of the American Legion for about 35 years, from assisting in the program for obtaining better treatment for the disabled, from my observation of the impact of the war upon men with whom I served and men with whom I have come in contact and the impact on the economy of the people with whom I come in daily contact with is:

1. Because of the uncertainties of causes of disabilities and the handicap that a veteran has had in proving his claim compared to the proceedings other claimants wish to take, that there are many veterans who have service-connected disabilities actually, but not legally and as to them the payment considered is far from adequate compensation for such disability and that because of the impossibilities of deciding who is service connected and who is not that the legislation offered is perhaps as nearly fair to the public and the veteran as a group as can be made at this time.

2. That if the cost of fairly compensating the veteran for his disability and loss of time because of foreign wars is too great then Congress should see that we do not get involved in any foreign wars.

3. That at the present time our Government is collecting large sums of money from the needy and average citizen to protect unwanted rulers in foreign countries contrary to the spirit of our own Declaration of Independence, the Monroe Doctrine and the Golden Rule and is taking large sums from the needy and average citizen to give war and construction contracts to those who are not in need and if this ceased many veterans would be in much more favorable positions and would perhaps not request any pension so that the cost would not be anywhere near the estimate.

4. That the payment of the pension proposed would do much more for the economic welfare of the average citizen than many of the present expenditures which the Government is making.

Rabbi Ralph Silverstein of Brooklyn

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. ANFUSO. Mr. Speaker, many of our colleagues this morning were very much impressed with the invocation given at the opening of today's session by Rabbi Ralph Silverstein, both as to content and the dynamic manner in which it was rendered. I urge all my colleagues to read the invocation, which contains an excellent message in these trying times.

Rabbi Silverstein is the spiritual leader of Temple Sinai in Brooklyn, N. Y., and is a very dear friend of mine for many years. He is well known for his spiritual, civic, and philanthropic leadership in our huge community. His efforts in the cause of interfaith amity are particularly noteworthy.

Mr. Speaker, in order that all Members may have the opportunity to learn something about Rabbi Silverstein and his background, I am inserting into the RECORD a brief article about him which appeared in a recent issue of the Jewish Examiner, a newspaper published in Brooklyn. The article reads as follows:

MAN OF THE WEEK: RABBI, EX-LAWYER

Last week while 1,000 people participated, the ground-breaking ceremonies for a new Hebrew school were held at Temple Sinai, one of Brooklyn's oldest.

It was a milestone both for the congregation and for Sinai's widely known spiritual leader, Rabbi Ralph Silverstein.

Born in Brooklyn of pious Orthodox parents Rabbi Silverstein had early manifested a strong desire to be a rabbi and with this aim in mind he attended Yeshiva Chaim Berlin of Brooklyn and then went on to the Isaac Elachanan Theological Seminary of Yeshiva University.

Just before he was ordained, however, he took a detour on his road to the rabbinate, diverted by a growing interest in the law and in public affairs. A husky, impressive, outgoing man with a powerful courtroom, as well as pulpit "presence," he was obviously earmarked for success as an attorney.

Graduating from St. John's Law School, he was admitted to the bar in 1933. Later, he was ordained by the Jewish Theological Seminary and Yavne Theological Academy, Brooklyn. Very soon, despite his youth, he had a highly lucrative practice, more clients than he could handle and a full schedule of speaking engagements from community organizations.

His dynamic oratorical gifts were also in constant demand by the Democratic Party and it wasn't long before he was a power in its councils. He was delegate to the Democratic State Convention in 1938 and was one of the most active members of the party's speakers' bureau. He tirelessly addressed rallies indoors and out, delivered radio talks and helped build party strategy.

Concurrently, his administrative abilities were sought by many Jewish organizations, among them the Brooklyn Division of the American Jewish Congress, which thrice elected him president by acclamation during its most dramatic period of growth.

He was a member of AJC's national executive committee and of the administrative committee of the World Jewish Congress. He was a Brooklyn delegate to the historic Cleve-

land gathering of the American Jewish Conference.

In the midst of his successful worldly career that promised ever greater financial rewards and influence, Rabbi Silverstein was haunted by the promising spiritual career he had uneasily put aside years before.

Unable to resist the call, he cut down his activities sharply to attend rabbinical school. When he was ordained in 1940, he was immediately called to the Ninth Street Temple, Brooklyn. He gave up his political activities, retaining some of his law practice.

By 1945, when he became spiritual leader of Madison Jewish Center, of Flatbush, Rabbi Silverstein had abandoned the law to devote himself exclusively to the rabbinate. In 1952, he was called to his present post, as rabbi of Temple Sinai.

Rabbi Silverstein was chaplain of a JWV post and of Cinema Lodge of B'nai B'rith, which numbered many leading directors, producers, and actors among its members. He visited Israel in 1951 and 1954, noting the remarkable course of its progress in that brief span of years. During his last trip he was guest of Ampal, the investment-development agency.

As an active Mason, he was also feted by the Israel Grand Lodge of Masons at a dinner attended by Grandmaster Shaoni and other leading officials of the organization; he brought greetings to the Israel lodge from the Grand Lodge of New York.

Rabbi Silverstein probably has one of the heaviest speaking schedules of any public speaker in the metropolitan area; his subject matter, vivid choice of words, and dramatic voice recall the golden era of oratory.

A Change To Make

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. GAVIN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from Town Journal of April 1956:

A CHANGE TO MAKE

The Washington reports shortly will be discussing the Bricker amendment to the Constitution. As usual many confusing and many inaccurate statements will appear. Some of these will be intentionally misleading.

The question raised by the Bricker amendment is this: Shall Americans be compelled to live under laws put in force by treaties or other international agreements even though they conflict with the Constitution?

In order to be adopted, an amendment has to win a two-thirds vote in each House of Congress and the approval of three-fourths of the States. The Bricker proposal will come up for a vote this month in the Senate and will then be presented before the House.

Two years ago 28 Democratic Senators voted for it and 16 against; 32 Republican Senators voted for and 14 against; 1 Independent voted against. This division shows clearly that the amendment is not a party question. The total lacked 1 vote of the necessary two-thirds.

Passage this year will depend upon the vigor with which informed citizens indicate their support. The division may again be close in the Senate. A hard battle may be expected in the House.

The language of the amendment, slightly changed to meet former objections, is simple and clear: "A provision of a treaty or other international agreement which conflicts with any provision of the Constitution, shall not be of any force or effect."

The Constitution itself says that a treaty "shall be the supreme law of the land * * * anything in the Constitution or laws of any State to the contrary notwithstanding." That provision was written primarily to protect the treaties then in force which had been made prior to the Constitution. It was probably intended also to give the National Government full control in foreign affairs, which it should have. In those days treaties concerned boundaries, commerce, fishing rights, navigation, and such matters.

In recent years, however, wholly new circumstances have arisen. Through the United Nations and other new agencies, the United States is asked to participate in many new kinds of international agreements and treaties. The practice of "executive agreements" between nations has grown up—deals between heads of nations which are not submitted to the United States Senate, as treaties have to be, for ratification.

Ways are thus opened by which Americans could be forced to accept as domestic law rulings which have not been passed upon by Congress and which could conflict with constitutional rights. It is this danger which the Bricker amendment will prevent.

The amendment, as revised, should be adopted. Americans will protect their freedom for the future by insisting that Congress submit it to the States.

Dividends and Democracy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 11, 1956

Mr. MULTER. Mr. Speaker, I am pleased to direct our colleagues' attention to the following talk delivered on June 11, 1956, by Lewis D. Gilbert before the Advertising Men's Post of the American Legion:

DIVIDENDS AND DEMOCRACY—A TALK BY LEWIS D. GILBERT BEFORE THE ADVERTISING MEN'S POST, NO. 209, AMERICAN LEGION, NEW YORK, JUNE 11, 1956

What is the small-stockholder movement you are hearing so much about these days? Yesterday it did not exist, today it is something, tomorrow it will be much more.

Where do you find it? On the floor of the annual meeting as owners speak their piece. In corporation proxy statements as the spokesmen for the small shareholders constantly use the proxy statement of the American corporation to bring before their fellow Americans the viewpoints which long needed airing and which are increasingly being adopted by corporation management.

Those of you have read Investor magazine, my book, Dividends and Democracy, and my annual report know what our objectives are and why they are proving the first effective positive force against socialism in the United States, on the one hand, and corporation dictatorship on the other.

I will today merely sketch in brief terms what our objectives are and let our publications do the rest.

Fifty years ago the corporation in the United States was indeed the typical radical conception of a 19th century corporation. Owned by a few individuals, it was very often what its enemies portrayed it—a soulless force for evil.

Today, however, the average corporation is a miniature republic. It is owned by hundreds of thousands of owners and in the years to come, as it becomes even more democratic, it will be owned by millions of fellow Americans.

Our job therefor is to see that the corporation is kept democratic and to insure that the management brass has to answer to someone—the owners—once a year.

The machinery to do this effectively fortunately had always been there in embryo. But the annual meeting had become a dried formality and that is why the radicals rejoiced that the day of the managerial revolution had come.

The first bottleneck to crack open was obviously the right to be seen and heard at the annual meeting. Here was my job at the start of my career a generation ago. It was a simple and yet complex one because it involved the defense of the right of individual property and the managers had to be made to realize that they were to be the hired hands not the masters of this developing new people's capitalism.

Naturally, this made for battles as we clashed with the tycoons, and slowly the episodes began to be noticed by the press. When not noted, the story of what was taking place still got around by word of mouth.

This in turn brought more and more stockholders to the annual meeting and they are now here to stay. Some come to defend management—for many reasons, some sincere and some quite otherwise But others now come too to defend and to support and to applaud what we are doing. Letters too started to pour in offering me their proxies for their 10 and 20 and 100 or 500 shares.

From the start I had realized that the strength of the Communists had been that they were willing to work for what they believed in without compensation. Surely, I who had my money in our system could afford to do the same, and that is why my work is an avocation, not a profession.

From the first I saw that selling stock in a company when things were not right and needed correcting was not the answer, and that by so doing all we were achieving was merely playing the Communist game, as the errors and abuses were never corrected.

As we aired our complaints and more and more owners joined the campaigns, changes began to take place—and thus slowly we started to strengthen our capitalist system. That it also, over the years, brought its own reward—increased evaluation and increased dividends—was sufficient gain and incentive enough for me. In the same way, I still believe that too many people in this country seem to have forgotten that salary in itself, plus stock ownership, should be sufficient remuneration for top management to do its best without absurd exaggerated bonus plans, astronomical pensions, and option abuses.

Over the years the stockholders I represent and those Wilma Soss and the Federation of Women Shareholders represent—and we often pool forces in the alliance, of course—have insisted on improvement in the proxy-voting mechanism.

These SEC proxy rules, by the way, are thoroughly covered in Dividends and Democracy. We still have far to go before they give us the protection we owners want to insure corporation democracy. Tomorrow will see such changes as better facilities for independent nominations to corporate directorships, the secret ballot, long overdue, and other reforms.

But meanwhile, we now at least have hundreds of thousands of shares cast for independent viewpoints, and as the votes swell and will continue to swell as the education of the American stockholder electorate proceeds, managements become more heedful of these independent demands.

What have we achieved? If we turn to page 220 of Dividends and Democracy I will show you the many things the small-share-

holder movement has achieved for the American shareholder.

Since both sides need our votes, proxy contests such as the Montgomery Ward and New York Central episodes have also helped to remind all comers they must bid for our vote. And once in power we continue to remind them of the unfilled promises, and will until we have secured our reforms.

This is perhaps a good time to comment on two things we want in every American corporation and want enacted into the law of every State. Many corporations already allow them either by law or voluntary action. There is no excuse for any exception, however, if corporation democracy is to be strengthened and corporation oligarchy defeated.

One is mandatory cumulative voting, whereby the owners can, if they so desire, cumulate or multiply their shares for any one or more candidates of their choice. It is already mandatory by State law in more than 21 States, and North Carolina has just joined the procession. It is mandatory at all national banks, the independents having blocked an attempt in Congress to remove it.

The right to elect a watchdog, which is all that cumulative voting does, simply means that the owners can elect a director who is responsible to them and who will protect their interest on the board of directors. As a director, of course, he has rights that the ordinary stockholder does not and should not have.

Unless he commands the confidence and suffrage of roughly 10 percent of the voters he cannot be elected, so that there is no danger of abuse by a handful of shareholders. Nor can the majority board decisions be overturned. And never forget it is the majority of the board, not the minority, who elect the officers who run a corporation between annual meetings.

Does cumulative voting work? Thanks to cumulative voting—thanks only to cumulative voting—Louis E. Wolfson sat on the Montgomery Ward board last year. Look at the changes brought about as a result of that contest. Avery is gone as chairman, the stock has been split, the dividend increased, the auditors elected for the first time—as should be done in every corporation, of course—and a new policy of constructive expansion decided upon.

Personally, I believe that had Wolfson continued to sit on the board, the progress of the company would have been even more remarkable because of his prodding. But partly because we still, unfortunately, do not have the right of cumulative voting at Merritt-Chapman & Scott, as the owners of hundreds of thousands of shares have asked for, it appears likely that he will have to devote a good deal of his time to this corporation's affairs to the exclusion of Montgomery Ward.

Let us look at New York Central, too, which also does not have cumulative voting because the law of this State does not make it mandatory, as it should. Robert R. Young, who now opposes many of the things he stood for when running for office, as has been demonstrated in proxy statements of recent New York Central meetings, will not allow us the right to vote cumulatively, he says, because some of those who opposed him might want to get on the board. If they have their money in the road, why should they not have the right to minority representation?

As a matter of fact, they sold out at 20, or about half the present value of the stock, showing how absurd is the theory that if one does not like a stock one sells it.

Fortunately, we are now about to see another case where cumulative voting is proving its value to the public shareholders. This time it is out at Seiberling Rubber, where Edward Lamb will represent the sizable holdings of his group at the same time he speaks up for the views of those public shareholders who think as he does on the future of the company.

He can do this because it is an Ohio company, where cumulative voting is mandatory, thus protecting the public interest with his own. He intends to send out independent quarterly letters as a minority director, thus keeping us all properly informed on things we ought to know as well as things the management wants us to know.

The second great basic reform in our laws which will insure more, not fewer, stockholders is the ending of the stagger system at all corporate elections. All directors in all corporations should be elected annually. Those who wish it otherwise, because stagger voting allows continuity and experience, can have all the protection they need or want with mandatory cumulative voting, which accomplishes this without depriving us of the right to elect all directors each year.

The stagger or class system of electing only a few directors at a time has now been ended by law in such States as California and Illinois. All legislatures should take action to prohibit stagger systems at corporate elections.

Meanwhile, fortunately, other corporations have been moving of their own volition in the same direction, as substantial blocks of independent stockholders, large and small, have been making themselves heard on the subject.

An example is National Dairy, which has now taken the steps to terminate it and thus elect all the directors each year. Gen. Lucius Clay, an example of a military figure who is also a great business leader, has taken a similar step at Continental Can, and Gen. David Sarnoff has now indicated that the RCA board will restudy the whole question there.

I have now outlined in a sketchy way why the interests of democratic capitalism demand not that people sell shares when they do not like management policies or some management policies, but that, be they large or small investors, they must rather be interested in the protection of all. This involves a fight for shareholder rights in proxy contests, at all annual meetings, irrespective of whether or not there is a contest, in the directors' sessions, in the legislatures, and in Congress.

On all fronts the battle for the defense of the public shareholder interest, and your interest is involved just as much as in our political elections, must be carried on unremittingly.

Here and here alone we have the real bulwark against socialism and communism, which no other defenders of our system can hope to match.

Tribute to Mortimer O'Connell, Clerk of the Dail of Ireland

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 6, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, it is with great sorrow that I rise to ask permission of the House of Representatives to insert in the RECORD some account of the life of the late Mortimer O'Connell, clerk of the Dail of Ireland, and one of the leading figures in both Irish politics and in the resistance movement.

Ireland, who owed him so much, and all who honor the fighters for freedom, mourned May 22, the day Mr. O'Connell died. A veteran of the rising of 1916, O'Connell joined the Irish volunteers while in his teens, and took part in some of the heaviest fighting. He was imprisoned by the British, and finally released in the general amnesty of 1917.

When guerrilla struggle was renewed in 1919, he joined the armed republican movement, was captured and interned in the iron-clad Spike Island Prison. He escaped, swimming in darkness through treacherous currents, a feat regarded as impossible.

With the Anglo-Irish Treaty of 1921 which established the Irish Free State, he played an important part in development of the new Irish Parliament in 1922. He served in the Dail Eireann for the past 34 years, and was named chief clerk in January 1948.

O'Connell was also an enthusiastic member of the International Parliamentary Union. He was a member of that group when it met in the fall of 1953 in the house of representatives.

O'Connell was a great admirer of the United States, its people, and our own struggle for independence because he knew from his own experience what risks those of the American rising had taken, and what prices they had paid for freedom. He was well known in the United States and had many friends here.

O'Connell is also remembered as a prominent scholar (he spoke Gaelic fluently). He was once a prominent national athlete.

At his funeral were veterans of the rising and the struggle of the early twenties. It was also attended by Irish Cabinet members, Eamon de Valera, and Prime Minister Costello.

Obituaries taken from the Irish press are included here as a part of my remarks:

DAIL TRIBUTES TO LATE MR. O'CONNELL

(Tributes to the late Mr. Mortimer O'Connell, clerk of the Dail, were paid in the House yesterday by An Taoiseah, Mr. Costello, and Mr. de Valera.)

Mr. Costello, at the end of question time, said that by his passing the Dail had lost one of its most active and loyal officers and the last serving one of that band of young men who were gathered together as an administrative staff to help in the development of the new Irish Parliament in 1922.

In the pre-treaty years, Mr. O'Connell played a noteworthy part in the struggle for national independence and when the call to arms came in 1916 he did not hesitate to answer it.

During the 34 years which Mr. O'Connell served in Leinster House, he proved himself a most efficient and conscientious officer. Up to 1940 he was the principal clerk in the public bill office and in that year was appointed clerk-assistant of the Dail. In 1948, he was appointed clerk of the Dail and in that office, which was one requiring wide knowledge and experience of the precedents of the House and their equitable application, he functioned with a high degree of success. He was honorable secretary of the Irish Parliamentary Association. He organized the Inter-Parliamentary Union conference in Dublin in 1950, and he attended conferences of the union at Stockholm, Istanbul, Berne, Washington, and Vienna, where his valuable work was highly appreciated. For some years he acted on the executive committee of the Autonomous Section of Secretaries General of Parliament. His

death would deeply be regretted by everyone who had made his acquaintance.

Mr. de Valera, speaking in Irish said that on behalf of the opposition he wished to agree with everything that the Taoiseach had said with regard to Mr. O'Connell, who showed when he was a young man that he loved this country and its people and had suffered for his ideal. Afterward, as the Taoiseach had said, he was assistant to his predecessor and became thoroughly acquainted with the work and procedure of the House.

CLERK OF THE DAIL IS DEAD

Mr. Mortimer O'Connell, Clerk of the Dail, died in Dublin last night. He had been ill for some time. He was an 1916 veteran.

A Kerryman, he had been on the Dail staff since it was established, and had been clerk of the House for about 15 years. He was aged 62.

Born at Ballinskellig, County Kerry, he was educated at St. Colman's College, Fermoy, and Blackrock College, Dublin. He was a past president of Blackrock College Union.

An Irish speaker, he joined the British civil service in 1914, and in 1916 was dismissed for his participation in the rising in which he was a member of F Company, Dublin Brigade.

He was interned in Stafford and Frongoch, being released at the general amnesty in 1917. He was imprisoned again in 1920 to 1921 in Cork City Jail, Spike Island and Bere Island.

He was reinstated into the civil service in 1922, and was placed in charge of the Public Bills Office of the Oireachtas.

He was appointed assistant clerk of the Dail in 1940 and became clerk on the retirement of Mr. G. McGann on January 1, 1948.

CONFERENCES

He took a keen interest in the Irish Parliamentary Union of which he was honorary secretary and as secretary of the Irish group he attended a number of interparliamentary conferences in various capitals.

He is survived by his widow, Mrs. J. O'Connell and four daughters, Mrs. Con Burns, Caherciveen, County Kerry, and the Misses Marie, Anne, and Josephine O'Connell, and also by 2 sisters, Miss O'Connell, Caherciveen and Miss M. O'Connell, New York.

The remains will arrive at the Church of Our Lady of Refuge, Rathmines, today at 6:30 p. m. The funeral will take place after requiem mass at 10 a. m. to Dean's Grange tomorrow.

Social-Security Program

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to have reprinted hereinbelow Senate Concurrent Resolution 21, by Mr. Rappelet, of the regular session of the Legislature of Louisiana of 1956, which sets forth the official position of the Legislature of Louisiana in support of a reduction of the retirement age under social security to 60 years of age. This resolution reads as follows:

Senate Concurrent Resolution 21

Whereas there are many workers between the ages of 60 and 65 who would like to retire, but are unable to do so because of the amount of benefits they are eligible to receive from their employers is insufficient; and

Whereas the above-mentioned persons would be able to retire if social security benefits were available to them to add to their other sources of income; and

Whereas if the above-mentioned persons could retire at the age of 60, younger men and women would then be able to advance more rapidly and could replace many persons who, because of age and perhaps ill health, are no longer properly qualified for the jobs they are holding; and

Whereas one of the results of the social security program has been that the older workers have been favored; and

Whereas now that social security coverage has become largely stabilized there is no reason to continue to weight its benefits heavily in favor of the older workers; and

Whereas the present age for retirement under social security is out of line with existing practices in most State, local, and private retirement systems; and

Whereas it is important that the retirement age under social security be brought into line with the prevailing practice among the States: Therefore be it

Resolved by the Senate of the State of Louisiana (the House of Representatives concurring therein), That Louisiana's Senators and Representatives in the United States Congress are requested and urged to use their influence to obtain a reduction of the retirement age under social security to 60 years of age; be it further

Resolved, That a copy of this resolution be sent to each of Louisiana's Senators and Representatives in the United States Congress.

———, ———

Lieutenant Governor and President of the Senate.

———, ———

Speaker of the House of Representatives.

The Measure of Greatness—Address by Senator Symington at Rally Honoring the Dean of Missouri's Congressional Delegation, the Honorable Clarence Cannon

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mrs. SULLIVAN. Mr. Speaker, at the proceedings in Mexico, Mo., June 8, honoring the dean of the Missouri delegation in Congress, the Honorable CLARENCE CANNON, our junior Senator, the Honorable STUART SYMINGTON, made an address entitled "The Measure of Greatness," which referred to the outstanding contributions of the chairman of the House Appropriations Committee. We all know Congressman CANNON as a kind, gentle, wonderful friend and person, whose experience and skill in parliamentary matters help all of us in innumerable ways in our efforts to serve our constituents.

Therefore, I know there will be widespread interest among Members of the House in Senator SYMINGTON'S remarks as they refer to our esteemed friend, Congressman CANNON, and I submit the text of the Senator's speech for inclusion in the Appendix of the CONGRESSIONAL RECORD, as follows:

THE MEASURE OF GREATNESS

The wisest of all teachers once said, "By their fruits ye shall know them."

The lasting value of a civilization, a nation, a political party, or an individual is best determined by the simple test embodied in those immortal words.

By his fruits we know CLARENCE CANNON, of Elsberry, Mo.

CLARENCE CANNON'S entire life has been devoted to the service of people, and that is the most important service of all.

Today he serves as chairman of probably the most important commtitee in the Congress.

Highlight of that effort includes Mr. CANNON spearheading the 1945 postwar drive which returned to the Treasury $130 billion of unexpended wartime appropriations.

It was he who about that time also proposed that Congress require a minimum payment of $5 billion per year toward reducing the national debt.

It was he also who stated: "No agency should be allowed to have any funds for which it does not account to Congress annually and which it does not justify in hearings before congressional committees."

Mr. CANNON believes that Government money is public money; and therefore should be spent only in the public interest.

Would that we could say this basic policy of sound government was the policy of the present administration.

Many current top appointees in the executive branch came to Washington from private business.

Some of these appointees are mighty fine people. Some, however, apparently believe the Federal Government is just another big business corporation, to be run for their own interest, and that of their friends at the top, instead of the interests of all the stockholders.

Quite a few of the latter have been removed from the job; but only after a Democratic Congress disclosed their activities. The welfare of the stockholders in question, in this case the American people, appeared incidental to their selfish decisions.

Yes, there have been some surprisingly unbusinesslike operations on the part of this so-called business administration. As a result, all of us have been forced to foot the tax bill for such financial fiascoes as Dixon-Yates, the incredible deal in cheese, and the heavy and unnecessary increased interest cost on our national debt.

With respect to that last cost, the largest single component item of the $4 billion increase in the first 3 years of this administration outside of national defense, is the increased price for money this administration decided to give the bankers.

In contrast, CLARENCE CANNON'S policy of government for all the people is made completely clear by the record.

Since first elected to Congress in 1922, Mr. CANNON has been instrumental in the passage of legislation beneficial to every American.

Let's take a few examples.

For the benefit of the farmer, Mr. CANNON has supported legislation for parity prices, farm loans at low rates of interest, reclamation and soil conservation projects, REA, protection of crops from pests and livestock disease, construction of better farm-to-market roads, flood control, and improved scientific agricultural research.

In supporting the 1941 farm-loan bill, which provided for Government loans to farmers to 85 percent of the parity value of 5 basic commodities, Mr. Cannon said the bill "places a floor under farm prices similar to the floor already under wages. For the first time in history the farmer is guaranteed a parity price."

On this and many other agricultural bills Mr. CANNON fought long and hard for the farmer, against an opposition both you and I know is entrenched and powerful.

Nor has that fight ended.

As you also know, only last April, President Eisenhower vetoed a Democratic farm bill which would have been a start toward a fair share for the Nation's farmers.

In 1952, the average farmer had an income of 52 cents for every $1 taken in by his city neighbor.

By 1955 that 52 cents had dropped to 42 cents.

As a result, the 13 percent of our population which remains on the farm, and which today produces the abundance of food and fiber that makes America the best fed and best clothed Nation in the history of the world, nevertheless receives less than 5 percent of our national income.

And according to Department of Agriculture income forecasts for 1956, under the present policies of this administration, that already unfortunate situation is going to get worse instead of better.

Already this situation is being reflected in the small towns. As a lead editorial entitled "The Rural Towns Problem" in the Kansas City Star pointed out last May 20: "Rural towns or cities are the first to feel the effect of reduced purchasing power among farmers."

For that damaging effect to reach the large cities is certain, and only a matter of time.

This administration's answer to the plight of the American farmer has been, and is, lower price supports, less farm credit at higher inerest rates, and less funds for REA.

Based on some of the statements made by those in charge, why should we be surprised?

As example, only last year an Assistant Secretary of Agriculture in this Republican administration said: "Agriculture is now big business. Too many people are trying to stay in agriculture that would do better some place else."

Well, 500,000 farm families have left the farm in the last 3 years.

But where have they gone and what will they do?

Is it good for America that these people and their children leave the field and pastures and woodlands of our countryside, to roam the concrete of the big cities looking for work?

What irony that in most countries of the world today 90 percent of the people work in the production of food—and their problem is famine, whereas only 13 percent of our people produce food—and our problem is surplus.

Shortly after Mr. CANNON was first elected to Congress, another Republican President, Calvin Coolidge, made this statement: "Farmers have never made money. I don't believe we can do much about it."

Apparently today, 30 years later, that is still the philosophy of the Republican Party.

But for many years the Democratic Party, under the leadership of such men as CLARENCE CANNON, has believed that something can and should be done to help farmers get a fair share.

Let's look at the record.

In the 20 years of Democratic administrations, farm income rose from $2 billion a year to $13½ billion; and the parity index rose from 58 percent in 1932 to 100 percent in 1952.

Since 1952 annual farm income has dropped nearly $4 billion. Parity during the last 6 months averaged 82, with a low point of 80. That is the lowest point and the lowest 6-month average in 15 years.

The reason is clear. It was Secretary of the Interior McKay who said, "We're here in the saddle as an administration representing business and industry."

If he was talking about big business, that is true; and the backs of little-business men and farmers this administration is riding are getting plenty sore.

Mr. CANNON's legislative record, however, has much in it besides sympathetic understanding and support of the farmers. He has consistently supported measures for help to our veterans; and to our small-business men, and to our average citizen.

In 1932 Mr. CANNON was one of those who worked hard to preserve $400 million of veteran benefits.

In recent years he has been one of the leaders behind legislation to provide maternity care for servicemen's wives, and also better hospitalization for veterans.

For the average citizen, Mr. CANNON has supported such welfare measures as aid to the blind, aid to dependent children, day nurseries, nurses training, pensions, and unemployment compensation.

For the small-business man, Mr. CANNON has fought against monopolistic practices. He has worked steadily for a fair deal for small business.

When and if they make any money, these farmers and businessmen are also taxpayers.

Let's review for a moment the tax policies of this administration.

In 1954, President Eisenhower proposed tax reductions.

Out of every dollar of tax relief obtained, the corporations received 73 cents.

Families earning over $5,000 received 18 cents.

Families earning less than $5,000 received 9 cents.

The Republicans said they couldn't afford to give tax cuts to everybody—so they gave a $1 billion tax cut to corporations, plus an $850 million tax cut to corporation shareholders.

This administration's record on small business is equally in conflict with the country's welfare.

Since 1952 the profits of companies worth $100 million or more have gone up 27 percent; but the profits of companies worth $250,000 or less have gone down 39 percent.

Business failures since 1952 have risen 36 percent—in fact, during the past 3 years, there have been more than twice as many business failures as there were during the previous 10 years.

Unless we put an end to the current program of helping the big get bigger while the small get squeezed out, capitalism, as we know it, will disappear.

As you know, over 80 cents of the tax dollar you pay today goes for past, present and possible future war—and 65 cents of your tax dollar goes to the Defense Department in the Pentagon to pay for the current programs.

Now a story is being spread around that because some of us believe in better organization of our military defenses—an organization based on progress instead of tradition—we are asking for more money for national defense.

This is not correct.

If the Pentagon was truly unified, the American people could obtain more security for far less money than is being spent today.

In this field also CLARENCE CANNON is a recognized authority. His voting record proves that he is dedicated to adequate national defense; but only on the basis of maximum return to the taxpayer for every dollar spent.

Anothr prominent American once agreed with that position.

On November 16, 1945, over 10 years ago, in testimony before the Senate Committee on Military Appropriations the then General Eisenhower stated:

"You could develop a more efficient fighting force with unification, with 75 percent of the men that you would have if you had separate forces. * * * I am certain that almost any professional officer that has studied this thing would agree."

A 25-percent reduction in the current personnel of our military establishment would save the American taxpayer many billions of dollars each year.

In this later published book, Crusade in Europe, General Eisenhower developed his point further when he said:

"The accomplishments in Europe of the three United States services operating under unified command strongly influenced my determined advocacy of a similar type of organization in postwar Washington."

And on February 7, 1948, in his farewell report as Chief of Staff of the Army, the general carried on his thought as follows:

"But our position of 5, 10, 15 years hence is being determined now. * * *

"We must do everything possible now to assure ourselves that we will fight another war with weapons more advanced than those of the enemy. * * *

"The constant aim of those concerned with integration of the Armed Forces must be the goal implicit in the act—a security program in which all fields of responsibility will be covered but from which all unnecessary duplication will be eliminated and in which each arm will be a member of an integrated team. * * *

"Study should be given to the proposition that each year a number of officers of proved experience, knowledge and judgment be withdrawn from their respective services and given commissions in the Armed Forces. The existence of a body of specially chosen officers representing all three services would act as a spur to junior officers to qualify for such selection, indirectly decreasing traditional barriers between the services. Free transfer among the services, without loss of rank, would, in appropriate cases, be a valuable measure for promotion of the national rather than the service viewpoint. Developments of this sort will come with time and I am confident that each succeeding year of unification will bring closer the goal of a fully integrated establishment."

It was not until he actually became a candidate for the Presidency, however, that General Eisenhower really "poured it on" with respect to his concept of deficiencies in the Department of Defense.

In a talk in Baltimore on September 25, 1952, the general said that we must obtain "the most defense at less cost with the least dollar."

And he continued:

"Our defense program has suffered from lack of farsighted direction.

"Real unification of our Armed Forces is yet to be achieved.

"The running warfare between Congress and the White House has made such blundering even more costly to us Americans. Both must share mutual confidence and common purpose. The cooperation must be sparked by executive leadership.

"We have had little of such leadership. Special interests in the armed services have repeatedly been carrying their appeals to Congress—sometimes without knowledge of any of their civilian superiors."

Then General Eisenhower said:

"Supplemental appropriations by Congress have been vetoed, passed over a veto, and sometimes held back by the President."

But only last year, the Congress appropriated $42 million to prevent any further reduction in the personnel strength of the Marine Corps, this action being taken on the theory that it was wrong to discharge many thousand Marine volunteers at the same time tens of thousands of men were being drafted off of the farms and out of the cities.

The Administration impounded the money Congress appropriated for this volunteer force. The Marine strength was permitted to decline. Actually, the Secretary of Defense used much of the impounded money for his own Department.

Also in Baltimore in 1952 General Eisenhower stated:

"Service disagreements have become public brawls."

Compare any disagreement between the services in 1952 with those flooding the press, television, and radio today.

General Eisenhower continued:

"Stranger than this is the almost inevitable demand of each service to do the research, development, and production work on new weapons. Each believes that it can do the work better. In this matter prompt adjudication among the services is mandatory—otherwise you will find all three engaged in spending public money for a single need."

* * * * *

"This brings us to the supremely important matter of unification of the Armed Forces.

"When I became Chief of Staff upon my return from Europe in November of 1945, I felt that all our war experience had rendered obsolete the defense organization then existing. I was convinced then, as I am today, that effective coordination of the services in war requires central planning in time of peace. This is the essence of unity in the Armed Forces. That unity must also extend to the procurement and administration of all the costly materiel and paraphernalia of modern warfare. It was the hope and expectation of all of us who worked to achieve the passage of the National Defense Act of 1947 that this kind of unity was in the making.

"This has not proved to be the case. Such unity as we have achieved is too much form and too little substance. We have continued with a loose way of operating that wastes time, money, and talent with equal generosity. With three services, in place of the former two, still going their separate ways, and with an overall defense staff frequently unable to enforce corrective action, the end result has been not to remove duplication, but to replace it with triplication.

"All this must be brought to as swift an end as possible. Neither our security nor our solvency can permit such a way of conducting the crucial business of national defense."

That was over 3½ years ago.

Not a single change in the law has been suggested by this administration to correct the situation described by General Eisenhower on September 25, 1952.

Instead of any proposals to bring "all this to as swift an end as possible," the President's own people volunteer that triplication and waste has increased heavily since he took office in January 1953.

The former Assistant Secretary of Air Force Research and Development, Mr. Trevor Gardner, resigned early this year in bitter protest at the current disorganization in the Pentagon.

Only last month Mr. Gardner wrote in Look magazine as follows:

"We must junk the creaking, decentralized reviewing and re-reviewing machinery we now so foolishly look to for decisions. In place of this bureaucratic Noah's Ark, we urgently need a streamlined mechanism capable of responding to new dangers as quickly as they become known."

As an illustration of what Mr. Gardner is talking about, this country fought and won the greatest war in history—and at that time its military departments contained a total of eight Secretaries.

Today, despite all this talk about the importance of further service unification in order to increase security and, at the same time, cut expenses, there are 31 Secretaries.

And the President has just asked the Congress to approve 3 more, for a total of 34.

Because of the rising criticism resulting from the bitter interservice rows which have recently broken out in the open, it is reported that something will be done about the deteriorating situation in the Pentagon.

Last week Time magazine stated:

"It is the duty of Commander in Chief Dwight Eisenhower to insure that the machine—in all its countless parts—adds up to a single unit meshed for a sole purpose: to keep war away by its total retaliatory power.

"That aim no longer permits the luxury of the three services and their many subservices wrangling for power and heading in different directions. For this reason President Eisenhower has come to one of the most important decisions of his administration: to move for a truly unified armed service that will work in practice as well as on paper, as a single machine. Last week he ordered his White House staff planners to start work immediately on mapping out a unification plan for completion this fall. If he is reelected he hopes to present his unification proposals to Congress next year."

But we heard all that in Baltimore, back in September 1952.

Why should be believe it now, any more than we should have believed it then?

For many years some of us have stated and restated that if President Eisenhower would only carry out what he said should be done in 1945, 1946, and 1948—and what he in effect promised would be done in 1952, many billions of dollars annually could be saved in our national defense cost, at no sacrifice whatever to our military strength.

The saving could mean a balanced Federal budget; and should mean a heavy reduction in income taxes.

Apparently some people believe that emphasis on the importance of national defense indicates a certain narrowness of viewpoint; a failure to recognize that military power is only a part of that much broader struggle which is rapidly shaping up for the political and economic control of the world.

Quite obviously the Communists, dedicated to world conquest, don't want to gain control of a devastated country. There is no profit in acquiring a lot of smoldering, radioactive real estate. They want to take over a going concern, at the peak of its productivity. Therefore their approach now is political and economic as well as military.

But their political warfare rests upon a military standoff. Note they did not even begin their successful recent developments on the political front until they felt they were at least within reaching distance of military equality.

It goes without saying that the political-economic struggle is an even larger, more difficult, and more challenging problem than the problem of maintaining military superiority.

To put it another way, the problem of military superiority is in itself a challenge to our resources. But it is small compared to the vast challenge of the overall struggle, including the struggle for the minds of men.

If the present leaders of this administration have been unable to cope with the current world-wide political struggle from a position of military strength, how will they manage from a position of military weakness?

If, during the Korean War our choices of action were limited by fear the enemy would "enlarge the war" (don't dare bomb beyond the Yalu, don't dare use atomic weapons), how will our policy and program be restricted if and when the Russians have a superiority in arms?

This is an intensely practical problem, one which must be faced if we are to continue in a free world.

Some future administration may have the genius to deal successfully in foreign affairs from a position of relative weakness; but this administration does not seem to be able to exploit its asserted position of relative strength.

We have a right to expect our Government to deal effectively with the broader problem, handling the military problem in stride. But this administration seems unable to handle either without a succession of obvious failure.

We might forgive the mistakes in foreign policy; but management—with a capital M—was to have been the great talent of the crowd now in office. (If you once ran General Motors, you are equipped to run the country.)

Yet in the very place where we were led to expect the pinnacle of competence, we have seen bungling and shortsightedness.

Again, preoccupation on my part with the military-defense problem does not mean any lack of awareness of the broader political struggle now taking place all over the world.

But the military problem is elementary. If we cannot handle that, how can we handle something far more complex?

If we—the United States—cannot maintain a superiority of arms, apparently cannot even maintain a military standoff, how can we expect to win the larger diplomatic and economic struggle?

The argument is made that America cannot spend for arms at the expense of its economy.

Who says we should? This is to avoid and evade the real problem. The real problem—the real measure of the problem—is to obtain the necessary capability without injuring the economy.

It can be done; and it will have to be done.

If we don't enlarge our vision, broaden our concepts, and achieve a better comprehension of the total problem, our failures in this field are just a foretaste of the much larger failures in store for us on the international political front.

We have come here today to honor a great Missourian, to honor him for what he has stood for over the years.

To him we express the gratitude of his party, his community, his district, his State, and his Nation.

Several weeks ago in the bright morning sun, I journeyed through the farms of western Kentucky. On the train was Alben Barkley, being carried to his eternal rest.

As we went by, farmers were kneeling among their crops in the fields, paying respect to one they loved, because they knew this great Democrat had devoted his life to attaining a better life for them.

Fortunately for us, another great Democrat is with us today, with many years of public service ahead of him.

We know, CLARENCE CANNON, that at the same time you participate in our most important national problem—the insurance of a more prosperous and a more secure America—the problems of your friends and neighbors are always in your heart and mind.

It is for that reason you have our respect, our affection, and our eternal gratitude.

More About Our Defense

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 11, 1956

Mr. MULTER. Mr. Speaker, the following article by Stewart Alsop, which appeared in the New York Herald Tribune of June 10, 1956, is "must" reading for every Member of Congress:

MATTER OF FACT

(By Stewart Alsop)

PARTRIDGE AND LE MAY

WASHINGTON.—The recently released testimony of Gen. Curtis LeMay and Gen. Earle Partridge ought to be required reading for every policymaking official of the Eisenhower administration, conspicuously including President Eisenhower himself.

The transcripts ought to be read in full for their real impact. But briefly, the main points made by General Partridge, Chief of the Air Defense Command, in testimony re-

leased last Wednesday, were as follows: First, the Soviet fighters are superior to anything we have. Second, "we now have a good system to fight the TU–4," which is the obsolete Soviet bomber no longer being produced. But, the Soviets "introduced the jet bombers and the Bear more rapidly than was forecast." As a result, "we find ourselves in the years 1957, 1958, and early 1959 in not too good shape."

The Partridge testimony was heavily bowdlerized by the Defense Department. But the transcript makes it abundantly obvious what "not too good shape" means. It means that under present programs, our fighters will not even be able to reach the altitude of the new Soviet bombers until the new "hundred series" of fighters begin to be delivered in quantity some 3 years from now. As General Partridge sadly remarked, "We are weak at high altitude. We are weak at low altitude." If there is any cause for complacency in such testimony, it is hard to detect it.

As for General LeMay, Chief of the Strategic Air Command, it is even more important to read the whole transcript of his testimony to gather the full meaning of what he said. But his main points were as follows:

First, by about 1958 or 1959, according to present programs, the Soviet "long-rnage bombers * * * will be a little over twice what we have, so the advantage will be with the Russians." Of 1960, LeMay said, "We may not be able to carry out our mission at that time."

The mission of the Strategic Air Command is to provide a retaliatory force sufficient to deter the Soviets from attacking. Other testimony brought out just what General LeMay had in mind. Senator STUART SYMINGTON, Chairman of the Armed Services Subcommittee investigating air power, asked the key question: "In what year, at what time, if the present programs go along * * * do you think they will be in a position, if they hit us, to destroy us? We will accept it as a guess from the man who has the most right to guess."

General LeMay. "I don't like to guess on those things, but if you insist, I will come up with a guess * * * 1960, he can do it with a complete surprise attack."

In short, by 1960, the Strategic Air Command "may not be able to carry out our mission" because all the SAC bases could be knocked out by surprise attack. LeMay's "guess," it should be emphasized, is based not on his own estimate of Soviet air power, but on the "national estimates." These are intelligence estimates prepared by the Central Intelligence Agency and approved by the National Security Council, of which the President is chairman.

The Partridge-LeMay testimony suggests certain questions. If Partridge and LeMay, in a fit of hysterical parochialism, are simply misinterpreting the meaning of the national estimates, why are they kept on in their immensely responsible positions? If, on the other hand, their interpretations are correct, and their testimony substantially accurate, what becomes of the twin doctrines of massive retaliation and mutual deterrence which supposedly form the basis of American defense policy?

Maybe it doesn't matter. Maybe the Soviet rulers have not the slightest intention of using the new weapons which they have made such enormous and brilliantly successful efforts to achieve. Even so, it is worth pondering one further question: What will happen to the Western alliance, and to our own firmness of purpose as leader of the West, when the Soviets know, and we know, and the world knows, that they can destroy both our cities and our ability to retaliate, at any time, by surprise attack?

Unordered Merchandise Racket

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 14, 1956

Mr. REED of New York. Mr. Speaker, under leave heretofore granted I am inserting in the Appendix of the RECORD a statement taken from Business Week which I think will be of interest to those who have been the victims of the racket to which the article refers:

PERSONAL BUSINESS

The mails these days are full of merchandise you didn't order and don't want—neckties, key-ring tags, phonograph records, books, and so on. In fact, the mailing of unordered merchandise is now a multimillion dollar business.

A part of this business is legitimate enough. About 50 of the Nation's 200 large mailers of unordered merchandise are religious, charitable, or patriotic nonprofit organizations that use this method for raising all or part of their annual budgets.

Another 150 or so large mailers are commercial companies, who swamp the mails with literally millions of articles of unordered merchandise each year.

The real culprits are among this group—a few high-pressure operators who even resort to threats in order to collect money for their unordered merchandise. One example will illustrate how unpleasant a situation of this kind can become:

An elderly man in Florida was nearly blind, and had been unable to read for years. Through the mail he received an unordered book, which he returned a his own expense (although he didn't have to).

Then he began to get a series of brazen and threatening letters, demanding that he remit $1.65 for the book. He ignored them. So a new series began—this time purportedly from a Delaware lawyer who said he was handling the claim for collection. He still refused to pay the bill.

Fortunately, not much more than threats could be leveled against him, even though no postal regulations govern unordered merchandise except when fraud is involved.

But the Federal Trade Commission has ruled that it is a violation of the Federal Trade Act for a sender of unordered merchandise to claim that "the receiver is under obligation * * * to pay for or return the merchandise."

Likewise, the Better Business Bureau says: "Recipients of unordered merchandise are not obligated (1) to acknowledge its receipt; (2) return it; (3) pay for it unless used; (4) give it particular care; (5) keep it beyond a reasonable length of time."

However, BBB points out that you are obliged to surrender the merchandise to the shipper or his agent, if called for in person, within a reasonable length of time. But before relinquishing it, you can demand storage charges.

There is a simpler way to do away with this nuisance and still stay within the United States postal statutes—just write the single word "Refused" across the face of any parcel or piece of mail you don't want. Hand it back—unopened, of course—to the mailman or postmaster—and that's the end of it for you.

The point is this: You don't have to accept any piece of mail, no matter what the reason. You don't have to state why you won't accept it, nor do you have to sign anything. So refusing the mail to begin with is the simplest way to dispose of unordered merchandise.

This also takes care of objectionable publications that you may get through the mail without having subscribed to them, or having given specific permission to anyone to send them. It's much more effective than writing to publishers and asking to be removed from their mailing lists—often they want to foist undesirable material on unwilling recipients.

When you mark such publications "Refused," the postman must fill out a form and send it to the mailer notifying him that in the future the publication is unmailable to that particular addressee.

There may soon be laws that prohibit such mailings in the first place, so you won't even have to go to the trouble of refusing it. The Post Office Department is trying to draft legislation right now that will screen out the worst offenders, and still not hurt the religious and nonprofit organizations trying to raise money for worthy causes.

The Marine Corps

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 8, 1956

Mr. BROOKS of Louisiana. Mr. Speaker, I have just received a most intelligent and enlightened letter from a member of the Marine Corps. This young man is from my congressional district and is now an officer of field grade status in the Marine Corps. So much has been said in the past in reference to the Parris Island episode that I think in fairness to the Marine Corps that this letter should be reprinted in full. I have deleted portions of the letter which would indicate the name or address of the individual writing me the letter and this deletion is, of course, for obvious reasons.

The letter follows:

Before I joined the Marine Corps, I was told by a well-decorated Marine officer that there were only two places where Marines were made: San Diego and Parris Island. He said that in boot camp you either make a man or you break him. I found that he spoke accurately. In my capacity both as observer and participant, I found that the Marine system of recruit training one of the most remarkably effective and singularly successful programs I had ever encountered.

The scope and purpose of boot camp is to take a fuzzy-cheeked lad of 17 or 18 years age and—in the short course of 12 weeks—develop in him the qualities of courage, discipline, individual pride, and esprit de corps that combine to prepare him morally for the gruelling hardships of infantry combat. These 12 weeks are essentially weeks of character building—training in the varied techniques of modern warfare is incidental to this primary mission. Such an undertaking is breathtaking in magnitude. To watch the transformation of "mama's boy" (away from home for the first time) into a fundamentally matured man in the period of these 3 months is most impressive. The methods that achieve this invaluable objective, I believe, should be preserved in the public interest and not lightly tossed aside as anachronistic.

The percentage of men who are "broken" or sustain any lasting physical or emotional

injury from boot camp training is infinitesimal. The notion that human dignity should be deferred to and boot training restrained out of respect for this basic dignity in a 17 or 18 year old youth is sheer poppycock. In point of fact, boot training relies quite heavily upon the existence of human dignity—but not after the notions of the egalitarian and the do-gooder. The net result of boot training is to verbally (and physically whenever necessary) hammer an individual into a respectable and self-respecting man, evincing for the first time—feeling and understanding for the first time—the attributes distinctive of human dignity and manhood.

In general terms, the method of boot training is to take a young man from civilian life, crush and redirect his adolescent rebelliousness, imbue him with pride in and allegiance to the Marine Corps and to his country, convince him of his moral responsibilities as an individual and as a member of the organization, and rigorously-exact absolute conformity to the discipline of a system whose terms are apparent to all.

The "boys" who come to the Marine Corps to be made into men generally are neither delicate nor cultivated. They do not understand the concept of discipline, but they do comprehend physically enforced authority. The techniques used, mothers might consider brutish; but that is frequently because the Marine Corps is sometimes giving her son the "spanking" she should have given him 10 years before. The code the boot lives by is harassing and it is strict. The drill instructor might just as well be God—his word is law, his authority absolute. Drill instructors, of course, are restricted but a recruit is only dimly aware of that. A boot stands at attention, addresses as "Sir," and requests "permission to speak" to everyone not a boot—from Pfc's up. Discipline starts on this basis and builds up. Anyone who decides that he wishes to deviate from the prescribed rules is dealt with in no uncertain terms and in a fashion he is not likely soon to forget.

The supreme responsibility shouldered by the Marine Corps in taking the youth of America into its organization, is that they be made into men before they must face the enemy in mortal combat. War taxes, sometimes beyond endurance, the timbre and manhood of all: how pitiful and unfortunate it would be to have to send soft and unprepared children into our Nation's battles. It is to avoid this eventuality that Marine recruits go through boot camp, and, thereby, are made ready for the demands of warfare.

So long as the old Navy Regs were in force, I am told, this system of boot training functioned well and to no one's embarrassment. The adoption of the Uniform Code of Military Justice made things somewhat difficult for the strict disciplinarian, but Marines were universally aware that certain things must be exacted from a boy in order to make him a Marine, and the law was hedged about. Drill instructors generally were protected from public opinion. They were backed up by superiors. Sudden transfers to other duty stations were instituted when punishments or activities initiated by drill instructors—in good faith—had unfortunate consequences. Public opinion was placated by being kept uninformed—mothers would never understand some of the things that were going on. No drill instructors would ever charge a boot for violation of an article under the Uniform Code of Military Justice and have him tried under a courts-martial proceeding, except in the instance of a serious offense. The purpose of the drill instructor is to make the young man a Marine, to teach him discipline, self-control, and utter responsibility. It is not his business circuitously and abstractly to exact a pound of flesh by judicial means. Breaches of conduct were (are) handled by the DI, in his own way and with no questions asked.

The public opinion of a society which had become increasingly pampered and obsessed with sugar coating has made the mission of the drill instructor an extremely difficult thing. The Marine Corps solution has been to leave the staff noncommissioned officers virtually free from direct supervision in the conduct of boot training. I believe this is as it should be. The heart of the Marine Corps is the staff NCO's. They are hardened professionals, knowing better than anyone else what it takes to make a man a Marine; giving restraint and guidance from above (but not down at the individual boot level) for decades they have done a terrific job.

For an officer to oversee the training given recruits would adversely affect that training. In the first place, it would serve to cheapen the rank of the enlisted men directly in charge of the recruit. The Marine Corps has never been known as a "rank-happy" organization; every rate carries with it legitimate and acknowledged prestige. It is important that the boot fully appreciate these distinctions. A present and supervising officer would, in effect, undermine the discipline and destroy the value of rate differences within the chain of command. Secondly, an officer is necessarily obliged to take action to rectify any instances or "maltreatment" or "injustice" which he sees. This is expected of him by the men. An officer is thought of as a gentleman, and between "men" and "gentlemen" there is expected to be a difference of kind. There is a class distinction and a recognized heirarchy here, and the initial indoctrination of boot camp serves to establish this as a serious and factual matter.

No system of training is without flaw, of course. Some individuals escape the full effectiveness of Marine indoctrination, generally because they are grossly unsuited to the tasks marines must perform. But these are very few indeed. The overage marine, graduating from boot camp, is conscientious and aggressive; he is vigorously self-reliant and enthusiastically devoted to the Marine Corps and everything for which it stands. All the hardships and discomforts of the previous months are disregarded, and he is proud of the long list of military achievements that at last have demonstrated his worth as a marine. Feeling that he has become a Marine, he probably has reached his life's proudest attainment.

It is this fundamental frame of mind that prepares him for the technical and tactical training that lies just ahead for him; that makes him respect his fellow marine as being worthy; that causes him to fight and survive and remain effective in the direst circumstances.

The Marine Corps shoots for esprit de corps in units and "gung ho" individual marines. Boot camp achieves this. The evolution of the system has taken a long time and its principles are sound.

Eisenhower Leadership Failure

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, the Members of the House of Representatives have recently completed consideration of the Mutual Security Act. The Senate now has that bill before it and all reports seem to indicate that that body may cut the aid proposed by the administration by an even more substantial amount than did the House.

I hope that these reports are mistaken, for it is my opinion that even those cuts approved by the House were dangerous in the extreme. If this undesirable action is taken, the President will have no one but himself to blame. Time and time again leading Democrats in the Congress have warned that only strong support of this administration measure by the administration would suffice to secure its passage uncut. This support was lacking during the House debate until the very last minute when it was too late. It now appears that the same situation may prevail in the Senate.

The import of this lack of action is not lost on the Congress, nor, I am happy to say, is it lost on the folks at home. Many people throughout the United States are distressed by the lack of leadership on the part of the President in a matter which is so vital to the future security of the Nation. That this sentiment exists is indicated quite clearly by an editorial which appeared in the Trenton Times, one of the leading newspapers in my district in New Jersey. For the information of my colleagues I would like to include the full text of that editorial. Other evidence of leadership failure may be found today in the Washington Daily News and the New York Times. I include two articles which clearly show that the feeling of uneasiness over this failure of leadership at this critical period is very widespread.

[From the Trenton Evening Times of June 12, 1956]

LEADERSHIP FAILURE

Rejection by the House of Representatives of the administration's $4,900 million foreign aid bill is one of the most severe and significant rebuffs President Eisenhower has received since assuming office. And it is one that he might have averted if he had been able or willing to fight.

Several weeks ago Democrats made it plain that if the President expected to get the foreign aid bill through Congress without substantial cuts he would have to intervene personally, promptly and vigorously. Until the last moment, however, the President listened to the counsels of timidity and proceeded on the complacent assumption that the magic of his name would dispel all opposition.

The old magic failed to function, and with good reason. There are many misgivings about American aid and there is a sincere belief in some quarters that loans and removal of trade restrictions would be more effective than outright grants. Logical questions were raised and the President did not feel under compulsion to answer them. Then, when he saw that his program was on the rocks, he made a last moment appeal which was ignored. The result was a reduction of the program by a billion dollars.

This was a failure of leadership. And there is the prospect of another failure of leadership, also of political courage, in the plight of Senator WILEY of Wisconsin, who has been cast adrift by the organization in his own State because he has gone down the line for the Eisenhower foreign policies. A word of support might have turned the tide for Senator WILEY in the Wisconsin convention. Yet, it was not forthcoming and a loyal supporter of the President is left to the tender mercies of Senator MCCARTHY.

The President's personal popularity remains high. His political leadership on foreign aid leaves much to be desired.

[From the Washington Daily News of June 13, 1956]

FOREIGN POLICY DILEMMA

(By Wellington Long)

The United States Government faces an almost insoluble foreign policy dilemma, and recent official attempts to think out loud about it have proved embarrassing.

The question is, How shall the United States, with a historic record of neutrality except in two wars, treat the new, neutral nations who wish to remain aloof from the cold war?

The administration got some burned fingers a year ago on this subject. But apparently the National Security Council has not even discussed a position paper which would lay down a policy toward neutralism. The flurry last year was created just before our stanchest European ally and a vigorous opponent of neutralism, West German Chancellor Konrad Adenauer, visited here in Washington.

This year, the excitement again started just before Herr Adenauer came here. But now, there's an added element—next month a foremost exponent of neutralism, India's Premier Jawaharlal Nehru, visits here.

The latest confusion stems largely from Secretary of State John Foster Dulles' tour of the neutralist nations of southeast Asia last March. On March 20, he said in Djakarta, Indonesia, that when the United States was a young country just emerged from colonialism, we were very eager to devote our efforts and attention primarily to our own affairs, trying to make stable and sound our newly won independence.

"It is quite understandable to the United States, therefore," Mr. Dulles continued, "that that should be the point of view of the Indonesian Government." He declared "there is no connection between our giving of economic aid * * * and the entry of any country into a collective security pact with the United States."

That appeared to be a sharp break with the former either "you are with us or against us policy." And seemingly was confirmed by President Eisenhower a month later when he told the American Society of Newspaper Editors:

"The new nations have many of the sensitivities that marked our own early years as a free nation. Some of them are concerned to avoid involvements with other nations, as we were for many years. Certainly, we Americans should understand and respect these points of view."

Last Thursday, the President touched on the subject again. He told his press conference that neutralism did not necessarily mean to be neutral between right and wrong. But only in respect to military alliances.

It seemed obvious the President had in mind the Asian neutrals. But Germany's Adenauer, trying to rearm his country over the objections of a growing neutralist political bloc within his own nation, was stunned.

So the following day, the White House clarified the President's remarks. In sum, it said that neutralism was all right in some parts of the world, but not in others.

Then, last Saturday Secretary Dulles, departing completely from his Djakarta text, declared that the principle of neutrality "has increasingly become an obsolete conception and, except under very exceptional circumstances, is an immoral and shortsighted conception."

By now, our allies are as discomfited as are the neutrals. The West Germans visited the State Dupartment last week to protest the President's statements. Today, an Indian representative calls to protest the Dulles remarks.

[From the New York Times of June 13, 1956]

"SERENDIPITY" IN CAPITAL—A CRITIQUE ON NEW ADMINISTRATION MOOD OF FINDING EVERYTHING BUT SOVIET GOOD

(By James Reston)

WASHINGTON, June 12.—The administration has found a cureall. It is a rare tonic called serendipity, originally discovered by the English writer, Horace Walpole.

The word was coined by Mr. Walpole in allusion to a fairy tale, the Three Princes of Serendip, who were never dismayed by misfortune, but always managed to discover, by chance or sagacity, wonderful things they had not sought.

This is what is happening here now. Others may be gloomy about the illness of the President, the state of the Atlantic alliance or the future of Germany, but the administration, like the Three Princes of Serendip, always finds something valuable or agreeable to say about everything, except, of course, the Soviet leaders.

Secretary of State Dulles was in a particularly serendipic mood today. He downgraded the President's illness to an indisposition. He saw no reason why this indisposition should hamper the efforts of the administration to restore the $1,100,000,000 cut in the foreign-aid appropriation. And he was full of bounce and optimism about many other things.

REMARKS ON NEUTRALS CITED

He was questioned closely, for example, about the President's recent sympathetic remarks about the reasons why some States preferred to remain neutral in the world struggle, and about his own references last Saturday to the immorality of neutrality.

But he saw no difference between them on this subject. "I had a long discussion with him—the President—in the course of other matters on Thursday afternoon, and I can assure you that there is no difference whatever in our points of view," he said.

Similarly, the Secretary of State was asked about the criticisms in Asia about the weakness of the southeast Asian alliance, but he said he was not aware of any general rising criticism in Asia.

Also, he was pleased with the progress that was being made in strengthening the North Atlantic Treaty alliance; and he denied that the disarmament talks with the Soviet Union were in a state of stalemate.

This was Mr. Dulles in his most optimistic mood. When he was asked about the forthcoming visit of Dmitri T. Shepilov, Soviet Foreign Minister, to Egypt, his only comment was that Mr. Shepilov seemed to be following the Dulles habit of relying on personal diplomacy rather than on written communications through the Embassies.

DULLES RECALLS OWN WRITINGS

And his main point about the recent speech of Nikita S. Khrushchev on the wickedness of Stalin was that he, Mr. Dulles, had known about this all along and had written about it in his book, War or Peace.

Like Mark Tapley in the Life and Adventures of Martin Chuzzlewit ("my constitution is to be jolly and my weakness is to wish to find a credit in it."), Mr. Dulles is always full of hopeful visions, especially when things are going badly. And the habit seems to be spreading.

A conscious effort is now being made to give the impression that the President already is back in command of the administration, 5 days after an emergency operation.

Though the administration originally had the Pentagon deal with the Soviet invitation to Gen. Nathan Twining—so as not to give that invitation too much importance—the White House made a special point yesterday of having the President personally take charge of the decision to reject the additional Soviet suggestion that the rest of the Joint Chiefs of Staff accompany the Air Force Chief of Staff to Moscow.

ASSURANCES ON PRESIDENT

Similarly, though nobody, so far as can be learned, has talked with the President since his illness about his campaign plans, his Cabinet members are asserting to all comers that the President will certainly run and that his convalescence will be brief and successful.

Coming on top of the President's recent statement that United States prestige in the world was greater today than at any time since World War II, and his other statement that "European union * * * seems nearer today than at any time in centuries," all this suggests to observers here a calculated effort to encourage the popular belief that everything is going well.

It is only fair to say, however, that this theme, while useful politically, is widely regarded as highly fanciful. The President's illness has occurred at a critical time in the legislative program. It has occurred, too, during a period when the whole policy of the western world toward the Communists is in transition.

This is why Canadian Secretary of State for External Affairs, Lester B. Pearson, was here yesterday, why Chancellor Konrad Adenauer is here today, and why Christian Pineau, French Foreign Minister, and Jawaharlal Nehru, Prime Minister of India, have planned visits to the capital in the forthcoming few weeks.

For the time being, however, "Serendipity" is the word, and since this coincides with the mood of the country, it seems to be a valuable addition to the administration's political arsenal.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Speech by Vice President Nixon on Meeting Soviet Union's Tactics

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. HUMPHREY. Mr. President, it is not often that I have been prompted to compliment the Vice President of the United States in broad and unqualified terms. That I do so today reflects my enthusiastic admiration and complete agreement with the substance of Vice President NIXON'S remarkable address delivered at the commencement exercises at Lafayette College last Friday night, June 8. I consider this speech a major contribution to our national evaluation of world affairs. The Vice President has given us both a comprehensive and constructive summary of the world situation. It is a statement which should be read and reread, and its message should be reflected in what we say and what we do.

I congratulate the Vice President on making this speech and commend it to the attention of the Members of Congress, asking unanimous consent that it be inserted in the RECORD:

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF NIXON'S SPEECH ON MEETING SOVIET UNION'S TACTICS

I was tempted in preparing my remarks for this occasion to discuss at length the economic prospects for the years ahead.

We are fortunate to be living in a period when, for the first time in a quarter of a century, we have had 3 consecutive years of unparalleled prosperity.

The college graduates of 1956 will find available to them the most jobs at the highest wages in the Nation's history.

And it would be fascinating indeed to explore the almost limitless possibilities for expansion of the American economy during the years ahead as we begin to harness the new sources of energy which our scientists have untapped.

Tonight, however, I believe there is a subject of greater importance to this graduating class and to the Nation.

I refer to the titanic struggle between two opposing concepts of life in which we are engaged. The next few years will determine whether we can live in peace and at the same time avoid surrender.

And that question will be answered by how well we are able to meet and defeat the changing tactics of the dictatorial forces which threaten the free world.

From the end of World War II to the death of Stalin in 1953, our problem was a relatively simple one.

Communist leaders all over the world used open threats of force coupled with thinly veiled support of revolutionary and subversive movements in countries designed for conquest. These actions of bluster and abuse inevitably drove the free world together in self-defense.

Then came the death of Stalin and the New Look in Communist foreign relations.

The leaders of the Soviet Union invited the rest of the world to a period of peaceful coexistence. In doing so they seemed to abandon their previous tough line and they have even repudiated some of the excesses of past regimes.

NOT THE WHOLE ANSWER

This change of tactics has understandably created considerable confusion in the non-Communist world.

I think there will be little dissent from the conclusion that in view of the record of the men in the Kremlin the lines of military and diplomatic policy that we have hammered out over the past 10 years must continue to govern our conduct at this time.

But, is this the whole answer?

Do we stand pat and leave all the initiative to the other camp?

Do we act as if nothing has happened in the 3 years since Stalin died?

I answer these questions by saying that we could make no greater mistake than to rest on our oars and to ignore the "new look" in Soviet diplomacy.

If it is made to appear that our primary concern is military hardware, we may find ourselves isolated in a world that has been convinced by the traveling salesmen of the Soviet Union selling other products.

What we face today is a new line which could be far more dangerous in the long run than the Stalin line of bluster and brute force.

It is basically a war for men's minds, a struggle for their allegiance, an effort to win them peacefully to the Soviet camp.

In this struggle, ideas—not guns or aircraft—are weapons.

In this war, our armies wear the university cap and gown, not the uniform of the soldier. Books and pamphlets, rather than tanks and battleships, will be decisive in this contest.

One of the major reasons for the change in Soviet policy becomes apparent.

It was abvious to the successors of Stalin that they could not sell their new line so long as people remembered slave-labor camps, mass purges, and the ever-present terror of the secret police.

Yet, to the outside world, there would appear to be a break with the past and a writing off of the handicaps derived from more than 30 years of terror.

WHAT THE NEUTRALS WANT

And the "new look" was sufficiently appealing in contrast to the old that there was every chance of selling this policy to uncommitted nations, and of breaking off one by one those who had allied together in a common policy of defense.

In the cold light of history it seems fantastic that a nation with the Soviet record of terror and aggression could hope to make widespread gains by announcing a simple change of policy.

At the least, one would expect that all non-Communist countries would adopt a policy of watchful waiting and not make any shift of program until the "new look" had been tried for 5 to 10 years.

Unfortunately, this is not the case.

We must recognize that there are powerful assets which work to the benefit of the Soviet in this contest. Unless we examine them and face them realistically, we may well lose out in the battle for men's minds.

First, let us see what is at stake. Approximately 600,000,000 people live in the so-called uncommitted or neutral nations. It is easy to see that the world struggle will be determined by what happens to these people.

On the basis of my travels through most of this part of the world, may I tell you what I believe the people in the uncommitted nations want and contrast the Communist appeal with our own.

First, there is the desire for peace throughout the world, a desire which is particularly strong in the nations newly freed from colonial ties. This is not merely negative in the sense of war-weariness or fear. It is often something much more positive.

They wish the time and freedom to build their countries economically, politically, and culturally.

To such nations the Communist world talks and promises peace. It appears to respect their desire for neutrality.

By contrast we often seem to be talking war and military alliances.

I do not say that these impressions are correct, but they are more widespread and sincerely held than we often realize.

Second, there is the understandable desire for economic progress in nations less developed than those in the West.

To these nations, the Soviet Union holds up the example of its own dramatic industrial progress under communism.

On the other hand, the almost unbelievable prosperity of the United States appears to many of these nations as a goal impossible of attainment.

Third, there is the desire for recognition, prestige and independence.

In much of Asia and Africa, strong resentments have been built up against Western nations because of past or present colonial and imperialistic policies.

Often there is the deep hurt that springs from real or imagined racial discrimination.

SOVIET ADROITNESS CITED

Here we find that there is a fear of what they term cultural imperialism, an effort by the West to dominate the thinking of other nations rather than to respect their cultures and religions on an equal basis with ours.

And here again the Soviet has been adroit in recognizing this desire. Compare, for example, the tactics of (Premier Nikolai A.) Bulganin and (Nikita S.) Khrushchev (Soviet Communist Party leader) in dealing with the peoples of the Far East and their tactics in Great Britain.

A fourth point to note is the attitude of many peoples toward material things in contrast to the intellectual and the spiritual. This is difficult to express accurately.

In one sense, all peoples are concerned with economic and material problems. They must produce to live.

Yet, at the same time, there are often profound differences in the relative place assigned to these activities.

In many areas of the world a place of honor is given to leaders in the arts and intellectual fields and in religious activities.

The intellectual is not dismissed as an egghead. The artist is not called a longhair. The minister of religion is not considered an impractical idealist.

Here again we find that many peoples think that we in America are too materialistic to have such ideals. We are considered anti-intellectual, deficient in culture, superficial in religion. Again, I am not passing judgment on the truth or falsity of these charges. The important point is that they are widely believed.

And what is truly amazing is this: That the apostles of communism can parade as exponents of the very ideals that they accuse us of neglecting when their own philosophy is the ultimate in materialism and the antithesis of religion.

THE BASIC QUESTION

But we find again how cleverly they present their case.

They point out that the scientist and the intellectual is held in high esteem in the Soviet Union.

Artists and writers are among the highest paid and most honored citizens in their regime.

Even the persecution of religon is played down by the claim that worship is free, and that only political activities of the churches are suppressed.

We now come to the basic question: What should our policy be in the light of the new Soviet tactics?

We must, of course, continue to maintain adequate military strength at home and we must try to keep alive our vital alliances abroad.

We must continue our programs of economic assistance and avoid, if we can, the possibility that less-developed nations will be forced to become economic satellites of the Soviet Union.

But our military and economic programs, essential as they are, may not prove to be the most important elements in this battle.

Of this we can be sure: The uncommitted nations are not going to be frightened into alliances with the West by military power, nor can their allegiance be purchased by dollars.

What will probably be decisive in this struggle is not how much each side does, but how it is done.

That is why we must, at whatever cost, place additional emphasis on developing the kind of ideological program which is designed to win the minds and hearts of men.

Before I discuss details of such a program, may I suggest one fundamental condition that can make the difference between success and failure?

Whatever we do, we must deal with other people as our moral and spiritual equals.

Nothing is more infuriating or more likely to make our program fail than a boastful or condescending attitude on our part.

It is dangerous to parade our material wealth or economic achievement.

IN A MISSIONARY SPIRIT

This may merely create envy, rather than admiration, on the part of other peoples.

In a sense, we must deal with other nations with the tact, humility, and friendliness of missionaries.

Indeed, we could learn a great deal in our foreign relations by studying the attitudes and methods of the Christian missionaries who have won friends throughout the world.

They came to help the nations to which they were sent.

They learned their languages and customs.

By taking literally the truth that all men are brothers under God, they were accepted into families and homes of distant peoples.

Once we have this attitude, our task is to convince others that democracy and freedom and all the rights and privileges we hold sacred are better for them than is the Soviet way of life.

It is not enough to denounce or expose communism. We must show that we have a better alternative.

We do not do this by parading our superior material standard of living.

It is the total pattern of life that must prevail—not merely one phase of it.

May I make one point clear at this time?

There is no question but that we have the better case to sell.

Because basically we are on the right side. The side of freedom and justice, of belief in God—against the forces of slavery, injustice and atheistic materialism.

Ours is the truly revolutionary dynamic idea. It is the Communist idea which is repressive and reactionary.

How do we get our message across?

I believe that often too much reliance is placed upon the effectiveness of bombarding the uncommitted countries with radio broadcasts, motion pictures and press releases which present the American viewpoint.

These programs are important and necessary, but, in the long run, I believe there are others which are more effective.

FOR THE COST OF A BOMBER

May I emphasize first the overwhelming importance of expanding our program for exchange of persons. This includes high-school youngsters who spend a year living with American families and going to our schools, colleges and university students who get their degrees in American schools, and the leaders program under which each week 50 or more foreign visitors—leaders in business, government, labor, and education—come to the United States as guests of our Government to talk with Americans who are in the same field as theirs.

In this way our guests learn about us firsthand, correcting false impressions they may have had about us.

It is particularly important that we expand this program in countries newly released from colonial status.

Here the need for trained leaders is often the greatest. Many times students will graduate from a university and almost immediately take a high political position in their native lands.

From a long-range point of view, we can gain immensely by programs of this nature.

For the cost of one large bomber we can make friendships that will benefit the free world for generations to come.

President Eisenhower's brilliant proposals to American educational institutions and foundations aid in expanding educational opportunities throughout the world is in line with this approach.

If the free world can teach the leaders of tomorrow in areas that may well dominate tomorrow's world, we need not fear the contest between communism and freedom.

There are those, of course, who may point out the fact that many of those who today oppose western policies were trained in western universities.

But they oppose us because we taught them ideals of freedom while we were keeping their lands in colonial bondage.

Now that great areas of the world are free from colonialism, we have a good chance to win back the friendship and loyalty of leaders of these lands.

In addition to Government-sponsored activities, it is important that every American who goes abroad or who deals with foreign guests in our own land realizes that he is an ambassador representing our Nation.

All of us must try to be sensitive, understanding, and helpful.

Arrogance and boastfulness make enemies—not friends.

And particularly we must appreciate the high place given to intellectual and spiritual values in many areas of the world. This places a tremendous responsibility upon our tourists and business visitors, upon the exporters of motion pictures and books; indeed, upon anyone who is likely to be taken as a representative of our way of life.

I was reading an article the other day that showed the importance of these attitudes. It concerned the great atomic scientist, Bruno Pontecorvo, who left Great Britain to devote his genius to Soviet atomic research. One of the important reasons for his defection, according to his colleagues, was the fact that he thought he would have more honor, prestige, and even greater freedom of research in the Soviet Union. Likewise, many of the scientists who got caught in the Soviet espionage network in the United States, Canada, and Great Britain were partially influenced at least by the feeling that they were not sufficiently appreciated in the free world. The world of tomorrow belongs to the nations that lead in scientific research and technical skill. We shall pay a great price if we fall behind in this contest.

In discussing our need to win the war for men's minds, I have said little about direct contacts with the people behind the Iron Curtain.

Today we can have such contacts almost for the asking.

If the present trend continues in the Soviet Union and in many satellite countries, it will be possible to meet broadly with these peoples, to exchange ideas, to compare our respective ways of life.

Many of my fellow Americans are rather skeptical about this new move. They suspect, with some justification, a hidden trick; possibly a device to make communism respectable and to discourage the peoples held in submission by Red armies.

I do not fully share this point of view. I think that the explosive power of freedom is greater than the combined effect of all the atomic and hydrogen weapons in the world today.

Whatever be the motives behind these new moves, I think that in the long run the cause of freedom will be served by breaking through the Iron Curtain wherever an opportunity is presented.

The task ahead of us is a task for all the American people, and not Government alone.

In time of war we are prepared to risk our lives serving with the Armed Forces of our country. But the war for men's minds is a real war and just as important as the struggle of armies, navies, and air forces.

You in the academic world are particularly fitted to serve in this contest. May I suggest that you graduates and you of the faculty give thought to the part that you can play.

On an even broader sphere, I hope that the learned societies of the United States with their counterparts in other free nations will devote time and energy to extend their study to this great struggle for allegiance.

Jointly, you should embark upon a peaceful crusade for freedom.

Some should volunteer for service abroad, just as soldiers volunteer for special missions.

The best thought of our best minds should be given to this burning problem.

It was once said that "You shall know the truth and the truth shall make you free."

This challenge has echoed through the ages. It is as valid today as it was when it was uttered more than 19 centuries ago.

We believe in truth and in the power of truth.

We believe in such basic truths as man's equality under God, the dignity of man, the rights of each individual to live his life in peace, the sacredness of law, the benefits of political freedom including the freedoms guaranteed in our Bill of Rights.

These truths are the great heritage of mankind.

We are confident that they will prevail.

And it is the task of this generation to make sure that our confidence is not misplaced and that all Americans will rise to the challenge that faces us.

Written on Human Parchment

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Dr. Richard F. Staar, professor of political science and departmental chairman, Harding College, Searcy, Ark.:

WRITTEN ON HUMAN PARCHMENT

(By Richard F. Starr)

Historical events are usually a mere backdrop to individual lives. They are like the rhythm of a distant drum that punctuates the melody which is seldom, if ever, the melody itself. Not with Europeans, however; with them history and social problems are so closely interwoven with the most intimate events of their lives that they make an inextricable pattern. And so it is with Stefan Bandos. When I look at his life, I see as if in a mirror a fragment of his country's past. His personal motif runs like a thread through the tapestry of history. All that he ever did and all that ever happened to him was directly caused and conditioned by Cleo's hand.

Born in a small town, then under Russian occupation, Stefan learned in the cradle, rocked by patriotic songs, to love his country and freedom above all. When did such terms as oppression, resistance, political struggle become real to him? As soon as bitter experience proved that to speak his mother tongue or to sing national songs in public was a ruthlessly punished political crime. When did he learn loyalty to a common cause? As soon as he was old enough to understand the meaning of long convoys of chained men on their way to Siberian mines. When did democracy cease to be an empty sound and become blood and tear reality? The day a pogrom of Jews was carried out by the Czar's "Black Hundreds."

By the time Stefan was 10, he had become an experienced conspirator. He thought in terms of secret meetings and of political propaganda; he dreamed of heroic deeds, of martyrdom for the country, of victory and freedom. At an age when children of other countries play with popguns, marbles, and waterwings, he spent his free time standing guard at the entrance to a hideout where a secret course in the history of his country was held, or distributing pamphlets of a subversive nature. His was a tense and exciting childhood filled with childish fears and adult hopes, with childish thrills and adult enterprise.

The death of his father left a widow and three boys in reduced circumstances. Stefan, who at the ripe age of 12 found himself, so to speak, the head of the family (being the oldest of the sons), had to go to work after school hours. He obtained a tutoring job. Among the boys in his class was the son of a local Russian police commissioner, a stupid lout, who was the despair of teachers and parents alike. Teaching him was a difficult and repugnant task, but the commissioner was appreciative of Stefan's efforts and paid well. He also praised the young tutor to his friends, and soon there were more students for Stefan to coach. This meant an increased income for the family but kept Stefan running all day long from his classes to one tutoring assignment after another. In his rare leisure hours he attended political meetings and lectures. Such a schedule left no time at all for any of the activities that are considered as normal for boys of his age in other countries.

By the time Stefan (or "Stefek," as he was known to his family and friends) was 17, he fell in love. The girl's name was Ada, and she was pretty. Her main charm, nevertheless, was her strong patriotism and great idealism. Had Stefek been less absorbed in his work, he might have married her and thus found the happiness that most men consider the goal of their life. But, obsessed with his dream of freedom and national rebirth, he relegated Ada to the fringe of his attention. The girl soon realized that she was merely an appendage to more weighty matters. In her hurt she withdraw, threw herself into a whirl of political activities, and finally married a man who had more time for pretty speeches and lovemaking. Stefan's other friends, both girls and boys, were strictly connected with the underground movement. It is worth noting that they belonged to various nationalities and religions. There were Roman Catholics, Jews, and Greek Orthodox among them who were united in a struggle against tyranny and in a fight for the rights of man.

Stefek was almost 18 and in the last year of his junior college (Gimnasyum, as it was called), when the Russian political police arrested some university students in the town. The papers that were found on them were incriminating, and one of the trails led to Stefan Bandos. The same evening his mother's house was searched, and two agents remained to arrest Stefek when he came home. But he did not return that night. The grateful police commissioner, whose moronic son Stefan had tutored with good success, warned him of what was in store for him unless he managed to escape. The following days Stefek spent in hiding. Then, after a hurried and fearful goodbye with his mother, he left and made his way through the "green border" (i. e., illegally) to Prussia. His mother had given him all the money she had been able to raise, and on this he traveled to Hamburg, where he took a boat—steerage, of course—to the United States.

Stefan does not like to recall his first years in America. But it is not hard to guess that they must have been heart-breaking and very difficult for a young boy who had neither friends nor relatives in the new country, and, worst of all, who did not know a word of English. Stefan had never done any physical work back home, but until he had mastered the language, manual labor was all that he could undertake. His first job was in a quarry. It consisted of carrying and throwing heavy rocks into a stone breaking machine. When he realized that even his powerful constitution could not stand this work, he took a job in a dress factory. From there, having acquired a rudimentary English vocabulary, he went to a metal plant where for the first time he saw machine tools, and where became interested in mechanics. Hunger, want, back-breaking toil. At last he knew enough English to resume his studies. What he experienced during that period of initiation he never forgot: a deep understanding and sympathy for the underprivileged remained with him through the years.

He enrolled at Cooper Union. Working for a living by day, he attended classes at night. I do not think this schedule left many free hours, but whatever time he had he gave to meetings and lectures organized for European immigrants. Later, after he had "found his feet" in the new country and when his material needs became less pressing, he established a technical magazine for European workmen who found it hard to understand English terms, and he wrote for his mother and brothers to join him. When they arrived, they took a small apartment in New York City, where Stefan could attend Columbia University and where his brothers were enrolled in a high school.

Stefek was still deeply involved with his studies, his magazine, and various educational and cultural enterprises which he was furthering for the benefit of immigrants when he met Julia. At that time she was barely 17, but already deeply interested in the same things that he was—social questions and work among the Europeans. Stefan, whose various activities were never of a profit-making nature, had no money in the bank and no time for a long courtship. In spite of that, he and Julia were married, to the great joy of Stefan's mother, who had always feared her eldest would marry a "foreigner" (i. e., an American).

It would be interesting to find out the details of those first years of married life. Two young people, completely poor, but full of social dreams. Unfortunately, Stefan and Julia seldom talk about these times. Thus, I can only guess at what they were like and at how Stefek, from an impecunious dreamer and apostle, became the prosperous professor that I remember from my student days. Julia, though sharing his ideals, was a woman and, therefore, a realist. After a daughter and a son were born, she probably prevailed on Stefek to give up some of his dreams and to settle down to a teaching job. And so he taught mechanical engineering at Case Institute of Technology in Cleveland and at the University of Toledo and Michigan. Somewhere in between there was a venture into business, but it was extremely short, business being altogether too mercenary for Stefan's tastes. Of those years he reminisces about a pleasant, well-run, comfortable home, a shady street, and a car in front of the lawn. It must have been a good life, but it did not satisfy Stefan. Still under the spell of his old country, in spite of Julia's protests, he decided to return to the small town of his birth, partly to be with his mother (who had gone back some years before and who was becoming very feeble), but mainly because he wanted to see his beloved country, at last free, and to take some part in her development.

The Bandos family sold their home and migrated back to Europe. Here, history was to catch up with Stefan again. When in the course of World War II the Germans overran his country, Stefan as a matter of course, threw himself into the resistance movement. Just as in his childhood days, it was pamphlets, underground newspapers, secret gatherings. Radios were taken away from all of the conquered peoples, but Stefek, as an American citizen, was permitted to keep his, with the warning that he was to listen only to German stations, and he was to repeat none of the news he heard. This did not daunt him, and he became the chief source of information for the local underground press. It was one of his jobs to listen to Allied communiques, to jot them down, and to forward them to the right persons. He also helped financially innumerable people in the community and aided Jews and persons politically suspect to the Germans to escape over the "green border" into adjacent countries still unoccupied by the Reich.

German terror increased methodically month by month, and by 1941 Stefan realized that he could do little to help his native country, while his wife and children were exposed to great danger. Urged by Julia, he finally decided to return with his family to America. Accompanied by his young son, Stefan made the trip to Berlin, where he went to obtain new passports and visas from the American Consulate-General. It was the end of April, and passage was booked on a boat which was to leave Lisbon, Portugal in July. Back from Berlin, the Bandoses got busy disposing of their furniture and household belongings, packing personal things, and saying goodby to friends.

The catastrophe came unexpectedly. The middle of May, Stefan's son was arrested by the Gestapo, and 5 days later the same thing happened to the father. At first they were kept in the local political prison, already jammed with the best of the community's citizens. After many months of confine-

ment and abuse, after innumerable questionings by the Gestapo and confrontations with other members of the underground, they were taken to Koenigsberg and put on trial with the other resistance fighters. Many of them were sentenced to death and guillotined. Stefan, who undertook his own defense, spoke with so much power and such dynamic force, argued so vehemently, and mocked the enemy so fearlessly in the German language that he made an impression upon his captors. They convicted him for high treason against the Reich, but, instead of capital punishment, gave him 9 years at hard labor.

At the Allenstein Penitentiary in East Prussia, where he was sent to serve his term, he soon won even the Germans' respect by his great courage and intelligence. Recognizing his outstanding ability, they made him inspector of the torpedo parts department of a war plant which the prisoners operated for the German Army. Right under the noses of the jailers, Stefan devised means of carrying out sabotage. It was so effective that thousands of cases of precision parts were made useless. He would have paid dearly for his audacity, had the Germans time to punish him. Fortunately, when the sabotage was detected, the Red army was on its march west, and soon the Germans had to withdraw. All the political inmates of the penitentiary fully expected to be put to death by the retreating Wehrmacht, as that was what happened in most cases. This time, however, they were formed into columns and marched out of the prison under escort. They were probably to be taken somewhere to dig trenches for the Germans. One day, the Russians evidently made an unexpected advance, for the sounds of battle grew very near. Stefek and some other men escaped from the prison convoy, then scattered and struck out for themselves, trying to get away as far as possible from the others, knowing they would be harder to find in smaller groups. Stefan was so weak after 4 years of imprisonment, semistarvation, and suffering that he could not go far. So, when he saw a farmhouse, he persuaded his companion to enter and ask the farmer for food and shelter. Three days later, he was still at the farm when the Red army occupied that sector. Besides Stefak, his companion and the farmer, there were also in the house two Russian women slave laborers. The "liberators" promptly raped both of them and then made ready to shoot all of the men, including Stefan. His fluent Russian and courage saved them, nevertheless, and he even persuaded the Red army officer, who was to have been his executioner, to arrange for a lift on an army truck, as he was trying to get to Odessa, from where he hoped to obtain a boat to France or England.

His trip to Odessa was an Odyssey, bristling with hardships and perils. It took 45 days of travel and then several weeks of waiting in the port of Odessa before he finally reached the questionable paradise of a refugee camp near Naples, Italy. There he spent 6 months awaiting passage to the United States, where Julia and their children had already arrived after many and various experiences of their own.

In 1946, at the age of 65, Stefan started life all over again. Like that first time when he came to America, he was penniless. But he had his family and many friends. On the other hand, he lacked the hope and energy that had carried him through his younger days. He saw his beloved old country still bleeding after years of German terror, suffering again under Russian tyranny. Once, long before, he had thought the future would bring freedom, a better life.

Today, he sees nothing but more tragedy, new and bloodier wars. He sees not only his native land, but the whole of the Old World, lost and submerged by a wave of barbarism. This time he knows that his old country, his own and his children's future, the world's tomorrow, live here in the United States.

Every time I think of Stefan Bandos as he is now, the lines on the Statue of Liberty come to my mind:

"Give me your tired, your poor,
Your huddled masses yearning to breathe free,
The wretched refuse of your teeming shores,
Send these, the homeless, the tempest-tossed to me,
I lift my lamp beside the golden door."

Were not they expressly written for such as he?

Jefferson-Jackson Day Address by Hon. Chester Bowles

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. HUMPHREY. Mr. President, at the Jefferson-Jackson Day dinner on June 4, 1956, 1,500 members of the Minnesota Democratic-Farmer-Labor Party listened to a stimulating address entitled, "Our Special Interest Is the People." Our guest speaker was Chester Bowles, the former Ambassador to India and the former Governor of Connecticut.

Mr. Bowles' provocative address deserves the widest possible audience. I ask unanimous consent that it be inserted in the RECORD.

There being no dissent, the address was ordered to be printed in the RECORD, as follows:

BOWLES ADDRESS STIRS AND ENLIGHTENS AUDIENCE ON INTERNATIONAL THREAT

I don't want to put too much weight in a name, but what a good name you have—the Democratic Farmer-Labor Party of Minnesota.

Your party is, as our party must always be, a party of farmers and those who labor, a party which believes in democracy. Since most of us work on farms or in cities, in one way or another, this means we are a people's party. And that, I think, is our mark, the thing that identifies us as Democrats, a concern for the people, for all the people. We believe that what is good for the people is even good for General Motors.

Of course, some giant corporations would like special status and privileges as artificial legal persons without accepting special duties or responsibilities under the law. And there are some people who find a party based on farmers and laborers quite distasteful, and who every now and then in a thoughtless moment even catch themselves saying so.

But how tragically these privileged individuals are out of tune with the America of New England Puritans and western pioneers, the America of sweat and tears and brotherhood of which Walt Whitman sang, the America that builds and labors and creates. From Thomas Jefferson to Franklin Roosevelt, our party is rich with the story of men who were born into privilege but who left the shelter of the great houses their fathers built in order to serve and work with the people, in order to participate in the materialization of the American dream.

WHO ARE THESE MINORITIES?

The Republicans' Madison Avenue public-relations men have tried to put over the idea that the Democratic Party represents special interests. They even accuse us of representing minorities. Let's see who are these minorities, these special interests? Farmers, factory workers, Negroes, immigrants, and second-generation Americans, small-business men, cooperatives, unions, housewife consumers, the old, the sick, the needy, the ones who need social security, health insurance, or aid for education.

It doesn't take much arithmetic to see that these minorities amount to the biggest majority there is. The party which has their interests at heart is not a special-interest party but a party dedicated to the greatest general interest there is—the general interest to which our Constitution is dedicated, to promote the general welfare. It is the party of we, the people.

Whatever may be our personal preferences among the leading candidates for the Democratic nomination this year, and whatever may be the outcome of the California primary tomorrow, I think we can all agree that the common denominator among them is this concern for the people, and the primaries have already shown that each has strong support among the people.

JEFFERSON DID NOT FEAR PEOPLE

"I am not among these who fear the people," Thomas Jefferson, the founder of our party, once wrote. "The will of the people is the only legitimate foundation of any government," he added. The truths which in the Declaration of Independence Jefferson said, were self-evident, the truths of human equality and the rights of man, are still the truths which guide our party.

They were the truths which led Andrew Jackson, a rugged man of the people, to come out of Tennessee, to bring frontier democracy to Washington, to usher the small farmers of the West and the tradesmen and workers of the cities into their long-overdue day in the sun. It was a great experiment to extend the franchise to the poor, the propertyless, and the untutored.

Jackson did not fear the people, and he had faith in democratic law as the way to promote the general welfare. When in his hour of crisis some southern extremists talked of nullification, Old Hickory looked them straight in the face and with all the fire in his soul told them, "Our Federal Union! It must be preserved." And he gave the leadership the country required in upholding the law of the land.

Now when I look at the present administration, I realize what a difference there is from this tradition of Jefferson and Jackson, what a falling off there is from the days of Roosevelt and Truman. Washington, D. C., could well stand another healthy dose of the frontier democracy of Jackson, and I might add of Harry Truman, of Independence, Mo. And it needs a revival of the tradition of the Jefferson and Roosevelt example of unselfish public service for the benefit of all the people and not for special privilege.

NOT FROM EXCLUSIVE COUNTRY CLUBS

The associates, friends, and advisers of Truman and Roosevelt were from all walks of life, and not taken largely from the roster of Wall Street firms or exclusive country clubs. In the New Deal and the Fair Deal there was no confusion between the interest of the giant corporations and of the country at large.

Nowhere is the difference clearer than when you read President Eisenhower's press conference. I do not object that, when asked about some important question, he so often says he does not know, although his batting average is bad compared with the previous two Presidents.

What I object to is the fact that so often the issue about which he confesses ignorance, and demonstrates no personal concern, is an issue relating to some human being. He has general answers to questions of grand strategy, but he seldom knows anything about the most pressing human issues in which his administration or the country is involved.

What did he know or say or do about all the shenanigans of his administration during the McCarthy-John Schine affair? Why did he consider it beneath him to take action on behalf of Ladejinsky, the land-reform expert who was fired by Secretary Benson on absurd grounds at a time when he was doing more to stop communism than any American in Asia? Do reports of such things never reach him?

What about the cases of injustice in our security-risk program which former Republican Senator Cain has tried so unsuccessfully to call to the President's attention? Why did he have nothing to say, no leadership to give, on the case of Miss Lucy, or Emmet Till, or other instances of violence which put this country on trial before the world?

PLAYING GOLF

I do not object to the President playing golf with corporation heads. I object to his inattention to the needs of people who are not corporation heads. I object to his inability or unwillingness to lead in solving some of the greatest problems before all the people—particularly, for instance, the crisis in school desegregation and the need for a vast program of aid to public education.

In foreign policy the story is the same. This administration has failed to provide adequate world leadership because it does not understand people. It looks coldly—and not even very intelligently—at diplomatic reports, military analysis, geopolitical factors; but it is not in the habit of seeing the world in terms of people.

Yet the greatest power in the world is people. People armed with ideas—with faith, with hope, with fears, with human needs. There are some 2.5 billion of us now in this human race, living in the neighborhood of this world. More than 2 billion live off the land, and the rest work in cities. If there were a world Democratic Farmer-Labor Party its majority would be pretty impressive.

It is because our Democratic Party under Wilson, Roosevelt, and Truman has been concerned with people that it has been able to sense the aspirations and problems of people throughout the world, and has thus provided true world leadership, leadership that stopped the march of communism in Europe and the Middle East and kept us in tune with the world.

WILSON STIRRED HEARTS OF PEOPLE

Wilson stirred the hearts of people everywhere when he raised the sights of the First World War from a naked power struggle to a war to make the world safe for democracy. He provided the vision of a world organization strong enough to enforce peace, the vision people needed. When the country chose the bumbling normalcy of the Republicans in 1920, the League lost its chance. World War II and its terrible destruction became inevitable.

Roosevelt in World War II was able to sense the revolution rising in the world, the revolution which Wendell Willkie saw, of people on the march for freedom and equality and progress, and Roosevelt's four freedoms have not been forgotten.

Truman, too, understood the people, he saw the human needs of a devastated postwar Europe, and he saw that the challenge of communism could not be met by guns alone, but only by positive peaceful performance, and he supported a great Secretary of State, George Marshall, in proposing the Marshall plan. That plan was not negative, but in the best American spirit, designed not against anything, as Marshall said, but hunger, poverty, chaos, and misery. And because it was positive and creative the Marshall plan gave new life to Western Europe and stopped the westward flow of communism.

Then came the 1948 campaign when Truman placed his faith in the people and took his case to the people with a fighting Fair Deal for our workers, farmers, and businessmen, a vigorous civil-rights platform, and won, and with his inaugural came the great creative idea, point 4, which gave new hope for democratic change to the awakening underdeveloped world of free Asia, Africa, the Middle East, and South America.

WILSON, ROOSEVELT, TRUMAN UNDERSTOOD

Wilson, Roosevelt, and Truman understood the world revolution in which we live because their view of the world saw people as human beings and not as numbers.

Theirs was the same view of the world which Jefferson demonstrated 10 days before he died, when writing of the Fourth of July and the Declaration of Independence he said: "May it be to the world, what I believe it will be (to some parts sooner, to others later, but finally to all), the signal of arousing men to burst the chains under which * * * ignorance and superstition had persuaded them to bind themselves, and to assume the blessings and security of self-government. * * * All eyes are opened, or opening to the rights of man. The general spread of the light of science has already laid open to every view the palpable truth, that the mass of mankind has not been born with saddles on their backs, nor a favored few, booted and spurred, ready to ride them."

There in the words of the founder of our party is the world revolution of our time in a nutshell. For it was with us that Jefferson's prophecy came true, and now finally to all' has come the bursting of the chains, the demand for an end to colonialism everywhere, and the liberating knowledge that modern science and technology make possible the ultimate ending of poverty.

UNLEASHING AND LEASHING CHIANG KAI-SHEK

Now we have had 4 years of an administration that does not have this vision, this understanding of our world's facts of life. We have had 4 years of emphasis on a narrow military approach that ignores politics, economics, and geography of a negative approach to everything, of going against the Asian revolution, of unleashing Chiang Kai-shek (and then leashing him), of opposing U. N. plans for a world economic development authority which our neighbors have been repeatedly proposing, of appearing to side with the feudal landlords, the vested interest, the colonial powers, of worrying about food surpluses, and letting farm incomes fall in a hungry world, that cries for a bold plan of distribution of surpluses to deficit areas, of, in fact, betraying the spirit of the American Revolution, which is the spirit that the world expected of us. And the result is that much of the world thinks of us as militaristic, warmongering, a threat to peace, negative.

Yet we are entering a new era in world affairs. Great changes have been taking place in the Soviet Union since Stalin's death. Forces have been released which may be difficult for any new Soviet dictator to chain. After a generation of suffocating tyranny and fear, the Russian people are showing that their desire for freedom remains, and the Russian collective dictatorship has shown that it cannot wholly ignore the demands of the people, at least during this period of uncertainty after Stalin, when the new regime is unsure of its power and support. But even as many of us fear this may be only a brief respite, the denunciation of Stalin and of police state methods and the promises given of greater freedom to come are encouraging, and may produce in time the fundamental changes we have been hoping for.

How has the Republican administration reacted to this challenge? We would be wise to be cautious. But we have been totally unimaginative, we have lacked faith in ourselves, we have had no vision. The Russian moves in all probability may be no more than a change of tactics; they may not represent any genuine about face. But why should we be panicky about a relaxation of tensions, even a temporary relaxation? Why should we haggle over the exchange of persons. Why should we not encourage the lowering of the Iron Curtain in every possible way? Why should we not take the lead in proposing an exchange of farmers, of students, of people on all levels? It will be good for Russians to see the extraordinary things we have accomplished in the West which make a lie out of what they have been told about us. It will be good for Westerners to move about among Russian people, to meet them and prove we wear no horns. Why not accept this shift and try to encourage it? Who can gain but ourselves by the contrast?

SUSPECT RUSSIANS BLUFFING

If, as we suspect, the Russians are bluffing, let us call their bluff. Let us make it difficult for them to go back to the old ways. Let us ask the Russians to join us in a world development program in which we each put up a certain percentage of our national income. Let us propose that much of the development aid be given not from nation to nation, in competition, but through the U. N. where it can be administered in the name of the whole human race. If, as I believe, Russia wants to use economic aid solely for her own special political purposes, she will refuse to let it be channeled through the U. N. Then it will be clear to everyone that it is we and not Russia which really wants peace and prosperity for all people.

Let us go to work to beat the Russians at the new game that they have opened up. It is the kind of competition which is naturally designed for us: Economic construction, building, pioneering. If ability to meet them effectively at this new game turns the Russians back to the old strategy of cold war, what have we lost? We will have gained the good will and understanding of a new skeptical world.

Moreover, if we go into this new peaceful competition with the right American zest the whole world may become so involved that no nation, not even a little band of willful men in the Kremlin, will be able to divert the world's attention from the No. 1 business before mankind.

In developing positive plans for the creation of durable bonds of economic self-interest with the non-Communist world, we start with some enormous advantages. The Soviet Union under a totalitarian government can operate, of course, with somewhat greater flexibility. Her rate of economic growth is more rapid than ours, and she is turning out more trained technicians and scientists.

Yet for many years to come our economic capacity will be far ahead of Russia's. Not the least of our assets is our huge farm productivity. I believe the day soon may come when we will stop looking at our store of 1.4 billion bushels of grain and 10 billion bales of cotton as a white elephant in a world where most of the people are ill-fed and ill-clothed, and recognize it as an opportunity and a blessing.

The habits of thinking which now limit our capacity for action on such questions are deeply rooted in most of us. Yet these man-made economic roadblocks are by no means as formidable as those which kept us immobilized in the depths of the great depression. As millions of hungry, unemployed people

walked past grocery stores overflowing with unsold food products, Republicans leaders could only say: "We know it is wrong. But what can we do about it? These people have no purchasing power."

Yet by the summer of 1933, under Franklin Delano Roosevelt, a substantial majority of the American people had thrown its support behind programs for economic expansion and reform which broke abruptly with the outmoded economic folklore that had so recently held us back. Millions went back to work; farm income rose; factories began to hum; and old facilities were expanded. Everyone benefited as the flow of capital and purchasing power raised living standards and set new horizons of mutual opportunity and growth.

MUST MUSTER IMAGINATION

Now, as in those days, we must muster our imagination and initiative to chart new ground. We must find ways to fit productivity to needs in international economics as we have already done so successfully within our own borders. And as we discover the economic mechanisms necessary to accomplish this objective, vast new opportunities will open up here in America and throughout the world.

So it is time for a change. It is time for the election of an administration in this country which will enable us to meet the new Russian competition in the American spirit, and most important of all, will enable us to join hands with the majority of the world's people who are not Western and not Soviet, but who are mostly farmers, who labor in the sun and have more color in their skins than most of us.

If we can join hands with this great middle world of free Asia, the new Africa, and South America, then it will not matter too much what the Kremlin does. Because we will then have frustrated the Kremlin and stopped the Russian revolution in its tracks, because we will have guided the world revolution of our time into the channels of democracy and freedom.

To do this we need an American president, someone with the vision of Jefferson and Jackson, someone who understands the world because he remembers the American Revolution and who will look at the people of the world, as Roosevelt did of this country in 1932. We need a President who will call on all nations to join with us through the U. N. in a war on want that will keep us all busy with full employment and full production and expanding opportunity for the rest of our lives.

I trust that this summer in Chicago our party will nominate such a candidate. I trust it will adopt a fighting platform that will not compromise on civil rights or a fair deal for all people at home; I trust it will not hesitate to raise this new vision for the American people and for all mankind.

Address by Hon. Herbert H. Lehman, of New York, at Dinner of the Liberal Party

EXTENSION OF REMARKS
OF
HON. HERBERT H. LEHMAN
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. LEHMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address I delivered on June 13 at the annual dinner of the Liberal Party, which was held in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY HON. HERBERT H. LEHMAN, OF NEW YORK, AT THE 12TH ANNUAL DINNER OF THE LIBERAL PARTY, GRAND BALLROOM OF THE COMMODORE, NEW YORK CITY, JUNE 13, 1956

At this hour, we are all deeply perplexed by the incongruous paradox of the present world situation.

At this hour, the international Communist movement should be wasting away with sickness in its soul, as a result of the posthumous trial and conviction of Joseph Stalin by the men who knew him best.

Yet at this very hour, when the late leader of world communism has been found guilty, by his own colleagues, of tyranny, torture, murder and genocide—at this very hour, world communism appears to be making new friends and influencing great numbers of new people.

To understand this paradox requires insight. To meet the resultant challenge demands imagination.

As for the challenge, we surely have the capacity—mental, moral and physical—to win the age-old struggle for human freedom against inhuman tyranny.

But we cannot win this titanic battle with cardboard weapons of self-delusion, self-complacency and self-adulation.

We dare not delude ourselves into believing that world communism is weakening when it is actually renewing its drive, using new methods, to extend its world influence.

We dare not be complacent about our alliances and our relations with our allies while they are being assiduously and seductively wooed with large-scale, easy-term Soviet trade and aid.

Above all, we dare not give even tacit acceptance to the dangerous claim of the present administration that all is well, that the cause of peace and freedom has been advanced, and that happy progress has been made toward a better, a more just, and a safer world.

Yet this unwarranted atmosphere of smug self-satisfaction seems, in fact, to have become widely substituted for reality in America today.

I have before me page 1 of the New York Times of June 1.

In column 5 is a story in which Gen. Alfred M. Gruenther, Supreme Military Commander of NATO, is quoted as saying that "the Western alliance was approaching its supreme crisis in the face of dangerously powerful Soviet world propaganda." That is a grim and, I believe, a true warning.

In column 8, on the same page, is a story quoting President Eisenhower as saying that "certainly the prestige of the United States since the last World War has never been as high as it is today."

Which of these two contradictory statements reflects the truth of the present situation?

In a further comment, General Gruenther emphasized the assertion that the Communists are relying heavily on their armed strength. Their recently announced reduction in armed forces, said General Gruenther, according to the New York Times, was "a small chip from what is still a vast monolith of power." Nothing the Russians have done "in their new policy of smiles, happy talk, and receptions," added General Gruenther, "could justify the least reduction in United States assistance to NATO." General Gruenther was talking realistically, based on factual observation.

But, on the very same day, the President of the United States is reported as saying, "We have largely nullified the Soviet Union's reliance upon force and threat of force." The proof of this change, he said, lies in the fact that the Soviet Union "has gone to different kinds of influence."

Now, which of these statements corresponds more to fact and to the truth?

I fear that we are making a philosophy out of smugness. The present atmosphere that all is well in the world, generated through every possible medium of mass communications, seems to reflect little awareness of the tensions and problems which confront us in Cyprus, in Israel, in the Arab States, in Yugoslavia, in Soviet infiltration of the Middle East, in north Africa, in Formosa, and Asia; in Montgomery, Ala., in Tallahassee, Fla., and in Washington, D. C. In short, we have been and are being encouraged, no matter what we may hear or see, to believe that all problems have either been solved or on the way to solution—as a result of the brilliant leadership of the administration team.

I say that we cannot afford the delusive and narcotic effects of such smugness.

To be smug is to set ourselves apart from the millions of people who are on the move in Europe, Asia, Africa, and South America. Those millions are restless, trying to shake off the cold grip of poverty and oppression that has held them tightly for centuries. Those millions of people want status—and not the status quo.

In terms of the world struggle for human rights, the smug side is the losing side.

We cannot win by talking big—and acting small.

We cannot win by preaching equality and practicing discrimination.

We cannot win by wooing our foreign friends and then slamming the doors in their faces with the loud thud of our present discriminatory Immigration Act.

We cannot win the hearts of the underprivileged of vast continents while serving privilege at home.

We cannot launch a vast offensive for freedom while Congress pinches every penny for foreign aid.

The world is on the march. We cannot afford to mark time.

We can win the day if our deeds match our words. We can win if our hands do what our lips say. We can win if we apply the pioneer spirit to our newest frontier: the struggle for human rights.

In the past our great democracy has shown an infinite capacity to deal with mammoth problems: economic, political, and social.

We have made great progress in human rights, in scientific development and social justice.

The saga of America's past and recent progress as a nation, honestly told, is an inspiration to any people in the world about to embark upon the great and challenging experience of self-government.

But while giving an honest picture to the world of what we are, we must also look deeply and constantly at ourselves to see what we still have to do. In assessing and describing our own unsettled problems, we will find a closer identity with the millions of restless ones around the world; and perhaps they, too, will find in us a common soul and a common purpose.

Chief of all our domestic problems is the plight of those who are still denied equal civil rights to a major degree in some parts of our country, and to some degree in all parts of our country.

In this field, as in others, we have of course, made progress. In the last decade, we have seen the white primary ended in the South; racial covenants in real estate deeds are no longer enforceable in the courts; segregation and other forms of discrimination in interstate travel have been abolished; in the District of Columbia and in many States, discrimination and segregation have been outlawed; an increasing number of States and localities have passed fair employment practices acts.

During the last 4 years the single most historic development was the Supreme Court

decision outlawing segregation in public schools.

But the single, most dramatic development, in my judgment, has been the emergence of the Negro people of the South, themselves, as active factors in the struggle. They, themselves, with strength, patience, unity, and forbearance have made the Montgomery bus strike a symbol of their new and active role, and of their deep understanding of both the will and the way to win.

The movement toward full civil rights in America has, like all progress, elicited cries of panic from its opponents. As they see the old order changing, they mobilize desperately for the counterattack, to halt further movement and to attempt to recapture ground already lost.

Recent acts of racial repression have shamed America. We have seen social ostracism, economic boycott, political disenfranchisement, and physical violence directed against white and black, who have sought to advance the democratic process.

We seem to have come to that point, in this struggle, where it is no longer possible to contain the situation with shreds of compromise. The issue must be resolved.

On this issue, the voice of the Nation is clear and resonant.

The Supreme Court decision was that voice, speaking in restrained tones, from the most august level of government. That voice has spoken the conscience and determination of millions of Americans: Black and white, North and South, Democrat and Republican.

In this struggle between law and those who would evade and defy the law, I do not see how any responsible American can be neutral. I am not neutral. I stand on the side of the law.

In this struggle between the oppressed and the oppressors, I am not neutral. I stand with the victims of oppression.

I confess I am no neutral in the conflict between the law and the Constitution, as stated by the Supreme Court, and the defiers of the law, as organized by White Citizens Councils.

I do not believe that the President of the United States can or should be neutral, as between the Government he swore to uphold and those who would paralyze and shame that Government.

Nor do I believe that the Congress of the United States can or should be neutral.

In the Congress, the Supreme Court decision must stimulate the enactment of the necessary legislation for the realization of all the goals set forth in that decision.

The first step in this direction is the repeal of that great roadblock to civil rights legislation in the United States Senate—Rule 22, that rule which permits a minority to frustrate the will of the overwhelming majority. And after the repeal of rule 22, or even without it, legislation must be pressed to assure to every American equal opportunity for political participation, equal access to public facilities, including schools, and the equal protection of all the laws, regardless of race, creed, or color.

These things must and will come to pass. Let them come now.

We must finish the job of winning full civil rights for all Americans—first, because it is morally right and legally correct; second, so that all the world may know that America, in 1956, like America in 1776, carries high the torch of human liberty. I find it not only appropriate, but important, to discuss this matter—America's role in holding up the torch of liberty—before this gathering of the Liberal Party of New York.

I consider the Liberal Party to be one of the principal forces in New York State and in the Nation, in steady support of advance and progress toward the goals of freedom and fulfillment for every man, everywhere.

Around me at the head table, and at almost every table in this gathering tonight, I recognize valiant fighters for liberty—economic, political, and social. These are not only fighters, but veterans of years of successful struggle—men and women whom I have known as fighters for these causes long before the Liberal Party came into existence.

I know of no more gallant, dedicated, and devoted leaders of the forces of liberty and progress than my old and close friends, Dave Dubinsky, Alex Rose, Adolf Berle, Dr. Counts, and Dr. Childs.

I am a lifelong member of the Democratic Party and I have never belonged—and never shall belong—to any other. But I am proud that I have had, in every political race I have ever run, the support of these men and their associates and friends. My friends too. Men like Luigi Antonini, Charlie Zimmerman, Isador Nagler, Ben Davidson, and many others too numerous to mention. May I say tonight, as I have on many other occasions, that I have considered it an honor and a great privilege to have received the endorsement of the Liberal Party each time I have run for public office since the Liberal Party has been in existence.

I have been glad to publicly acknowledge the vital support I have received from you by joining the name of the Liberal Party to my own party in my designation of affiliation in the records of the Senate.

And, above all, I have valued with pride the personal friendships and associations I have made—friendships which have been above and beyond politics or political purposes—friendships and associations I will cherish so long as I live.

And now, some brief and final thoughts on the problems which we all face.

We face the challenge of the future of America, and of the cause of democracy and freedom.

We are not meeting that challenge today. We are shrinking from it. We are hypnotizing ourselves into a trance of self-contentment and complacency.

There is so much to be done; there are so many evil forces to beat back, so many looming dangers to be confronted, and so many problems to be resolved lest they overwhelm and overcome us.

There are great new frontiers to be opened; mighty mountaintops of human progress to be climbed. Yet we hear today few clarion calls to action and achievement.

We must move forward in the field of housing, in the field of immigration and citizenship legislation, in the field of minority rights, in the field of atomic energy and its peacful uses, in the field of social security and social justice. We must learn how to share our great technical know-how with other peoples and how to learn from other peoples the great know-how of philosophic and historic experience and cultural appreciation. Above all, we must seek to achieve a just, free, and peaceful world. All these are goals, some immediate and some long range, to challenge the best and most that there is in us.

For new ideas on ways of achieving these goals, we must look to individuals and groups of individuals who dare to think in new and different terms; who dare to be nonconformists; who dare to be unorthodox—who dare to move ahead into uncharted areas of thought.

I consider the Liberal Party to be a group of such trailmakers. I hope that it will always continue, and even intensify, its explorations in these vital areas. I can think of no greater or more pressing need for our country, for the free world, and for humanity itself.

Let us set our sights on these distant goals and proceed to march forward with strong and active faith in ourselves and in the principles of freedom and democracy.

Memorial Day Address by Judge Nelson Schwab, Jr.

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a Memorial Day address delivered by Judge Nelson Schwab, Jr., at Wesleyan Cemetery, Cincinnati, Ohio, on May 30, 1956.

There being no objection, the address was ordered to be printed in the REOCRD, as follows:

MEMORIAL DAY ADDRESS BY NELSON SCHWAB, JR., WESLEYAN CEMETERY, CINCINNATI, OHIO, MAY 30, 1956

Some of you may realize the emotions I feel standing on this platform in Wesleyan Cemetery on this Memorial Day. For you see, my grandfather, who spent his entire adult life on Blue Rock Street, and my father, also born and raised in this neighborhood, have both performed similar duties in years gone by. I mention such facts not out of boastfulness or egotism but rather in a spirit of pride in this community where we revere and respect our precious traditions and heritages.

My young sons, whom I hope may one day stand here too, asked me why we celebrate Memorial Day, and it set me thinking of the answer. So I reread Supreme Court Justice Oliver Wendell Holmes' great Memorial Day address in 1884. It was before the GAR post in Keene, N. H.; and Holmes told of his Civil War experiences. He spoke of his having been wounded, of different events in battle, and of his memories of Army companions living and dead. He said that Memorial Day meant to him the reaffirming from year to year of a national act of enthusiasm and faith.

And I think all of us who have fought in wars reflect back today on our experiences. We think of the men we served with, the ships we were on, and the lands we operated in. We think of those who did not come back. And I think all of us relive the glory and the honor of having served our country in uniform.

But I believe that there are reasons today which lend new and even greater significance, meaning, and importance to Memorial Day. We see too often today a feeling that references to patriotism and love of country are somewhat embarrassing or foolish flag waving. A sincere and meaningful celebration of this day with sober reflection about the duties and obligations which this day implies is one sure cure for such false thinking.

I read recently an article in the U. S. News & World Report where an Army doctor was interviewed about the brainwashing of American soldiers captured in Korea. He outlined the insidious and subtle techniques used by our enemy to confuse and weaken our young men. This Army major concluded, however, that too many of our young men had yielded to Communist brainwashing. He was asked this question:

"What do you consider the basic defect revealed by the success of this Communist program on so many Americans? What's missing? What's wrong?"

And he answered, "The basic defects lie in three areas:

"First, in the area of character development and the development within young people of an internalized system of discipline.

"Second, in the area of general education, particularly education about the American democracy, which, I think, has suffered at the hands of those who cry havoc at any hint of what they choose to label 'nationalism.'

"Third, in the area of military preparedness, which in the minds of a great many people resolves itself simply into a problem of mechanics, ballistics, push-buttons and guided missiles rather than emphasizing the moral and characterological elements in war."

The second reason given by the Army doctor is the need for more education about our American democracy interests used most on Memorial Day. Because I feel one of the purposes of this day should be to review what our American democracy means to us and to rededicate ourselves to the task of teaching our children about our country and what it stands for.

And I think we are doing a good job in this community in this regard not only on Memorial Day, but throughout the year.

Our many fine veteran organizations are doing their part and I think our churches, schools, and public officials are doing the same.

In 1954 the Cincinnati school board published a pamphlet called "Foundation Values of American Life." This was sent to all schools for use by parents, teachers, and pupils. And these are the foundation values of our American life which this pamphlet discusses. These are the values which form the framework of our heritage:

1. Recognition of the inherent worth of each individual.
2. Recognition of the spiritual and religious foundation upon which our values are dependent.
3. Importance of continuance of education throughout life.
4. Need of leadership based upon merit proven by competition.
5. Respect for truth and intellectual honesty.
6. Respect for our system of justice.
7. An understanding of the freedom of association in American life.
8. Respect for property and the right to own and dispose of property.
9. An appreciation of the privileges and responsibilities of citizenship.
10. Recognition of our need for steady improvement by proper processes.

Industry is doing its share in teaching patriotism too. You may have seen the book entitled "Freedom Is Not Free." It was printed and published right here in Cincinnati and it tells of the fundamental principles and practices of our form of government and of the rights and obligations of all of us as citizens. And this book has been passed out in many industrial plants throughout the country.

The above are merely illustrations. There are countless other public and private efforts being made to make people aware of our precious heritage. But in sipte of all this, more must be done. This to me is the reason, the purpose, the spirit of Memorial Day. To pay tribute to those who have fallen—to reaffirm and restudy the foundation values of our American life, and to rededicate ourselves to the task ahead.

Housing's Winding Path

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 14, 1956

Mr. SPARKMAN. Mr. President, a few days ago there appeared in the Christian Science Monitor an editorial entitled "Housing's Winding Path." I think the editorial is a very good one, particularly in view of the very fine housing bill the Senate passed recently, and one which seems to be very good, that the House committee reported within the last day or two. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOUSING'S WINDING PATH

The Senate's action in voting authority to build far more public-housing units than the administration had requested adds one more turn to a trail which differing viewpoints and partisan maneuvering have been tracing since 1949.

In that year a Democratic Congress, with the general backing of conservative Republican Senator Taft, passed the Federal Housing Act of 1949. This authorized Federal cooperation to built 810,000 units over the following 6 years.

In 1953 President Eisenhower toned this down to an annual figure of 35,000, and probably felt relieved when a Republican Congress cut this to no lower than 20,000. Next year he asked to subsidize 140,000 units in the next 4 years, but Congress authorized but 35,000 for the next year only.

In 1955 the President asked for the same number, 35,000 annually, but only for 2 years. Then the now Democratically controlled Senate made a move quite similar to the recent one: It called for a minimum of 200,000 and a maximum of 800,000 units in the following 4 years. The House pulled this back sharply to 45,000 for 1 year only. But the Democrats had placed a liberal effort on the record.

In its latest action the Senate has voted to restore the 1949 goal of 800,000 units. By midsummer three-eighths of these will have been built or contracted for. The remainder the President is told to build at 135,000 per year or, at his discretion, at somewhere between 50,000 and 200,000 in any 1 year. The House is expected again to cut this back. Again, and in a campaign year, the Democrats have chalked up a liberal effort.

Politics aside, whatever else the House may do it might well consider the latitude offered the President. At a moment characterized both by fear of inflation and fear of recession the authority to expand or trim a sizable chunk of public works has no little merit. Its use might help considerably to keep the economic scales in balance.

Why the Delay?

EXTENSION OF REMARKS

OF

HON. WILLIAM E. JENNER

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Times for June 2, 1956.

This editorial states what we on Congress know well, that the American people want a complete reexamination of foreign aid, and they expect Congress, not the executive branch, to make the study.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHY THE DELAY?

For more than 6 months suggestions have been mounting that the foreign-aid program needs a complete overhaul. They have come not only from Congressmen and Americans in private life, but from the foreign recipients of United States aid.

Yugoslavia's Marshal Tito, who is next on the list of Kremlin red-carpet visitors, suggested on the eve of his departure for Moscow that American aid henceforth should be in the form of long-term loans rather than outright grants.

French Foreign Minister Mollet, whose country since the war has received American aid second only to Britain, recently said the United States was detested when it gave away money.

Now the General Accounting Office, which keeps track of how the money is ultimately used, reports that the foreign-aid program suffers from poor planning, lack of accountability, poor coordination, overestimating capabilities of recipient countries and overambitious programs.

These critical remarks could be multiplied many times to prove that the present American aid program is in dire need of reexamination and revision.

In Washington much lip service has been given to the need for a new study of foreign aid. But no one has acted.

This so obviously is a responsibility of Congress it is incredible that both the House and Senate seem reluctant to move. Of course no study started now can contribute to full appraisal of the 1957 program. But if Congress doesn't get off its cushioned complacent chair soon it will be too late for such a study to have any value for the 1958 program.

Furthermore, if pressure continues, the executive branch of the Government will start a study outside Congress' jurisdiction. And Congress should know by now what that means—a once-over-lightly whitewash of the present program.

This waiting for something to turn up is Micawberism at its worst. No wonder hardly a day passes when the Bolsheviks don't grab the initiative in some other corner of the world.

The time to start a thorough study of foreign aid is now. The agency to do this is Congress. If Congress shirks this responsibility, we hope the voters who pay the bills will remember it this November at the polls.

Race Relations

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 14, 1956

Mr. SPARKMAN. Mr. President, ever since the Supreme Court decision, a little more than 2 years ago, relating to segregation in public schools, there has been much discussion of this matter—not only in the South but throughout the Nation.

The Alabama Christian Advocate is the publication of the Methodist Church in Alabama. It opened its columns for discussion of this subject, and the subject of race relations generally. Many people took advantage of this opportunity to state their views. One of those was a clergyman of many years of service in the church. He speaks forcefully out of his long experience as a Methodist preacher. I refer to Dr. James A. Chandler, of Mobile, Ala.

Mr. President, I ask unanimous consent to have his article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RACE RELATIONS

(By Dr. James A. Chandler)

Jesus taught the fatherhood of God and the brotherhood of man, but that doctrine does not forbid the segregation of nations, races, or social circles.

Equality before God in His atoning love does not demand social equality or the right of anyone, white or colored, to enter indiscriminately any and all circles of society. Neither does it demand or justify the indiscriminate integration of Negroes into either white school or white churches, or the white into Negro schools or Negro churches.

SEGREGATION WITHIN RACES

Both the white race and the Negro race practice segregation in their social circles, and there is no divine law against it. If Negroes practice social segregation among themselves in their various circles of culture and at the same time love God and their race, where does the Negro get the idea that he has a divine right, without mutual consent, to integration with all white people anywhere and everywhere, hotel, church, school, or what not, without any restriction whatsoever? It does not make good sense, and the Bible does not teach it.

The relations between the two races have been amicable for long years. There were no strained relations until professional agitators created them, but even now the vast majority prefer their own churches and to associate with their own color. It was Booker T. Washington, perhaps the greatest leader the Negroes have ever had, who said: "We can all be separate as the fingers socially, and as united as the hand in working to help each other and the South."

To men of good will, segregation is no indication of either race or class hatred. It is accepted philosophically. There is no sin in segregation until some agitator creates it.

SEGREGATION NOT DISCRIMINATION

Segregation does not necessarily mean the supremacy of one race over another race, nor the superiority of one class over another class. It is not a matter of to what genes one can or cannot trace his ancestry, or whether one's blood unmixed can be traced to a certain source or stock. It is not a matter of all nations springing from one blood or the opinion of some scientists that all blood is the same. Perhaps so, in a matter of blood transfusion, but the fact remains that in genetics a Negro's blood begets its kind, and a white man's blood begets its kind. There, too, was a time when there was only one language, but God changed all that (Gen. 11: 1-9).

Segregation is simply a matter of congeniality, or what and where one race or another is and prefers to remain. "Birds of a feather flock together." It is natural. God Himself made people like that. It fosters peaceful relations, with respect for all and malice toward none. Both races can be brotherly and deal justly with each other, though separate, which they did very acceptably until Russia's propaganda of desegregation and integration was sold to our country.

THE LAW OF LOVE

There is one big fact that all equalitarians seem to forget and that is that the moral law of love for one's neighbor is a "two-way street." It embraces not only one's rights for himself but his duties to others. That means if either a white man or a colored man considers it his right to enter some circle of society of a race different from his own, that circle or society has an equal right to forbid it and to prevent it, if possible to do so by lawful means.

If the law of love prevailed in society, the simple virtue of modesty, decency, and humility would prevent intrusion upon the privacy of others or any desire to seek a social preferment where one is not wanted. Both colored and white would accord to every man the right to choose, by mutual consent, his own company. There would be no inferiority complex or a personality bitterly sensitive to its own rights. There would be no display of rudeness, presumption or familiarity to provoke discord. Deference is oftentimes a Christian virtue and an indication of noble birth.

Jesus taught that the humble man will not seek the upper seats, or the higher levels, but will wait to be invited to them, with the assurance that "he that humbleth himself shall be exalted" (Luke 14: 7-11). That Christian virtue would prevent any man, white or colored, from demanding association with some sphere of society where he knows he would be persona non grata.

JESUS OPPOSED FORCE

The law of love condemns impudence. Modesty is an indication of potential greatness. It may mean that a man is fit to be on a higher level. But men cannot happily and profitably gain a higher level by demand but by proving themselves qualified for it and worthy of it. To seek that level by force would be uncouth and reveal a lack of quality for the equality level sought.

If the law of love prevailed, there would be no fight by agitators of either race, in church or state, to obtain by force or revolution the social privileges to which one race or another may consider itself entitled. Jesus did not advocate political force. Said He, "The kingdom of heaven is like unto leaven which a woman hid in three measures of meal, till the whole was leavened." (Matthew 13: 33). It works silently, imperceptibly, slowly but surely. God's kingdom is not extended by force, political pressure, or court decisions. Jesus said, "My kingdom is not of this world" and it "cometh not with outward show," (John 18: 36; Luke 17: 20). If so, the Christian concept is opposed to carnal weapons, political pressure, or court procedures as a means to further its interests. "Let go and let God."

The time element is necessary. A mushroom may grow overnight, but the sturdy oak requires long years. Growth cannot be forced. It can grow only by a proper adjustment to the elements. If those who favor immediate radical measures to obtain what they term their social rights would bide their time in patience and rest upon the merits they claim—if they would trust the leaven of Christ's kingdom to work out the leveling process of society, all social problems would be solved in God's own time and way.

RUSSIAN HYPOCRISY

This social revolution that now confronts us was hatched in Russia. The Soviet Union demands worldwide desegregation and integration, but it is a well-authenticated fact that she does not practice it among her own people. In the central Asian region of the Soviet Union, there is a union of five Soviet republics, covering an area larger than all western Europe, populated by 20 million people mostly of strong Mongolian strain, a colored race. But Russia very hypocritically demands for all other nations social equality and integration, though she herself does not practice it but provides private schools for her own people. Russia's program is bait for the American people and they have swallowed it. Both of our political parties, our Supreme Court, and many churchmen have fallen in line with Russia's nonsegregation propaganda. It is well known that the purpose of Russia is to array class against class and to create division and frustration throughout our country and the whole world. Her success has been alarming, phenomenal, unbelievable. That program has no scriptural foundation. Russia hates our Bible and says there is no God.

Basic in Russia's often declared purpose to conquer the world is her plan to make all men equal. Equal indeed. But her leveling process is always to level down, not up. It is a plan to pull down patricians, higher-ups, even kings from their thrones, to a common level. It is not a plan to lift up the common man, white or colored, to a higher level but to reduce them to the level of puppets and slaves. That will be the result of the Communist program, if it ever gains control in this country.

RACIAL MIXTURE UNDESIRABLE

This political fight involves much more than social equality and desegregation. Mongrelization, or intermarriage, is the avowed aim of the leading equalitarians and the Negro press of this country. Mongrelization, or integration leading thereto, is contrary to the law of nature and to the plan of God, who "divided to the nations their inheritance," "separated" them, and "determined the bounds of their habitation," (Genesis 10: 5, 31, 32; Deuteronomy 32: 8; Acts 17: 26). If God had intended there should be one nation, one race, one color, one language, or one world, all mixed and living together as one people, all equal and no barriers, He would have so determined it (Genesis 11: 1-9). On the contrary, He established the nations and segregated them. He taught them and all people to love one another and to live in unity of spirit—not equality, but unity in one great diversity.

God segregated the Hebrew people and sought to keep their blood pure, or unmixed with that of a different people. What was divine for or a virtue of the Hebrew people certainly cannot be "a sin" for the white race today. The preservation of racial purity is a God-given instinct, and, being so, it cannot be inconsistent with the law of love.

By fault or favor of the white man, the Negro is far from the bounds of his divinely appointed "habitation." Africa is his home. Both Jefferson and Lincoln favored his deportation to Africa. Jefferson organized and sponsored the Colonization Society of Virginia, which deported some 10,000 Negroes to Liberia. The movement failed for lack of funds. Jefferson wrote, "Nothing is more certainly written in the book of fate than that these people (Negroes) are to be free nor is it less certain that the two races equally free cannot live in the same government."

The law of nature (to produce "after their kind"—Genesis 1: 21—and, naturally, to choose association with "their kind") and the law of love, which Jesus taught, must harmonize with each other, because God is the author of both laws, and therefore they cannot be opposed to each other.

Neither the law of nature nor the law of love forbids the segregation of nations, races, or social circles.

The Purpose of the Theodore Roosevelt Centennial Commission

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 14, 1956

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of the purpose of the Theodore Roose-

velt Centennial Commission, as prepared by the Commission.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THEODORE ROOSEVELT CENTENNIAL COMMISSION, 1858–1958—PURPOSE

To restore to American life Theodore Roosevelt's inspiration and guidance as "the greatest teacher of the essentials of popular self-government the world has ever known";

To give the widest possible circulation to his conviction that "the fate of the 20th century will in no small degree depend on the type of citizenship developed on this continent"; and

To stimulate industry, labor, education, the church, and every other element of American life to use their capacities and resources to make American men and women, American boys and girls, alert and responsible citizens, who feel in their hearts the hunger that was in Theodore Roosevelt's, to make America, throughout the world, a bugle to the free, a beacon to the enslaved.

The Armistice Farce

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Times for June 2, 1956.

This editorial points out that two of the so-called neutral members of the so-called Neutral Nations Commission were known to be Communist stooges of the Soviet Union.

It is easy to understand why the Communists insisted on putting their partisans on a neutral commission, to hide the buildup of Communist strength in North Korea, and carry on espionage and subversion in the Republic of Korea. I should like to know what strange hidden influences in our State Department, and its allies outside the Department, engineered our consent to this disgraceful political surrender of our hard-won victory, and to the humiliation of a valiant ally.

Congress should not rest until it uncovers the focal point of this deadly political infection, because that is the only way to prevent another Korean war, and another Communist victory when we sit down to talk peace.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE ARMISTICE FARCE

The United Nations command finally has caught up—part way, at least—with the farce of "neutral" supervision of the Korean armistice.

Because it was loaded from the start with Communist pawns and spies in the name of those fine old neutrals, Red Poland and Red Czechoslovakia, the Communist side consistently has thumbed its nose at the truce terms.

The only provision they have observed is no shooting. But that is scant assurance they don't ever intend to shoot again, what with their massive buildup of artillery and jet planes in North Korea.

The United Nations has known about this all along, but has waited until now to act. And it has taken a half measure, at that. It simply bars truce teams from operating in South Korea. This won't stop the move of Red arms and jets to North Korea but it should end the espionage which has been so flagrantly conducted by the Poles and Czechs under a white flag in South Korea.

Moreover, acting in collaboration with the Communist military forces, the Red observers continually have obstructed attempts of the two real neutrals, the Swiss and Swedes, to investigate violations going on in the north.

Since the Communists obviously have no intentions of living up to the armistice terms, there is only one thing to do to end the supervision farce completely. That is, to rack up the whole commission. The United States early last month suggested this step to our allies, but nothing has come of it. Switzerland and Sweden are conscientious members who don't want to run out on a job that has been handed to them.

We should renew pressure to abolish this meaningless setup—and keep our powder dry in Korea. Being conscientious rarely pays off in dealing with communism.

Soviet Attitudes Toward Settlement of Disputes

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Dr. Richard F. Staar, professor of political science, and departmental chairman of Harding College, entitled "Soviet Attitude Toward Pacific Settlement of Disputes."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET ATTITUDE TOWARD PACIFIC SETTLEMENT OF DISPUTES

(By Richard F. Staar)

Ever since the October revolution and the successful overthrow of the Kerensky government in Russia, the Communists in that country have characterized themselves as "champions of international peace." In support of this contention they have called upon the world to view the array of peace notes, appeals, and declarations, records of conferences on interwar problems and disarmament, treaties, and pacts of neutrality and nonaggression which the Soviet Government has either supported or entered into over the years. On its face this is an impressive record indeed.

In order really to understand the attitude of the Soviet Union toward the pacific settlement of international disputes, one must first determine what the Russians actually mean when they talk about "peace" or "war." The purpose of this paper, however, is merely to review the record of Soviet diplomacy, in order to determine the U. S. S. R.'s bona fide attitude toward the international settlement of disputes.

DIPLOMATIC NEGOTIATION

The Soviet Union has repeatedly stated and shown in practice a preference for bilateral talks rather than other means of settling disputes. This has been exemplified in many conciliation treaties. The Soviets have always claimed that their international agreements are more stable than those of any other state.

The fact of the matter is that the Russians have kept faithful to treaty obligations only when such a course was to their interest.[1] During the years that the U. S. S. R. was weak and afraid of being crushed, it sought security through negotiation (1920–21), international conferences (1922–25), political agreements (1925–31), connection with the French alliance system (1932), the League of Nations (1934–39), and Hitler (1939–41).

The situation following the Second World War was predicted 27 years ago by a Soviet international lawyer:

"The splendid isolation in the traditional policy of the United Kingdom will be reproduced historically by the Soviet Republic, with the difference that not water will separate Russia from the European Continent but borders of a different character * * * those of the Great Concept."[2]

Today the frontiers of de facto control have extended to include most of the Balkans and half of Germany.

GOOD OFFICES AND MEDIATION

Both of these methods are essentially similar. There are only a few examples of acceptance by the Russians of mediation offers by other powers. The Allied Powers invited the Bolsheviks to Prinkipo in January 1919 for a conference that would conclude the civil war then raging in Russia. The Soviets immediately accepted by radiogram.[3]

This meeting failed to bring about peace. A second attempt was made in March 1919, when William Bullitt unofficially represented the United States on a trip to Moscow for the purpose of determining the possibility of acceptable terms to both the Soviets and their enemies. The former signed a draft treaty, thus showing their willingness to conclude peace with the anti-Bolshevik forces.[4] The agreement never went into effect.

A third example under this same category was the Soviet acceptance of a 1926 French mediation offer concerning a dispute with Switzerland. The trouble arose from the assassination of a Bolshevik diplomat. The Russians agreed to remove their boycott of Switzerland, providing that the latter meet certain conditions.

It would seem on the basis of the foregoing prima facie evidence that the Communists recognize the value of mediation by third parties. Such a superficial conclusion breaks down, however, when one examines the setting in which these incidents took place. The Bolsheviks were in extremely precarious conditions.

The first two illustrations happened during the civil war, when the Soviets were battling for their very existence on all fronts. The last example took place at a time, when the political situation was extremely dangerous due to the exhaustion and disorganization resulting from this same civil war. In view of the preceding, it would seem more justifiable—especially since the U. S. S. R. to date has never accepted any other offers of mediation—to assume that the positive Soviet attitude toward good offices and mediation was not manifested ex principio but rather because of necessity.

COMMISSIONS OF INQUIRY

This method of settling international disputes involves a definite procedure, established at the Hague Conferences of 1899 and 1907. The Soviets have never resorted to such factfinding commissions. The reason for this negative attitude was explained by Maxim Litvinov in a 1922 speech:[5]

Footnotes at end of speech.

"Commander Hilton Young has asked whether it is impossible to find an impartial judge in the whole world. It must be established first that there exist not one but two worlds: the Soviet and the non-Soviet * * *. One party [to a dispute] will propose a Communist judge, like the chairman of the Third International; the other party perhaps the head of the League of Nations * * *. Maybe only an angel could solve the Russian problem."

Even U. S. S. R. satellites have been candid in their criticism regarding international commissions of inquiry.[6] Neither the Soviet Union nor its Balkan satrapies (Yugoslavia, Albania, Bulgaria) permitted United Nations' commissions to enter territories under their control during the civil war in Greece. A similar refusal met the later attempt by U. N. representatives when they attempted to perform their legal duties in North Korea to bring about free elections.

ARBITRATION

The Russians prefer diplomatic action or even commissions of conciliation to this quasi-judicial process. They welcome arbitration only for commercial disputes on questions involving the conflict of laws, that is, private international law.[7]

Again the reason for this attitude has been made quite clear by Soviet writers:

"The necessary minimum and basic premise for any arbitration is a community of mind on legal principles. Insofar as such a community is lacking, any attempt to secure an impartial authority for two parts of humanity that speak such different languages is a priori hopeless."[8]

In other words, there are no impartial states when a question involves differing economic systems according to the Communists. The idea of compulsory arbitration by third parties, therefore, has always been opposed by the U. S. S. R. The following exceptions only tend to substantiate this rule.

In a treaty signed by the Soviets with the proletarian government of Finland on March 1, 1918, compulsory arbitration was one of the provisions. Both parties to the agreement were, however, workers' states. Also, the arbitrator was to be selected from the proletarian party of Sweden.

In December 1922, the Russians accepted the principle of international arbitration for political disputes with non-Socialist states, under the condition that a simultaneous agreement for disarmament be signed.[9] It was known a priori to the U. S. S. R. that the capitalist states would not accept the latter stipulation. In view of this, the whole proposal takes on the character of a propaganda maneuver, calculated to prove at no cost the peace-loving nature of the Socialist fatherland.

The Soviets have demonstrated that they prefer to settle disputes by means of mixed commissions. Most of the treaties of conciliation, signed by the U. S. S. R. between the two World Wars, contain provisions for such commissions.[10]

All Russian treaties of this type are restricted by the provision that if agreement is not reached through conciliation, then no further obligation rests on the parties. The conciliation commissions are paritary and do not have a neutral chairman.

Soviet conventions for conciliation procedure usually contain a provision for submitting all disputes—regardless of nature—between the two parties, which cannot be settled through regular diplomatic channels within a reasonable length of time.[11] Some of these treaties contain explicit reservations. One is found in the convention with Poland, which precludes the applicability of conciliation to disputes concerning territorial questions.

Some Soviet treaties provide that precedence be given to special procedures established by previous agreements binding upon the parties. If such special procedures are provided for in these other agreements, the disputes falling under their provisions are not approached in accordance with the treaty for pacific settlement, but, instead, are handled in conformity with the provisions of the special agreement.[12]

Many of the treaties signed by the U. S. S. R. provide for the appointment of different commissioners for each session of the commission, despite the fact that the commissions established by these treaties meet periodically. They are, in a sense, more permanent than the so-called permanent commissions constituted by other treaties, which seldom if ever convene.

Each of the countries appoints two persons from among its own nationals. The sessions are presided over by one of the nationals of the party in whose territory the commission is sitting. Meetings are held alternately in the capitals of the two states. A session usually lasts 14 or 15 days and is held toward the middle of each year.

Under the system of annual sessions, no applications are necessary, except when one of the countries demands an extraordinary session. In that case, the party requesting the meeting must inform the other party of the urgent circumstances occasioning the request. With regard to ordinary meetings, each state shall communicate to the other, through the diplomatic channel, the list of questions which it desired should be dealt with at that session (identical in all treaties).

Often, experts appointed by the parties are allowed to be with the commission as advisers. The conciliation commission usually decides the procedure of its meetings. Any person is heard, whose evidence is deemed to be useful. The countries are obligated to furnish the commission with all data and assistance that is found to be necessary.

All members must be present for the proceedings. Most treaties require a unanimous decision. The commission submits a joint report on all disputes referred to it as well as a consolidated settlement proposal on the basis of interpretations that must be sound at law.[13] It usually recommends that its proposals be accepted by the two parties through diplomatic channels. The high contracting parties are bound to inform each other within 90 days as to whether they accept the proposals.

There have been some examples of mixed commissions established for a specific purpose. One was set up to map the Soviet-Afghanistan boundary by a convention between the two states.[14] The commission had three persons from each side and was empowered to decide the ownership of islands. Its report was subject to approval by the two high contracting parties. A similar mixed border commission was provided for the following year in an agreement between the Soviet Union and Finland.[15]

COMMERCIAL ARBITRATION

This topic relates to disputes arising from transactions between non-Communist individuals or corporations on the one hand and Soviet state trading corporations on the other. As such, it concerns only one state directly—the U. S. S. R.

The Foreign Trade Arbitration Commission in the All-Union Chamber of Commerce was established in Moscow by decree of June 17, 1932.[16] Soviet agencies transacting business in the United States, for example, always included a clause in their contracts with American corporations which provided that arbitration would take place only before this Soviet commission in Moscow. All decisions were final and binding.

A post-war trade agreement with Poland contains a similar provision. Article XI of this agreement, which was signed on February 2, 1946, by the Minister of Navigation and Foreign Trade of Poland and the Foreign Trade Board of the Soviet Military Administration in Germany, reads as follows:[17]

"All disputes arising out of the present contract or in connection with it shall be subjected to the pronouncements of an arbitration commission attached to the All-Soviet Chamber of Commerce in Moscow whose decision is final and obligatory for both parties."

The most famous case of commercial arbitration was perhaps that between the Lena Goldfields Company, Ltd., and the U. S. S. R. The type of arbitration agreed upon here was different from the foregoing illustrations. The Soviets bound themselves in a contract to have a three-man arbitral commission, consisting of a national from each side and a neutral umpire.[18] The U. S. S. R. eventually withdrew its commissioner, Dr. Chlenov, and never paid the 13 million pounds sterling which was later adjudicated as damages.

It would seem that experiences of this type have proven to the Russians that they cannot rely on any third party to see matters from their point of view. Therefore, the Communists now keep to their own Foreign Trade Arbitration Commission, where they are certain that the verdict will always be made in accordance with their wishes.

CONCLUSION

In general, it can be said that while the U. S. S. R. acknowledges the usefulness of international law, it reserves the privilege to deny the application of those provisions that it finds inconvenient. "This desire to retain freedom of choice springs from the Soviet conception of law as an instrument of the state and the state as an instrument of a dominant economic class."[19]

Warren, Douglas, and Black

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Thursday, June 14, 1956

Mr. BYRD. Mr. President I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting editorial from the Richmond, Va., News Leader, of June 6.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OF WARREN, DOUGLAS, AND BLACK

The Supreme Court of the United States handed down three opinions on Monday. Each of these decisions, to some extent, tended to preserve the vanishing powers of State governments and to limit—or at least not to expand—the asserted authority of Federal agencies. From that standpoint, they surely were welcome decisions.

Yet it would be a mistake, in our view, for the States Righters of the Union merely to acknowledge the Court's opinions with a gratified glance and pass on. What the three cases accomplished, among other things, was further to confirm the rise on the Court of a tight triumvirate of federalists—men determined to weaken the States and to expand the national power. We have in mind Messrs. Warren, Douglas, and Black.

FROM CALIFORNIA

Monday's first decision dealt with the strange case of Doris Walker, who obtained a job in 1941 as a label clerk in the Cutter Laboratories. In order to get the job she concealed the fact that she was a licensed attorney; she concealed a record of prior employment with the Office of Price Administration; she concealed the fact that she had been hired and fired by a series of canneries. It was not until long after she had been on the payroll, and had become intensely active in union affairs, that the company discovered she was an active member of the Communist Party. In 1949, Mrs. Walker became president of the union. Shortly thereafter, she was dismissed. The union brought suit against the company, contending that Mrs. Walker had not been fired for "just cause," but rather for her union activities. The California supreme court upheld her dismissal.

On Monday, the Supreme Court of the United States affirmed the California decision, 6–3. The majority held that the key question was whether the Cutter company had waived its right to dismiss Mrs. Walker by not acting at once when the company learned of her falsehoods and her Communist activities. This question seemed to the majority to involve "only California's construction of a local contract under local law." No substantial Federal question could be found.

To Mr. Justice Douglas, dissenting, the majority's action sanctioned "a flagrant violation of the first amendment." Mrs. Walker was being dismissed from a laboratory, engaged in manufacturing critical drugs and vaccines, just because she was an active Communist. This Mr. Justice Douglas could not approve. This was a dangerous innovation. This violated constitutional guaranties of industrial workers.

Suppose, Mr. Justice Douglas went on to inquire, this were a contract that allowed "any employee who is a Republican to be discharged for just cause." Surely the courts would enforce no such discriminatory contract. "It is elementary that freedom of political thought is protected by the 14th amendment against interference by the States, and against Federal regimentation by the first amendment." Why, then, permit the dismissal of a Communist? "Government may not favor one political group over another." To say that Cutter had just cause to fire a lying Communist is to approve "an unconstitutional scheme to discriminate against citizens by reason of their political ideology." "I do not think," said Mr. Justice Douglas, "we can hold consistently with our Bill of Rights that Communists can be proscribed from making a living on the assumption that * * * the danger from Communist employees is too great for critical industry to bear."

Chief Justice Warren and Mr. Justice Black joined in this dissent.

FROM FLORIDA

The second of the cases won little attention. It involved a petition by Dan Durley, 63, who was convicted in Florida of cattle stealing and sentenced to the State penitentiary. He sought his freedom in the Florida courts on a series of petitions for writs of habeas corpus, in which he alleged, among other things, that he was convicted on perjured evidence. When the Florida Supreme Court refused to release him, he obtained a full hearing before the Supreme Court of the United States. On Monday, the high court affirmed the Florida decision, 5–4.

The opinion went to highly technical considerations of law, too complex to be summarized here. It will suffice to say that a majority of the Supreme Court held that Florida's State judicial procedures were not to be interfered with. On the record, the majority found, no Federal jurisdiction had been established.

To Mr. Justice Douglas, dissenting the majority's action served only to compound "a shocking case of miscarriage of justice." In his view, the Florida courts were unwilling or unable to discern a miscarriage of justice for themselves. The Supreme Court judges, from their marbled Olympus, can see things mere State judges cannot. He was joined by Chief Justice Warren, and Mr. Justice Black, and in this case, by Tom Clark.

FROM WISCONSIN

The third case came from Wisconsin. It concerned an order entered by the Wisconsin State Employment Relations Board against the United Auto Workers, directing the union to cease violent tactics and mass picketing at the Kohler Co. plant. The UAW appealed contending that Congress had so preempted the field of labor relations that no State, through its own labor agency, could enjoin actions which would be subject to an unfair labor proceeding before the National Labor Relations Board. The Supreme Court on Monday refused to accept this argument. In a 6 to 3 opinion by Mr. Justice Reed, the majority held that the Taft-Harley Act did not take from the States their power "to prevent mass picketing, violence, and overt threats of violence." The dominant interest of the State in preventing violence and property damage, said Reed, cannot be questioned. It is a matter of genuine local concern. The States are the natural guardians of the public against violence. "We would not interpret an act of Congress to leave them powerless to avert such emergencies without compelling directions to that effect."

To Mr. Justice Douglas, dissenting, the majority's action created a situation "pregnant with potentialities of clashes and conflicts." It opened a door for unseemly disputes. To be sure, the States may control violence. "They may make arrests and invoke their criminal law to the hilt." But if a State orders a union to stop bullying law-abiding citizens? That, in the eyes of Mr. Justice Douglas, a State must not do. The States transgress "when they allow their administrative agencies or their courts to enjoin the conduct that Congress has authorized the Federal agency to enjoin." Chief Justice Warren and Mr. Justice Black joined in the dissent.

What do we learn from all this? Here are three members of the highest Court in the land, among them the Chief Justice, who equate the Communist Party with a political party; here are three justices ready to seize from State tribunals the power to enjoin violence in labor disputes. These same three Justices, in recent weeks, have joined in voiding the conviction of a notorious Communist, Steve Nelson, on the grounds that Pennsylvania's State Sedition Act was an encroachment upon an exclusively Federal prerogative. They have joined in forbidding New York City to discharge a fellow-traveling professor, Harry Slochower.

Warren and Douglas and Black: Three of nine. Two more such justices on the court, and the States are done for. The power to amend the Constitution, the ultimate control over this Union's basic law, will have passed from their hands. Was it ever in-

tended, we must ask once more, that any five men were to assume the sovereign powers of not fewer than 36 States? That is the intention, and that is the assumption, of these three. However gratified States Righters may be at Monday's majority decisions, let us not forget the fact.

Statement by George J. Burger, Prepared for Delivery Before the Antitrust and Monopoly Legislation Subcommittee

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. SPARKMAN. Mr. President, a few days ago Mr. George J. Burger, vice president of the National Federation of Independent Business, prepared a statement to be delivered at the hearings on Senate bill 3341. Unfortunately, Mr. Burger was not able to be present at that time; but he sent the statement to the chairman of the subcommittee, to be inserted in the record. I ask unanimous consent to have the statement inserted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF GEORGE J. BURGER, VICE PRESIDENT, NATIONAL FEDERATION OF INDEPENDENT BUSINESS, BEFORE SUBCOMMITTEE ON ANTITRUST AND MONOPOLY LEGISLATION OF THE SENATE JUDICIARY, SUBJECT: S. 3341

I am George J. Burger, vice president in charge of the Washington office of the National Federation of Independent Business. I am appearing here solely for the membership of the Federation.

We represent independent business and professional people in all vocations from all parts of the country. We have the largest directly supporting membership of any business organization in the country.

Our position on legislation is dictated directly by our membership. We poll our members on all important issues, and are committed by their majority vote. No officer or group of officers is permitted to speak or act officially for the federation until our entire membership has been polled.

Our members were polled through Mandate No. 213 (official publication of the federation) on the question: "require firms worth $1 million or more to inform Federal antitrust agencies of merger plans at least 90 days in advance of action."

It is to be noted on the mandate the instruction is given to members: "Before voting—see arguments for and against."

The argument for: "This bill strengthens safeguards against monopoly mergers. The 1914 basic law stopped such mergers completed by stock purchase; 1951 amendment closed the asset purchase route. Yet merger total today is three times the 1949 rate, almost equal to the 1946–47 high. Monopoly-threatening concentration is increasing apace. Assistant Attorney General Barnes has said bill will help in merger control, by giving antitrusters time to dig up facts and warn against mergers thought suspect. FTC Commissioner Gwynne says it will make merger law enforcement simpler."

The argument against: "After every merger wave, someone comes up with a new law to solve the problem. But the problem remains, to crop up again. Obviously there's not so much need for new laws as there is for enforcement of existing laws. There's question, too, whether Congress, having saddled antitrusters with new responsibility, will give them additional funds needed to carry out the heavier duties without shorting themselves on funds for other necessary antitrust work. Further than this, even though antitrusters get advance notice, mergers may still be completed."

The result of this poll, as it appears in Mandate No. 214, shows: 70 percent for the proposition, 23 percent against, and 7 percent no vote.

As a matter of record, I request the privilege of having made a part of the permanent record of this hearing, Mandate bulletins Nos. 213 and 214 as they refer to our action on the antimerger legislation.

Mr. Chairman, and members of the committee, as these expressions come from what can properly be termed the "grassroots" of our Nation, we believe it should be of importance for the committee and the Congress in shaping future action on this major subject.

The bill before your committee is S. 3341. We did not poll our members on this bill introduced by Senator SPARKMAN but we did poll on S. 2075, introduced by Senator SPARKMAN, which he amended in his new bill, S. 3341. The basic principles involved are the same, namely, antimerger legislation and we consider the membership poll on S. 2075 carried the same implications and instructions to favor this legislation as embodied in S. 3341.

To review our personal appearances before the platform committees of both the Republican and Democratic National Conventions in 1948 and again in 1952, you will find our recommendations to those committees in the first instance, in fact the principal and main recommendation in behalf of small business, was for consistent and vigorous enforcement of the antitrust laws and that the proper steps be taken to amend these laws where actions are instituted which would result in monopoly and increased concentration. Again, our position taken at that time was upon the direct instruction of our nationwide membership, comprising independent business and professional men.

We hold to the premise that if small business is to remain an important part of our overall economy, both at the production and distribution level, the first requisite for their success in the business world, provided they are efficient and have the necessary financial resources, is that the Government must see to it that no weaknesses exist in the enforcement of the antitrust laws and they must take every safeguard to srenghen these laws to protect the small business economy.

It must also be noted for the record that small business is not looking for any subsidies nor are they looking for any special consideration over any other segment of our economy, but they must be protected against any and all merger actions in our economy that would tend to reduce their rightful position or permit a situation to be created that they would be a captive group of the big segments in our economy.

No one knows better than we in the federation, as a result of the daily correspondence from our members, either to the head office at Burlingame, Calif., or to our division office located in Chicago, Cincinnati, New York, and Washington, of the fear instilled in the minds of many small business institutions, that if they come forward and lay the facts on the line as to the situation they face through monopolistic actions, the retaliation that might accrue to them for laying the facts on the line.

Make no mistake that small business is very vitally concerned about the increased merger action in our economy and the increased concenration taking place. They put the question, "When will there be an end and how long are we to remain in our respective business or is it better, as some say, to get out now and close down and hold on to the resources we have at the moment?" I say to you, Mr. Chairman, in their behalf, this is a terrible plight to live under.

I noted with considerable interest the statement made by the Honorable Sinclair Weeks, Secretary of Commerce, before this committee in opposition to the above bill. It doesn't surprise us to hear of this opposition from that Department. Is it any wonder that many small-business institutions feel that the Department of Commerce speaks and acts for the best interest of the bigger industries in our economy and that they do not act for the best interest of all businesses and particularly including small business. We recall when the basing-point legislation was up for consideration before the Congress (in which the federation took a leading position opposing this legislation, because we believed the action was monopolistic and beneficial to the big and injurious to small) we found at that time that the preceding Secretary of Commerce favored such legislation. Again that was in the interest of big business.

We were told at that time that if that legislation was not approved it could result in ghost towns, and even certain segments of labor took the same position of favoring the legislation. To the credit of the President at that time, Mr. Truman, he vetoed the legislation.

In the objections by Mr. Weeks, speaking for the Department of Commerce, opposing this legislation, he is reported as saying "that the provision for a 90-day waiting period be eliminated and that mergers be permitted to go ahead as soon as the Government had been notified."

Also, Mr. Weeks was quoted as saying "that the Justice Department should be required, on request, to give a firm legal opinion on a merger, an opinion that, if favorable, would prevent any antitrust suits against the company." I am more than pleased that the Justice Department, through their able, sincere spokesman the Honorable Stanley Barnes, is reported as vigorously opposing such recommendation by the Secretary of Commerce.

Here's a good case in question, and it was an important case that happened shortly before World War II: I'm talking about the time that we officially went into the war. The Fisk Rubber Co. at Chicopee Falls, Mass., a well-known national institution, beginning in the early days of the automobile industry, was acquired or taken over by the United States Rubber Co.

At that time, the Fisk Rubber Co., as I recall, was in a reorganization period and on the way, and very definitely on the way, to remaining an important part in the rubber tire industry. They had national acceptance and furthermore were an increasing competitor in rubber tires to the United States Rubber Co. I know because I had been a member of that industry in the retail trade, at that time, for over 30 years and I knew the acceptance of their products nationwide by the independent tire trade. I repeat, they were a strong growing competitor of the United States Rubber Co. in the sale of tires and tubes.

When this acquisition by United States Rubber Co. was announced, the record will show the fear in the minds of the civic leaders in Springfield, Mass., a closeby city to Chicopee Falls, that if this merger was permitted it might result in the Fisk plant eventually being dismantled and add to unemployment in that area.

The Honorable Thurman Arnold was then Assistant Attorney General in charge of the

Antitrust Division, Department of Justice, and it will be found that Mr. Arnold was in a quandry as to just what to do. It is my opinion that he remarked that the matter was of such a serious nature that before final absolution be given to the merger, it should be passed upon by the Federal courts.

There was considerable discussion on the floor of the House at the time this merger was pending and finally consummated. I think this is a good case to bring before the committee as to what could happen if the recommendations of the Secretary of Commerce were followed.

A few years before that, the Goodyear Tire & Rubber Co. acquired the Kelly-Springfield Co., of Cumberland, Md.

The irony of the situation in both of these cases is—if there had been antimerger legislation on the statute books at that time, these mergers would have been more carefully scrutinized before they were permitted to be accomplished.

Realize, Mr. Chairman, that if these companies had remained individually owned as heretofore, I mean the Fisk and the Kelly-Springfield, they would have enjoyed the prosperity of war business and probably would have been strong competitors for the four big giants remaining in the rubber-tire industry; namely, Goodyear, Goodrich, Firestone, and United States.

In my travels, I do run into many people in the course of conversation, and just recently, a very well informed authority in the chemical industry, who apparently is with one of the big chemical corporations, said to me that certain strong financial interests urged him to go into the independent chemical ranks. He said they were amazed when he rejected their financial assistance and he said the reason for his rejection was because of the concentration and the mergers taking place in the chemical industry, that it would be business suicide to risk that splendid financial help from people who had the faith in his ability to succeed in the chemical industry.

Whether it be so or not, I recall during the past decade, an authority in the can business remarked to me that there was not a chance for a small can company to exist with the monopoly and mergers taking place in that industry. He should know, as that was his industry I believe all of his business life.

Finally, Mr. Chairman, a more serious aspect in our overall economy in which small business is vitally interested is, with the increasing population which brings about an increasing demand for all types of commodities. Look at the picture of the scarcity of newer institutions being established in the major products in our overall economy. We have requested the Small Business Committees to explore this situation and see what's really happening in our overall economy.

There are 3 or 4 dominating the automobile industry; there are 4 dominating the rubber-tire industry; there are a few bread companies dominating the bread industry; there are 3 dominating the aluminum industry and likewise the steel, copper, chemicals, shoes, etc., and a few milk companies that dominate the mill industry and still merging—why go on? Destroy small initiative and we end up with regimentation or dictatorship.

It's our hope that constructive organized labor at the same time will take cognizance of this situation as it applies to the future of small business, both at the production and distribution level; and we make a plea that they may come forward and give a helping hand to save the free enterprise system.

In conclusion, we recommend the adoption of S. 3341.

Thank you, Mr. Chairman.

Debate Without Argument

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Star of June 1, 1956.

The bipartisan policy formulated by Mr. Acheson and Mr. Dulles even before the end of World War II has worked out exactly as its sponsors intended. It reduces our foreign policy debates to a fruitless exchange between internationalist Democrats and internationalist Republicans, while the majority of the people in both parties are left without means to discuss their opposition to the American Government's giving our people's earnings to foreign governments which they wish to favor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEBATE WITHOUT ARGUMENT

Secretary of State John Foster Dulles told a television audience the other day that he would welcome a "pretty thorough airing" of United States foreign policy during the present political campaign. "I think it's a healthy thing," said Dulles, "that every 4 years foreign policy should be discussed."

It is a healthly thing. It would be healthier yet if the debate were not cut in half and the more troublesome half shoved under the table. As it stacks up now, one side takes the affirmative and the other says, "Yes, but—"

In such a debate, millions are left without a spokesman. They are the ones who say "No" to foreign spending.

The keystone of present foreign policy is to export taxpayers dollars. That is the issue which should be debated yea and nay. Yet in the realities of campaign politics, it is unlikely that any such debate will occur. Democrats are chronically committed to more foreign spending. Unhappy Republican leaders who are capable of leading a crusade against the doctrine of foreign aid are largely silenced by the fear of seeming to be critical of their own party organization during a campaign.

There is tremendous discontent in this country with the idea that America should spend thousands of dollars, for instance, spraying the homes of natives in Thailand with DDT. There is vast unrest at a bookkeeping system which uses mostly American money to support United Nation social welfare programs and gives this country not one ounce of credit. There is a very real constitutional question of the Federal Government's right to tax its citizens to buy highways for Jordan.

The discontent with continued spending abroad is something that cannot be kept down. It erupted in Wisconsin the other day when the State's Republican convention repudiated Senator ALEXANDER WILEY and gave its blessing in the coming Wisconsin primary to Representative GLENN R. DAVIS to oppose WILEY for the senatorial nomination. The issue was strictly foreign policy.

Wiley has been a consistent supporter of the administration's foreign-aid policies. If reelected to a Republican dominated Senate, he would be chairman of the Senate Foreign Relations Committee. DAVIS is a violent critic of foreign spending. On that basis he won the support of the Wisconsin Republican organization. The same thing happened in Georgia, where Herman Talmadge will replace Senator GEORGE almost solely because of Talmadge's strong position against foreign aid.

In this country, where the people's representatives are supposed to carry out the people's will, the first question for debate should be, "Shall our money be spent in endless billions of foreign economic aid?"

Only when that question is resolved, and only if it is resolved in the affirmative, should the debate proceed to the matter of how and where the money should be expended. To skip the first question and debate only the second one, as it seems likely will be done, is to take the important decision out of the hands of the people and leave to them the worst of two bad alternatives.

What needs to be debated is not how our foreign policy is succeeding in Europe and Asia, but whether it is succeeding in the United States.

The Situation in the Textile Industry

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. SPARKMAN. Mr. President, a few days ago there appeared in the Wall Street Journal an article dealing with the textile situation. The textile industry in this country is confronted with a most difficult problem. I believe that a reading of this article will indicate some of the causes of it. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COTTON CUTBACK—CLOTH MAKERS SLASH OUTPUT AS SALES LAG; SOME PRICES DECLINE—BATES TRIMS PRODUCTION 20 PERCENT AT TWO DIVISIONS; ERWIN CUTS HOURS AT 3 MILLS—BUT SOME STORE SALES RISE

(By Thomas E. McCarthy)

From New England to Dixie, mills that make cotton cloth are cutting back production after 3 months of sagging sales.

Mill men list a wide range of reasons for their difficulties—rising imports of cotton cloth and garments from Japan; lower auto output that has reduced use of upholstery fabrics; chilly spring weather that stalled clothing sales, and the possibility of lower cotton prices by early autumn.

While mill cutbacks have been scattered, they are being eyed apprehensively. For one thing, they are one of the few soft spots in a generally bubbling economy. And the cotton cutback comes on top of a serious slump in the synthetic fabric industry, perhaps indicating that much of the entire textile business is in for more widespread troubles.

MAINE TO NORTH CAROLINA

In the past few weeks 3 big New England concerns employing nearly 12,000 workers have curtailed operations at a dozen mills. Maine's Bates Manufacturing Co. reduced output 20 percent at 2 of its major divisions. Berkshire-Hathaway, Inc., also trimmed output 20 percent at 3 Fall River, Mass., plants and at 1 in North Adams, Mass.

And in Greensboro, N. C., Erwin Mills, Inc., is operating 3 mills on a 4-day week. "We're

storing a lot of goods," says a spokesman. We'd be justified in curtailing further, but we want to keep people at work." The Erwin official blames his company's sales slump and the cutbacks on imports of Japanese textiles and the weather. "Sales are off quite a bit," he notes. "People bought for spring and spring just wasn't there."

Brookside Mills has halted all production at its 1,000-loom Knoxville, Tenn., plant and is considering closing the operation completely. "We haven't been able to book any sizable business at the break-even point since the turn of the year," says a spokesman for this matter of cotton dress goods and corruroy.

The Aragon, Ga., mill of A. D. Juilliard Co. has been on a 4-day week ever since last February and Wellington Sears Co. of New York slashed its output of auto upholstery fabrics nearly 50 percent last month as auto makers cut back their production schedules.

PRODUCTION AND EMPLOYMENT

"Slow sales and low price levels since mid-February can only be reflected in reduced production and employment," says R. Buford Brandis, chief economist for the American Cotton Manufacturers Institute. "A major factor in this unfavorable situation is continuing heavy imports of cotton textiles from Japan," claims Mr. Brandis.

Retail merchants tell conflicting stories of cotton goods sales this spring and the reasons behind the fall-off reported in some areas. Cold spring weather throughout much of the country is blamed for some lagging demand for such normally big-selling items as cotton dresses and light blouses.

Sales of clothing made entirely from cotton are trailing the 1955 pace, says Lloyd Liebes, Sr., vice president and merchandise manager of a San Francisco store featuring women's and children's clothing. But, adds Mr. Liebes, sales of blended fabrics, combining cotton and manmade fabrics, "are a great deal better." Mr. Liebes' store is ordering fewer all-cotton goods than in 1955 for the summer selling season.

A Cleveland department store reports sales of cotton items down 10 percent to 15 percent from the year-ago level, and the store has canceled some orders to keep inventories in line with reduced demand. But in Allentown, Pa., the Hess Bros. department store reports storewide business in cotton goods "well ahead" of 1955. The manager of a San Antonio department store adds that a "May white sale right now is showing increases of about 20 over a year ago."

COTTON THE KINGPIN

According to Wall Street Journal tabulations, sales of women's wear chain stores in April plummeted 21.9 percent below the 1955 level. For the year to date, such stores' sales are down 3.5 percent. Sales of men's wear chains were off 22.4 percent in April, 3.4 percent for the year to date. Pre-Easter shopping came in March this year, while in 1955, some such buying extended into the first week of April.

Cotton is the kingpin of the United States textile industry. Cotton fabric accounts for 77.8 percent of all cloth made in this country. Synthetics total 19.5 percent, woolens and worsted materials account for 2.4 per cent, and silk has only 0.3 percent of the market.

Roughly 40 percent of the Nation's cotton cloth production goes into wearing apparel, while 35 percent goes for industrial fabrics, and 25 percent into home furnishings. The cotton textile industry once was centered in New England, but now has become largely a southern enterprise. Of the Nation's 22.2 million cotton system spindles—used to turn cotton fiber into cloth—some 19 million now are in the South.

The synthetic fabric business started to slump in 1955. Mills that weave cloth from manmade yarns cut back their production 20 percent between August and December of last year. And since late 1955, production of fabrics made from short-type synthetic fibers—the ones that compete with cotton and wool—has been reduced more than 25 percent.

But woolen and worsted mills are enjoying their best business since the scare buying that followed the start of the Korean war. In recent weeks, makers of worsted (hard finish wool fabrics) even have been increasing their prices.

Cotton mill cutbacks have been reflected in other phases of manufacture between cloth production and garment making. A sales executive of a major cotton textile printing concern estimates that the cotton printing business now is at least 25 percent below the year-ago level. Cotton printers put color and design on the gray cloth that comes from the textile mills.

MORE THAN SEASONAL DECLINE

Demand for cotton cloth normally slackens at this time of year because apparel manufacturers have filled their needs for spring and summer goods. But the cotton cloth sales dropoff came earlier this year, and it has been sharper than in recent years. Daily consumption of raw cotton mills in March generally falls 1.2 percent below the February level; this year mills consumed 3.4 percent less raw cotton in March than in February. This was the sharpest February-to-March decline since the low point of the post-Korean war recession 4 years ago. April daily consumption also fell below the March level, although not quite so sharply.

Heavy orders booked last November and December kept textile mills humming through the winter and early spring. But prices began to edge down even before output was reduced. The popular 80-square print cloth that garment makers turn into women's dresses has slipped 1½ cents to 19⅛ cents a yard since mid-February.

Among cotton textile men, the loudest complaining centers on Japanese imports. The Japanese indignantly deny low-cost goods from their country are to blame for textile troubles in the United States—and they point out that United States exports to Japan still exceed Nipponese shipments to America.

FIGURES ON IMPORTS

In 1955, some 133 million square yards of cotton cloth came into the United States from foreign nations, with 99.5 million square yards coming from Japan. Domestic output of cotton cloth totaled more than 11 billion square yards, and exports totaled 542 million square yards. But, United States cotton men argue, adding finished items such as blouses, shirts, tablecloths, and towels to the Japanese cloth volume means an import total equivalent to 250 million square yards—against a total of only 30 million square yards of cloth a few years back.

"Japanese imports are a cancer," insists Lester Martin, president of Luther Manufacturing Co. "They've hurt all the mills in this country." Luther's 1,000-loom Fall River, Mass., mill now is being liquidated. About half the 400 workers have been laid off in the past few weeks. The shutdown, states Mr. Martin, was caused directly by import competition.

While some textile executives admit—privately—that claims about their industry being pushed to the brink of disaster by imports are extravagant, they also argue that the Government has minimized their problem. "We're both talking through our hats," one textile executive admitted.

HELP FROM UNCLE SAM

The United States mills apparently are going to get some help from Uncle Sam, although probably not the rigid import quotas some would like to see imposed on Japanese textiles. A group of cotton-industry executives who met with Government leaders last week have confirmed that the administration promised to try to get other nations to buy more textile products from Japan—thus reducing the pressure on the American market—and promised to work out a plan to subsidize United States exporting mills for the difference between the cost of price-supported cotton and the world cotton price. Such a subsidy would, in effect, reduce United States mills' operating costs and help them to compete in foreign markets.

"If we don't get relief from the Government we'll have to cut back production around 20 percent within a few weeks," declares J. Craig Smith, president of Avondale Mills, Sylacauga, Ala. Roger Milliken, president of Deering, Milliken & Co., Inc., Spartanburg, S. C., maintains "ghost towns will replace thriving mill communities from Maine to Texas," if Japanese imports continue to climb.

The lure of Japanese textiles, of course, is low prices. Many clothing stores have offered made-in-Japan women's blouses for $1, compared to about $2.50 for a similar blouse from a United States manufacturer. For the cotton cloth eventually made into clothing, price differentials also favor the Japanese. One standard gingham-type cloth made in America sells in New York for 52½ to 60 cents a yard. The same type, imported from Japan, costs 42½ to 47½ cents. United States mills' asking price for a popular type of broadcloth used for shirts and blouses is 26¾ cents a yard. From Japan, with all import duties paid, the price is 25¾ cents a yard. Price differentials of a penny or so a yard can mean great savings to a clothing manufacturer when multiplied by hundreds of thousands of yards of material. And a penny a yard often is the difference between profit and loss to domestic mills.

While it is doubtful that the United States will impose any quota restrictions on Japanese textile imports, Japan has agreed to continue through 1957 its own restrictions on the amount of cotton goods it ships to the United States. The self-restriction would limit Japanese shipments to no more than 150 million square yards of cotton fabrics and 2,500,000 dozen blouses in 1956. Japanese exporters have promised to give the United States 3 months' notice if they decide to increase shipments to America.

Another troublesome factor in the textile business is uncertainty about the price of raw cotton next fall. Mills expect to buy cotton more cheaply after August, states Marvin Woolen, southeast manager of Anderson, Clayton & Fleming, a leading cotton merchandising concern. The cotton price decline is expected to result from Government efforts to put the fibre into the world market at competitive prices. Mills also expect domestic cotton prices to decline because of increased world production and lagging United States exports.

Nation's Drycleaners Participate in Flag Day Program

EXTENSION OF REMARKS

OF

HON. DeWITT S. HYDE

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. HYDE. Mr. Speaker, under leave to extend my remarks in the Appendix, of the RECORD, I include my statement pertaining to the participation of the Nation's drycleaners in the Flag Day program:

NATION'S DRYCLEANERS PARTICIPATE IN FLAG DAY PROGRAM

The National Institute of Drycleaning in Silver Spring, Md., has gained the cooperation of the Nation's drycleaners to provide "new glory for Old Glory" by cleaning flags without charge between June 1 and June 12. This is the third consecutive year that the drycleaners of the Nation have rendered this service, and as a result more and more homes and businesses are flying clean American flags on Flag Day, June 14. The drycleaners of the Nation and the Legion posts cooperating with them deserve recognition for their patriotic services to the public in recognition of Flag Day.

Most Dangerous of all Communist Fifth Columns

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD an editorial from the Geneva Progress, of Geneva, Ind., March 29, 1956.

Mr. Earl Dawald, the editor, calls our attention to the most dangerous of all Communist fifth columns, that which wears the appearance of the Christian ministry. We cannot prevent the Soviet leaders from training and directing their emissaries to penetrate our churches as they have established political control of their own churchmen. We can properly ask that true Christian leaders recognize the nature of the threat to all spiritual life, and disentangle themselves from the web of illusion spun by the Communists for their destruction.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BENEATH THE CROSS

This Easter season there is a tragic scene beneath the cross of Christ. Leaders from the National Council of Churches in America, composed of many Protestant denominations with great numbers of devoted members, have been visiting Soviet Russia for the claimed purpose of establishing better church relations between Russia and America. How can this be? Only a few short months ago Nikita Khrushchev, top Soviet leader boasted: "We remain athiest and we do everything we can to liberate a certain part of the people from the opium attraction of religion." This is no fancy or dream; it is a matter of record. Furthermore, except to the "brain washed" and to the "lovers of the left", there is evidence all over Russia that what Khrushchev said is true. Yet, here we have men who are supposed to be men of God trying to mix the red blood of Jesus Christ flowing from the cross on Cavalry with the Red atheism flowing from the Kremlin in Moscow. How impossible! Where communism prevails Jesus Christ can not; and where Jesus Christ prevails communism will not. The Church of Jesus Christ belongs to God and the Red atheism of Moscow belongs to the devil. The church of Jesus Christ seeks to save the souls of men and the Red atheism of Moscow seeks to enslave the souls of men. Never can these two dynamically opposite forces be reconciled. All Christendom this Easter season, from the crossroad church to the mightiest cathedral, should be alerted to the great danger that the church of Jesus Christ may be betrayed into the hands of its atheistic enemies in Moscow in much the manner Jesus Christ Himself was betrayed into the hands of enemies. It must not be forgotten that the betrayer of Christ had also been a follower of Christ—until he betrayed.

The Flag of the United States of America

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks, I am inserting in the RECORD a speech to be delivered in St. Louis, Mo., today by Mrs. Frederic A. Groves, president general of the National Society of the Daughters of the American Revolution, entitled "The Flag of the United States of America":

THE FLAG OF THE UNITED STATES OF AMERICA

(By Mrs. Frederic A. Groves, president general, National Society, Daughters of the American Revolution, prepared for delivery before DAR luncheon at Forest Park Hotel in St. Louis, Mo., June 14, 1956)

Since the beginning of time mortal man has used emblem and banners of various kinds to express his hopes, his ideals, his struggles, and his accomplishments.

Many reverent flag authorities trace the origin of the flag to Divinity itself, holding that after the flood God unfurled in the heavens the first flag—the rainbow—as a signal of danger passed, of safety assured.

All Americans can take just pride in the reverent aspirations of our early forefathers who were the first to reach to the heavens for the symbols of the flag of the United States of America.

It was just 179 years ago, on June 14, 1777, that the Continental Congress adopted our flag under the following resolution:

"*Resolved*, That the flag of the United States be 13 stripes, alternate red and white; that the union be 13 stars, white in a blue field, representing a new constellation."

It is in these words that we find the real significance, the very soul and spirit of the American flag. These were the words which, like scintillating stars in the heavens, signaled to humanity the birth of the first nation on earth dedicated to the personal and religious liberty of mankind.

George Washington once described the flag by saying, "We take the star from heaven, the red from the mother country, separating it by white stripes, thus showing that we have separated from her, and the white stripes shall go down to posterity representing liberty."

Flag authorities all agree that the essence—the divine spark—which differentiates the flag of the United States of America from those of all other nations of the world lies in those stars which so clearly spell out personal and religious liberty for all mankind.

Just as the Declaration of Independence is termed the heart of America, and the Constitution the backbone, our flag is the soul of America.

The personal and religious liberty spelled out in the 13 stars in the flag of the United States is of the utmost importance to women, who are the natural conservators of the great inheritance of freedom for our children.

Women and children are the first to suffer at the hands of tyrants and have the most to gain from liberty under law.

One way in which we as women may help to emphasize the values behind the flag of the United States is to be sure that we salute the flag properly. When the flag is passing by, women should salute it by placing the right ungloved hand over the heart.

An important exception to this rule applies to women who are members of any branch of the Armed Forces. They should salute the flag in exactly the same fashion as the male members of their branch of the services.

Generally speaking, we know when the occasion will probably arise that we will be required to salute the flag. Therefore it is only a matter of common courtesy, toward this our great symbol of liberty, that we be prepared for the salute. Let us put bundles and packages down if possible, and shift our pocketbooks and gloves to our left hands, so that the right hands may be free to render the salute.

We will not fail to do proper honor to this our flag if we always remember that these stars in the blue heaven and these rippling stripes stand for the protection of all our personal and religious liberty.

From George Washington on, every President has tried to put into words the meaning of the flag of the United States. Even that taciturn Vermonter, Calvin Coolidge, waxed eloquent when he spoke of the flag.

He said: "When the people of the Colonies were defending their liberties against the might of kings, they chose their banner from the design set in the firmament through all eternity. The flags of the great empires of that day are gone, but the Stars and Stripes remain. It pictures the vision of a people whose eyes were turned to rising dawn. It represents the hope of a father for his posterity. It was never flaunted for glory of royalty, but to be born under it is to be a child of a king, and to establish a home under it is to be the founder of a royal house. Alone of all flags it expresses the sovereignty of the people which endures when all else passes away.

"Speaking with their voice it has the sanctity of revelation. He who lives under it and is loyal to it is loyal to truth and justice everywhere. He who lives under it and is disloyal to it is a traitor to the human race everywhere. Who could be saved if the flag of the American Nation were to perish?"

As women we can render to our country and to the world a great service if we keep constantly before our youth those stalwart words, "He who lives under it—our flag—is loyal to truth and justice everywhere. He who lives under it and is disloyal to it is a traitor to the human race everywhere."

Those are true words—and considering later events—almost prophetic ones. We have only to think of the tragic results of the theft of atomic bomb secrets, for example, not only to this country but to human beings the world over to see the verity of the charge that he who lives under the American flag and is disloyal to it is a traitor not only to this country but to the human race everywhere.

Old as the ages is the knowledge in every human heart that he who is a traitor to his own nation is a traitor everywhere.

Modern education in some instances has tried to erase that idea in favor of the notion of world citizenship. Sometimes those who attempt to teach this concept are not even aware of being subversive. They are reaching for something new. They forget that the tried experience of the human race from the beginning of time gives the lie to any idea that a person can love the world or the human race if he does not first give his love and loyalty to his own.

Far from being outmoded in today's world—a globe shrunken to tiny proportions

so far as time and space is concerned—patriotism—love of country—is more vital than ever.

It has indeed become necessary for us to give great understanding and sympathy to our neighbors on this tiny globe.

But can any woman tell me how it is possible for us to respect our neighbors if we hate and are disloyal to our own family? As women, as mothers, as neighbors we know this simply cannot be.

We know that the more deeply we love our own the more sympathy, compassion, and understanding we have for others.

We can respect the ideals, aspirations, and accomplishments of others, only in proportion to our respect for the standard of our own beloved flag and the Nation for which it stands.

The very words of our Star-Spangled Banner have been a rainbow—a divine rainbow—to oppressed peoples everywhere.

"And the Star-Spangled Banner in triumph shall wave
O'er the land of the free and the home of the brave."

With a prayer in our hearts and reverence in our minds, it is up to us to keep that Star-Spangled Banner aloft as the symbol of freedom and courage.

Solving the Farm Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. I ask unanimous consent, Mr. President, to have printed in the Appendix of the RECORD an editorial from the Manchester Union Leader of May 19, 1956.

Congress has spent a great deal of time on emergency solutions of the farm problem, without any hope that we are improving the situation as a whole. It is time for a fundamental approach which will set American farming on the road to long-term prosperity in freedom.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOLVING THE FARM PROBLEM

There is sound judgment in Senator JENNER'S proposal to Congress that an advisory commission be created—made up of Members of Congress and private citizens—to make a fundamental examination of the farm problem.

That is exactly what is needed. Congress cannot go on indefinitely providing emergency legislation to relieve the farmers without doing anything to solve the farm problem.

This is what it has been doing for the past 25 years, ever since Henry Wallace, Rexford Tugwell, and Mordecai Ezekiel undertook to establish an agricultural planned economy. That was when the family farm ceased to be the basis of agriculture, and the farming industry was brought under a collectivist machine.

This is the system, as Senator JENNER pointed out to Congress, under which the farm problem has been operating since 1933. And it has got the farmer nowhere, except Government handouts to relieve his difficulties. This kind of thing can't go on forever. Even the farmer doesn't want that. He wants his problem solved correctly.

One difficulty today is that the collectivist system is so deeply rooted that changing the party in power makes no difference. For as Senator JENNER says: "With a mesh of supranational controls operating through the United Nations, GATT, and other forms of supergovernment, on the one hand; and a Government bureauacry in the saddle here at home, on the other hand—a change of party means little."

All of which means that no effective solution of the farm problem is possible except by a thorough examination of the long-term trends of American farming to create a constructive program that will restore farm stability.

There is no other road to a solution. It is hoped therefore that Senator JENNER'S proposal will be adopted by Congress to enable it to find a reasonable way out of the present farm difficulty.

The President's Health

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Madison (Ind.) Courier of June 11, 1956:

THE PRESIDENT'S HEALTH

President Eisenhower's intestinal disorder, which has now been satisfactorily corrected, has given political analysts a field day—assessing and reassessing the President's chances—of running for office and winning.

These same analysts, at the same time, might turn their minds toward the Democratic presidential candidates and the Democratic leaders—and see why it is that they are so determined to paint the President as an aged and senile man instead of the vigorous man he is.

His complete recovery from a heart ailment—and there can be no question now that he has completely recovered after the way he went through surgery at Walter Reed hospital—and his amazing snapback following last week's operation can leave no doubt but that here is a man who has a strong constitution and who will not be put on the sidelines by the comments and statements of professional politicians.

Why does the Democrat Party so fear President Eisenhower that it is using every device to influence him from running?

Is it a genuine concern for what the minority firmly believes is a condition of ill health? Or is it merely a camouflage to enhance the spider-web thin chances of Stevenson, Harriman, Symington, or Kefauver?

Are the Democrats who advocate Ike's retirement concerned with the future of the country, or are they again putting party ahead of country as they did when they failed to keep the Nation informed as to the failing health of the late President Roosevelt in his declining years?

There is no one who will deny that Ike has been a great leader for peace, a leader who is widely respected the world over. Would the Democrats put this tremendous influence on the sidelines, and hurt this Nation's world prestige, just to put a hand-picked puppet in the White House to be manipulated by DeSapio and Butler and the other bosses?

Ike has been a frank President—frank about his health, frank about controversial legislation, frank about any tinge of corruption, and frank about any shortcomings. These qualities have won him the respect of his countrymen and the respect of the world.

Both the United States and the rest of the world look forward to 4 more years of peace under his leadership.

Address of Hon. Lloyd Thurston Before the St. Louis Memorial Day Observance, May 30, 1956

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. CURTIS of Missouri. Mr. Speaker, I am inserting in the Appendix of the RECORD a speech made by one of our former colleagues, the Honorable Lloyd Thurston, at the Memorial Day services in St. Louis, Mo., on May 30, 1956, along with the introduction of Mr. Thurston by Walter G. Smith:

INTRODUCTION OF MR. LLOYD THURSTON BY WALTER G. SMITH, USWV, AT MEMORIAL DAY SERVICES IN ST. LOUIS, MO., MAY 30, 1956

Ladies and gentlemen, on February 15, in 1898, the battleship *Maine* was sunk in Havana Harbor with the loss of 266 lives which caused the President of the United States to declare war on Spain. On April 25, 1898, he issued a call for volunteers. A lad of 18 on the prairies of Iowa enlisted as a private in the 51st Iowa Voluntary Infantry in this Spanish-American War and the Insurrection of the Philippines. He was a captain in World War I, a member of the Iowa Senate from 1920 to 1924, and in the Congress of the United States from 1925 to 1939. He is a member of the United Spanish War Veterans, the American Legion, the Veterans of Foreign Wars, Military Order of the Philippine Pacific Organization, Uncle Sam's 1-2-3 Boys. He has served in the highest offices of the State and Nation of the United Spanish War Veterans. He was 1 of the 6 Members of Congress to represent our Government at the ceremonies honoring the *Maine* heroes at Havana, Cuba, February 15, 1948. He was a member of the Jefferson Memorial Territorial Association for many years. I have the great honor and the pleasure to introduce to you Past Commander in Chief of the United Spanish American War Veterans, Lloyd Thurston, of Osceola, Iowa, and his charming wife.

ADDRESS OF HON. LLOYD THURSTON BEFORE THE ST. LOUIS MEMORIAL DAY OBSERVANCE, MAY 30, 1956

It is with humble feeling in heart and mind that I salute this huge multitude, representing the veteran, civic and official life of this historical metropolis, and well may each of your citizens be proud of the achievements you and your forebearers have brought to your city, the State of Missouri, and the Nation.

It is doubtful if any mortal could orally describe or compose sentences to portray an accurate picture of this splendid, patriotic gathering, in one of the foremost industrial and cultural centers on this continent. Not far removed from the geographical or popu-

lation centers of the Nation, nearby two great rivers commingle their waters, as men and women and children assemble to pay homage to the Founders of the Republic, and to its valiant defenders, who have made every sacrifice human beings could offer to sustain the greatest and most noble experiment of man.

May the day never come when Americans fail to honor those to whom they owe so much.

Thousands of communities in the United States of America, and many places abroad, are on this Memorial Day observing an earned tribute to the American soldier, sailor, airman. He had the courage to remain with Washington at Valley Forge; made forced marches with Jackson to reach New Orleans in time for that unprecedented victory; crossed the parched plains to Mexico City; bivouaced with our armies in the long-drawn-out War Between the States, sailed with Dewey to take part in a complete victory at Manila; several years later embarked in crowded transports to Europe for action in World War I; after a short respite, again responded to a call of the colors, by the thousands to save the day in the continents of Europe, then Africa, and later hundreds of islands in the South Pacific; lastly, the long, undecisive, bitter campaign in Korea, which they were not permitted to win.

No wonder, the American civilian is proud of the wonderful, decisive victories of those who wore the uniform of his country. All of these sacrifices based upon the premise that freedom is the most precious heritage of man.

The pages of history disclose that there has been an age-old conflict between the two dominant philosophies of life: Those who strive for freedom, and those who are willing to be slaves. The man or group who would ursurp the limitations placed upon the abuse of power, in effect, says to you: You are incapable of self-government; that your lowly mental stature justifies controls from above. A candid appraisal of such egotism brings the inescapable conclusion: A diseased, dangerous ursurper. Whether these ideas of supermen come from abroad or are fostered in our midst, intelligent minds will join to oppose these false concepts.

Out here in the heart of the Union, we are somewhat removed from the sharp, cross currents of international affairs, but, we too, are greatly concerned about the future of our country. It is known that these United States have already faced perplexing problems of both a civil and military character; yet, through calm, deliberate judgment, we righted the course of our Ship of State, so it sailed into peaceful waters. Irrespective of religious faith or political belief, we again seek such a port. Our forefathers did not flinch or fail; we must do no less.

Although we complain about excessive taxation, it would be interesting to know the total amount of funds that would be required if we did not have so many persons and charitable and benevolent organizations which annually contribute millions of dollars to assist the unfortunate, and a multiplicity of worthy causes. The list of such donors would be a long one, but included are the churches, private schools, hospitals, and colleges; service units such as the American Legion, the Veterans of Foreign Wars, the Spanish War Veterans and their auxiliaries; the Farm Bureau with its 4–H and Future Farmers; the Farmers' Union and the Grange; the Federation of Women's Clubs and the Business and Professional Women; the YMCA and YWCA; the KC; the USO; the Red Cross; Salvation Army; the Rotary; Kiwanis; Lions; Boy and Girl Scouts; Parent-Teachers Association; Women's Relief Corps; Union relief funds, the Masonic and IOOF Orders and their auxiliaries. Then we have the specialized groups, such as the heart, cancer, eye, blood, blind, deaf, bone; all rendering splendid service. The Protestant, Catholic, and Jewish congregations support a multitude of institutions for the aged and impaired.

So a survey of this charitable field discloses that if all of the splendid work done by these and other like organizations were to be paid for out of public funds, there would be a tremendous increase in taxes.

Not only do many of the groups mentioned expend their funds as indicated, but their educational programs cover a broad field of public service; civic, national, international; and their welfare and patriotic teachings extend vital support to uphold American ideals and traditions.

It is no difficult task to recount the splendid victories won by our service men and women in the several major conflicts in which our Nation has been engaged, but what about the contribution of the average American citizen? Has he been adroitly lulled into focusing his attention on foreign propaganda, and thereby fail to witness the planned undermining of his Government? Is he content to listen to the lullabies of the intellectuals who are more concerned about the rights of traitors than the preservation of this freedom-loving land?

But today we are primarily gathered here to pay our homage to our servicemen who have passed to the great beyond. What a flood of thoughts come to each of us when this subject is mentioned? As a sailor, we could picture him as standing erect, alert, on the bow of a destroyer, cutting through the foam of the sea, with shell splashing the water on either side of his ship; or, a pilot, in formation with his plane, diving in an attack through a hail of missiles from hidden land batteries; then, there would be the doughboy, wading ashore, burdened with a heavy load of ammunition, trench tools, and field rations, expecting to dig in and hold a salient point.

Encountering more dangers and risks in a few hours than a civilian would experience through a lifetime. Try to think of the change brought into the life of this young American. Called to the service of his country, abandoning his way of life, his family, his business. He does not have time to ask: "What of the future? Is my present employment one that will prove of value to me in civilian life? Will those for whom I have served appreciate my sacrifice? If my services contribute to the winning of the war, will the country I am fighting to preserve retain its free institutions? Or will those who are poisoned with the plans to undermine my Nation gain control? Will the gangsters in the cities combine with the dreamers who spin but do not toil? Will those who benefit by the veterans' efforts have the courage to strike down those who would destroy my Government, your Government, the best government the world has ever known?"

Caesar, Napoleon, Cromwell, in their time, started out as the champions of the oppressed, but ended as tyrants. Later, Hitler, Mussolini, Stalin, and others organized a trail of bloodshed, anarchy, which brought ruin; as will all, who seek to rule through force rather than by orderly processes.

The thought expressed brings the logical corollary; men come and men go, but the principles of justice and humanity are as fixed as the north star. Stated broadly, those who put their faith in men awake in despair, as few mortal beings are strong enough to withstand the flattery of court jesters or office seekers. Washington, Jefferson, Lincoln, were among the limited few on this continent who survived the test. And the humility, the modesty, the nobility of these great men, might well be used as a precept for others who slightly overweigh their talents. Hero worship is a public disease.

Then a further search into the field of human motives is met with the stern, but indisputable evidence that the Almighty did not place all of the brains or intelligence of an era in one cranium; the diffusion of learning and knowledge was not confined to a race, a class, a creed, and never to an individual.

Because of our generosity to other peoples, their governments have organized subtle, clever staffs to promote propaganda to lay the basis for more funds from our Treasury. Of course, they cannot be blamed for promoting such a profitable investment, the inquiry is? How long are our people to be subjected to heavy taxation to meet the demands of our dreamers who flit from country to country, urging that gigantic sums be requested to meet their demands?

Lenin proposed that Russia should encourage her enemies to undermine their strength by excessive spending, so their collapse would require slight effort to conquer. I ask you: are we complying with the Russian philosophy?

I warn you that a solvent nation is a strong nation; the reverse need not be stated.

What America needs most today is a reappraisal of the basic concepts of our philosophy of life. We need earnest men and women to inaugurate a campaign to teach the present generation—adult as well as youth—the value of what we now possess; not what some dreamers or visionaries have to offer. Sane persons when in need of professional or technical assistance do not employ novices or roustabouts, yet, many of the intelligentsia in our land would have us abandon our practical experiences in government, industry, agriculture, and join with nations which are bankrupt, or which have failed to bring education, hospitalization, humanities and other modern conveniences and necessities to their people.

If your speaker had command of descriptive language, he would paint a word picture of the average home, school, college, church, hospital, and a long array of modern homes, which would be a panorama of current conditions in our country; then, in contrast, a picture of the average public building and home in the rest of the world, and with that wide void or gap, no sane American, no real American, would urge us to abandon what we and our forefathers have achieved. Is it improper to suggest that the "fuzzy minds" renounce their citizenship here, get a one-way ticket, and speedily join up with those they admire so much.

Well, my comrades, you have been separated from active duties in our Armed Forces, but you still have a duty to perform. You served to preserve freedom and liberty in the country you loved so well, with little thought that weakminded persons at home were proposing to submerge, eventually to destroy, your country by entering into some kind of an international organization, composed of nations which did not possess the courage to route out communistic influences, and in effect would thereby cancel or repudiate your sacrifices and results of your military efforts.

So, you with a host of true Americans must stand guard until those who support, yet fear the Communists, are safely berthed in mental institutions where they rightly belong.

As an aside, may I share with you, as one of many million citizens of the Mississippi Valley, in supporting the movement inaugurated in St. Louis to honor Thomas Jefferson for his foresight in consummating the Louisiana Purchase—one of the most important and far-reaching steps ever taken by our Government. It is fitting, indeed, that an appropriate memorial should be erected on the banks of the majestic Mississippi River to perpetually mark this important epoch in the progress of our Nation.

I was honored in being named as a member of the original Jefferson National Expan-

sion Memorial Commission, the late Luther Ely Smith being the chairman, and later in a minor way cooperated with the fine group of private citizens and public officers of your city, who through the years have guided the project to date, and who I am sure, will see that it is thoroughly completed.

God has been good to America. We have been provided with fertile soil to produce food; fuel to heat, light, and power our industries; appliances to lessen the burdens of human bodies; an abundance of all useful and requisite things; in government, the most profound concepts thought out by men. All of these benefits and many more, have been utilized for peoples everywhere, so as in part to reciprocate for the gifts of the Almighty to our land.

The untold billions of dollars, probably 200 billion, donated by the United States, exceeds the gifts of all nations for all times. In return, we only ask that those so generously treated will refrain from attempts to undermine our Government, through their own saboteurs or the misguided intelligencia in our midst. In this connection, it might be said that one does not have to be a Communist to be a traitor to our country—membership in disloyal, subversive organizations is giving aid and comfort to the enemy.

This question to the youth gathered here today:

What is the highest, most prized possession in the world? One might make a long list of physical objects: some might prefer a title from a bankrupt nation.

But the highest and most sought possession in the world is the right and privilege to be a citizen of the United States of America.

Though you might lose all of your earthly holdings—even your health—you still will possess this priceless distinction. You should always be thankful and deeply grateful to those who brought these countless blessings to you.

This America of ours is the finest heritage ever handed down to a people. America's position in the world did not just happen; it was attained through the toil and privation; the talent and genius, yes, the sweat and blood of thousands of men and women who were determined to prove that human agencies through divine guidance could create and maintain a form of government which would provide free institutions for a whole continent.

And what have been the results of the labors of the Founders of this incomparable Republic? What benefits have accrued to the descendants of the pioneers of this ocean to ocean empire? A reply could assert that if the story of the romance of human progress were to be written, the chapter devoted to America would be the most amazing chronicle of advancement the world has ever known.

All humanity in fact or in spirit shares these benefits with us. Subtract America's contribution to the world if you could visualize such a calamity: Primitive or medieval life would then replace most of the necessities—all of the luxuries we enjoy today.

America, under divine guidance, has enjoyed a glorious past; and we, its present trustees for the future, though the trail be somewhat dimmed and uneven, and in the face of difficulties which appear to be almost insurmountable, now pledge that the freedom for which generations of our forebears have toiled and sacrificed will not perish, but will blossom forth to reestablish free thought and free action among men.

In closing, we are not unmindful of the black pall of slavery which hangs over many nations; and the fear of insecurity which envelops all lands, yet, there has always been a silver lining, so in the midst of this worldwide misery.

The spirit of America with her free institutions, must be the light that never fails.

Indiana Public Schools

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Two Looks Are Better," which was published in the Indianapolis Star of May 20.

I am proud to point out this evidence that the people of Indiana take full responsibility for meeting the school needs of Indiana's children. Our State has already built the extra classroom space needed to meet the postwar boom in the schoolchild population. We shall continue meeting the educational needs of our children by our own management, out of our own resources.

This is the only American way to provide for the education of our youth without setting up in the Federal Government a Frankenstein which, in the end, will brainwash the children of the Nation into a colorless uniformity.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TWO LOOKS ARE BETTER

The Indiana Chamber of Commerce has recently published a collection of facts about Indiana schools. The tables show the cycle waves of enrollment rise as the postwar boom gathered momentum. They also show that in those first years of the rising trend, construction of new school space fell far short of keeping pace.

The first Federal study of the classroom situation was authorized in 1951. In the 4 years ending with the 1951–52 school year, Indiana schools had fallen behind by more than 1,000 classrooms. That is, construction in those years lacked that much of merely taking care of the increases of enrollment in the same years.

The report of the status phase of the Federal study was made in 1953. By the 1953–54 school year, postwar addition to Indiana's classroom deficit had risen to nearly 1,400. Since 1948, enrollment increase had been enough to occupy 4,346 new rooms. Only 2,983 had been built. These figures indicated a situation which could not be allowed to continue forever.

It did not continue.

With new financing methods available, school construction came to life in Indiana in the 1954–55 school year. New schoolrooms constructed were more than half again enough to take care of the year's enrollment increase. In the current school year new rooms added will be almost twice as many as needed for the enrollment gain.

There is an even more significant figure. By the end of the current school year, the postwar deficit in Indiana schoolbuilding will be entirely wiped out. The number of new classrooms built will surpass the number required to take care of the population gain, for the wohle period.

This will not mean that space problems will have been solved in every community, of course. Some of the new space will have been built by forward-looking communities against future need. Some of the overcrowding will remain in other localities. State authorities say 1,600 rooms are still needed to overcome this. Some buildings which ought to be abandoned will not yet have been replaced. But in sum total the books will have been balanced, and orderly solution of remaining space problems will be in sight. Continuation of building at the present high level for a few more years will not only keep pace with population growth, but will enable most communities to take care of longtime needs and enable many to get ahead of the game.

There are still school needs in Indiana. But there is no longer a statewide crisis, such as could be seen developing only 2 or 3 years ago.

We wonder if something of the same sort has not been happening in other States. The lag in school construction after the war was natural. Total school enrollment had been declining for so long that most communities needed a while to adjust to the change in trend. It was during this period of adjustment that the hue and cry for Federal aid arose.

The statistics being used in the Federal-aid argument are mostly a couple of years or more old. As far as Indiana is concerned, it can be seen clearly that those statistics cover the period of lag, but not the period of recovery. How generally is this true? Before allowing ourselves to be talked into brash action, we'd better have a look at more up-to-date figures.

Mutual Security Act of 1956

SPEECH
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 11356) to amend further the Mutual Security Act of 1954, as amended, and for other purposes.

The CHAIRMAN. The gentleman from Minnesota [Mr. JUDD] is recognized.

Mr. JUDD. Mr. Chairman, I rise to oppose this amendment striking out all assistance for India, even loans and sale of agricultural surpluses. We have just voted against cutting off military aid to a country, Yugoslavia, that is under complete control of an avowed Communist, Tito. He does not even pretend to be a neutral. A Communist government, by definition, has to be dedicated to the isolation and destruction of the United States and every other free country.

Having voted against cutting off military aid to an enemy, I cannot see any possible justification for stopping all economic aid to a country, India, which is trying to be neutral. We may not approve India's neutralism, but nobody can say that India is under a Communist dictator or is an enemy of the United States.

What is the aid proposed for India? About $10 million for technical assistance and some $60 million for development assistance. But the latter can be only in the form of loans or the local currencies obtained from sale in India of our surplus agricultural commodities to help the country maintain its independence.

We would rather have India enter into a mutual security agreement with us and other free countries. We believe that would be better for her and for the

peace of that part of the world. But India does not agree. She wants to and believes she can be neutral in this world struggle. I doubt that she can succeed indefinitely. As the Communists say, she will eventually have to lean to one side or the other. But certainly it is far better to have India a neutral and better to help her maintain her neutrality, than to have her an enemy.

Why is India so determined to remain neutral?

First, the Indians are more concerned about and more against the western imperialism they were under for so long, than they are against Communist imperialism, which they have not been under. That is not a peculiar Indian reaction; it is a human reaction.

We have seen it in France. Millions of Frenchmen would rather take a chance on a Communist conquest, which they have never known, than on a recurrence of German conquest, which they have known. We saw it in Vietnam before it gained its freedom. Millions there preferred to take a chance on Communist control, which they had not yet been under than on a continuance of the French control which they had been under.

Let us remember that India was under England for more than 200 years. Nehru himself was in jail 14 years. His lifework was to free his country from western control; and we are regarded as part of the West. If I were to have that experience, I suspect my reaction would be about the same as his. I would be against the imperialism I had fought all my life.

Many in India and other Asian countries fear that America's aid is given to enable us stealthily to take over the western imperialism, which India fought for more than 200 years. The Communists are constantly telling them that the Americans are coming in as representatives of Wall Street, first, to try to get economic control of their country, then gradually to gain control of their national policies, and finally move into England's place.

This is not a reasonable fear; in fact, it is ridiculous, but it is understandable. You find it in any country recently emerged from colonial control.

Some years ago in Korea, when a prominent leader was voicing to us his great anxiety over our rebuilding Japan's military and economic strength, one of us said, "It appears that you feel that if your choice were to be under Japan again or under the Communists, you would prefer the latter." Without hesitation be replied, "Certainly. We would at least have a different master."

The deep distrust in India following centuries of control by white men rubs off on us. It is a suspicion of us that we do not like but it is understandable and it is inescapable. Our problem is how best to allay it.

A second reason for India's neutralism is wishful thinking—the almost pathetic hope that communism in China will be different from communism in Europe, because the Chinese are Asians. It will not be. It cannot be—because when a man becomes a Communist he ceases to be a Chinese patriot—or a Japanese, or a German, or an American patriot. But I cannot blame the Indians for being intrigued with the vain hope that they can get along with communism in China. Did not plenty of Americans think that too? Some still do.

A third reason is fear. The Indians know that whoever has been master of China has generally been master of Asia. They know the growing power of Communist China and that it lies right above them. They hope they can avoid antagonizing it. Well, did not we do the same?

In a neighboring Asian country, a prominent leader said to us when we were there last fall, "We are trying to be neutral. Not because we are pro-Communist, but because we have a long border with Communist China. There are only two strong powers in the world—you and the Communist bloc. You could win—but you are not winning. We are a small country. We have only about 20 million people. We have been independent only 7 years. We cannot substantially influence the outcome of this world struggle. We have just got to accept whoever is the winner."

He said, "Your former Secretary of State said of a struggle with the Communists in China, 'Wait until the dust settles.' Well, that is just what we Burmese are trying to do; wait until the dust settles in the world struggle and try to get along with whichever side wins."

In the same country in a conversation with a brilliant scientist recently returned from study in the United States, wholly sympathetic with the free world but still defending their attempted neutralism, we asked, "How could you be neutral, or whom would you be neutral between, if we were to try to be neutral too?"

He replied quickly, "We can be neutral if you stand firm."

That, Mr. Chairman, is our task—to stand firm. We will find most of these neutral countries quickly joining our side whenever we convince them we can be depended on to stand firm and to respect fully their precious newly-won independence.

But as of today they see no certainty that the free world will prevail in this great struggle between the free world and the Communist world. They are too weak as yet to influence the outcome. They want to survive—and to try to be friends with both sides appeals to them as the safest and most realistic course.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Mr. JUDD. Mr. Chairman, will the gentleman from South Carolina yield me 2 minutes?

The CHAIRMAN. The gentleman from South Carolina has 4 minutes to close the debate.

Mr. RICHARDS. Mr. Chairman, I ask unanimous consent to yield 2 minutes of my time to the gentleman from Minnesota.

The CHAIRMAN. Is there objection to the request of the gentleman from South Carolina?

There was no objection.

Mr. JUDD. The Indians and other peoples throughout Asia say to us, "Is it not strange that you insist that we not be neutral on this Communist issue, but at the same time you insist on your being neutral on many other issues?"

You will remember President Sukarno who spoke eloquently to us here a few weeks ago. We had a visit with him in his reception room in the capitol of Indonesia last fall, and he put the same question to us: Why does America want to be neutral and yet not want us to be neutral?

When the issue is between France and her north African colonies, the United States abstains from voting. She is neutral. Why?

Because America wants to be friends with both sides.

In the conflict between Greece and England and Turkey over Cyprus the United States is neutral. She wants to help resolve the dispute. She wants to be friends with all three.

In the conflict between Pakistan and India over Kashmir, America is neutral. She wants to be friends with both sides.

In the conflict between Israel and the Arab States, the United States is scrupulously neutral. Why? Because she does not want to antagonize either side.

In the dispute between the Dutch and Indonesia over west New Guinea, the United States is neutral. Why? Because she wants to be friends with both sides.

Again in the dispute between Pakistan and Afghanistan, America is neutral. She wants to be friends with both sides.

Japan wanted us to put the screws on Syngman Rhee over fishing rights, telling us he would have to do whatever we told him to do. In Korea, Syngman Rhee said we should be firmer with Japan over that same issue, that if we were, the Japanese would have to go along with our wishes. But again we are neutral, because we want to be friends with both sides.

With respect to Vietnam we were told that just as we did not want to offend France, so many in Vietnam did not want to offend Communist China, which is stronger and closer to them than France. We can make the sound argument that there is a world of difference between being neutral in a conflict over territory with some right on each side, and being neutral in a conflict between efforts to preserve freedom in the world and Communist efforts to conquer the world. But their experience with the West has been too unpleasant to allow them to see the issue that sharply.

What would be our attitude if we had had the long, hard struggle against the West that these new countries that we are trying to help through this program had had? They hope to be friends with both sides and to help settle what appears to them as only a quarrel between their friends. We must learn to be patient and more understanding while pointing out the risks they are taking.

Finally, Mr. Chairman, let us ask ourselves again, what is in our American interest? What are our objectives in this program?

Are we trying to buy friends? No; it is not possible to buy friends.

Are we trying to make satellites? No. That is what the Kremlin does. That is what we are against.

We do not want satellites. We do not want puppets or stooges. Rather, we are trying to help newly-independent peoples retain their independence. We are trying to strengthen their will and increase their capacity to stay free, to keep their territory, their manpower, their resources out of the Kremlin's control. That serves their interest; and it serves ours.

Whatever else Nehru is or is not, he is an Indian nationalist, he is an Indian patriot; he has spent his whole life working for the independence of his country. India has won her independence and there can be no question as to her will to maintain it against both West and East. It is going to be a difficult task at best. I believe it is only good sense and good statesmanship to help them do so by providing some technical assistance, some loans, and selling some of our agricultural surpluses for Indian currency. That is what the Indian program is this year. I do not believe it would be wise in any respect, or would even prove to be economy, to strike out this program. I therefore urge that the amendment be defeated.

The Grassroots on Foreign Aid

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis News of May 14, 1956.

The editor correctly describes the growing indignation of our people at spending such vast sums for aid to other countries, with no visible benefits either in strengtheniпg our defense or in increasing good will between nations.

We are now witnessing efforts by the House of Representatives to reduce the authorization for this global spending. I call the attention of the Members of this body, and of the press, to the parallel efforts being made by our foreign-policy propagandists to maintain or increase foreign aid by shifting it from military ends, where the needs are measurable, to so-called aid for backward areas, where the needs will be without limit as the explosive growth in population keeps increasing the number of mouths to feed. Our contributions to our loyal allies—Korea, Free China, Vietnam, and Turkey—will be decreased, while increased funds are channeled to the neutralist nations which never will stand by the side of our fighting men if trouble comes.

While Congress is trying by hard legislative work to carry out the mandate of the American people, our foreign-policy planners are working at home in their districts to fill the press, radio, television, and other channels of mass communication with human-interest stories or carefully conducted tours of visiting VIP's, designed to win support for ever-increased foreign spending for evermore elusive ends.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis News of May 14, 1956]

THE GRASSROOTS ON FOREIGN AID

On the subject of foreign assistance, the Washington administration needs to tune its ears more to what Americans are thinking, and less to the advice of diplomats abroad.

Up until last week, administration leaders had said they wanted $4,900,000,000 voted this year for a long-range program, to be spread over future years.

Confronted with justified congressional opposition to future commitments of that kind, President Eisenhower called key House and Senate leaders to his White House study. There they were asked, not for a future program, but a flexible $4,900,000,000 1957 program now.

Secretary of State John Foster Dulles had just returned from Paris, where he talked with the French, British, and others. He had been told of their needs.

On the other side of the picture is the House Foreign Affairs Committee and other Congressmen who have been hearing, not from the Prime Minister of Britain or the Khedive of Afghanistan, but from the folks back home.

These folks have been reading in their newspapers about this proposed new $4,900,000,000 (count the zeros) foreign giveaway. They are expressing their opinions in no uncertain terms.

Congress is getting an unexpectedly large volume of mail from all over the country protesting further spending programs abroad. The letters range from angry denunciations to reasoned objections.

Some of them ask why, with all the $53 billion we have sent abroad in the last 9 years, the Russians have not only been winning new followers but also the good will of some of our own allies.

Others want to know what good these financial grants do when the very countries which have been enjoying American bonanza now are leaning away from us toward neutralism and accommodation with the Soviets.

An increasing number of our own citizens are asking their Congressmen: "Do you believe we should continue to give large sums to our allies when we ought instead to be using this money to increase our own strategic bomber force and our guided-missiles program?"

How is it, Congress Members are being asked, that we propose to send over more cash for Allied military establishments when the whole lot of them now are in the midst of a disarmament binge?

Many of our average Americans have been visiting Europe. They have not been able to detect the hardships for which new billions of our economic assistance are needed. They are writing to their Congressmen.

The letters show a remarkable unanimity. They do not begrudge paying taxes for defense and security if the money is being used for that purpose. But they strongly question whether anything like $4,900,000,000—count the ciphers—in new foreign assistance is needed to protect this country.

This is grassroots reasoning, and it is right. There is a correct feeling that, since our friends are cutting down their military programs, we thereby need to increase our own. And that a lot of this proposed giveaway program should be diverted into planes and hardware for American defense.

The House Foreign Affairs Committee is reported to be ready to make a deep cut this week in the administration's foreign-aid request. It should.

Foreign Policy Debate

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. SPARKMAN. Mr. President, a few days ago there appeared in the Scripps-Howard newspapers, particularly in the Washington Daily News, an editorial entitled "Foreign Policy Debate." The editorial makes some very good suggestions, and is quite interesting and provocative. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOREIGN POLICY DEBATE

Secretary of State Dulles welcomes a "thorough airing" of foreign policy in the election campaign so long as it is constructive debate. Any other position would be intolerable. Full discussion of all issues affecting the American people is part of the free way of life.

Mr. Dulles puts it this way: "I think it is a healthy thing that every 4 years foreign policy should be discussed."

But foreign policy in this age permeates almost every daily event. It needs to be discussed daily. Reviews and reappraisals should not await an election.

The Eisenhower administration seems unwilling to get down in the arena and debate foreign policy issues with the people. Repeatedly it squelches appeals for reexamination of foreign aid, information, defense, the cold war—usually with the answer that everything is fine as it is.

Repudiation of the Eisenhower foreign policy by the Wisconsin Republican convention—even allowing for Wisconsin's latent isolationism—should be a warning that the people are not tuned in on what the President is trying to do.

On several recent occasions the President has emphasized that "nothing is more important" than that the people understand the difficult problems of the world—what are the "basic facts," what are the alternatives, why don't we make better progress?

Yet the administration itself is doing little to promote such understanding. The President made a foreign policy speech at Waco, Tex., last Friday. But one can search it in vain for other than vague generalities, some of which are debatable.

For example, the President says "communism is, in the deepest sense, a gigantic failure." Without arguing what the President meant by "in deepest sense," most evidence adds up to the bitter fact that communism, on the surface, is a gigantic success. Not from our point of view, but certainly from the point of view of the evil men who lead the Communist movement.

Compare communism today with its status at birth in Russia 38 years ago—or even 11 years ago at the end of World War II. Why are hundreds of millions of Asians looking favorably on communism?

What of the Middle East—an area the Soviets and their Czarist predecessors have

coveted for more than 100 years? Are recent Red moves there, whatever their sinister motives, a gigantic failure?

Since Mr. Dulles concedes foreign policy is going to be an issue this year, it is time for the administration also to concede that the issue cannot be debated in generalities. The world is not at peace—in the deepest sense. The Free World is not winning the epic struggle with communism.

The American people can face those ominous facts—if they are informed. The American people will make the sacrifices needed to change those truths—if guided.

By all means let there be a great debate on foreign policy. It is many months overdue. But, in the President's own words, let us have the basic facts and not try to appraise our policies on the basis of pious platitudes.

Unhappy Coincidence

EXTENSION OF REMARKS
OF
HON. EARL WILSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. WILSON of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Indianapolis Star:

UNHAPPY COINCIDENCE

President Eisenhower's operation inevitably raises the question whether he will now decline to seek reelection. Only one man can answer it—Dwight D. Eisenhower.

The doctors believe there is no medical reason why Mr. Eisenhower should not run. They maintain in effect that the operation to remove obstruction of the lower intestine was nothing more than an unhappy coincidence in relation to the President's earlier heart attack.

The intestinal disorder was not caused by a cardiac condition and Mr. Eisenhower's heart was not weakened by the operation. This is the testimony of the doctors.

The medical consensus is that the operation will improve Mr. Eisenhower's general health and prolong his life expectancy. There is no reason to think that more than a dozen nationally respected physicians and surgeons would be in agreement on this point if it were not true to the best of their knowledge. Their job is health, not politics.

In other words, there is better medical reason now than there was before the operation why the President should stand for reelection. There is better reason why he should be reelected if he does decide to run. The only real issue is Mr. Eisenhower's own attitude, his mental reaction. It is all important.

No one should ask him to remain in the presidency if staying there would impose worries about his health which might, in fact, make it worse. If this new trouble makes him fretful and apprehensive of the future, his real well-wishers would prefer to see him retire. The Nation does not need to and would not want to call upon Mr. Eisenhower for what he might consider a supreme sacrifice.

We hope that the President accepts the doctors' findings as the people have accepted them—as good news. If he is able to look ahead with optimistic confidence to better health sure in his own mind that the doctors are right, then he should abide by his earlier decision to accept the Republican nomination.

Mr. Eisenhower's whole record is one of optimism. He has never shown any attributes of a chronic worrier. On the basis of the President's character, it does not seem likely that he will withdraw from the political race.

If he stays in, the health issue will be used more strongly than ever by his opponents. Politics needs no logic for its arguments, and the coincidence of a heart attack and an operation within a period of a few months will be stressed. Whispering campaigns will be launched.

When they come, it would be well to bear in mind that the health issue is little changed. If there is an issue there, it is Mr. Eisenhower's heart. Public reaction has already largely rejected opposition arguments based on that issue.

A Little Disloyalty

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. MUNDT. Mr. President, yesterday I introduced a bill and made a brief statement in connection with the Supreme Court's decision which tore down one of our very important defense bastions in our internal security program. In connection with it I made some statements concerning certain editorial writers in this country who consistently have supported those who favor a soft policy toward American subversives. So, Mr. President, I am happy today to ask unanimous consent to have printed in the Appendix of the RECORD an editorial which is headed "A Little Disloyalty," which appeared in the Wall Street Journal, generally accepted as one of the most constructive and most carefully edited newspapers in the United States.

It provides an eloquent argument in support of my proposed legislation.

I recognize that every editorial writer has his own point of view. But it seems that many writers on the metropolitan morning newspapers in the East write their editorials so early in the morning that they do not have both eyes wide open. I suppose that since they get up so early in the morning they open only their left eyes, because their editorials so frequently appear to be written to the left. I believe if the editorial writers would try to write their editorials in the afternoon, when both eyes are open, they could give us a better approach to and a more helpful understanding of what we should do in these days of peril to defend ourselves against subversion from within. Their editorials thereby might be better balanced.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A LITTLE DISLOYALTY

In 1950 Congress passed a law permitting dismissal without appeal of security risks in 11 sensitive Government offices. The law also granted the President authority to extend the provisions of the act to any other Departments or Agencies where necessary in the best interests of national security.

In 1953 President Eisenhower issued an Executive order blanketing the entire Government under the provisions of the law. A number of Government employees were subsequently fired as security risks—either because they were subversive, or associated with subversives, because their morals laid them open to blackmail, or because they couldn't keep a still tongue in their heads.

Now, the Supreme Court by a 6 to 3 decision says the President had no right to broaden the act's provisions to include all Government employees. The majority opinion said the act was designed to control those activities of the Government that are directly concerned with the protection of the Nation from internal subversion or foreign aggression. All other Government activities are nonsensitive and thus outside the law.

Stripped of its legalisms, the ruling plainly means that treasonable people have a right to work for the Government in some jobs and the Government has no right to fire them.

We think the Supreme Court is wrong for two reasons. One is that the Court makes a distinction between the risk the Government should take in one man in one job and another man in a different job.

Any person in Government who is a security risk is in a position to do disservice to the country. The three members of the Supreme Court who disagreed with the majority ruling wrote that "The janitor might prove to be as important securitywise as the top employee in the building." They added that the ruling "might leave the Government honeycombed with subversive employees."

And there is the second reason for disagreeing with the majority's ruling.

The decision can seriously shake the reliance people must have in their Government. The public is told by the Congress and the executive department that communism is a danger to our way of life and that we must spend great sums of our earnings to combat it here and abroad.

Yet the Supreme Court says that security risks have a right to work in the Government, that there is nothing wrong legally with a little disloyalty providing it is found only in some places and not in others.

We think that most Americans will agree with Mr. Eisenhower, who believes that Government employment is a privilege and not a right. And we think they will agree with him when he demands "complete and unswerving loyalty" to the Constitution of every person who is employed by the Government.

Anything less cannot only honeycomb the Government with spies, but destroy the very fabric of public confidence on which Government must rest.

Doing Business With Communists

SPEECH
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, it must be obvious to the American people, and I think to the free world generally, that you cannot do business with Communists unless you do it on their terms. It comes with a good deal of surprise to find out that neutralism in Europe is on the march. It is on the march in Asia and also in our own country we find that there are those in official

positions who today feel that they can do business with the Communists.

Mr. Speaker, we are on notice in that respect, however. It was in 1920 when the Secretary of State for President Wilson, Mr. Colby, put it in black and white with respect to the broken promises of Russia.

He stated:

The existing regime in Russia is based upon the negation of every principle of honor and good faith. The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements.

See note for further quotation.

Mr. Speaker, I submit that policy has not changed even to this day.

Freeing the Satellites Is the Test of Communist Good Faith

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum from the Alliance of Czechoslovak Exiles in Chicago, on the 11th anniversary of the Kosice Program.

This memorandum details the steps by which the Communists seized an independent nation and subjected it to alien rule.

I fully endorse the conclusion of the statement that the real test of the attack on Stalin's reputation will come when and if the Communists tear down the iron curtain about the satellite nations and permit them to have a government which the rest of the world can be permitted to see.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

FREEING THE SATELLITES IS THE TEST OF COMMUNIST GOOD FAITH

In the case of Czechoslovakia, may we take this opportunity to utter words of warning on this, the 11th anniversary of the Kosice of April 5, 1945. The Kosice program in its entirety set the pattern for the future Czechoslovakia, under the control of the national front. Into this front, the political parties with Marxist and socialistic programs were to be included and allowed to participate. Antisocialistic and anticommunistic parties, more particularly the parties from 1919, who were the bulwarks of the nation, were denied participation in the national front. Political leaders were summarily jailed; property was confiscated and divided among the parties of the national front and private enterprise halted. In fact, the program of nationalization was begun and carried out, and the death knell of the democratic parties of the First Republic was sounded.

The Kostice program entailed the giving over of the free and independent labor organizations unto the control of the communistic-dominated organizations, and factory militia was created. Also, merging of organizations including gymnastic societies, control of the school system by communistic doctrines, control of all social and welfare agencies, regulation of religious institutions, control and censorship of the press, denial of the right of peaceful assembly and a host of other suppressions were incorporated in this program. Another bolster to the program was the creation of the socialistic bloc, which strengthened and enforced the decrees of the "National Front."

The national front, with its nationalizing decrees, its factory militia, its destruction of capital and private enterprise by the "Socialistic Bloc," all tended to prepare the way for the communistic putsch. Valerian Zorin, who came to Prague at the command of Stalin had the way well prepared for the eventual carrying out of the putsch.

In no other state overlorded by the Communists was freedom and democracy so completely killed as in Czechoslovakia. This criminal and fraudulent government, prepared after the February putsch, the Constitution of May 9, is no other than living proof of the divestation of democracy in the Czechoslovak Republic.

The Czechoslovak Exiles in Chicago, the largest organization of its kind, herewith recalls the sins and criminal acts of the Kosice program, and warns liberty-loving peoples everywhere not to believe in the Soviet leaders who would blame everything on Stalin. During his life, thousands were jailed and murdered, and today his cohorts have one responsibility, which is to return the freedom of all enslaved nations. They have the power given them by the hands of the Dictator Stalin. Let them demonstrate that they are better than Stalin, not by words, but by deed. The Czechoslovak Exiles not only wish to warn the free world against criminality, but address itself to Stalin's fellow guilty and ask them to banish the freedom-robbing decrees. Also, we ask them to return liberty, democracy and freedom to the enslaved peoples in Czechoslovakia, a freedom which they helped to destroy by the Kocise program and the subsequent putsch.

At a time when the whole world is surprised by the systematic and well-thought-out fraudulent plan of the communistic leaders in the Soviet Union, who are bending every effort to place all the guilt and responsibility upon the the late Dictator Stalin, there can be no doubt for the moment that the program for the restoration of freedom and democracy in the countries behind the Iron Curtain is entering into a new period.

For 8 years, we are in exile, forced upon us by the Soviet dictatorship. Many time we have called attention to the mass murders ordered by Stalin and to those who assisted and blindly carried out his orders. To us, who have counted the murders by this criminal system, it is hard to believe that there are people today who still, in their blind trust in socialism, can believe in coexistence with communism. All those, who today are engaged in the tearing down of the Stalin myth and trying to clear the names of those executed, guilty or not, seem to forget that there are thousands upon thousands who were eyewitnesses to concentration camps, jails and torture chambers.

The time has now arrived for the so-called representatives of the people behind the Iron Curtain to come forth and loudly herald that Messrs. Khrushchev, Bulganin, and Malenkov and others of this bloody Stalinist regime, show good faith, tear down the Iron Curtain, allow free elections, open the jails and forced labor camps, free those charged with political activity against the state, allow religious freedom and lastly, tell the Soviet people the truth.

Recreation Program for the City of Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. NEUBERGER. Mr. President, because of the physical-fitness program now being promoted by the President of the United States and others in Government, I think an article in the June 10 issue of the Northwest Magazine of the Sunday Oregonian is unusually pertinent and appropriate. The title of the article is "Her Work Is Play," by Elizabeth Salway Ryan, noted Oregon writer.

The article describes the career and achievements of Miss Dorothea Lensch, physical education instructor and director of the park bureau recreation program of the city of Portland. Under the supervision of Miss Lensch, an outstanding program of recreation has been worked out for the children and young people of our community. This program not only serves to combat juvenile delinquency, but also improves the mental and physical well-being of our city and State as a whole.

Miss Lensch has had a notable career in the realm of community development and physical education. I ask unanimous consent that the article by Mrs. Ryan be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HER WORK IS PLAY

(By Elizabeth Salway Ryan)

For years Portland's park recreation was a summer project appealing mostly to youngsters. Today the year-around program is for everyone. Responsible for the tremendous growth and the continual stream of new ideas is Dorothea Lensch, director of recreation for the Portland park bureau, a woman who radiates enthusiasm.

Often she is at her desk in the city hall at 7:30 a. m. She likely is the last to leave after helping pack the props about midnight for a show at Washington park or the civic auditorium. Perhaps she held up some of the scenery during the performance. Even the youngest troupers chirp, "Hello, Miss Lensch." Mealtimes frequently see her at some service club speaking on her favorite topic—recreation.

This vivacious brown-eyed dynamo, known to hundreds as Dot or Dorothea, has been interested in activity since her first taste under Richard Gens-Genserowski at Portland's old Turnverein. She relishes every sport but one. When she was small, she once dived into the water and landed on another child. This so upset her she has disliked swimming ever since.

She won the Franklin High School girls' league cup for scholarship, character, leadership, and service. She attended Mills College a year, switched to physical education at the University of Oregon, made every honorary she was eligible for, including Mortar Board and Phi Beta Kappa, and was president of the Women's Athletic Association.

Next came a master's degree at Wellesley and teaching at Rockford College, Ill., and George Washington University. But she dreamed of Portland and at the first oppor-

tunity took the civil-service exam for recreation director.

When she began in 1938, only Montavilla, Sellwood, and Peninsula Parks had centers for winter indoors activities. Seven full-time employees comprised the staff, with thirty-three more in the summer.

She has seen her vision translated into 15 buildings with full- or part-time year-round programs. These include the junior museum, which develops talent in both gifted adults and children; the Soroptimist center, where retired women combat loneliness; the talent workshop for amateurs to acquire poise and the new craft house for those who like art.

Add 3 year-round swimming pools, the Neighborhood House pool, and the 43 parks with summer programs. Many schools contribute their facilities at times. The full-time recreation staff of 55 is joined by 130 more in the summer.

On her expanded menu are everything from checkers and ceramics to skaterball, baseball, and seven-man football. In past days, aside from high school swimming and tennis, girls had little chance to compete. She sees they get competition now in Portland's parks, with softball, volleyball, and basketball added, and they love it.

Most Portland park programs have no sex segregation. All preschool games, rhythms, storytelling, are for both boys and girls. Older boys and girls learn tennis, golf, and dance together.

Once she thought of being a doctor and was accepted at the University of Oregon medical school, several years after becoming recreation director. She had felt the need of an additional challenge. It came—with the attack on Pearl Harbor. Civilian housing units, Vanport, shipyard workers and servicemen all needed recreation.

She got the use of schools, churches, and even store buildings. Vanport had its own centers. They had big Halloween parties and posted records of no vandalism.

Her own recreation few would call relaxing, for it is the strenuous modern dance. As a college senior she acted the swaggering Goliath in a dance recital when Martha Hill was the teacher. Later she studied under Martha Graham, and spent a summer in Germany with Mary Wigman.

Since her return to Portland, she has led a modern dance group. Several of these women have been with her since the beginning and share expenses of an accompanist. Like them, she is unhappy when she can't attend Monday evenings. They have danced at the art museum and in operas at Washigton Park.

"In presenting a technique in movement, she never analyzes an individual or singles one out who may be performing the movement ineffectively," said Mrs. Ione Walker, Washington high physical education teacher and member of the group.

How does Miss Lensch add to Portland's recreation? Sometimes it begins with a call: "We need a recreation center."

"I'll see what I can do," says the friendly director.

Mayor Fred L. Peterson was in charge of the park bureau several years as commissioner, and often sees this phrase become action. He told of the St. Johns recreation hall which belonged to Oregon Shipyard:

"At the close of the war, when this building became surplus, Dorothea came to me with the idea it could be moved and re-erected at much less than its original cost ($400,000) or present value. It cost the city $1,500, plus the cost of moving and re-erecting in St. Johns.

"She helped organize a group of St. Johns citizens headed by the St. Johns businessmen and the St. Johns Optimists. They raised some $4,000 to help furnish the building with the necessary ranges, chairs, curtains, etc."

As for the junior museum, Mayor Peterson said Dorothea worked with the junior league in starting the project.

"She conceived the idea that the old Jacob Kamm home, vacant and owned by the school board, where now stands the Lincoln High School, would be suitable for a junior museum. Today the junior museum is quite a project at Southwest Second Avenue and Hood Street."

After the vacated South Portland branch library was turned over to the city, Miss Lensch saw to its transformation. It is now the craft house, used for demonstrations, exhibits, and as a workshop for arts and crafts.

Furnishings for these buildings never come from taxes. So Miss Lensch, a poised, efficient organizer, visits service clubs.

"We have a community center for you now," she says. "We will staff it, but we need your help. We need furnishings and equipment other than the bats and balls the city supplies." They respond.

The Active Club provides awards for the annual Swimathon. The American Legion sponsors the Junior Olympics. The Peninsula Kiwanis initiated the Golden Ball basketball tournament. It outgrew them, but they still serve as officials and give medical examinations.

The downtown Portland Lions bought a pony for the youngsters at the junior museum. The Optimists supported junior teams and bought uniforms. Outstanding high-school girls advise and officiate for grade-school groups and contests.

After a study, the Soroptimist women found that many older retired women were living alone and hungry for companionship. As a member, Miss Lensch shared in the decision to pay about $2,000 yearly for the Soroptimist center at SW. Third Avenue and Salmon Street. The park bureau staffs it.

Before the first world softball championship came to Portland, Mayor Peterson went to Houston. "Part of the material which helped me secure the championship," he said, "was Dorothea's fine outline as to the manner in which the team would be cared for and the type of recreation and entertainment planned for them. The fact that she is a national figure in recreation added great credit to her program. Because of the manner in which it was handled, for the first time in the history of amateur softball the tournament was split up, and the women came to Portland in 1949."

They came again in 1955.

Miss Lensch takes an active part in recreation and AAU conferences, and is a member of the national PTA board. Others often come to Portland to study her formula for successful recreation. In 1951, the State Department sent her to Germany for 4 months to help organize a recreation program.

She loves to travel, but even her vacations, such as her flying trip to South America, turn into tours to see how others handle recreation.

If she isn't speaking at some service club or on the radio, perhaps she is appearing at a high school career day or at a college.

Anyone who has watched her on the job, sometimes 7 days a week, will agree with Mayor Peterson:

"Dorothea has been, is, and will always be planning, thinking, and working for something bigger and better to improve the recreation facilities for the people of the city of Portland."

Why I Am Dedicated to Teaching

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay entitled "Why I Am Dedicated to Teaching," written by Gertrude M. Geraghty, and published in the Tennessee Teacher for May 1956. It is the prize-winning essay in the contest held by the Lion Oil scholarship fund, and I am certain it will be appreciated by teachers and by members of parent-teacher groups who may read it.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

WHY I AM DEDICATED TO TEACHING

(By Gertrude M. Geraghty, teacher of English, Memphis Technical High School, Memphis, Tenn.)

My early years of teaching were carefree and happy. I enjoyed my work but certainly had not the faintest idea of dedicating my life to it. A husband, home, and children were foremost in my dream of the future. When I was 30, I decided that being a wife and mother was not God's plan for me, or in some way I had muffed my chance.

I settled down, not bitterly, not hopelessly, to forget my lost romance in the training and educating of other people's children. Since I was to have no children of my own, what better lifework could I choose? As the years went by, I began to see and to feel the significance of my job. God expects everyone, I reasoned, to render an account of his talents. He will expect me to do the best job of teaching that I am capable of doing.

I must never lose sight of the fact that I am dealing with the most precious of all commodities, human beings; that subject matter, techniques of teaching are valueless if I forget the child in my teaching. With the realization of this fact, my work became important to me. It was not a new job but a different slant on a familiar one. It put life and meaning into my work. I did not feel like a crusader, however. I have never kept my eyes and mind so close to my profession that I have had no time for the interesting things on the outside.

It is remarkable how much one can enjoy his work if his heart is in it. The joyless, drab, monotonous task becomes an adventure. I am always annoyed with the well-meaning person who says: "Oh, you must have loads of patience. I don't know how you put up with so many bad children day after day. My own boys nearly drive me crazy." I try to point out to her that children are not bad—at least not every day—that there is a pattern of classroom behavior to which most children conform. I see I am throwing words away; she is "of the same opinion still."

Are we teachers not somewhat to blame for the pitying attitude some people adopt? Have we unconsciously developed a long-suffering, "down-at-the-heel" air? Do we need anyone's pity? Have we the pride in our profession that we should justly have? Most teachers today are smartly dressed, well-groomed, interesting women who are taking important places in the life of the community. We should really put a higher value on ourselves.

In what other profession would I have so much adventure, so much romance? In what other job would I have the chance to stay young with young people, for every day I live their lives, vicariously. To get the confidence of the boys and girls in the classroom, to feel that one has a part in molding the future citizens of our country—these two facts alone make a teacher's life worth while.

I can see that teaching subject matter, day after day, year after year, could become deadly monotonous. If we aren't getting joy out of our teaching, then we certainly aren't giving any. The teacher's gaiety is as necessary to her pupils as sympathy and understanding. Not every Monday is blue Monday, and there is always "Friday, thank

God." The teacher's whole soul must be bent on making her pupils come alive. She must be a master salesman, and the competition is keen. To prod the lazy, to lure the difficult, to encourage the slow, and to guide them all, she must possess the charm of a Cleopatra, the wiles of a Machiavelli, the patience of Job, the gentleness of St. Francis, and the wisdom of Solomon.

In our little world at school, every day is a fresh beginning. The discourteous boy who disrupted yesterday's class has apologized; the truant has returned repentant. The day is made new for all of us, for I have another chance also. What a challenge the new day brings; what a feeling of adventure. The boys are spick and span in uniform today, brass shining, shoes polished. They sit up straight with new dignity. The girls look fresh and pretty. All are watching me; they are giving me a chance to make good. I must not "goof." "Dear Lord," I breathe, "make me patient and gentle and wise, and help me to keep a sense of humor." My Irish sense of humor has helped me over many a difficult spot. Only a few days ago, a boy in one of my senior English classes remarked, "Miss G., I never cut your class. We get a kick out of this class. You are so human; you make us laugh. You ought to be on TV. No kidding." I must watch my witty remarks. They so easily become sarcastic, and children have no defense against sarcasm.

I hope I do not sound smug or complacent. My mistakes are legion. I do not always plant a flower where I find a weed growing. Sometimes the weeds seem to take over, but when, if ever, does a teacher really enjoy the feeling of having succeeded? I am often discouraged and disgusted, but just one word of praise from a superior or a word of appreciation from a pupil or parent will completely restore me.

"And then my state, like to the lark at break of day arising
From sullen earth, sings songs at Heaven's gate."

Like the immortal bard, I then scorn to change my state with kings.

I feel a great pride in my profession. Like Stevenson, I could not live without my art. I believe with Jesse Stuart that "The schoolroom is the gateway to all the problems of humanity." It is the gateway to the correcting of evils; it is the gateway to happiness, to health, to brotherhood, to everything. And so I am happy to dedicate myself to the greatest profession of mankind. Even if it is the most poorly paid in dollars and cents, it is the one with the richest rewards.

And So, Mr. Butler, Let's Not Talk About Our Operations, Please

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. VAN ZANDT. Mr. Speaker, Mr. Robert Boyer, editor of the Altoona (Pa.) Tribune, in the June 13, 1956, issue, has the following editorial comment regarding the constant harping of Paul M. Butler, chairman of the Democratic National Committee, in his frenzied efforts to belittle Presidential Press Secretary James C. Hagerty's efforts to keep the American people fully informed on the recent illness of President Eisenhower:

"NOW, ABOUT MY OPERATION—"

Mr. Paul Butler, chairman of the Democratic National Committee, Tuesday accused President Eisenhower's associates of reporting on his illness "in terms of propaganda."

Mr. Butler was especially irked by what he said was the practice of Mr. James C. Hagerty, Presidential press secretary, as trying to picture Mr. Eisenhower as a better man because of his recent illnesses and operation.

We do think Mr. Butler is treading on dangerous ground. It may have escaped his notice that two current top Democratic aspirants have had recent operations. Gov. Averell Harriman of New York is recovering now from a glandular operation, and Mr. Adlai Stevenson had a gall bladder operation not long ago.

Mr. Stevenson apparently is in better health than ever, and has been campaigning vigorously, no one, so far as we've heard, even hinting that his operation was a detriment to his campaign, or made him in any way ineligible for the presidency.

And, as for Governor Harriman, his operation was hardly over until he announced formally his candidacy. Again, no one has suggested that an operation has put him out of the running.

It seems reasonable to suppose that the operations were performed on all these men because in the judgment of their doctors, such operations were necessary to continued good health and life.

The President's ileitis not only has introduced a new word to the lay public, but also, from the considerable medical explanation given variously on the subject, apparently is the culmination of a condition which could have rendered him in poor health for an indefinite period; and now, with correction of the difficulty, may place him in better health than he has been for some years.

All this at least is as reasonable to assume as it is that both Governor Harriman and Mr. Stevenson now will be in normal health because of their operations.

And so, Mr. Butler, let's not talk about our operations, please.

Farmer Carroll Gets Help

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Indianapolis Star of May 20, 1956.

The editorial tells the story of a Florida farmer who refused to sign a crop-acreage report on his own farm at the insistence of the Federal Department of Agriculture. He was promptly put into jail.

The editorial writer of the Star sees to the heart of the matter, when he says that such actions by Federal bureaucrats are, in fact, a claim to Government ownership rights in the land, transcending the rights of the individual who bought and paid for it. The so-called private owner may retain the appearance of a title to the land, but he is in fact being transformed into a serf.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Indianapolis Star of May 20, 1956]

FARMER CARROLL GETS HELP

Walter T. Carroll, a farmer in northern Florida, was helped by the Federal Government last Saturday—right into jail. Carroll, who believes that he and nobody else is the owner of his farm, was sentenced indefinitely for contempt of court after refusing to sign a crop acreage report for the United States Department of Agriculture.

The Federal view is that when a lot of farmers in a district go along with acreage allocation agreements, you just can't let someone like Carroll upset the turnip cart by refusing to certify whether he has 10 acres of sorghum hidden on the west 40. Carroll's view is that it is none of the Government's business.

We think Carroll is right.

It may very well be that the voluntary cooperation of farmers in allocating acreage to various crops is a good thing for the agricultural economy. It may be also that the United States Department of Agriculture is the logical agency in which to center such cooperation. But when jail or the threat of jail takes the place of voluntary action, that is something else again.

Such measures as were taken in Florida represent in effect a claim to Federal ownership of farm lands transcending the ownership of the individual farmer. Under this theory, the farmer is left in possession of the land he thinks is his—except when he goes to jail—and is allowed to take the profit from it, if any. He is even allowed a certain measure of self-determination in what he will plant.

Let the serf get to feeling uppity, however, and decide that what he does on his own farm is his own business, and he soon finds out that he had a senior stockholder looking over his shoulder all the time, ready with a club to enforce that economic magic called "compliance."

The fact that Carroll went to jail for asserting one of the primary rights of ownership should surprise no one who has studied the course of Federal assistance in various fields. No matter how pure the motive in the beginning, Federal aid means creeping Federal encroachment on the rights of States and individuals alike. Bureaucratic control feeds on itself until in the end anyone who opposes it comes to be regarded as against the common interest, and therefore an enemy of society.

We suspect that something of this kind was in the mind of Midwestern farmers recently interviewed by Gallup poll representatives. The farmers were reported to be lukewarm to the proposed soil-bank plan, many of them tending to think of it as another instance of the Government "trying to tell me what to do."

They have had enough of that, and who can blame them?

The mere existence of any Federal farm program calls for a certain measure of control from Washington. In the soil-bank plan, for instance, the participating farmer cannot be given an entirely free hand in deciding which of his acres he will retire from production. The Federal Government must make sure he is not cheating.

This, in theory, protects the bulk of the taxpayers, whose money is going to help support the farmer. In bureaucratic practice, it creates an opening wedge for regulation piled upon regulation. Ultimately and inevitably, as the program becomes a fixture of agricultural life, the demand will grow among the Socialist-minded to enfore compliance upon the few rugged individualists who believe that they have a right to do as they please with what is theirs.

We hear a great deal in this election year about the so-called farm revolt, but it is mere chicken feed beside the real farm revolt that may come one of these days if the farmers discover that bureaucracy is on the way to making Walter Carrolls out of all of them.

Corporate Accounting Standards Under Federal Securities Laws

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address entitled "Corporate Accounting Standards Under Federal Securities Laws," delivered by Mr. J. Sinclair Armstrong, Chairman of the Securities and Exchange Commission, Washington, D. C., before the 18th annual institute on accounting of the Ohio State University, at Columbus, Ohio, on May 17, 1956.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

CORPORATE ACCOUNTING STANDARDS UNDER FEDERAL SECURITIES LAWS

(Address of J. Sinclair Armstrong, Chairman, Securities and Exchange Commission, Washington, D. C., before the 18th annual institute on accounting of the Ohio State University, Columbus, Ohio, May 17, 1956)

It is a great pleasure for me to have the opportunity to address the 18th annual accounting institute of the College of Commerce of Ohio State University on the subject of corporate accounting standards under the Federal securities laws. The 18 years during which this great university has annually sponsored this 2-day gathering of distinguished scholars, practitioners, and students in the accounting field are the years in which the great evolution of accounting standards has occurred, under guidelines and standards set by the acts of Congress administered by the Securities and Exchange Commission.

Parenthetically, may I say, as a member and Chairman of the Securities and Exchange Commission, I feel a close relationship with Ohio State University, in this way. As an independent agency, the Commission is by statute under the surveillance of two standing committees of the Congress. In the Senate the committee which watches over the Commission is the Committee on Banking and Currency, of which your trustee and distinguished Senator, JOHN W. BRICKER, is a member. In my talks with him from time to time he has often spoken of his great interest in the growth and accomplishments of Ohio State University, and of its College of Commerce, under whose auspices this accounting institute is held.

Before discussing accounting standards as such, I want to emphasize the great importance the accounting standards developed under guidance of the Securities and Exchange Commission, with the aid of the profession, over the past quarter century have had for the economy of America, and hence for the people of America. Good accounting is the essence of financial reporting. Good financial reporting to investors and security holders is the only way by which the public can be put in a position to make intelligent investment judgment. There are at the present time 2,238 issuers required by the Securities Exchange Act of 1934 to file financial reports with the Commission because their securities are listed and traded on national securities exchanges and 1,104 additional issuers required by the Securities Act of 1933 to file such reports because of having made public sale of their securities in interstate commerce. The development of the enormous body of financial information, by reports prepared under the accounting standards of the Securities and Exchange Commission and in accordance with accounting principles deemed by the accounting profession to be generally acceptable, with respect to these listed and publicly financed corporations has been a vital factor in the restoration in the past few years of investor confidence in the securities markets. This confidence was badly shaken in the 1920's and early 1930's, as a result of abuses in the securities markets. On continued public confidence in the securities markets of the country depends the ability of the privately owned system of productive enterprises to raise the capital which will be needed in enormous amounts to finance the industrial expansion required for our increasing population and higher standard of living in the years immediately ahead.

The capital requirements of American industry in the next decade are expected to be very much greater than those of the years just passed, but let me tell you of them briefly to give you a glimpse of the enormous amounts of money involved.

In the year 1946 to the present, new records for industrial expansion were established and for public financing by business corporations. In this period business corporations spent $52 billion on increases in working capital and $196 billion on plant and equipment. The corporations obtained $178 billion of the funds required from internal sources, retained earnings, depreciation accruals, and the like, but raised $63 billion of new money (net of retirements) from the sale of new securities and bank and mortgage financing. Furthermore, of the securities sold, 22 percent were equities, that is capital stock. The confidence of the investing public in the securities of corporations can only be based on sound financial reporting. With that confidence continuing the enormous amounts of capital funds which must be channeled from the savings of the American people into our privately owned corporate enterprises will be raised and our free-enterprise system will advance in accordance with our expanding needs.

With this larger orientation, now let me come to the more specific area of discussion, corporate accounting standards under the Federal securities laws. These are the laws administered by the Securities and Exchange Commission.

The rapid increase in the use of corporate forms of organization and the great size to which some corporations have grown, with the accompanying subdivision of ownership and the separation of immediate control of operating policies from the stockholder owners, have made reliable accounting reports a vital necessity for managerial control and investment management. While investors cannot expect to obtain from financial statements all the information necessary to the exercise of investment judgment, nevertheless financial statements come close to being the only common measure of comparison of different companies and are the basic sources of all financial information.

Accounting and financial information plays an important part in all of the work of the Securities and Exchange Commission. In the administration of the Securities Act and the Exchange Act accounting plays a most important role. These acts have had the greatest influence on the development of the present character of corporate accounting standards. The important role accounting plays in the administration of the Securities Acts is foreshadowed in the acts themselves.

The title of the Securities Act states that it is "An act to provide full and fair disclosure of the character of securities sold in interstate and foreign commerce and through the mails, and to prevent frauds in the sale thereof, and for other purposes."

It is designed to make available to investors the business and financial facts deemed by the Congress to be necessary for the investing public on which to base an informed judgment as to whether to buy new issues of securities being offered.

The title of the Exchange Act states that it is "An act to provide for the regulation of securities exchanges and of over-the-counter markets operating in interstate and foreign commerce and through the mails, to prevent inequitable and unfair practices on such exchanges and markets, and for other purposes."

This law provides for, among other things, the filing by listed companies of periodic financial reports. It provides for regulation by the Commission of solicitation by listed companies of proxies from their stockholders. It requires brokers and dealers to maintain certain records and file certain reports with the Commission. All of these provisions in most instances require the filing of financial statements certified by independent accountants. The aim of this legislation is broader than that of the Securities Act in that it is to provide the information to be used by the investor in determining what securities to buy, hold or sell. It also contains regulatory provisions regarding the stock exchanges and the over-the-counter markets.

The enactment of the Federal securities laws and the establishment of an administrative agency, the Securities and Exchange Commission, to effect recognition of the investor's interests have created unusual demands on accounting and the accounting profession and have had a forceful impact on the trend of accounting thought and development of reporting techniques. Under these laws the fundamental basis of regulation is disclosure—disclosure of all pertinent information concerning the securities and the issuers. Neither the Securities Act nor the Exchange Act gives the Commission authority to pass on the merits of any security or to approve or disapprove any security. For this reason, these laws are called disclosure acts. They also include vital antifraud provisions.

The components of a matured investment judgment are not susceptible of exact mathematical determination. Particular facts which induce the investor to buy or sell or hold are often extraneous to the business itself or even the industry. Judgement as to the future of the industry or the competitive position of a company in its industry, or judgement as to the ability of the management may be the immediate motivating force in reaching an investment decision. Such a decision to be an informed judgment, however, could be made only after an analytical study of the available financial information.

The backbone of the information to be used in arriving at such a decision is the operating history and financial position of the corporation as reflected in its financial statements. This is basic information. This factual information is the starting point for any analytical study, whether it be to review the operating efficiency of the company, to appraise its financial position or the caliber of its management, to formulate business plans, such as for expansion, retrenchment, or direction of sales effort, or for investment analysis.

The statements required in the Commission's forms are the conventional balance sheets, income and surplus statements, and certain supporting schedules. The registra-

tion statement forms for new issues of securities usually require 3-year income and surplus statements, and in the prospectus to be delivered to the investor a summary of earnings for an appropriate period, usually not less than 5 years.

The form and content of the required financial statements are set forth in the Commission's accounting rules, known as regulation S–X. This regulation does not purport to define accounting principles. It merely defines the extent of the detailed information required in conventional terminology and present accounting practice. It was worked out with the advice and cooperation of the accounting profession, and is under constant revision in the same spirit of cooperation.

The Securities and Exchange Commission has often been importuned to write accounting principles into regulation S–X. We have even been petitioned to adopt rules requiring corporations to conform to advanced accounting theories, such as economic depreciation. But the Commission has wisely left the development of accounting principles and practices to the accounting profession and the educators. This approach has been urged upon us in the past by leaders in both the practicing and the academic sectors of the profession.

This does not mean that we have abdicated our authority or delegated it to the accounting profession. The Securities Acts give the Commission authority to require financial statements certified by independent accountants. In most instances we require that the statements be certified by independent accountants and we have taken steps to insure that the accountants will be independent.

Likewise, the Securities Acts require that a broad schedule of information be furnished and leaves the Commission a wide latitude as to the amount of detail to be required, even to defining the method to be followed in the preparation of the reports. Section 13 (b) of the Exchange Act states:

"The Commission may prescribe, in regard to reports made pursuant to this title, the form or forms in which the required information shall be set forth, the items or details to be shown in the balance sheet and the earning statement, and the methods to be followed in the preparation of reports, in the appraisal or valuation of assets and liabilities, in the determination of depreciation and depletion, in the differentiation of recurring and nonrecurring income, in the differentiation of investment and operating income."

But the Securities Acts do not attempt to define corporate accounting standards to be used in writing those rules and regulations. They do not even mention accounting principles. These matters are left to the discretion of the Commission.

Consequently, while our regulations use generally accepted accounting terminology and we expect financial statements filed with us to be prepared in accordance with generally accepted accounting principles and practices, as we believe that this will best indicate their significance and character, we are in no way limited to accepted accounting practice in obtaining such information as we deem necessary or appropriate for investors. Many requirements in regulation S–X were not required by generally accepted practice at the time the rules were adopted. For example, rule 3–19 of regulation S–X requires disclosure in footnotes of assets subject to lien, intercompany profits and losses, defaults, terms of preferred shares, pension and retirement plans, restrictions on the availability of surplus for dividend purposes, and contingent liabilities. Likewise, rule 3–20 requires disclosure of installment sales, intercompany profits and losses, depreciation and amortization policies, and stock options to officers and employees.

The Commission's staff has recently made a study of the stockholders reports of some 1,200 unlisted companies which have at least 750 stockholders of one class and $2 million of total assets. This study showed that while about 85 percent of the reports gave a complete set of financial statements, that is, balance sheet, income, and surplus accounts, and generally followed accepted accounting principles and practices, at least 50 percent of them failed to give the type of information I have just mentioned.

Even more important than the extent of the detail of information required or the endeavor to obtain adequate information is the accuracy and integrity of the information obtained. The Commission attempts to restrict the financial statements to pertinent factual information and to avoid the inclusion of forecasts or evaluations of securities. It is the Commission's practice to test the information furnished for substantial truth and accuracy but to leave the investor to draw his own conclusions.

Financial statements filed with us are required to be prepared on the historical cost basis as determined by conventional accounting practices. They are in most cases required to be certified by an independent public accountant. Under both the Securities Act and the Exchange Act, the corporation filing must sign the registration statement or annual report through an authorized officer. In addition, in a registration statement under the Securities Act the principal executive officer, principal financial officer, and principal accounting officer, and a majority of the board of directors must sign the registration statement. The management is therefore responsible for the preparation and reliability of the financial statements, which are required to be reviewed independently by accountants who are not connected with the business. Thus there is a dual responsibility imposed upon both management and independent accountants for the financial statements. This dual responsibility is not satisfied if the accountant is not independent as defined in our rules and regulations, or if the management has left its accounting responsibilities to be performed by outside accountants. This does not, of course, prevent the management from relying on the report and audit of an independent accountant to the extent that they may legally rely upon the report of an expert.

Although we discourage persons filing registration statements and other statements and reports from including evaluations of the security being offered and forecasts of earnings, we do not underrate the importance of current values, economic and financial analysis, and interpretations and forecasts. But we consider that these are beyond the scope of financial statements and of the basic factual information required by the Securities Acts under their disclosure standards. A sharp distinction should be drawn between the presentation of factual information and interpretations, forecasts and conclusions. As a general rule, for a person preparing and certifying accounting data to go beyond factual information detracts from the reliability, integrity and usefulness of the report.

It is because the Commission considers the integrity and accuracy of this basic financial information of first importance that it has throughout its existence resisted the pressure to accept the reflection in financial statements of departures from historical cost. By historical cost is meant the appropriate cost basis as determined by conventional accounting practices and techniques. There are many problems connected with determination of historical cost. We do not, however, object to showing in a proper manner factual evidence of increases in value of assets during the time held by the corporation, or the effect on the operating results or financial position of changes in price levels.

While, in general, we adhere to the historical cost principle, we also have to deal with all problems which come before us in the regular course of business. For example, in certain instances we have not objected to the determination of an appropriate initial carrying value in excess of cost to the last purchaser in situations in which historical cost principles were deemed not to apply. These situations are concerned with the determination of original carrying value, usually to a new corporation under circumstances approaching arm's-length bargaining, and where the value of the assets in question have been substantiated by appropriate means. We do not, however, consider these determinations as judgments of principle, but rather as interpretations of conflicting principles. We do not consider them necessarily as precedents, but as each such problem arises we consider its own merits. We have indicated in recent discussions with representatives of the accounting profession our desire to review this area of accounting thought to determine whether a satisfactory expression of the principles could be developed.

In summary, the main aim of the Securities Acts is good financial reporting. Accounting does not encompass all financial reporting, but it is the backbone of financial reporting and is of vital importance in the administration of the Federal securities laws. It is most significant for corporate accounting standards under the Federal securities laws that the accounting profession, industry, and the Securities and Exchange Commission have cooperated in the development of appropriate standards of reporting and disclosure to meet changing conditions. This progress must continue if the confidence of the American people in the corporate securities markets is to be earned in the years ahead, and this, as I stated at the beginning of these remarks, is of vital importance to the continued success of our free-enterprise system.

Shipping and the Seaway

EXTENSION OF REMARKS

OF

HON. A. D. BAUMHART, JR.

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. BAUMHART. Mr. Speaker, I wish to call to the attention of my colleagues the lead editorial appearing in today's Cleveland Plain Dealer. The legislation referred to in this editorial is S. 3108, which has passed the Senate, and H. R. 8886 and other similar or identical bills, which are under consideration in the House Committee on Merchant Marine and Fisheries.

As the sponsor of H. R. 8886, I am delighted to see that the powerful voice of the Plain Dealer has come to the support of this much-needed legislation. I hope that, in the very near future, the House will have an opportunity to record its approval of it, in the interest of our domestic economy and our national defense.

The full text of editorial follows:

SHIPPING AND THE SEAWAY

Not in all corners is there unbridled optimism about the St. Lawrence seaway. Great Lakes shippers, operators of the famil-

iar ore and grain carriers, are apprehensive of losing trade to foreign lines in time. There appears genuine grounds for such fears, since a number of European outfits are making noises as if they were about to tackle the opportunity.

It is a chance which does not exist today. Ore movement on the lakes is a coastal proposition, strictly controlled by law. Our ships for example, can pick up ore in this country and freely deliver either in the United States or Canada. But we cannot haul Canadian ore to a Canandian port, and by the same token no Canadian vessel can engage in direct competition here.

Geographically, of course, it has been impossible for anything save Great Lakes-built vessels to engage in such service. However, as Mesabi deposits peter out, it puts much greater emphasis on the need for Labrador ore via the seaway. Movements in that direction inevitably will boom, and as things stand there is nothing on the books to bar anybody from entering this new international trade route.

The bugaboo is the same one that has perpetually plagued American shipping—low costs of shipbuilding abroad and their fractional operating expenses, brought about by low wages to seamen.

We often hear of complaints from America's merchant marine about this competition, and the Government tries to alleviate or equalize the situation by both building and operating subsidies. The policy dates back to 1936 and the Merchant Marine Act of that year. Those Government payments neither guarantee profit nor insure against loss. They can be likened to a golfer's handicap, designed to provide equal opportunity.

For lake operators, though the situation is not precisely comparable even with the opening of the seaway. Unfortunately the Merchant Marine Act specifically excludes lake ships from construction or operating differentials, because such aid is restricted to common carriers. Which the lake bulk ships definitely are not.

Compounding the predicament is the fact that America's ore fleet is perilously close to obsolescence. By 1960 better than 213 or 62 percent of the 343 lake vessels will be 50 or more years old. Since World War II only 25 new ones have been built; not one is presently on the ways. Simultaneously, the Canadians have added 223,000 tons of carrying capacity to their fleet, a move spurred by a Government tax fillip whereby 33⅓ percent of the capital cost of ship construction can be depreciated in any one year.

As a spur to building new ore ships, a bill now pending in Congress calls for trade-in allowances on old freighters. It would equalize the difference in cost of building a new ship abroad or here. The measure has passed the Senate but is facing opposition in the House.

There ought not be any objections. Ore freighters are an absolute essential in time of war and constitute a key arm of our national defense. Experience of past wars has been that European-operated ships run for home immediately, which could leave this country worse than high and dry if it lacked a fleet of ore carriers.

We grant depletion allowances for raw material producers, accelerated tax writeoffs to defense industries and assorted help to the economy as a whole. Already the Government protects a major segment of American shipping against competition abroad. While the Plain Dealer has not looked kindly upon subsidies generally, there should at least be consistency about them. The lake shippers deserve a fair share as much or more than anyone else.

Spies: France Nets Some Small Fry

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the National Review for June 6, 1956, by Philippe Ragueneau.

The article reports the recent trial in France of four persons accused of involvement in the leakage of military secrets of the Indochina war to the Communists.

As usual, the meshes of the law caught some minor officials involved, but no top officials were convicted.

Mr. Ragueneau was a distinguished soldier in the ranks of the Free French Army, and rendered signal service to the allied cause by his work behind the lines in France.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPIES: FRANCE NETS SOME SMALL FRY

(By Philippe Ragueneau)

ULTRASECRET DECISIONS OF THE FRENCH INDOCHINA HIGH COMMAND WERE KNOWN TO THE COMMUNISTS WITHIN HOURS—AND THE HIGHLY PLACED TRAITORS ARE STILL AT LARGE

In a warm Parisian summer dawn the roar of the presses in a printshop on the Rue Poissonnière drowned out the voices of the workmen stacking copies of l'Observateur. They little knew that they were handling dynamite.

Two hours later news trucks delivered the weekly. This particular issue carried prominently, under the signature of Roger Stéphane, an article containing the essential facts from an ultrasecret report presented 6 days earlier by General Navarre to the National Defense Committee.

The notorious affaire des fuites ("the case of the leaks") had started.

At the trial which followed, General Navarre, commander in chief of French forces engaged in the Indochina war against the Viet Minh, was to say: "My first reflex was to demand the opening of a judicial inquiry. But on further reflection it appeared to me that it was best to find out how l'Observateur got its information."

In any case, the Viet Minh knew by now what to expect. To the French Cabinet, meeting in closed session, General Navarre had said: "I cannot defend Laos if the Communists choose to attack it." And it was in the direction of Laos that the Viets surged next.

On November 24, 1953, in the rostrum of the National Assembly, Emanuel d'Astier de la Vigerie, Progressive (Communist-dominated) deputy of Ille-et-Vilaine, cited a secret telegram which dealt with the EDC and which was addressed by the French Ambassador in London to the French Ministry of Foreign Affairs. Two days later l'Observateur drew from this material for a sensational article. (The inquiry later disclosed that the text used by d'Astier de la Vigerie did not come from the Quai d'Orsay but, once again, from the National Defense Committee.) In the trial, examining Magistrate Duval was to find the Observateur article "more precise and more complete" than the remarks of the crypto-Communist deputy. In other words, l'Observateur did not get all its information from d'Astier.

The situation in Indochina continues to deteriorate. The bell has begun to toll at Dien-Bien-Phu. On May 7, 1954, the heroic garrison is overrun.

In Paris, the leaks continue. The decisions of the Committee in its May 14 and May 15 sessions find their way, in summary form, to the Communist Party.

On May 25, 1954, Generals Ely, Salan and Pélissier report to the Committee on their mission of inspection in Indochina. May 27, l'Observateur publishes a story ("the report of the generals") which is exact in every detail.

On May 29, Express—the Mendès-France weekly—runs a story which completes the information in the Observateur article.

On June 28, General Ely reports to the Committee again. The question under discussion: the dispatch to Indochina of le contingent, the French military service draftees heretofore exempt from service in Indochina. On July 8, l'Observateur writes: "Will the contingent leave July 21?" And what follows is a faithful recounting of the Committee meeting.

President Coty is enraged. The committee room is searched with a fine-tooth comb. Police investigate the backgrounds of the typists and telephone girls. But on September 14 it is apparent to all that the committee deliberations of September 10, despite all precautions, have again passed through closed doors.

Four-way dash

This time action must be taken. Public opinion is aroused. The nation is indignant. Act? But since July 30, 1953, all of the competent police services have been in action—which is to say, too many. Since the case deals with leaks abroad of military secrets, discovered in Paris and attributed to "spies of a political organization," four police bodies are involved:

The Service of Exterior Documentation and Counterespionage (SDECE), since foreign contacts are involved;

Military security, which is run by the Ministry of National Defense, because military secrets are involved;

Department of the Surveillance of the Territory (DST), headed by M. Wybot and attached to the Sûreté Nationale (Ministry of the Interior), because the search is for a spy;

General Information Service, a unit of the Prefecture of Police, because a French political organization is on the suspect list.

Inevitably, this dispersion of authority results in interservice rivalries. Each group follows its own trail. Each hopes to wear the winner's laurels. And in the final dash each service will tread on another's heels. Which of them will furnish the papers with their first headline?

It will be M. Wybot's DST. On the morning of September 18, 1954, Police Superintendent Jean Dides leaves the Ministry of Tunisian and Moroccan Affairs. He heads toward his car, parked on the rue de Lille. Suddenly, six inspectors surround him. "Follow us," they order.

Dides is astounded. "Whom do you think you are talking to?" he barks. An unfortunate gesture of someone—and a brawl develops. Dides, a judo champion, knocks two of his assailants to the ground. But from a nearby doorway, reinforcements surge. Overpowered, Dides resigns himself to follow his "kidnapers" (colleagues) to the headquarters of the DST on the rue des Saussaies. There, his briefcase is searched. In it is found the report of the deliberations of the Central Committee of the Communist

Party, which contains a long discussion based on the National Defense Committee meeting of June 28.

The DST has triumphed, and Dides is furious. He has patiently built an anti-Communist net which operates—the DST knew this well—in liaison with the "rival" service organization, the Prefecture of Police. Dides thunders: "I was on the right track and you are trying to steal it from me." He explains: The documents in question were given to him, the night before, by one of his agents, Baranès, a journalist on Libération—a Progressive daily run by d'Astier de la Vigerie.

Baranès tries to flee, is arrested and announces he will talk. What he says has the effect of a bombshell. "Jean-François Mons, Secretary General of the Committee of National Defense," Baranès tells the police, "takes notes at committee meetings. He is the only man authorized to do so. His own chief clerk, René Turpin, then passes on the substance of the notes to another committee employee, Roger Labrusse, a bona fide Communist who has converted Turpin to pacifism. Labrusse, who believes me to be a Communist, because I write for Libération, passes on these documents to me. I give some crumbs to the Communist Party, to cover myself, and the rest to Dides."

A formal inquiry into actions "endangering the external security of the state" is opened September 18, 1954, the evening of the day on which the DST seized Dides.

The public soon discovers that Martinaud-Deplat, a former Minister of the Interior, first learned of the "leaks" when he read a Baranès report which reached his desk through the Dides-Baylot channel. (Baylot was then prefect of police.) Martinaud-Deplat alerted the Premier—at that time it was Joseph Laniel—and early in June 1954 the investigation was turned over to M. Baylot.

But a few days later (June 12) Laniel falls. Pierre Mendès-France succeeds him. At the Interior Ministry, François Mitterand replaces Martinaud-Deplat. At the trial, Mitterand will complain bitterly that no one told him of the leaks. But once he finds out his first action is to withdraw the dossier from Baylot and the Préfecture, and give it to Wybot and the DST.

Like nails in a row, one Premier follows another, one team of ministers another, one group of police another. We have seen how the DST, upon entering the game, had immediately "burned" the Dides-Préfecture network and taken over the Baranès contracts—to its own profit.

Two million words

After 18 months of investigation, "l'affaire des fuites" reaches court. The trial opens March 7, 1956, before the Military Tribunal of Paris. The dossier contains 1,854 documents, 67 sworn statements, a 2-million-word gusher—with as many contradictions.

Four defendants stand at the bar: Jean-François Mons, who will answer to charges of "grave negligence"; Turpin, Labrusse, and Baranès, indicted for "endangering the external security of the state." (L'Observateur is to be tried separately before the criminal court which deals with the misdeeds of the press.) D'Astier de la Vigerie, whose parliamentary immunity has not been withdrawn, will be summoned as a witness.

From the first day of this trial, intended to throw light on the subject, dark shadows invade the court. No person agrees with any other, nor is there agreement on any single event or fact.

Mons? Wybot will say "he is the No. 1 spy." But 10 generals and Marshal Juin himself will come forward to testify that "Mons is above all suspicion."

Baranès, the Newspaperman? For Baylot and Dides, he is a "loyal informer." For Mitterand, former Minister of the Interior, he is a Communist Party agent, who duped Dides and "intoxicated" the prefecture and the Government with false clues. According to Wybot (DST), Baranès is even a triple agent, selling his information to the highest bidder. As for Baranès himself, he says, "I gave information neither to d'Astier nor to the Communist Party. They had access to a complete dossier on the meetings of the Defense Committee without my help."

Only Labrusse and Turpin look like culprits. But they are pallid and unimportant pawns.

From March 13 on the trial turns into a political free-for-all. The witnesses see to that. Martinaud-Deplat, Baylot, and Dides uphold the theses of "Communist infiltration into the machinery of the nation." For Pierre Mendès-France and his minister, Mitterand, the case of the leaks is above all a machination against them on the part of their political enemies.

Reports vanished

But all is not said, because it is soon apparent that certain documents in the dossier are "in eclipse." In September 1954 Baranès was under surveillance. But the report about this surveillance has vanished. (It will be rediscovered—much later.) Court President Niveau de Villedary finally exclaims, "We cannot pass judgment under these conditions. Certain pieces of information have been kept from us, and every day we discover others of which we had been ignorant."

On May 3, 1956, the tribunal takes a heroic decision: "We will start again from scratch. Call back the witnesses."

That is where the case rests at this writing, with every question mark still in place. Is the Turpin-Labrusse-Baranès-X net the only one? No, certainly not. Was it the most important espionage net? No; certainly not. Had it not been established that the information l'Observateur printed was better than that furnished by three of the defendants? And hadn't Communist Deputy Jacques Duclos boasted, "We knew more about it and we knew it earlier"?

Former Prime Minister Georges Bidault put his finger on the main issue. "One thing angers me," he told the court. "That is those who are absent."

The immense majority of the French people are of his opinion. They feel that the real culprits, those who organized the Réseau des Seigneurs (the network of the Lords) have not been brought to justice—only the pitiful Labrusse, Turpin and Baranès. That the police was able to ferret out an espionage net astonished no one. Without spies, after all, there would be no movies. And what country hasn't its own spies? After all, Fuchs, Pontecorvo, Burgess and Maclean, Otto John were not French.

The real culprits

What hasn't been brought to trial are those conditions which aid and abet treason in our simple-minded democracies. We should have found:

Guilty, the administrative routine which insists on 14 copies of all secret telegrams of the National Defense Ministry;

Guilty, the organization which arrays one bureaucrat against another, and divides responsibility unwisely;

Guilty, those work methods which tie a poorly paid bureaucrat to his desk 15 hours a day and cavil at allowing him a telephone or a file cabinet;

Guilty, finally and above all, a regime in which irresponsible teams of Ministers succeed each other every 6 or 8 months.

In the best of circumstances, a secret is hard to guard. It becomes impossible to guard when the Minister of the moment (surrounded by groups of "good friends" from whom he will hide nothing because he owes them everything) takes in hand the affairs which an evicted predecessor makes no effort to explain and risks his future in the raging seas of a Parliament where 150 Communists occupy as many seats.

As M. Martinaud-Deplat cried out, pointing to the accused: "You have before you just a sample. The network of treason is complex in France, and that treason is the Communist Party and all those who group themselves around it—the bought, the idealists, and the misled intellectuals."

Amendments to Railroad Retirement Act

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. TOLLEFSON. Mr. Speaker, pending before the House Interstate and Foreign Commerce Committee is H. R. 9065, a bill to amend the Railroad Retirement Act of 1937 to provide increases in benefits and for other purposes. The primary objective of the measure is to provide a 15 percent increase in benefits, with certain limitations. The measure also proposes to increase contributions to the retirement fund to the extent of 1 percent each from the employer and employee. An additional feature of the bill provides that employee contributions shall be exempt from income tax. H. R. 10578, a bill pending before the House Ways and Means Committee, includes this income tax-exemption feature. It is my hope, Mr. Speaker, that both bills will receive favorable action by the respective committees and that the House will approve them before Congress adjourns.

During the hearings before the Interstate and Foreign Commerce Committee, a spokesman for the Railway Labor Executives' Association and for the Brotherhood of Locomotive Engineers presented an explanation of H. R. 9065, which I would like to call to the attention of the Members of the House. If that bill together with H. R. 10578 become law in their present form, several objectives will be accomplished, according to the explanation:

EXPLANATION OF BILL H. R. 9065, TO AMEND THE RAILROAD RETIREMENT ACT OF 1937 TO PROVIDE INCREASES IN BENEFITS AND FOR OTHER PURPOSES

The overall purpose of the bill is to provide a 15-percent increase in benefits (with limitations hereinafter noted); to raise additional funds in the amount of 2 percent of payroll to cover the cost of the increased benefits; and to offset the burden on employees of the increased contribution by excluding the employee contribution from income for income-tax purposes. It is not proposed, however, to increase the overall social-security minimum or to increase the present maximum on spouses' annuities which is equal to the maximum spouses' annuity payable under the Social Security Act; consequently, annuities being paid under the social-security minimum and spouses' annuities may not be increased at all or may be increased less than 15 percent.

Section 1 (a) of the bill increases the several percentages of monthly compensation used in computing employee annuities by 15 percent each. The total effect is to in-

crease these annuities so computed by 15 percent.

Section 1 (b) revises two elements in the minimum employee annuity formula by increasing them 15 percent. This, too, would have the effect of increasing annuities computed under the minimum annuity formula by 15 percent, with the exception that no increase is provided with respect to those annuities which under the formula are equal to the average monthly compensation that the employee earned while in active service. It should also be noted that these changes affect only the minimums computed under the Railroad Retirement Act formula itself and do not affect the general minimum provision providing benefits at least equal to the benefits that would have been received if railroad employment had been covered by the Social Security Act.

Section 2 (a) of the bill relates to the residual lump-sum guaranty which assures to all employees that they will either draw in benefits while living or that there will be paid to surviving beneficiaries an amount at least equal to the employees' contributions, together with an allowance in lieu of interest. This amount is computed at 7 percent of the compensation on which taxes are paid at the rate of 6¼ percent. The amendment would provide for computing this amount at the rate of 8 percent of the compensation on which it is proposed that taxes will be paid at the rate of 7¼ percent.

Section 2 (b) relates to maximum and minimum survivor annuity totals and again adjusts both maxima and minima by an upward revision of 15 percent.

Survivor annuities under the Railroad Retirement Act formula are computed from a so-called basic amount which is defined in section 5 (1) (10) of the act. Section 2 (c) of the bill proposes an upward revision of 15 percent in pensions (i. e., those taken computation of the basic amount; thus the basic amount will be 15 percent higher with the consequence that survivor annuities computed therefrom will be 15 percent higher.

Section 3 of the bill provides a flat increase of 15 percent in pensions (i. e., those taken over from the railroad voluntary pension systems), in joint and survivor annuities (i. e., those under the former option provisions) awarded before the effective date of the bill, and in annuities awarded under the Railroad Retirement Act of 1935. The preceding sections of the bill do not apply to these classes of benefits.

Section 4 of the bill amends the Railroad Retirement Taxing Act provisions of the Internal Revenue Code so as to provide an increase of 1 percent in both the employer and employee contributions and an increase of 2 percent in the employee representative contributions (who now pay the equivalent of both the employee and employer contributions).

Section 5 of the bill excludes employee and employee representative contributions under the Railroad Retirement Taxing Act from gross income for income-tax purposes and from wages for the puropses of the withholding of income tax at the source. The result would be that any employees who have taxable income in an amount equal to or in excess of their railroad-retirement contributions would realize an income-tax saving of at least 20 percent of such contributions; in such cases although the gross contribution under the bill would be 7¼ percent the net after income-tax savings would be 5.8 percent.

Section 6 of the bill fixes the dates on which the changes made in other sections become effective. Section 6 (a) makes the increases in annuities (whether employee, spouse or survivor) effective with respect to all accruals after June 1956 irrespective of whether the annuities have been theretofore or thereafter awarded. The increase in lump sum survivor benefits is made effective with respect to deaths occurring after June 1956. The increase in pension payments would be reflected in the August 1 payment to correspond with the date on which the first increased annuity payments would be made.

Section 6 (b) makes the amendments to the Railroad Retirement Taxing Act effective July 1, 1956, and specifies that the new rates shall apply to taxes on compensation for services rendered after June 1956.

Status-of-Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. BOW. Mr. Speaker, in the debate on the amendment I offered to the Mutual Security Act my colleague from Mississippi expressed a resentment toward military men, which is surprising when you consider his Army service and his membership in veterans' organizations. He made no distinction between the criminal inclinations of foreign soldiers and our own servicemen.

He expressed his fear of the foreign soldiers' training at the airforce base in his district with these words:

What if any one of those foreign soldiers in my district went on a rampage and committed some crime? Suppose it was a case of rape, murder, arson, or some of the other crimes we hear about.

In fact, my colleague seems to be obsessed by thoughts of these particular crimes. He had this to say about his fellow citizens:

I am getting tired of people saying that because a man is wearing an American uniform that he is perfect, that he could not commit murder, or rape, or arson, and that if he did, we should forgive him. I think that we should demand that American soldiers who do not live up to the laws of foreign countries should be subject to punishment.

I, for one, as a Member of Congress do not intend to take part in any effort to defend murders and worse by this type of indirect action.

Now the gentleman knows that the amendment I proposed to the Mutual Security Act was not a defense of murderers. He knows that no one has ever advocated that a wrongdoer in the service be granted immunity from punishment. But some of us still believe that punishment should be meted out the American way; that it should be uniform no matter where our servicemen may be; that the same offense should not be punished by a term of 90 days in one country and 4 years in another.

I was curious as to what heinous acts might have been committed in my colleague's district by foreign soldiers to develop his obsession about murder, rape, and arson. So I asked the Air Force. I am told that the Greenville Air Force base has been in operation about 2 years. During that time there has not been one single crime committed by any foreign serviceman assigned to that base for training. One man had a little trouble with a check being returned, but the commander of the base considered it minor. So there lies the bogey of crime in my colleague's district.

The gentleman from Mississippi did not claim any great success as defense attorney at courts-martial when he served in the Army. He said none of the dozens of men he represented were acquitted. This is quite understandable. He must have suffered even then from the virus that has attacked so many proponents of the status of forces agreements—the presumption that all accused servicemen are guilty. He must have represented the accused he was assigned to defend in much the same manner that some counsel act who are appointed by foreign courts to defend our accused servicemen. An observer of a serviceman's trial in Japan said: "The dedication of counsel to the defense of the accused left much to be desired."

Joint Statement by Diplomatic Representatives of Estonia, Latvia, and Lithuania

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 5, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, the United States has unswervingly maintained the position that Soviet Russia occupied Estonia, Latvia, and Lithuania by conquest and not in accordance with the will of the people. The right of self-determination has been denied these Baltic people.

Mr. Speaker, under leave to extend my remarks, I am including a joint statement by the Baltic diplomatic representatives in connection with the commemoration of the 15th anniversary of the beginning of mass deportations in the Baltic States by the Soviet Union. This statement is a result of a public meeting held in the city of Washington, D. C., at Pierce Hall on Sunday, June 10, 1956. The statement follows:

JOINT STATEMENT BY THE BALTIC DIPLOMATIC REPRESENTATIVES IN CONNECTION WITH THE COMMEMORATION OF THE 15TH ANNIVERSARY OF THE BEGINNING OF MASS DEPORTATIONS IN THE BALTIC STATES BY THE SOVIET UNION

On the eve of World War II, the Baltic States became victims of the Soviet aspiration for world domination. Soviet leaders opened the gates of aggression in Europe by the Molotov-Ribbentrop pact, signed on August 23, 1939. By this pact, the Soviet Union secured a free hand in eastern Poland, Latvia, and Estonia, and later, on September 28, 1939, by means of an additional protocol, also Lithuania was included in the sphere of influence of the Soviet Union. The enslavement of the Baltic States was undertaken notwithstanding the Soviet's most solemn declarations and treaty obligations to respect the territorial integrity and political independence of the Baltic countries and not to interfere with their domestic affairs. All that followed—the forced conclusion of mutual assistance pacts between the Soviet Union and the Baltic States, military occupation, formation of puppet governments,

farcical elections—is now a well-established fact.

The occupation and incorporation of the Baltic States into the Soviet Union was only the prelude to the whole campaign of territorial acquisitions on the part of the Soviet Union in Europe and Asia.

"Millions of people of different blood, religious and traditions have been forcibly incorporated within the Soviet Union, and many millions more have in fact, although not always in form, been absorbed into the Soviet Communist bloc. In Europe alone, some 100 million people, in what were once 10 independent nations, are compelled, against their will, to work for the glorification and aggrandizement of the Soviet Communist state.

"The Communist rulers have expressed, in numerous documents and manifestos, their purpose to extend the practice of communism, by every possible means, until it encompasses the world. To this end they have used military and political force in the past. They continue to seek the same goals, and they have now added economic inducements to their other methods of penetration.

"It would be illusory to hope that in their foreign policies, political and economic, the Soviet rulers would reflect a concern for the rights of other peoples which they do not show towards the men and women they already rule." (Joint declaration made by the President of the United States of America and the Prime Minister of the United Kingdom in Washington on February 1, 1956.)

The same goal of world domination and expansion was recently reiterated at the 20th Congress of the Communist Party of the Soviet Union:

"The Communist Party of the Soviet Union follows Lenin's thesis that 'all nations will realize socialism, this is inevitable, but not all of them in the same way.'"

To this Khrushchev added:

"These (bourgeois) politicians do not dare to declare that capitalism will perish in the new world war, if they will wage it, but they are already forced to admit publicly that the socialist camp is invincible".

"It is true," said Khrushchev in his report to the 20th Congress, "that we recognize the necessity to transform in a revolutionary way the capitalist society into the socialist society. * * * It does not at all follow from the fact that we stand for peaceful coexistence and economic competition with capitalism, that the struggle against bourgeois ideology, against the survival of capitalism in the minds of men can be relaxed."

Soviet imperialism in Europe and Asia has been imposed with greatest ruthlessness, and it has been accompanied with an appalling amount of human misery.

Today we are commemorating the mass deportations which began in our countries in June 1941, and which still continue under one form or another. In those tragic days of June more than 100,000 Estonians, Latvians, and Lithuanians were deported to remote areas of the Arctic and Siberia. Since then our people have been deprived of the most elementary human rights and have been exposed to torture and starvation in forced labor camps. On the testimony of hundreds of eyewitnesses, the Select Committee To Investigate the Incorporation of the Baltic States Into the U. S. S. R. of the House of Representatives of the United States in 1954 established the following:

"The U. S. S. R. has been and is now engaged in a ruthless program of sovietization in Estonia, Latvia, and Lithuania, employing the well known Communist tactics of arrest and detention without cause, torture chambers, mass deportations to slave labor camps, population transfer, and wide-scale political murders."

After a detailed analysis of the facts, the committee concluded:

"The evidence is overwhelming and conclusive that Estonia, Latvia, and Lithuania were forcibly occupied and illegally annexed by the U. S. S. R. Any claims by the U. S. S. R. that the elections conducted by them in July 1940, were free and voluntary and that the resolutions adopted by the representing parliaments petitioning for recognition as a Soviet Republic were legal, are false and without foundation in fact." (Third Interim Report, 1954, p. 8.)

The Baltic nations, like the other Soviet subjugated nations behind the Iron Curtain are firmly convinced that as ramparts of western civilization they will not be abandoned by the free world. Therefore, we highly appreciate the joint declaration of the President of the United States and the Prime Minister of the United Kingdom made in Washington on February 1, 1956, setting forth their attitude toward the struggle between the western and Communist worlds, wherein they expressed the hope of all the captive nations as follows:

"We [of the West] shall help ourselves and others to peace, freedom, and social progress, maintaining human rights where they are already secure, defending them when they are in peril and peacefully restoring them where they have temporarily been lost."

At this solemn commemoration, together with millions of other Estonians, Latvians, and Lithuanians throughout the world, we mourn those compatriots who have fallen victim to the Communist conspiracy and those who are still struggling for their lives in the remote reaches of the Arctic and Siberia, or in their own lands—Estonia, Latvia, and Lithuania.

We must again state that our goal has been and will always remain the reestablishment of the complete independence and full sovereignty of our nations, and we have faith that with the help of God, Estonia, Latvia, and Lithuania will achieve that freedom and independence.

And then further, Mr. Speaker, I am also including as part of my remarks the resolution adopted at this same meeting.

BALTIC COMMITTEE OF
WASHINGTON, D. C.,
WASHINGTON, D. C., *June 10, 1956.*

DEAR SIR: I have the honor to submit the following resolution unanimously adopted by citizens and residents of Estonian, Latvian, and Lithuanian descent, assembled this day at Pierce Hall, Washington, D. C., to commemorate the first mass deportations of citizens from Estonia, Latvia, and Lithuania, perpetrated by the government of the Soviet Union on June 14, 1941, and to raise our voice in protest against the continuous violation of fundamental human rights, and enslavement of the Baltic States by the Soviet Union:

"Whereas the Soviet Union has arbitrarily occupied and established Communist regimes in Estonia, Latvia, and Lithuania, and continues to enslave the peoples of these democratic republics;

"Whereas June 14, 1941, marks the beginning of Soviet mass deportations of citizens from Estonia, Latvia, and Lithuania to slave labor into the subarctic tundra, Siberia, and the steppes of Kazakhstan, and that such deportations still are continuing;

"Whereas the Government of the United States has refused to recognize the incorporation of Estonia, Latvia, and Lithuania into the Soviet Union and is steadfastly continuing recognition of their lawful diplomatic representatives in this country; and

"Whereas the President of the United States and the Prime Minister of Great Britain on February 1, 1956, in their Washington Declaration stated that 'Millions of people of different blood, religions and traditions have been forcibly incorporated within the Soviet Union' and that 'we shall help ourselves and others to peace, freedom and social progress maintaining human rights where they are already secure, defending them when they are in peril and peacefully restoring them where they have temporarily been lost': Be it

"Resolved, That we, here assembled in prayerful mourning for the victims of Soviet aggression and genocide in the Baltic countries, vigorously protest against the continuous practice of genocide and enslavement of the Baltic peoples by the Soviet Union; and be it further

"Resolved, That we respectfully request the Government of the United States to initiate action by the United Nations with the aim of achieving the withdrawal of Soviet occupation forces from the Baltic States and complete restoration of their soveregnties; and be it finally

"Resolved, That we express our sincerest gratitude to the people, the Congress, and the Government of the United States for their resolute support and encouragement of the Baltic nations' struggle for regaining their liberty, and that we pledge our unequivocal support to America's leadership in the fateful fight of the free world against totalitarian Communist aggression."

Faithfully yours,

Dr. D. KAIVICKAS,
Chairman.

Withdrawal and Utilization of Public Lands

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 9, 1956

Mr. JOHNSON of Wisconsin. Mr. Speaker, within the last week, hearings were held before the Committee on Interior and Insular Affairs on H. R. 10371, introduced by Committee Chairman CLAIR ENGLE, and other similar bills. All the bills provided that withdrawals or reservations of more than 5,000 acres of public lands of the United States for certain purposes shall not become effective until approved by act of Congress.

I am glad to state that I sponsored one of the bills, H. R. 11001, and appeared and testified before the committee in support of the legislation on Monday, June 11. At that time, I also presented testimony favoring the legislation received from L. P. Voigt, director of the Wisconsin State Conservation Commission, and from Werner Radke, game warden for Jackson County, my home county.

Prior to these hearings, the Committee on Interior and Insular Affairs held hearings beginning in January 1956 on the general subject of withdrawal and utilization of public lands in the United States. These hearings, which cover 495 pages, resulted in the proposed legislation now before the committee.

I believe it only fair to give full credit to the man who first called this matter of encroachment on our wildlife refuges to the attention of the public, Arthur H. Carhart. Mr. Carhart dealt fully with the subject in the June 1955 issue of

Sports Afield. In this informative article, Mr. Carhart discussed the encroachments by the military and also explained how a Secretary of the Interior, lacking appreciation and understanding of wildlife values, could wipe out our wildlife refuge system. At this time, I would like to include the article by Mr. Carhart:

ONE MAN CAN WIPE OUT OUR WILDLIFE REFUGES

(By Arthur H. Carhart)

By merely signing a typewritten order, one man can wipe out great national wildlife refuges. In the same way, he may open the gate to oil drillers, stockmen, rocket shooters, or others who would overrun our refuges and destroy their value to wildlife.

This appointed official can take such action without hearings, advance public notice, or discussion with outdoorsmen and conservationists. He can blot out a million-acre refuge, or open one to commercial interests, merely by putting his signature on an administrative order.

Who is the man with such life-and-death power over our Federal wildlife refuge system? He is Secretary of the Interior Douglas McKay.

But perhaps you believe that such administrative orders would never be given. Maybe not. But let's look at the evidence.

Whiffs of what's cooking leaked out, and Sports Afield said, "Dig into this and report." Here's what was uncovered by 6,000 miles of travel, visits to threatened refuges in 6 States and weeks of probing.

At least 40 refuges appear to be in immediate jeopardy. And though abandonment proposals are more in the open for some great game refuges in the West, the pattern holds black implications of what may be ahead all across the Nation.

We have 254 Federal refuges in 40 States; and 18 in Alaska, Hawaii, and Puerto Rico. They contain about 17.5 million acres, less than 1 percent of the total area of the Nation.

Their sizes and critical services vary greatly. The 210-acre Great Meadows Refuge in Massachusetts is a little haven for migrating waterfowl; the 38,933-acre Noxubee in Mississippi is a winter home for ducks and geese, breeding stock flying northward to summer nesting. The Lower Souris in North Dakota, seriously threatened by both oil drillers and a Reclamation Bureau scheme, contains 58,571 acres, vital nesting grounds for waterfowl, prairie chickens, and sharptailed grouse.

The 23,648-acre National Elk Refuge in Wyoming saved, and now maintains, the biggest elk herd in the Nation. This refuge provides excellent hunting in adjacent acres by supplying indispensable wintering grounds for the elk.

In the Southwest, the Kofa, Cabeza Prieta, and Desert Refuges undoubtedly saved the magnificent desert bighorn sheep from extinction; they have built up flocks so that limited hunting has been permitted for several seasons.

Each refuge meets definite, high-priority needs of one or many types of game. They protect scarce or important species from decimation or extinction. They produce stock that can be transplanted to suitable, unpopulated areas. They are testing stations for game-management programs that, when proven out, can be applied to millions of other acres in other localities.

These refuges are so small a percentage of our Nation's area, and so vital, that any official who would reduce their acreage or allow uses that would dispossess the birds and animals on them, would deal a grevious blow to our wildlife.

This is no local issue. It's nationwide.

The issue is this: Will the Secretary of the Interior hold fast to gains in our Federal refuge system? Or by using the power he has, will he proceed to wipe out some refuges completely and allow conflicting uses in others that will degrade their wildlife values? Are we about to see a creeping disintegration of the whole Federal wildlife refuge system?

The first solid step of what appears to be a plotted course is an official memorandum signed on March 31 last year by Assistant Secretary Orme Lewis and Under Secretary Ralph A. Tudor. The memo established a five-man survey team to overhaul the United States Fish and Wildlife Service, the Interior Department agency that supervises the Federal refuge system.

On June 2, last year, after 6 weeks of intensive study and investigation, the team reported. There's no question of the integrity and good intentions of the men in that group. They probably didn't know the grief some statements about national wildlife refuges might bring.

They first recommended that all existing refuges should be subjected to critical scrutiny to determine if they fit the overall objectives and responsibilities of the service. That could be a constructive angle.

But the fuse that can blow the main demolition charge is this statement by the team: "There are certain existing refuges the continued maintenance of which under Federal control seems of doubtful value."

That gave Interior the springboard to make the next jump. Early this year, a directive went out to the regional directors of the United States Fish and Wildlife Service to study refuges, with a plain suggestion of abandoning any of doubtful value.

That survey team may or may not have known that 3 of the 5 regional directors of the Fish and Wildlife Service already, either by act or statement, have shown positively their inclination to move out of large Federal wildlife refuges and let other interests take over. This move could do untold harm.

The threats to our refuges vary. The best way to understand what's going on is to scan some case histories.

There's a good illustration of the overall picture in the Hart Mountain National Antelope Refuge of southeastern Oregon and the famous, nearby Charles Sheldon National Antelope Refuge.

Both of these refuges are mountain masses bulging up out of semidesert flats. They contain high-country grasslands, spots of forest, rough canyons and most important of all, vital watering places.

The Sheldon Refuge was one of the first areas to be dedicated to protecting vanishing wildlife. More than 30 years ago, Dr. T. Gilbert Pearson, then president of the National Audubon Society, visited the area. He learned about the desperate plight of the antelope and began talking about a refuge to save the remnants.

In 1919 Martin S. Garretson, Secretary of the American Bison Society, spent days in the area appraising the situation. Garretson found antelope shot and used for wolf bait. He was told there were herds of thousands in that section. But methodical checking indicated there were less than 200 animals.

Aroused, the Audubon Society and the Boone and Crockett Club raised funds and bought 2,377 acres of key lands from private owners to make the refuge project feasible. These lands were donated to the people of the United States. Federal funds were used to purchase over 300 additional acres of private lands. And President Hoover, on January 26, 1931, issued an executive order establishing the refuge, and adding public domain so the total mounted to 31,439 acres on which wildlife welfare has first position.

This first unit, known as Little Sheldon, did not contain vital winter range. The Audubon Society bought and donated additional properties, the Government spent $153,926 to secure 23,881 key acres, and 520,525 acres of public domain were added, to set up the Charles Sheldon Antelope Range, surrounding and supplementing the Little Sheldon.

Nearby Hart Mountain was made into a refuge because many of the antelope move back and forth between it and the Sheldon, finding good kidding grounds and summer range at Hart Mountain. The Government purchased 57,898 acres of private lands in the Hart Mountain area for $250,422, added enough public domain to bring the unit up to 240,644 acres.

The two areas—Hart Mountain and Sheldon—are segments of one management unit, none of which can be so well managed if any portion is cast out.

In 1919 Garretson counted 200 antelope in the vicinity; now there are 6,000 to 7,000 head using 2 refuges. In addition there are mule deer, sage grouse, and a host of other wildlife dependent on the refuge areas.

In the early 1930's, Dr. Olaus Murie studied the range on the Sheldon and found it being grazed down to nubbins. But now the range has come back. There still are 500 to 600 head of cattle grazed on the Sheldon game range because that portion of this reserve is under the joint jurisdiction of the Fish and Wildlife Service and the Bureau of Land Management, successor to the old Grazing Service. But there is genuine local cooperation between agencies, and wildlife at least gets a decent break on the Sheldon Game Range.

The drift from these refuges has restocked surrounding areas; there is open-season hunting there. Deer hunting is allowed within the refuges in designated areas and ways; it's necessary to keep the animals in balance with the available forage resources. That's the record of Sheldon and Hart Mountain.

These two refuges are in region 1 of the United States Fish and Wildlife Service. Regional director is Leo J. Laythe. When asked if recommendations of the five-man survey team would lead to the Fish and Wildlife Service getting out of these refuges, he said frankly he was inclined "to turn them over to the States for management." He explained that this would be "purely a matter of economics"; that the Service's funds were too small to do a job at Hart Mountain and Sheldon.

The same Mr. Laythe later said emphatically there was no move on for the Service to dump the refuges. Apparently turning them over to the States wouldn't constitute dumping.

If you know the pattern of Western States politics you realize how stockmen dominate the scene. After 20 years of range and wildlife management, the Sheldon and Hart Mountain areas look like a cow paradise to stockmen. The forage has come back since overloading ended; your money and mine has built excellent watering places. It would be slick to have this area subject to local politics and pressures.

Men who know how State lands have been handled in the past figure that "turning the refuges over to the States for management" would just be one step in a series that even the best-intentioned department couldn't ward off surrender to grazing interests.

Regardless of Leo Laythe's declaration that there is no move to dump these refuges, one of his staff certainly did approach the Oregon State Game Commission, feeling out its attitude toward having Hart Mountain put in State hands. Oregon has its own, well-planned, and thoroughly plotted program for acquiring wildlife lands and managing them. The State apparently figures it will need all the funds it has to carry through its own program.

In Nevada it's a different story. A driving campaign is on there to get the Federals out of the Sheldon Range. The Washoe County Game and Fish Commission, an offi-

cial segment of Nevada's oddly organized department, has adopted a resolution to have Federal control of the Sheldon done away with.

Are stockmen behind this? It's a good bet. And other forces are mixed into this campaign.

The same sort of campaign is going on to wipe out the desert-game range in southeastern Nevada, near Las Vegas. On March 9 this year, Frank Groves, director of Nevada's fish and game department, was in Washington putting on the pressure to have the desert range turned over to the State, lock, stock, and buildings, plus other improvements paid for with Federal wildlife funds. Any State would be happy to have such a gift. And Nevada would have a lot to say about grazing livestock on refuge lands.

This great wildlife area was established in 1936. It contains 2,203,711 acres. Its main features are two craggy mountain ranges on opposite sides of a big desert valley. It was set up to prevent extinction of the desert bighorn sheep. And it has done the job in spite of a crazy-quilt pattern of various agencies having various jurisdictions over it.

Incidentally, if you think that refuge areas are all dedicated to wildlife, the situation on the desert-game range will set you straight. There are 61,567 acres within the refuge that are under the primary jurisdiction of the United States Forest Service. There's teamwork in this quarter; forest and wildlife men work together. Over the remainder of the desert range, the United States Bureau of Land Management has equal jurisdiction on paper with the Fish and Wildlife Service. Actually the Bureau of Land Management has more say than the wildlife officials. About 650 cattle, owned by 8 individuals, graze 61,390 acres of the refuge. On top of that, the Air Force has a gunnery range plastered on top of a third of the area.

When the desert game range was created, there were an estimated 300 head of desert bighorns in the area. They were skidding toward zero. Now there are about 1,200 head, and drift has allowed hunting for this magnificent trophy animal in areas outside the refuge. There's a chance now to trap and transplant bighorns to many other areas in Nevada where they were poached off. If the State has the money, there's a place to put it.

Regional Director Leo Laythe is the man who will study the desert range with a view, perhaps, to putting the Fish and Wildlife Service out of the area.

Southward, near Yuma, Ariz., are two other refuges, set up to save the desert bighorns and the rare Sonoran pronghorn antelope. These are the Kofa refuge, containing 660,041 acres, and the Cabeza Prieta, with 860,041 acres. Like the desert-game range, they are mountain islands surrounded by desert.

In all three bighorn ranges, water is the key to maintaining animal life. On the Desert Range, 30 waterholes have developed; 9 on the Cabeza Prieta where there was only 1 spot of water before; about a dozen installed on the Kofa. The cost of these water developments ranges from a relatively few dollars in hand labor, to blasting ingenious stub tunnels into solid rock at a cost of several thousand dollars per unit. These tunnel holes are filled by flash runoff from slashing thundershowers; wing dams prevent rubble from getting into the tunnels, but allow overflow water to fill them.

As on the Desert Range, there is a scramble of jurisdiction on these Arizona game refuges. In addition to the Cabeza Prieta being in a grazing district with the Bureau of Land Management and a local grazing board in the picture, the Air Force has a rocket range covering most of the refuge.

When air-to-air shooting goes on 5 days a week, not even wildlife officials may enter the Cabeza Prieta. Air Force "Keep out" signs are all over the place, and spent-rocket cases plummet down and bury themselves a foot or so in rock-hard soil.

Not long ago, without the knowledge of our wildlife men, ground targets were set up, and air-to-earth shooting started inside the refuge. That was stopped.

The Army also coveted this refuge. It proposed using a major portion of the Cabeza Prieta as a poison-gas training area under battleground conditions.

Recommendations to abandon these bighorn refuges would come from John C. Gatlin, regional director, Albuquerque, N. Mex. There isn't much question of what his viewpoint has been; he has already studied and recommended. In June last year, Gatlin spelled out how he would have the United States Fish and Wildlife Service move out of the Kofa and Cabeza Prieta, and turn the areas altogether into the hands of the Bureau of Land Management; Arizona then would be given permits for the wildlife to use the waterholes, and the wildlife property could be transferred to the State.

The waterholes are a sweet setup for livestock to be grazed in this area. But there isn't enough water in the Desert, the Kofa, or the Cabeza Prieta to support both game and domestic stock.

Beside the economic argument advanced for turning the refuges over to other interests, those in favor of such a move say that wildlife on the refuges is resident game and therefore should be handled by the State. The refuges saved the wildlife when it was resident game in the first place; without them there's a chance that what has been saved could be totally lost.

If the resident-game argument is valid, it should apply to all resident species.

Very well; coyotes and rodents certainly are residents. The allotment for refuges in the 1954 United States Fish and Wildlife budget was only $100,000. But for predator and rodent control it was $956,241—nearly 10 times as much. So nearly a million was set up largely to benefit individual stockmen in western States. If it's a Government principle to have States take over the management of all resident wildlife, then let's insist that they take on their coyote and rodent control as well; save a million.

I have indicated only a few of the refuges that are in jeopardy. They set the overall pattern of what appears to be a general movement to dismember our national game refuges. Only a few of the others that are threatened can be listed here.

The Little Pend Oreille, in eastern Washington, contains the indispensable, crisis winter range for a head of the largest whitetailed deer in the West. It had been skinned to bare earth by domestic stock; the Resettlement Administration bought up the land on a distress basis. The Fish and Wildlife Service took it over and rehabilitated the range; the deer have prospered. Now stockmen lick their chops as they look at the area. It's something they'd like themselves.

There are whisperings that the National Bison Range in western Montana, the National Elk Refuge in Jackson Hole, Wyo., the Sullys Hill Refuge in North Dakota are likely to be classed as of doubtful value in the Federal wildlife lands.

In Oregon and northern California there's a hell-roaring campaign on to wipe out the last of that most vital key area in the Pacific coast flyway—the Klamath and Tule Lake Refuges. The Reclamation Bureau is in there, interested in draining the last fragments of the once-great marshes so they can give lands to settlers that got bum homesteads on another reclamation unit. If this area is blotted out as a wildlife sanctuary, the center is knocked out of the whole Pacific flyway—no less.

In Oklahoma the Wichita Mountains National Wildlife Refuge is threatened again. Late in 1953 the Army unveiled plans to expand Fort Sill Military Reservation. Since the area surrounds the Wichita Refuge on three sides like a vise, Army officials eyed the refuge for a new weapons-testing area. The Oklahoma Outdoor Council, together with sportsmen across the country, raised a protest. The Army pulled in its horns.

Now, local rumors persistently point to a revival of earlier Army plans. An item in the Army's budget calls for expanding military areas, and Fort Sill is on the list for expansion. Army officials locally refuse to comment on Wichita Mountains National Wildlife Refuge; but it is no secret that transfer of Government land from one agency to another merely involved some paperwork and no cost.

On other refuges, oil interests have tried to get in to drill. An order that would have allowed this reportedly got as far as the desk of Secretary of the Interior McKay. This move became public knowledge. Protests were made. As this is written, the order is believed to be on that desk, perhaps cooling off and ready for action later.

In Maine, another Fish and Wildlife Service regional director, David R. Gascoyne, has made moves to get rid of the Moosehorn Refuge. This is an area in which management techniques have been worked out for increasing upland birds.

The list of national wildlife refuges that are in jeopardy could go on at length. This isn't a local issue.

Remember, this scuttling and junking can be accomplished quietly and smoothly, without any knowledge by sportsmen of what's going on.

This isn't like that battle with the land-grab gang that your letters helped to beat in Congress last year. A refuge can be dumped by Secretary of the Interior McKay merely by signing an administrative order. No hearing, no discussion; the job can be done wholly within the Interior Department.

For example, Secretary McKay, by issuing a land order, could turn over all the public-domain lands of the Hart Mount Refuge to the Bureau of Land Management. They'd go into a grazing district with a local board of livestock operators having a lot to say about what happens on those ranges.

Lands bought with Federal wildlife funds could be declared surplus. They'd be offered to any other agency that might want to control them.

What legal involvements might result in dumping lands that have been purchased by conservation groups and given for refuge purposes to the United States is a question. But these lands could be turned over to the States outright under the Coordination Act. They could be tossed into a Federal-aid project, become State property, no longer Federal refuge lands.

Whatever may be the reasons for the various regional directors wanting to get the fish and wildlife out of managing our game refuges, if they study the areas and recommend their being junked as of doubtful value, that's a step toward the breakup.

These wildlife refuges have been built up through a quarter century, through labors and often heartbreak, with literally millions of dollars of sportsmen's money.

The focal point is not in the regional directors' offices, nor even in the office of their boss, John Farley, Director of the United States Fish and Wildlife Service. It's in the office of Secretary of the Interior McKay.

There's enough evidence on this issue for sportsmen and conservationists over the Nation to demand that the Secretary of the Interior define his policy on our national wildlife refuges. Is there or isn't there a sell-out shaping up for wildlife?

Soviet Record of Broken Promises—It Cannot Be Trusted To Keep Agreements—Embassies Are Espionage Centers—Sever Diplomatic Relations—Approve House Concurrent Resolution 238

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 12, 1956

Mr. SMITH of Wisconsin. Mr. Speaker, it must be obvious to the American people, and I think to the free world generally, that you cannot do business with Communists unless you do it on their terms. It comes with a good deal of surprise to find out that neutralism in Europe is on the march. It is on the march in Asia and also in our own country we find that there are those in official positions who today feel that they can do business with the Communists.

Mr. Speaker, we are on notice in that respect, however. It was in 1920 when the Secretary of State for President Wilson, Mr. Bainbridge Colby, put it in black and white with respect to the broken promises of Russia. He stated:

The existing regime in Russia is based upon the negation of every principle of honor and good faith. The responsible leaders of the regime have frequently and openly boasted that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing such undertakings or carrying out such agreements. * * * Upon numerous occasions the responsible spokesmen of this power, and its official agencies, have declared that it is their understanding that the very existence of Bolshevism in Russia, the maintenance of their own rule, depends, and must continue to depend, upon the occurrence of revolutions in all other great civilized nations, including the United States, which will overthrow and destroy their governments and set up Bolshevist rule in their stead. They have made it quite plain that they intend to use every means, including, of course, diplomatic agencies, to promote such revolutionary movements in other countries.

* * * * *

* * * It is within the knowledge of the Government of the United States that the Bolshevist Government is itself subject to the control of a political faction, with extensive international ramifications through the Third Internationale, and that this body, which is heavily subsidized by the Bolshevist Government from the public revenues of Russia, has for its openly avowed aim the promotion of the Bolshevist revolutions throughout the world. The leaders of the Bolsheviki have boasted that their promises of noninterference with other nations would in no wise bind the agents of this body. * * * Inevitably, therefore, the diplomatic service of the Bolshevist Government would become a channel for intrigues and the propaganda of revolt against the institutions and laws of countries, with which it was at peace. * * *

* * * * *

We cannot recognize, hold official relations with, or give friendly reception to the agents of a government which is determined and bound to conspire against our institutions; whose diplomats will be the agitators of dangerous revolt; whose spokesmen say that they sign agreements with no intention of keeping them. (American Note on Polish Situation, Department of State, August 10, 1920. A Formal Reply From Secretary of State Bainbridge Colby to His Excellency Baron Camillo Romano Avezzana, Ambassador of Italy.)

In the 36 years since those historic words were uttered, there have been no substantial new facts to change or upset Bainbridge Colby's conclusion. In every year, on every continent, new facts have emerged to support it.

Communist regimes have been continuously based upon the negation of every principle of honor and good faith, as Colby said. Communist leaders have continuously demonstrated that they are willing to sign agreements and undertakings with foreign powers while not having the slightest intention of observing them or carrying out such agreements. Communist leaders have continuously proven that their diplomats are the agents of dangerous revolt who use diplomatic agencies to promote such revolutionary movements in other countries.

Mr. Speaker, we have not only the conclusions and judgment of Mr. Colby but also those of Charles Evans Hughes, another great Secretary of State under a Republican President who 3 years later presented voluminous documentation to the Senate Committee on Foreign Relations to show that the Soviet dictators in the Kremlin had no changed one iota. Secretary Hughes summed up the situation as follows: He said:

It is believed that the evidence presented by the Department of State, at this hearing, has conclusively established three facts: First, the essential unity of the Bolshevik organization known as the Communist Party, so-called Soviet Government, and the Communist International, all of which are controlled by a small group of individuals, technically known as the political bureau of the Russian Communist Party. Second, the spiritual and organic connection between this Moscow group and its agent in this country—the American Communist Party and its legal counterpart, the Workers' Party. Not only are these organizations the creation of Moscow, but the latter has also elaborated their program and controlled and supervised their activities. While there may have existed in the United States individuals, and even groups, imbued with Marxist doctrines prior to the advent of the Communist International, the existence of a disciplined party equipped with a program aiming at the overthrow of the institutions of this country by force and violence is due to the intervention of the Bolshevik organizations into the domestic political life of the United States. The essential fact is the existence of an organization in the United States created by and completely subservient to a foreign organization striving to overthrow the existing social and political order of this country. Third, the subversive and pernicious activities of the American Communist Party and the Workers' Party and their subordinate and allied organs in the United States are activities resulting from and flowing out of the program elaborated for them by the Moscow group. (Letter to Hon. William E. Borah, then chairman, Senate Committee on Foreign Relations, January 21, 1925.)

Mr. Speaker, on May 14, I introduced House Concurrent Resolution 238 which if approved by the Congress would establish a joint congressional committee to conduct a full and complete study and inquiry with respect to all aspects of the question of the severance of the diplomatic, economic, cultural and all other relations between the United States and the Union of Soviet Socialistic Republics. It is in this connection, Mr. Speaker, that the prophecy made by Bainbridge Colby could be investigated to ascertain if his prophecy was true, namely, that Communist diplomacy would become a channel for intrigues and the propaganda of revolt and further that diplomatic agencies would be used to promote revolutionary movements in other countries.

Mr. Speaker, I believe that the blackest day in the history of the United States was the day when these United States recognized Soviet Russia. It was in November of 1933.

The first Ambassador appointed by President Franklin D. Roosevelt was Mr. William C. Bullitt. It did not take Mr. Bullitt long to discover the motives behind the rule of the Kremlin dictators. In less than two years he, too, confirmed the statements made by former Secretaries of State Colby and Hughes. Mr. Bullitt said:

The aim of the Soviet Government is and will remain, to produce world revolution, said Ambassador Bullitt. The leaders of the Soviet Union believe that the first step toward this revolution must be to strengthen the defensive and offensive power of the Soviet Union. They believe that within 10 years the defense position of the Soviet Union will be absolutely impregnable and that within 15 years the offensive power of the Soviet Union will be sufficient to enable it to consolidate by its assistance any Communist government which may be set up in Europe. To maintain peace for the present, to keep the nations of Europe divided, to foster enmity between Japan and the United States, and gain the blind devotion and obedience of the Communists of all countries so that they will act against their own governments at the behest of the Communist Pope in the Kremlin, is the sum of Stalin's policy. (From Foreign Relations of the United States, the Soviet Union, 1933–39, p. 227.)

* * * * *

I believe that we should employ this occasion to make clear to the American people the aims of the Soviet government which lie behind the mask labeled "united front against fascism and war."

I believed we should revoke the exequaturs of all Soviet consuls in New York and San Francisco, leaving only the consular section in the Soviet Embassy at Washington.

I believe that we should restrict to a minimum the granting of American visas to Soviet citizens (p. 246).

* * * the people of the United States must be warned of the intentions of the Soviet Government and of the American and foreign Communists who take their orders from the dictator of the Soviet Government. Steps must be taken for the protection of our lives and liberties. To permit Soviet consuls to remain in American cities after the boasts of the Communist Congress with regard to fomenting strikes in the United States is impossible. As a first protective action the Secretary of State today has directed that the exequaturs of all Soviet consuls in the United States shall be canceled. He has also directed that all Soviet citizens who desire to come to the United States must be scrutinized with greater care than heretofore. We must prepare further methods of protection. And we must be vigilant in watching for the intrusion of those American and foreign agents of the Soviet Government who, in the simile of Dimitrov, will adopt the tactics of the

Trojan horse and sneak into our midst, concealed by a covering of antifascism and peace to destroy our institutions, liberties, and lives (p. 247).

The move to sever diplomatic relations with Russia may sound and seem drastic, but the Communist conspiracy must not be approached with kid gloves. It requires drastic treatment.

There is precedent for the action that I have suggested, Mr. Speaker.

In 1921, the British Government granted de facto recognition to the Soviet Government by means of a trade agreement. The agreement provided for the prohibition of Bolshevik propaganda in Great Britain. Only 2 short years later, Britain threatened to terminate that agreement because Soviet agents were spreading anti-British propaganda in Afghanistan, Persia, and India.

In 1924, regardless of what had already happened, Britain granted the U. S. S. R. de jure recognition. Three years later it terminated both the trade agreement and recognition, because the Soviet diplomatic service in Great Britain was acting as a channel for intrigues and the propaganda of revolt precisely as our American Secretary of State had predicted 7 years before.

In 1924, China and the U. S. S. R. established normal diplomatic relations. Under the treaty "each country was to refrain from spreading propaganda against the institutions of the other." Three years later, China broke off relations because the Soviet diplomatic service, once more, was acting "as a channel for intrigues and the propaganda of revolt."

In 1924, Mexico recognized the U. S. S. R. In 1930, Mexico withdrew that recognition. (From Trends in Russian Foreign Policy, Library of Congress, pp. 5–11.)

Mr. Speaker, again I urge that the House Rules Committee grant a hearing on my resolution and submit the matter to this House where it can work its will one way or another but the time has come for action. Assuming the adoption of my resolution, I feel certain that it would bring hope and faith to many millions of people who are today behind the iron curtain and at the mercy of the Communist dictators who think in terms only of world revolution and conquest.

Jim Hagerty's Job

EXTENSION OF REMARKS
OF
HON. PATRICK J. HILLINGS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 8, 1956

Mr. HILLINGS. Mr. Speaker, I wish to place in the RECORD an editorial which appeared in the Evening Star of Monday, June 11, 1956, describing the outstanding work of Mr. James Hagerty. Mr. Hagerty has performed a great public service in keeping the American people informed of important happenings in the White House. His work last weekend particularly points up the quality of his service.

The editorial follows:

JIM HAGERTY'S JOB

This morning's bulletin from Walter Reed Hospital reflects the President's steady progress toward recovery from his operation Saturday morning. And now that the crisis atmosphere has passed, the bulletin also serves to remind one of the splendid job which has been done by Jim Hagerty, the President's press secretary.

Mr. Hagerty is getting to be an old hand at this sort of thing. During the long weeks after the September heart attack he manned the information post in Denver and kept the Nation posted on Mr. Eisenhower's condition. That ordeal is not likely to be repeated this time, for the President seems to be out of the woods and well on his way to a resumption of the quieter White House routine. Nevertheless, it was a rugged weekend for Jim Hagerty—14 press conferences on Friday and Saturday, 37 hours without sleep, etc.

This, of course, is his job. It is what he is supposed to do when the need arises. Still, this country has never seen anything quite like the handling of the news of Mr. Eisenhower's two illnesses. Never before have the people been kept so fully informed on a matter of such vital importance to them. To be sure, this was both the right thing and the smart thing to do. But it also was a job that could have been badly botched had it been entrusted to less competent hands.

National Federation of Independent Business Urges Vigorous Enforcement of Antitrust Laws as Best Way To Aid Small Business as the Administration Moves Stanley N. Barnes to Less Influential Post and Establishes Small Business Committee To Study Problems

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 12, 1956

Mr. THOMPSON of New Jersey. Mr. Speaker, many people have been interested in the large number of study groups and commissions established by the Eisenhower administration, and concerned over the fact that many of these groups were composed, in large part, of persons well known for their long record of opposition to the very programs they were appointed to study. In many cases, also, those appointed to these study groups and commissions have been in a position to benefit personally from the recommendations made.

Mr. Speaker, I tried the other day to learn the status of and count the many groups and commissions, but I lost my way, there were so many. There are those that are still studying their particular problems, those that have completed their work, and those that have been disbanded, so I do not know whether the figure today is 30, 40, or 50—and I would be completely surprised if the President himself knew just how many there are.

Now the President has established a Cabinet-level committee to deal with the problems of small business which follows the pattern of the study groups and commissions set up earlier. It is composed of people who have demonstrated their indifference to the very problem about which they are supposed to study and make recommendations. For instance, one of the members of the new committee is Charles E. Wilson, the Secretary of Defense. In a speech I made on the floor of the House on May 9 of this year I pointed out that in the 7 months ending January 31, 1956, the Department of Defense awarded contracts amounting to almost $1 billion. Of this huge sum only 5 percent went to firms having 500 employees or less. Surely, this kind of situation does not need any prolonged study. What is needed is a reversal of the present policy which favors big business to the almost total exclusion of small firms. Let us hope that decisive action to reverse this policy will be undertaken immediately and that we will be spared a lot of double-talk designed to pull the wool over our eyes and hide the fact that there is no intention to give worthwhile contracts to small business. The backbone of our economy has always been small business and it deserves more than it is getting from the Eisenhower administration—for what it has been getting is only the crumbs from the rich man's table.

Another important member of the new Cabinet-level committee is Wendell B. Barnes, head of the Small Business Administration. One of the most cogent comments on the agency he heads was made by Sylvia F. Porter in the New York Post of April 16, 1956. This keen commentator on financial affairs wrote of the recently published fifth semiannual report of the Small Business Administration in part, as follows:

The report boasts new awards to small-business firms under military contracts rose from 15.7 percent in the last 6 months of 1954 to 17.6 percent in the last 6 months of 1955, and the net value of awards to small business rose from 19.8 to 20 percent. A large part of the report and of the press release is devoted to this subject. Comment: But when you dig into other figures on defense contracts, the complexities seem baffling, and the boast seems meaningless.

For instance, for the full 1955 fiscal year, the percentage of new contracts going to small business fell from 18.3 to 18 percent, and the percentage of net procurement slumped from 25.1 to 21.8 percent. The SBA itself points out the net figure is the one which reveals the share of defense dollars going to small business over a long period.

What's more, a just-released separate report by the Defense Department discloses that since 1953 the share of defense contracts going to the giants of America has been swelling.

The report admits small businesses do complain of various problems such as the squeeze on some raw materials, higher prices, such as for steel scrap, which they are unable to absorb, tightening bank credit, inability to compete with larger firms for skilled professional help. But, remarks Barnes, shortages, bottlenecks, and price increases are characteristic of the boom economy which we are experiencing.

Comment: This tendency to minimize the problems of small business is the most startling aspect of the report. Small business is finding it brutally tough to compete against the giants for steel, aluminum, copper, newsprint, etc., and the SBA knows it. Small business is finding its borrowing costs are soaring and its ability to get new money is shrinking, and the SBA knows it. Small business is finding the pressures from every direction are fierce and mounting, and the SBA knows it.

So much for the new committee and its members. I suppose we will know before long whether it is a study committee like the others or really intends to come to grips with the preblems. In a letter to Dr. Arthur F. Burns, Chairman of the Council of Economic Advisors, General Eisenhower showed some awareness of the important role of small business in our economy. The President said:

The important contributions made by small-business concerns to the progressive spirit and vitality of the American economy have repeatedly been stressed in my economic reports to the Congress and on various other occasions. Such enterprises, of which there are some 4 million currently in operation, serve continuously as a dynamic influence in our free-enterprise system. It is often through them that new products and new processes are first brought into use.

Equally important, it is in small concerns that many men and women find an opportunity to demonstrate their ability to serve constructively in the business world. For these and related reasons Government policies that make it easier for new businesses to be established and that foster the growth of small concerns enhance the welfare of the whole economy.

After listing the Government programs now in operation to help small business the President declared that, despite these programs, "the conditions of our modern economy are such that many small concerns confront substantial hindrances to their growth." He said that the programs for aiding small business should be carefully reviewed at this time with the object of strengthening them where necessary and of making recommendations for steps that will provide such enterprises with additional constructive assistance. The programs listed by the President included loans and defense contract assistance, antitrust enforcement, various managerial and technical aids available from the Department of Commerce, efforts by the Office of Defense Mobilization to strengthen the productive potential of small firms in our defense programs, and help for small construction companies in the housing field.

The President's recommendations seem fine, at least on paper, but it remains to be seen whether the ideas he has expressed in his letter to Mr. Burns are to be implemented or whether, like so many other programs which the President has championed with platitudes, they become lost and forgotten. Words, Mr. Speaker, are not enough. They are useful only if they result in action. George J. Burger, Washington director of the National Federation of Independent Business, pointed out that the overall actions in establishing the new committee would be largely wasted if it failed to concentrate on the basic cause of small business problems. This, he said, was the strengthening and enforcement of the antitrust laws.

Mr. Burger has a good point. Antitrust enforcement is an action which the Federal Government can take, and take now. Such action would speak more loudly than words.

Along this same line, I should like to remind the administration of a bill I have introduced, H. R. 9514, which would establish a graduated corporation tax to help small business. The National Federation of Independent Business recently completed a nationwide poll on this legislation. The poll, reaching in excess of 100,000 small-business men throughout the country, showed that 84 percent favored my bill, while only 12 percent were opposed to it. The President has hinted of his concern for the problems of small business. Were he to support this bill, it would clearly indicate that he understood the problems faced by small business today. Establishment of additional study groups and commissions and resounding speeches are no substitute for positive action.

It is interesting to note, Mr. Speaker, that the New York Times reported on June 2, 1956, that the President's action in establishing the new committee was the result of a recent rise in business failures to the levels of the late 1930's.

I include here as part of my remarks a statement by George J. Burger, vice president of the National Federation of Independent Business, and a report from the Washington Evening Star on the testimonial dinner given to Judge Stanley N. Barnes, who believes, as does Mr. Burger, in vigorous enforcement of the antitrust laws:

PRESIDENT'S SPECIAL CABINET COMMITTEE

NATIONAL FEDERATION OF INDEPENDENT BUSINESS,
June 1, 1956.

George J. Burger, vice president of the National Federation of Independent Business, hailed the action of President Eisenhower in creating the Special Cabinet Committee To Strengthen the Economic Position and Foster the Sound Development of Small Businesses.

He adds that it's a forward step by the administration to recognize this basic problem facing the future of over 4 million small business institutions in our expanding economy. He says: "We trust that this is not a partisan move."

This new Special Cabinet Committee in the opinion of Burger, should have no great difficulty in discovering the real basic causes for the destruction of small business. He holds to the premise that the destruction has been brought about by the failure of the administrations for the past 35 years or more to vigorously enforce the antitrust laws. "However," Burger adds, "one ray of light in this picture was the recent action by the head of the Antitrust Division, the Honorable Stanley Barnes. If a similar policy is instituted by the administration and following administrations, carrying out the program instituted by the present antitrust head, small business of this Nation can look for a bright future."

The federation's position on this has been stated time and again before congressional committees and also before the platform committee of both the Republican and Democratic National Conventions.

He stated that the principal function of this Special Cabinet Committee should be on the No. 1 proposition, namely, antitrust law enforcement and strengthening. Burger concludes, if this is not the No. 1 subject matter to be considered by this Special Cabinet Committee, the federation would consider the overall actions wasted, to a large degree.

[From the Washington (D. C.) Evening Star of June 14, 1956]

FOUR HUNDRED JOIN IN TESTIMONIAL DINNER FOR JUDGE BARNES

Some 400 friends and associates of Assistant Attorney General Stanley N. Barnes gathered last night at a testimonial dinner to mark his recent appointment as judge of the United States Circuit Court of Appeals for the Ninth Circuit.

Leading jurists here and across the Nation were among the celebrants. Heading the list was Mr. Barnes' boss of the past 3 years, Attorney General Brownell.

The dinner, sponsored by the Federal Bar Association, the District chapter of the Federal Bar Association, and the Antitrust Division of the Justice Department, was held at the Shoreham Hotel.

RETURNS TO CALIFORNIA

Judge Barnes, 55-year-old Republican, lives at 3850 Tunlaw Road NW. His new job will take him back to his native State, California. The Ninth Circuit Court of Appeals covers California, Arizona, Idaho, Montana, Nevada, Oregon, Washington, Alaska, and Hawaii. His appointment by President Eisenhower was confirmed last March.

Congressmen, too, were present to honor the man who will soon go West to fill the post formerly held by Judge William E. Orr, who retired January 1.

Several noted guests, including Mr. Brownell, took part in the presentation of skits which hailed the guest of honor for distinguished service here. Judge Barnes has headed the Antitrust Division since 1953.

The skits began with his career as a judge of the Los Angeles County Superior Court from 1947 to his coming to the District 6 years later. He was "seen" as the bar associations see him, and by Judge Thurmond Arnold of the United States Court of Appeals in the District of Columbia "as a predecessor sees him." Mr. Brownell "saw" his as "any boss would see a remarkably talented and wonderful man."

ALSO PRESENT

Among those present to honor Judge Barnes were Mrs. Brownell, Mrs. Arnold, Chief Judge of the United States District Court for the District of Columbia and Mrs. Bolitha J. Laws, Federal Trade Commission Chairman and Mrs. John W. Gwynne, Chief Judge of the Municipal Court and Mrs. Leonard Walsh, Solicitor General Simon Sobeloff, and Republican Senator and Mrs. Thomas H. Kuchel, of California.

Also, Gerald D. Morgan, assistant to the President; Judge Victor R. Hansen, of the superior court of California and recently named a candidate to the post being vacated by Judge Barnes; Senator Malone, Republican, of Nevada; Representative Celler, Democrat, of New York; and Deputy Attorney General and Mrs. William P. Rogers. Mr. Rogers was toastmaster.

Judge Barnes, who was president of the Federal Bar Association in 1954–55, also was honored by Earl W. Kintner, first vice president of the association; Mrs. John Green, president of the District Women's Bar Association; Charles Rhyne, president of the District chapter of the Federal Bar Association; and Mrs Bart Smyth.

Mrs. Barnes, Mrs. Morgan, and Mrs. Rhyne also were present.

Two Hundred Thousand Find Nothing Refreshing in Unemployment

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. O'HARA of Illinois. Mr. Speaker, when 200,000 workers in the automobile industry have been laid off and are un-

employed they and the members of their families find nothing refreshing in their experience. For them these are days and nights of anxiety. They derive no joy in "the right to suffer." They find in hopeless unemployment no "refreshing pause."

I deeply regret that the spokesmen for this administration are meeting the situation in the exact pattern of the spokesmen for the Hoover administration.

When unemployment had started in the last Republican administration members of the President's Cabinet assured the unemployed that they had nothing to worry about. All they had to do was wait long enough for right around the corner was a "chicken in every pot." In mid-July of 1929 a member of President Hoover's Cabinet, speaking at Jackson, Mich., said that complacency would solve all the problems of hunger. A few weeks later the great crash came and the country was plunged into the most devastating depression in history.

When people are out of work action is necessary to get things straightened out. It is no time to sit down in the rocking chair and be complacent.

The "chicken in every pot around the corner" philosophy brought on by the depression of 1929. I hope and pray we will never again have such a depression. Why cannot the spokesmen for this administration realize what they are doing by giving us in 1956 a full-size rerun of the "chicken in every pot around the corner" philosophy of 1929.

It was bad enough when a Presidential assistant told an audience in Detroit that "the right to suffer is one of the joys of a free economy." At the time there were many thousand unemployed in Detroit. Did this assistant to the President think that he was alleviating their condition by a verbal glorification of their misery? I wonder to what heights of joy he would have risen if the President had repudiated his remarks by cutting him off the payroll.

No sooner had this spokesman for the administration finished explaining that it was only a slip of the tongue than another spokesman, this time no less a personage than a member of the President's Cabinet, bobbed up with the same thought. By this time unemployment in the automobile industry had mounted. Among the workers there was real concern. But Secretary of the Treasury Humphrey said it was a "refreshing pause."

Mr. Speaker, if I went up to a man who had lost his job, could not find another job and was going sleepless worrying how he was going to support his family, and congratulated him on his good fortune in having the opportunity to enjoy a refreshing pause, what would be his reaction?

In the June 16, 1956, edition of Labor is an expression of the reaction of the 200,000 unemployed automobile workers to Secretary Humphrey's remark. By unanimous consent I am extending my remarks to include the article from Labor, as follows:

DO JOBLESS AUTO WORKERS ENJOY REFRESHING PAUSE?

Has a high administration official pulled another boo-boo? That's what some observers were wondering after a Washington newspaper this week reported Treasury Secretary George M. Humphrey told Congress the Nation's economy is presently enjoying a refreshing pause.

The remark came in testimony before a subcommittee of the Joint Economic Committee headed by Congressman WRIGHT PATMAN, Democrat, of Texas. Humphrey also predicted the auto industry's difficulties will be behind us in a relatively short time.

The Humphrey remark recalled an earlier slip by Howard Pyle, an assistant to President Eisenhower, who told a Detroit audience "the right to suffer is one of the joys of a free economy."

Some 200,000 jobless auto workers, who had trouble swallowing Pyle's statement, may find Humphrey's refreshing pause equally hard to believe.

More About Republican Prosperity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 13, 1956

Mr. MULTER. Mr. Speaker, the following article from the front page of the Wall Street Journal of June 14, 1956, speaks volumes:

JOBLESSNESS, LAGGING SALES HURT SOME AREAS DESPITE UNITED STATES PROSPERITY—FLINT'S RETAIL STORES SUFFER AS AUTO LAYOFFS MOUNT—CUTBACKS IN QUAD CITIES—TROUBLES IN THE MIRROR BAR

A man got up from the bar at "Ethel's" in Flint, Mich., walked over to the big Seeburg juke box and punched the selector button for guitar-banging, caterwauling Elvis Presley's Heartbreak Hotel.

"See what I mean," said Ethel's husband the bartender, "they're all singing the blues this year."

It was 6:30 p. m. and a few months ago the joint would have been jumping as the gang from the Fisher Body plant across the street relaxed a bit before heading home. But there were only four men at the bar and they all were drinking 15-cent draft beer; the harder stuff, which retails at 30 cents a shot at Ethel's, was getting no play at all. "Our sales are off more than 50 percent this month. We're not even cashing may pay checks any more," noted the bartender gloomily.

FEW INDUSTRIES FALTER

Flint, the self-styled Vehicle City where nearly everyone seems to work for the General Motors—for Buick, Chevrolet, Fisher Body, or the A. C. spark plug division—has undergone a rapid transformation. From one of the glossiest examples of the postwar boom, the city of 198,000 population suddenly became what the Bureau of Employment Security in Washington labels a distress area.

Flint is fairly typical of a small group of soft cities—communities that are suffering from the faltering of a few industries such as autos, auto parts, farm equipment, textiles and some appliances in the midst of today's generally robust economy. The tire town of Akron and some appliance cities like Newton, Iowa, and Evansville, Ind., are experiencing only a mild dose of doldrums so far. Some Midwest auto parts-making cities like Anderson and Muncie, Ind., have generally been harder hit. Other cities, in textile-making regions of New England and in the farm equipment center around Moline, East Moline, and Rock Island, Ill., and Davenport, Iowa, have had a business slump of longer duration that's now being aggravated by the current softness in those industries.

Although some cities, and even some entire industries, are showing signs of recession, the national economy is perking at record levels. For the first 4 months of the year, the Nation's personal income was running at an average annual rate of $314.6 billion a month, up from 294.9 billion in the like 1955 period. Personal income in April reached a record high of $317.1 billion, against a $298.9 billion figure for April 1955. And by mid-May employment was even higher—a record for the month of 65.2 million. Of course, these husky national figures provide little comfort for laid-off workers or sales-shy merchants in the soft cities.

On April 15, there were 5,500 people out of work and collecting unemployment compensation in Flint. This was about 3.8 percent of the total labor force, considerablly more than the 2,300 jobless a year earlier but still not considered alarming. Within the past month, however, the unemployment total has swelled to 13,000, or nearly one out of every 10 workers.

STARTED IN FEBRUARY

The effect on business in the city has been immediate and far-reaching. The big Sears store here fell 20 percent short of last year's volume in May. Although E. A. Talberg, the store's manager, thinks unseasonably cool weather may have been a contributing factor, his credit manager admits that twice as many credit customers have fallen behind on payments as a year ago.

"Business started to slip in February and has grown progressively worse, until now it is 50 percent below last year," says the owner of the Durant Laundry & Cleaners, who had to lay off two employees last month because of the downturn. "There's been no seasonal pickup at all," he adds. "Factory workers who used to come in with 3 or 4 pairs of dungarees a week now come in with 1 pair or don't come in at all."

"During April and May we had a dozen diamond rings brought back that were bought on 6 months' contracts," says the manager of Hatfield's, a large Flint jewelry store. The store's business even in this normally good month of brides and baccalaureates is down 30 percent from last year.

The auto sales slump has curbed the prosperity of a lot of places outside of Michigan. The big three auto makers maintain plants, assembly operations, and parts depots in about 100 cities. Add the independent manufacturers of parts who sell to the auto builders and as many as 200 cities and towns are affected by sluggish car sales.

LOOKING FOR WORK

Thirty-four-year-old Jim Sells joggled his two-year-old son on his hip as he waited patiently in the long line at the unemployment office in Anderson, Ind. "It's rough when you have four kids," says this former generator builder who had 1½ years' seniority at the local G. M. Delco-Remy plant. He figures there's no prospect of anything opening up in Anderson before July, and thinks he might try nearby Indianapolis for a job. "You don't worry too much about moving when you have to find work to pay the bills," he says.

But a neighbor in the line commented, "There's not too much in Indianapolis either. I ought to know. I got laid off at the Chrysler plant there a month ago."

Anderson possibly has been hurt worse than Flint by the auto-sales slump. James Armstrong, manager of the Indiana Employment Security Division's office there, estimates 14 percent of the city's labor force of 38,000 has been affected by factory layoffs. During peak auto production periods of 1955, the 10 Anderson plants of Delco-Remy employed more than 16,000 workers making ignition parts, generators, horns, starters, and

switches for G. M. cars. Employment cutbacks started in January and reached a high on May 18, when 1,726 hourly workers were laid off and 61 salaried supervisors were reduced to hourly scales. This lop-off reached men with seniority dating back to May 1952, and cut employment to 13,499.

The guide lamp division of GM, the second largest Anderson employer with more than 6,000 workers last year, is now down to 4,246. The most recent layoff occurred May 22, when 200 got their notices.

LAYOFFS IN MUNCIE

In nearby Muncie, also a big auto parts town, the principal employer is the Warner gear division of Borg-Warner Corp., which makes automatic transmissions for Ford and Studebaker. About 1,600 employees at this plant are understood to have been cut loose since the first of the year and total unemployment is estimated at 5,400, compared to 2,500 at this time last year.

Verle Hains, manager of the Modern Electric appliance store in Muncie, says, "We're making about twice as many cash sales as last year. People just hesitate to buy on credit." Also, he notes, delinquencies on time payments have about doubled. "We had to go get a washing machine and dryer this morning, but we decided just to pick up the dryer and let the washing machine go. We'll try to get all we can out of it, but this guy has five kids and he's really up against it."

Jewelry stores normally expect a brisk business in watches, pens, rings, and other graduation items at this time of year. But Anderson Jeweler Paul Adams reports his sales are off about 15 percent compared with this time last year. "I've been in this business 31 years, and I can tell you when things are good in this town, they're really good. When it's bad, it's lousy," he adds.

The auto slump has begun to take the edge off the boom in tiremaking Akron, too. In the past 2 months about 900 rubber workers have been laid off and Firestone currently is in the midst of a cutback schedule with 200 laid off last week, 200 this week, and 200 scheduled to be released next week. Another major tire producer reportedly is planning to drop 250 workers in the next 60 days.

SHORTER WORKWEEKS

Although the number of unemployed is currently only about 3 percent of an estimated rubber work force of 50,000, layoffs have been accompanied by shorter workweeks (5 days instead of 6 last year) and the Sunday overtime schedules of 1955 have just about vanished this spring.

"There's no question we have been hurt by the situation in the tire plants," says Larry Silverman, owner of the Modern Men's Shop, a small haberdashery in downtown Akron. "The worker here sees what is going on in Detroit and he starts watching his pocketbook more carefully. Our sales are down about 17 percent this spring," he says.

D. G. Burg, owner of a discount furniture store near the Goodrich plant, adds that "volume is not off too much but we're making less profit—more special sales, price cutting and the like." Mr. Burg notes a recent increase in the number of customers asking for credit, although he has no great collection problem at the moment.

"Slimmer pay checks and too many bills" is the way Pete Cipolla explains the 20 percent drop in patronage at his Silver Mirror Bar, where the Saturday night take has been off $50 to $75 from what it was a couple of months ago.

Ernest Meder, branch manager for the Capital Finance Corp., reports he's had to "refinance a few accounts because of shorter work weeks in the tire factories." But he doesn't foresee any "serious trouble" ahead and reports no increase in repossessions.

Leo Dugan, a top local official of the United Rubber Workers Union, is more pessimistic. "The summer employment outlook doesn't look too good to me," he says, adding that he's heard rumors of heavier layoffs yet to come.

"The fellows laid off today are not able to stand it economically as well as they could 2 years ago," Mr. Dugan says. "Their living standards have kept going up and they owe more bills, with less savings to fall back on."

Although demand for replacement tires is running at a record rate of 53 million a year, new-car tire shipments have been running 22 percent below last year and there is a bulging inventory of 17,800,000 tires ready to be fastened onto new cars when and if they are built, compared to a stockpile of only 12,197,000 new-car tires a year ago.

"Our main worry at the moment is the high inventory of passenger-car tires," says Robert S. Wilson, executive vice president of Goodyear Tire & Rubber Co. Mr. Wilson concedes that production will have to be cut in the third quarter. "But the situation is by no means alarming," he insists.

Economic soft spots aren't limited to the auto industry and its adjuncts. Tomorrow, Consolidated Textile Co. will close its Lynchburg, Va., print cloth mill for a month, instead of the usual 1-week vacation shutdown, because of what President Lester Martin terms "heavy inventories and a lack of spot orders."

"THEY DON'T KNOW"

According to Iowa State unemployment compensation figures, Newton, home of the Maytag Co., big washing machine manufacturer, has seen an increase in jobless payments this year.

"I'm writing an editorial about some of those cities that are complaining about layoffs this spring. They don't know how well off they are," says the editor of the weekly East Moline Herald, in the heart of the Quad-Cities farm machinery center.

This industrial area along the Mississippi River includes Moline, East Moline and Rock Island, all in Illinois, and Davenport, Iowa, as well as nearby Bettendorf on the Iowa side. There are 12 big implement and tractor plants operated by such industry leaders as Deere & Co., International Harvester Co., J. I. Case Co., and Minneapolis-Moline Co. About a scole of foundries are located here, too, to supply castings to the implement plants.

Employment has been going downhill for years. "We haven't had it very good since 1948 or 1949," one local businessman comments. By mid-May employment in the local implement plants was down to 13,700 against 21,300 3 years ago. There were 4,100 unemployed and 3,300 on strike (against Deere & Co.), roughly five times as many without income as in 1953.

The United Auto Workers strike against Deere, which had dragged on 134 days since last January, was settled June 1, to the great joy of local business people. "We had the best Saturday since before Christmas," said Phil Rosene, proprietor of Rosene's, "the world's largest miniature department store" in East Moline.

MORE BAD NEWS

However, more bad news was not long coming. International Harvester almost simultaneously announced layoffs for 200 at its East Moline implement plant and 650 at the huge Farmall tractor works in Rock Island. Total Harvester layoffs scheduled for June in farm equipment plants will come to 2,380, the company announced last Friday. Job cutbacks at Farmall affect men whose job seniority dates back to January, 1945—11½ years—according to UAW officials.

Minneapolis-Moline Co., which manufactures farm tools at a Moline plant once employing 750, is turning the big brick building into a parts depot at the end of this month and cutting back employment from 450 to 100. J. I. Case, also in a contraction cycle, is discontinuing its foundry operations in Rock Island. Davenport Besler Corp., a locomotive maker which employed about 300, has closed for good, as has the Uchtorff Brewery in Danvenport, idling about 75. Swanson's Foundry in Moline has halved its labor force and is working a 3-day week while the French & Hecht foundry in Davenport, a division of Kelsey-Hayes Wheel Co., is reported working only a 4-day week.

There has been a steady decline in the total labor force as people leave for places where the job outlook is brighter. In the past 3 years, according to the Illinois State Employment Service, the labor force on both sides of the river has dropped from 112,700 to 101,700.

"Most of the fellows from Alabama, Missouri, Tennessee, and the Carolinas who came up here during the war have gone back to the hills now," says C. A. Siegfried, head of the Business Man's Association, Moline's credit bureau.

The area apparently is a fertile hunting ground for recruiters from more affluent industries in search of skilled factory hands. This week it was Boeing Airplane Co. which filed up the short help wanted columns of local papers with offers of high-paying jobs elsewhere. Recruiters for United States Steel also have been through the area recently.

BUSINESSMEN MINIMIZE EFFECTS

Businessmen in the Quad Cities minimize the effects of this year's slump, saying they've been through layoff periods before and that in January 1954, when the farm equipment industry also was in a slow period, unemployment totaled 8,700. Now there are about 5,000 out of work.

"Collections haven't been too bad this spring," a Moline banker says. "We've had to learn to be good collectors here. If a man doesn't make a payment the morning it's due, we have a letter out to him in the afternoon mail."

However, there is no gainsaying that the decline in farm equipment volume since 1950 has had its effect on business activity. Home building in Moline, for example, totaled 239 in 1951 but was down to 146 in the year ended March 31.

The sudden impact of this spring's layoffs, of course, is most dramatic in Flint, where the Michigan Employment Security Commission last month had to hire 37 more people, almost doubling its staff, to handle the sudden rush of claims.

Unemployment finds many auto workers with a full load of credit payments to handle. "I'm driving my own car now, not the finance company's," explains a former tool crib worker at the Buick plant. He eased out of his financial squeeze by giving up payments on his 1955 Ford, purchased last year, and buying instead a used 1949 Buick. Now his biggest pressure is meeting the rent every month on his house.

MOVING TO THE FARM

Another Buick worker interviewed at the unemployment office lost his $7,000 house trailer this week. Out of a job since May 7, he's moving in with his in-laws on a small 20-acre farm. His monthly payments on the trailer were $105.93 and he still owed $4,390 on it. The bank carried him for 2 months while he tried to sell it to "get some of the equity back." He still owes $300 on a 1954 Buick.

A stockroom man who came up from Mississippi with his wife 15 months ago and had worked at GM's Ternstedt division (automotive hardware) was laid off 5 weeks ago. Things had looked good and he bought a $11,246 house and a 1956 Chevrolet. Now the monthly payments total $142 for the house and car but he can't find a job.

"There were too many people who bought Buicks and Oldsmobiles in last year's flush overtime period when they should have stuck to Chevrolets and Fords," an official of

UAW local 662 in Anderson, Ind., admits.

The problem of repossessions of workers' cars is proving a ticklish one for General Motors Acceptance Corp., the credit arm of the big motor maker.

"We are making renewals and extensions of types we normally wouldn't even consider," says Martin Schneider, who manages an 11-county area, including Muncie and Anderson, in central Indiana, for GMAC. Mr. Schneider admits getting a deluge of requests for help in meeting payments and says the concern is "bending over backward to avoid repossessing an unemployed worker's car."

Despite the slump, many businessmen are optimistic that it will be over soon. "When they call back the first few workers, that will give everybody a boost and people will start buying again," hopefully predicts Roger Bloyd, standing among row after row of unsold sofas in his furniture store on Anderson's Courthouse Square.

This feeling is especially pronounced in Flint, where H. H. Curtice, GM's president and the highest-paid industrial official in the country, still maintains his home—a pleasant but not palatial structure on the western fringes of the city. Many share the belief that GM will spread a financial umbrella over Flint and that the present doldrums will be shortlived.

Brotherhood Marks Rabbi Simon's Anniversary

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 14, 1956

Mr. O'HARA of Illinois. Mr. Speaker, there has been celebrated in Chicago this last week Rabbi Ralph Simon's silver anniversary in the rabbinate. Congregation Rodfei Zedek, in the district that I have the honor to represent, set aside the weekend to pay tribute to its spiritual leader. It seems to me fit and proper that we here in the Congress should take notice of such events. The strength of our Nation is in the depth of its spiritual tones.

How closely bound in brotherhood are the people of the Second Congressional District again was shown at the Friday evening services that began the weekend of festivities. Speakers who paid tribute to Rabbi Simon were prominent leaders of the Chicago community, including Rabbi Ira Eisenstein, of Congregation Anshe Emet; Dr. Samuel Hollander, president of the Jewish Federation of Chicago; and the Reverend E. Jerry Walker, pastor of St. James Methodist Church and president of the Hyde Park-Kenwood Council of Churches and Synagogues.

Rabbi Ralph Simon, who was born in Newark, N. J., was ordained with distinction and received a master of Hebrew literature degree from the Jewish Theological Seminary, in 1931., and also holds a master's degree from Columbia University. He has served at various times as president of the Chicago Rabbinical Association, and vice president of the Zionist Organization of Chicago, and is presently treasurer of the Rabbinical Assembly of America.

The Flag Goes By

EXTENSION OF REMARKS
OF
HON. JOHN W. BRICKER
OF OHIO
IN THE SENATE OF THE UNITED STATES
Thursday, June 14, 1956

Mr. BRICKER. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a pamphlet consisting of a poem entitled "The Flag Goes By," written by Henry Holcomb Bennett, an article entitled "Its Origin," written by John Bennett; and an article entitled "Its Author," written by Martha Trimble Bennett.

There being no objection, the pamphlet was ordered to be printed in the RECORD, as follows:

THE FLAG GOES BY

Hats off!
Along the street there comes
A blare of bugles, a ruffle of drums,
A flash of color beneath the sky:—
Hats off!
The flag is passing by!

Blue and crimson and white it shines,
Over the steel-tipped, ordered lines.
Hats off!
The colors before us fly;
But more than the flag is passing by.

Sea-fights and land-fights, grim and great,
Fought to make and to save the State;
Weary marches and sinking ships;
Cheers of victory on dying lips;

Days of plenty, and years of peace;
March of a strong land's swift increase;
Equal justice, right, and law:
Stately honor and reverend awe;

Sign of a Nation, great and strong
To ward her people from foreign wrong:—
Pride and glory and honor, all
Live in the colors, to stand or fall.

Hats off!
Along the street there comes
A blare of bungles, a ruffle of drums:
And loyal hearts are beating high:—
Hats off!
The flag is passing by!

—*H. H. Bennett.*

ITS ORIGIN

(By John Bennett)

I remember well the day he wrote The Flag Goes By; and how he composed it, entire, lying on the day-bed, the old lounge in mother's room; how he rose rather quickly, went directly up to the Roost, and after quite a while came down, a bit dishevelled with intense production and singularly simple and direct creation, and handed me the first typed draft for my criticism, with 1 or 2 suggested verbal alterations already noted in pencil by himself. Those were very few, not half a dozen. The poem as finished stands almost exactly as he composed it complete, in his head, before he hastened up the stairs to set it down.

I may add that I found no suggestions to make, further than to agree with his own proposed emendations. The poem was, practically, done, perfected permanently, in that first writing.

This was a habit of Harry's; to lie down on that long lounge, apparently asleep or dozing; sometimes for an hour or two at a time, motionless, silent, giving no attention whatever to anything passing around him. During that time he would compose, complete, from beginning to end, verses, or prose articles, which his really unusual verbal memory enabled him to carry in mind as definitely as if he had already written the text down. I have known him to do this with prose stories, usually on military or soldier topics, such as he had published in Scribner and the Atlantic, incomprehensible as this was, and still is, to me. Then swing himself around on the couch, spring to his feet, and hurry through the house to his rookery and furiously engage, with typewriter or pencil, in setting down the fresh-born text, writing with great rapidity. I had the privilege of reading over with him these first drafts, and of discussing the alterations, emendations, or additions proposed by him on the manuscript.

The Flag Goes By was first published in The Youth's Companion, January 13, 1898. Its appearance in print was delayed several months by a rejection letter from St. Nicholas Magazine which its editors lived long enough to regret. It is interesting to note that the first anthology in which the verses were included was Edmund Clarence Stedman's Anthology of American Verse. I think it impossible to list the many anthologies which since have included it, as Harry was always ready and generous to permit its use and wide circulation. Rear Admiral Luce included it in his Anthology of Patriotic Verse. It was translated into French by the Reverend Samual N. Watson, former rector of St. Paul's Church, Chillicothe, and used in presentation of flags to American regiments going to the front in France during the First World War. A copy of the poem, requested, is on exhibit at the Valley Forge Museum of American History.

Harry was always militant and patriotic; he was also, though never very strong, and always rather lightly built, as pugnacious as a bull-pup, and would fight at the drop of a hat. His first "military experience" as a boy was as guide-marker for the old Campbell Light Guards, bearing the guidon on which company pivots and turns were centered. He was a member of old Company H, Ohio National Guard, and, I believe, a sergeant, at the time of the Spanish War; but illness, typhoid fever and convalescence prevented service with the company.

So long as the United States lives and honor is paid to those who lay down their lives for an ideal, just so long I think Harry's poem will be treasured as a voice from the past, perennial and forever stimulating to loyalty to all that the flag of these United States represents.

ITS AUTHOR

(By Martha Trimbell Bennett)

My brother Henry was born in our family home in Chillicothe, December 5, 1863. His education was gained in our local schools and at Kenyon College, but chiefly through life-long reading—poetry, drama, fiction, the classics, and especially history; local, national, current, ancient, modern and Biblical.

After leaving college he was employed in the Cincinnati offices of the B. & O. Railroad and later as an expert actuary in Kansas City. On his return to Chillicothe he did some illustrating, and contributed both prose and verse to leading magazines, some of his stores being based upon his experiences with Company H, Ohio National Guard, with which he saw lively service on riot duty. As a young boy he was marker for the Campbell Light Guards, a local company, and through his life he was interested in military affairs.

For 30 years he did newspaper work here, first with the Scioto Gazette and later, until his death, as editor of the News-Advertiser. For the Gazette he edited the notable Centennial edition in 1900, the research for which deepened his knowldege of local history. Many of the illustrations used in this edition were from his sketches.

In our Chillicothe Centennial (1896), and in the Ohio Centennial centered here (1903), he was active, and in the 1912 Columbus Centennial he was assistant secretary to the commission, in charge of all decoration and design. His knowledge of historical detail, of costume, and his artistic ability contrib-

uted in large measure to the floats and to the pageant put on at Ohio State University.

He was always interested in civic affairs in Chillicothe, was a charter member of the Rotary and Sunset Clubs, and for 15 years a member of the park board. He was a devout communicant of St. Paul's Episcopal Church, a founder of its men's club, member of the choir, leader of a men's Bible class, and write many plays for the young people of the church school. At his death he was secretary to the vestry.

A happy boyhood, spent with a singularly congenial group, exploring hill and stream, strengthened his love of nature. He delighted in the outdoor world—the changing seasons, clouds and shadows, color and form, trees and flowers, but above all he loved his birds, their coming, and nesting, and going. He studied them lovingly and left valuable records, accompanied by accurate water color studies of individual birds.

It was the joy he had found in such things, and his keen interest and concern for boys, that led him in 1911 to initiate Boy Scout work here. It would give wholesome interests, develop resourcefulness and responsibility, and love of country.

Unassuming, friendly, generous of time and knowledge, with a happy sense of humor and a quick and ready smile, courteous and considerate, he was a delightful companion. In every family relation he was devoted and loving beyond all measure. He died, after a brief illness, April 30, 1924, just as the world he loved so much was waking into beauty.

The cover illustration was taken from a pencil drawing of Sgt. Henry Holcomb Bennett, Ohio National Guard, by his brother John Bennett, distinguished author of historical novels (among them Master Skylark) and chronicler of South Carolina legends, who here records the origin of The Flag Goes By. Their sister, Miss Martha Trimble Bennett, founder and head of the English department at Dana Hall (Wellesley) for many year, has given her retiring years to local history, perennial object of the Bennett family's devotion. The Ross County Historical Society proudly presents this definitive study of The Flag Goes By, dedicating it with affection and esteem to the great American family which created it.

Chillicothe, Ohio, Flag Day, June 14, 1956.

Fraternalism Fights Communism

EXTENSION OF REMARKS
OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. OSMERS. Mr. Speaker, the July issue of the American Mercury magazine carries a most important article on the subject Fraternalism Fights Communism. This article was written by George E. Stringfellow, of East Orange, N. J. Here are some brief facts about Mr. Stringfellow:

He was born in Reva, Va., son of James and Elizabeth F. (Bowers) Stringfellow. Married Carrie M. Fearnow.

He is a director and senior vice president of Thomas A. Edison, Inc., and director of Thomas A. Edison of Canada, Ltd.; was a daily business associate of Thomas Alva Edison for many years.

He is a director of Mine Safety Appliances Co., Pittsburgh, Pa.; member of the board of directors of the American Mining Congress, Washington, D. C.; member of the American Iron and Steel Institute and the American Institute of Mining and Metallurgical Engineers, New York City; member of the board of directors of Indiana Technical College, Fort Wayne, Ind.; and member of the board of governors, American Foundation of Religion and Psychiatry, New York City.

He is an honorary member of the New Jersey Medical Society; was awarded the certificate of service by the Rotary Club of Orange, N. J.; was cited as the outstanding citizen of the Oranges and Maplewood; was cited by the Brotherhood Committee of Christians and Jews for bringing about a better understanding among the three religious sects.

He received an honorary degree of doctor of fine arts from Ithaca College; honorary degree of doctor of laws from South Jersey Law School; honorary degree of doctor of laws from Upsala College; honorary degree of doctor of humanities from Indiana Technical College; a citation of merit from the New Jersey Association of Business Schools; the 1953 Gustav Lucie Brotherhood award; the citizen award for outstanding achievement in industrial statesmanship from the New Jersey Society of Professional Engineers.

He is past president of the New Jersey Taxpayers' Association; founder and first president of the New Jersey division of the American Cancer Society, and the recipient of the American Cancer Society award. Served two terms as president of the Kiwanis Club of New York City; served two terms as president of the chamber of commerce and civics of the Oranges and Maplewood; former chairman of the finance committee of the Republican Party of New Jersey; member of the Imperial Divan of the Shrine of North America.

His clubs are the Kiwanis Club of New York City; Advertising Club of New Jersey; Union League Club of New York and Philadelphia; New York Railroad Club; Duquesne Club of Pittsburgh; Montclair Golf Club, Montclair, N. J.; and the Essex Club of Newark, N. J.

Under unanimous consent, I include in the Appendix of the RECORD this very worthwhile article:

FRATERNALISM FIGHTS COMMUNISM

(By George E. Stringfellow)

The voluntary cooperation of a free people is one of the invaluable spiritual resources of a free society. Personal, voluntary cooperation in the United States has become so widespread and has developed to such an extent that it can be described as an established influence in our land of the free. "When the history of our times is written," says Clarence B. Randall in his Creed for Free Enterprise, "this characteristic will stand out as our most revolutionary contribution to the advancement of human welfare by democratic processes."

Of the countless voluntary organizations in America, the 700 fraternal organizations, composed of both men and women, stand as one of our most valuable resources. Faced with the challenge of atheistic communism to our way of life, the members of these fraternal orders have not only taken their stand for God, but in opposition to communism and all its works. Moreover, many of the leaders in our fraternal orders have been on the front line in the fight to preserve our American way of life against the infiltration of communism.

Civilization rests ultimately on an act of faith. For those of us who have grown up in the Christian ethic, faith in God is the very foundation of the social order. This is God's world; He is the Creator of the universe, which is under His dominion.

In this faith and abiding conviction, Freemasonry, the oldest form of fraternalism, was founded and has developed through the centuries. Its symbolism, its ritual, and its rule of life are derived from a belief in God. No atheist can qualify for membership in the Masons, nor in other fraternal orders.

While the vows and rituals of Freemasonry are not publicized, the symbolism and philanthropic acts of the order portray its ethical foundations. The doctrines of Freemasonry parallel the traditional lessons of humanity that are one with the highest hopes of all ages. The objective of Freemasonry, briefly, is the "development of a body of 'moral instructions,'" communicated and taught.

Of the symbolism of Freemasonry, three symbols alone will suffice to illustrate the religious basis of the order: The altar, the square, and compass, and the all-seeing God.

Both the form and place of the altar proclaim its sacred importance in the lodge. Here the Bible is spread open; here, too, the square and compass are placed; here are carried on many of the rites of the craft.

The square and compass have mystic significance. By an earlier ritual, they sought "to teach members to square their actions and to keep them within bounds."

"Who wears the square upon his breast
Does in the sight of God attest
And in the face of man
That all his actions will compare
With the divine, the unerring square
That squares great virtue's plan."

The all-seeing eye, since ancient times, has been considered a symbol of divine watchfulness and care of the universe by God. David, son of Solomon, wrote: "The eyes of the Lord are upon the righteous, and His ears are open to their cries."

This belief in God, which is the central fact and faith of Masonry, is also the central faith of all the leading fraternal orders in this country. Symbolism, ritualism, and specific objectives may differ in the different fraternities, but on one thing there is complete agreement—namely, believe in God as the Creator of the universe.

When one lists the approximate members of the major orders such as the Knights of Columbus, Odd Fellows, the Eagles, Elks, Moose, Knights of Pythias, and Masons together with their appendant orders and auxiliaries, the total is nearly 13 million. To this substantial total must be added the 700 other fraternal orders in the United States. It is this stanch phalanx of God-committed men and women who stand as a mighty bulwark against the assaults of Marxist socialism.

The role of this vast group of men and women becomes of great importance when we recognize the nature of our present world crisis. Those who have eyes to see perceive that we have reached a climax in history. That climax is characterized by the present ideological struggle for the minds and souls of men. In such an ideological struggle, it is essential that we understand not only the faith by which we live in the free world, but the faith by which the slave world lives.

The ideology of the Communist world was originally formulated by Marx and Engels in the Communist manifesto in the middle of the 19th century. By that manifesto, communism was made a mass force in the world. In that document, Karl Marx not only attacked economic beliefs of the 19th century, but its political and moral ideas as well. He denounced parliamentary government, and asserted that "force is the midwife of every old society pregnant with a new one." He based his theory on the materialistic con-

ception of history, the inevitability of the class struggle, the violent overthrow of the social order, and the dictatorship of the proletariat.

Communism, as it has developed, combines the most ruthless practice of power politics with a fanatical zeal for revolutionary change. Communism would abolish our fundamental concepts of freedom, democracy and law in our society. It isolates man and destroys the belief in the moral responsibility of the individual. It can exert much influence since it has the financial backing of wealthy people.

But what makes communism a most serious threat to our western civilization and to modern capitalism is the missionary zeal of its volunteers and its goal of world domination. So great an authority on Soviet strategy as Gen. Douglas MacArthur recently asserted that the Russian strategy is the double envelopment to the South as well as to the North. Soviet intent is clear; economic control of the world as a means of world conquest.

But beyond this sober warning by MacArthur, how shall be appraise the violent denunciation of Joseph Stalin by his former associate Khrushchev and the present Red leaders before the recent Communist Party Conference? And what shall be conclude from Khrushchev's statement that Moscow, in Stalin's time, was "ridden by plots, counterplots, and intrigue?" Or, what are we to conclude from the assertion that Stalin was afflicted with a terrible form of madness over the past 20 years?

If Stalin was a fanatic and a murderer, as is now charged by his former partners in crime, including all-powerful Lazar Kaganovich, his father-in-law, what about his competence to negotiate agreements in behalf of the Soviet Republic at Yalta, Teheran, and Potsdam, with representatives of Great Britain and the United States?

Little wonder that, as a result of all these disclosures of the true nature of Stalin's dictatorship and the clique he represented, there is consternation among his followers within the Soviet Union, and utter dismay among the leaders of the Communist Party, both within and without the Iron Curtain.

Thirty years ago, before there was an awareness of the danger of Communist infiltration in the United States, the International Supreme Council of the Order of De Molay issued a warning in behalf of Masonic youth that, for the most part, went unheeded. Let me quote the words of Frank F. Land, secretary general of the order:

"The Order of De Molay took an emphatic stand against communism in 1925 when our youth movement was only 6 years old. De Molay's was the first youth movement to do this, and pioneered the way for others. Today, with its membership approaching the 3 million mark, De Molay is more firmly entrenched now than ever in the traditions of Masonic endeavor.

"De Molay immediately added a vigorous anti-Communist campaign to its list of activities in 1925, and, in the following year, more than 33,000 persons attended 473 De Molay-sponsored meetings to combat communism. Ever since, De Molay has continued this activity, always stressing reverence of God and all-out patriotism to one's country, which are two of the cardinal virtues upon which the order is founded."

Nearly a decade before the present revelations of the nature of Soviet communism, Past Imperial Potentate George H. Rowe, of the Ancient Arabic Order of the Nobles of the Mystic Shrine and a distinguished member of the Supreme Court of New York for nearly a quarter century, warned of the serious inroads of communism in America.

"Fraternalism and religion will cease if communism breaks down our form of government and democracy. World leaders have commended the Shrine for its fearlessness, its foresight, and its knowledge of America's Red menace.

"The Shrine took the lead among the Nation's fraternal orders in turning the spotlight on Red communism—its identity; its aims; its purposes—and we did it in time. Certain corporations and labor organizations, and our Government itself, were then indifferent, but grew amazed at revelations. Finally, investigations were inaugurated. But the support of the Shrine must not lessen until this enemy of free living shall cease to exist in America. For that, the Shrine draws the scimitar in the Nation's defense. For only in a free country can fraternalism live."

With the same clear warning, Galloway Calhoun, past imperial potentate and chairman of the Board of Shriners Hospital for Crippled Children, asserted: "Communism is a cancerous sore, eating at the very heart of the world. It is a godless philosophy, contrary to the sacred principles on which our Government was founded, our way of life, our Bill of Rights, and all for which Old Glory stands, seeking finally to overthrow our Government by force, if necessary, to accomplish its ends.

"The 800,000 Shriners of North America, each having placed his trust in God and standing foursquare for God, for country, and our flag, shall stand like a mighty phalanx, opposing this scourge from hell until their arms shall strike no longer and their tongues shall speak no more, definantly saying to the hordes of communism, 'Thou shalt not pass.'"

Harold Lloyd, a past imperial potentate of the Shrine, and member of the board of the trustees of the Shrines Hospital for Crippled Children, said: "To me, the issue is as clearly defined as white from red. One can't be both an American and a Communist."

Other prophetic voices from fearless and forthright leaders of fraternal organizations have been raised against the menace of communism, both to our country and to fraternalism. Aroused and alert, they have called upon their fellow lodge members to be vigilant and vigorous. No one can deny the pioneer work of the leaders of fraternalism in sounding the alarm long before the public was aware of the danger. Yet this patriotic service of our fraternal orders is one with that earlier and even more illustrious role of Masonry in laying the foundation of the Republic. Then, the sovereign rights of freemen were at stake—and the principle of government by consent was in the balance.

The story of the American Revolution and the early efforts to build a republic of freemen in colonial America is one of the epics of the human spirit, the achievement of which was wrought in no small measure by men whose love of freedom was nurtured in their Masonic lodges. Historians of that period assert that Masonry alone undertook to lay the foundations for national unity in America.

In 1760, there was no town, large or small, along the Atlantic seaboard where Masonry had not begun its work of preaching fraternity and unity. The fellowship thus created was invaluable, as was the ideological work carried under the shield of Freemasonry.

The Boston Tea Party is regarded as the first revolutionary act on the part of the colonists—it was, in fact, an adjourned meeting of the St. Andrew Lodge of Boston.

Paul Revere, the Right Worshipful Grand Master of Massachusetts, sounded the alarm that aroused Concord and Lexington. Tom Paine, Patrick Henry, James Otis, and John Paul Jones were all Masons.

George Washington, Master Mason of his craft, drew inspiration from his membership in the order and gained strength from his association with his brother Masons. During his entire adult life, he drew about him members of the order. Of the 56 signers of the Declaration of Independence, 31 were Masons—or, three-fifths of the entire assembly.

Thirty-nine patriots signed the new Constitution that was drafted at Philadelphia; 23 of them were Masons that included Washington, Franklin, Hamilton, and Madison. But not only was Masonry a vital force in the establishment of the Republic; it was responsible, in part, for removing the hatreds caused by the War Between the States.

And so the record unfolds. It prompted one historian to describe Freemasonry as the great social force of the 18th century. It is not too much to assert that the history of Freemasonry is intertwined with the early history of our country, as today it stands with the other fraternal orders as a defender of our liberties.

The conclusion of the matter is this: The distinguished and devoted leaders of our fraternal orders and religious organizations were in the vanguard in warning our Nation about atheistic communism, and today are in the forefront of the battle to meet this mounting challenge.

As a Mason and as a Shriner, this is my belief, my creed of an American who worships God, who cherishes the beneficent services of fraternity, and who has unbounded faith in the destiny of America:

I believe in God.

I believe in this Nation, under God.

I believe in our fraternities, under God.

I believe that this Nation, under God, was destined to be the protector and defender of human liberty.

"For, where the spirit of the Lord is, there is liberty."

He Gave $11 Million Back to the Boss

EXTENSION OF REMARKS

OF

HON. CHARLES RAPER JONAS

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. JONAS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article written by Paul R. Leach which appeared in the Miami Herald some time ago. This article discloses a remarkable record of economy and efficiency by Mr. Raymond Blattenberger, the Public Printer, in directing the activities of the Government Printing Office.

Public attention is usually focused on waste and extravagance and all too frequently records of efficiency and economy go unnoticed. When such a record is made, I think it deserves public attention.

The article in question follows:

[From the Miami Herald of December 19, 1955]

WASHINGTON.—Thrice in the last 2½ years Raymond Blattenberger, the man who directs the mammoth Government Printing Office, has turned money back to the United States Treasury, $11 million in all.

In the same period his payroll has been reduced by 800 persons. He has wangled and absorbed $2,875,000 in 3 pay raises for members of the 15 unions working there. Prices to his "customers" have been slashed, and production volume has gone up $3 million.

He has done it by running that $77 million annual business the way he did his job as executive vice president of the Edward Stern Printing Co., of Philadelphia. That is, as a

"griper" in getting things done, but with a warm pat on the back for every man on the job who has helped do it.

Such goings on, "a gratifying achievement" to quote penny-pinching Treasury Secretary Humphrey, are termed without historic parallel in the 30 acres of floor space of that print shop. It is almost unheard of for any bureau head to turn back unused money.

Just as unusual is the story of how this slender, soft-spoken, 63-year-old man came to be Public Printer.

He never finished grade school. He grew up in the printing business, starting as a press helper at age 14 for $6 a week. He had 2 years of a night school business course, and put in 2 similar years prepping for Temple University.

You could call him a frustrated physician, for medicine was his idea in going to Temple. He disagrees with that. He remained with the trade because he loved it.

Blattenberger was drafted by President Eisenhower's "charm." He gave up close to a $30,000 income to work for Uncle Sam at half that figure.

Nearly 50 men, all with powerful political backing, wanted the job when Eisenhower came in. While the GPO does printing for all departments and Congress, it is an agency of the Congress.

Five weeks after Ike's inauguration Blattenberger picked up his phone in Philadelphia. Senator FRANK CARLSON, Kansas Republican, then chairman of the Rules subcommittee which had charge of printing, was talking from Washington.

"Have you any recommendations for the job of Public Printer?" CARLSON asked.

"Yes," said Blattenberger. "There's John Soandso, and Bill Whoosit, and * * *."

"Now, the man we want," CARLSON interrupted, "is vice president of one of the biggest companies in the East. He has a fine record as a production manager. He's a Republican, member of the Union League Club. He has never been in politics, lives in Haddonfield, N. J., and * * *."

"Hey," Blattenberger cut in, "are you talking about me? If you are I don't want the job. I'm perfectly happy where I am."

"We know you don't want the job. That's why we want you," the Senator said. "The responsible people of the industry say you're the man."

Still protesting Blattenberger was asked to come to Washington and see Presidential Assistant Sherman Adams. He was pleased by the offer, Blattenberger told Adams, but he did not want any part of the job. So Adams took him in to see the President.

"I am delighted that you are coming to join us," said Ike. And then the President smiled.

That did it. Blattenberger says today he'd do anything that man asked him to do. He looks over his shoulder many times a day at that same smile on his office wall. When the going is rough the smile reassures him.

It is a color print of Norman Rockwell's famous Saturday Evening Post cover portrait. There's a second portrait on Blattenberger's wall, painted by one of the Printing Office workmen. It is of another well-known Philadelphia printer, name of Ben Franklin.

It is in that setting, with a clean desk, that Raymond Blattenberger runs the Government's printing business. The GPO has its own appropriation of only about $12 million a year from Congress. That is a revolving fund.

Congress and the departments are billed monthly for printing and publishing, for which each has its own budget figure. The billing is on a cost basis, determined on the average cost per unit of operation.

Unlike other Government departments which are spenders of public money, the GPO has to maintain its own building and equipment. A balance sheet is drawn every month.

After Blattenberger had been Public Printer for a year he reduced charges to all departments by 5 percent and turned $5 million over to the Treasury. Last spring he sent Humphrey a $3 million check. Just a few days ago still another $3 million went into the coffers.

"We had the money and didn't need it," is Blattenberger's explanation. But that does not tell all the story.

At the outset he called in all division heads and told them what he wanted done. The work would be so apportioned that steady jobs were assured. There would be no firing of anybody on political grounds. Budgets were set up for the first time for all divisions.

Manpower would be reduced, he said, by not filling jobs as people retired or quit. An equipment modernization committee was set up. If a machine maintenance cost was out of line, it was replaced, not to increase output but to modernize, so as to use fewer men per machine.

Reducing the payroll, cutting out 1 of 3 round-the-clock shifts, putting higher paid men on day work when Congress is not in session, having apprentices do oiling and cleaning instead of journeymen pressmen, budgeting, and reorganizing all buying, are highlights of the economy program.

Old-fashioned letterpress printing gave way on all possible jobs to the faster and simpler offset process. That reduced manpower, because 1 offset unit replaced 2 letterpresses, and got more work done.

Labor relations are fine, according to his aids. By law, employee groups sit with management once a year for general agreements. But a grievance can come up at any time, directly to the chief if necessary.

Blattenberger has a big stack of letters from the White House, the Cabinet, Budget Director, Members of Congress, bureau heads, praising his economy and efficiency.

His way of showing appreciation to the people who work there is reproducing those letters with his note and circulating them throughout the place.

Compulsory Swimming Training

EXTENSION OF REMARKS
OF

HON. FRANK C. OSMERS, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. OSMERS. Mr. Speaker, one of my distinguished constituents, Mrs. Mary Macfadden, has strongly urged that swimming training be compulsory in the armed services and in our schools. Mrs. Macfadden is the author of the best seller Dumbbells and Carrot Strips, which describes her life with the late Bernarr Macfadden.

Because of the wide interest in swimming which was aroused by the recent tragic drowning of six marines who were in training, I ask unanimous consent to include in the RECORD a letter from Mrs. Macfadden, dated May 25, my reply of May 28, an editorial from the Englewood (N. J.) Press Journal of May 31, and another letter from Mrs. Macfadden, dated June 7:

URGES COMPULSORY SWIMMING LESSONS

TO THE EDITOR:

I would appreciate it if you could find space for the enclosed letter to Congressman FRANK C. OSMERS, Jr., as I feel it brings up an important point:

ENGLEWOOD, N. J., *May 25, 1956.*

Congressman OSMERS.

DEAR SIR: I am inspired to write you the following letter on this propitious day (Mother's Day) after attending my church. My heart was heavy for those mothers whose sons' lives had been taken in vain. I'm referring to the six marines recently drowned. Reflecting upon my memory in such a disaster, I recall some years ago that there was a bill in Washington to make swimming compulsory. Had this bill gone through, there no doubt would have been many lives saved. It is my thought on this day that such a worthwhile bill should be resuscitated by you or your colleagues in Washington. What more worthy cause could they participate in than this? To save a life is the most important thing anyone can do.

It was because of a very sad experience in my girlhood that I learned to swim. My school chum and I delighted in going across the canal locks. She slipped in one day and was drowned. This tragic situation was a nightmare to me for many years.

Although not in good health, I prevailed upon my father to let me learn to swim, although I was forbidden by my doctor. Not only did I learn to swim, I became a very healthy girl because of it. My interest in swimming knew no bounds. Competition and life saving I also took up. Of all the awards I won, I am proudest of my "Award of Merit" from the Royal Life Saving Society. Because of this knowledge I was subsequently able to save three persons that I know would have perished but for my efforts on their behalf.

I was very much interested in reading that our wonderful President took swimming in his health rehabilitation program. How can one beat a man with such wisdom. I could never have stood the great problems I've met with had it not been for what swimming did for me mentally and physically. It is my sincere desire, this day of all days, to call to your attention that mothers are the backbone of this democracy and you must help to protect the fine sons we gave you custody of.

A bill of this kind will not only save lives it will give our children better health and happiness and will help prevent much delinquency. For 30 years I have kept constant vigilance on my lake to prevent drownings which could have occurred. Some very young children, without supervision, often trespass and it is a shame not to protect them. If I had any say-so in a bill to compel children to swim, it would be when they were quite young. I taught my many children (seven) between the ages of 2 and 4. What better cause could you foster?

Cordially yours,

(Mrs.) MARY MCFADDEN.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., May 28, 1956.

Mrs. MARY MACFADDEN,
Englewood, N. J.

DEAR MRS. MACFADDEN: Thank you very much for your letter of May 25, and I want to tell you how much I appreciate having your thoughts on the subject of compulsory swimming instruction in the Armed Forces.

I have inquired at the Marine Corps with regard to swimming instruction, and I am happy to report that all recruits are required to take at least 10 hours of training which is sufficient to teach all of them except those very few who are unable to qualify due to their great fear of the water.

My own mother and father were both good swimmers and taught me to swim at an early age. I have always enjoyed swimming as a form of recreation and upon occasion I have been able to use my knowledge of swimming to be very helpful to others.

The drownings in the Marine Corps recently were tragic, but I can report that steps are being taken to prevent a recurrence.

Sincerely yours,

FRANK C. OSMERS, Jr.

From the Englewood (N. J.) Press Journal of May 31, 1956

LEARN TO SWIM

In the Letters to the Editor colums in last week's Press-Journal Mrs. Mary Macfadden of Englewood, widow of the late Bernarr Macfadden, calls upon Congress through Representative FRANK C. OSMERS, JR., of this district to make it compulsory for children to learn to swim.

If there is any way in which this could be done it would mean the saving of thousands of lives and the wiping away of incalculable fears among men and women when they are in, on or over water.

Ability to swim should be as natural as ability to walk or run—unless one intends never to be near water during his life.

The newspapers are full of stories of water tragedies caused by inability to swim. Most colleges make swimming an integral part of the curriculum. Public schools do not because they lack facilities, but there again, we need more swimming pool facilities, not alone for recreational purposes but for this vital educational purpose.

And until something is done on a large public scale, it is the wise parent who insists upon his child learning to swim. This is the modern age in which you cannot stay away from the water.

ENGLEWOOD, N. J., *June 7, 1956.*

FRANK C. OSMERS, Jr.,
Congressman, Ninth District, New Jersey,
House of Representatives,
Washington, D. C.

HONORABLE SIR: I greatly appreciate your letter to me of May 28 in answer to mine. Its contents interest me very much, and I would like to comment upon what you have written. In your first paragraph, "and I want to tell you how much I appreciate having your thoughts on the subject of compulsory swimming instruction in the Armed Forces," it is my opinion that compulsory swimming instructions should be put into effect long before a boy gets into the Armed Forces.

Your second paragraph—and I quote: "I have inquired at the Marine Corps with regard to swimming instruction, and I am happy to report that all recruits are required to take at least 10 hours of training, which is sufficient to teach all of them except those very few who are unable to qualify due to their great fear of the water." This is my answer to it: Let us assume that these boys had had compulsory swimming in their earlier years, then the 10 hours of training now given them should be used to teach them the art of lifesaving, the rescue, release, and resuscitation methods which are very necessary in some cases to save the lives of the distressed swimmer and himself. Without this knowledge, I could never have saved the life of Mr. Macfadden in the English Channel, of which I give an example in my book, Dumbbells and Carrot Strips.

Queen Elizabeth of England is the patron of the Royal Lifesaving Society, in which I got my early training in the methods to save a drowning person. Never could I forget the slogan of this wonderful society. When I saw Mr. Macfadden in difficulty in the English Channel, my subconscious mind was repeating: "Whomsoever you see in distress, recognize in him a fellowman." Without this knowledge I had acquired from this society, he would never have lived. That was in 1913, and I was a bride of only months.

The third paragraph is most interesting—and I quote: "My own mother and father were both good swimmers and taught me to swim at an early age. I have always enjoyed swimming as a form of recreation, and upon occasion I have been able to use my knowledge of swimming to be very helpful to others." In my thinking it proves my contention, and I am happy that I presented my idea of compulsory swimming to you.

Apropos of what swimming can mean to one, I was saddened this week to learn of the death of my old friend, Sir Frank Beaurepaire, of Australia. His obituary told of his great success—financial and civic attainments. Sir Frank as a poor boy swam in 1 of the 15-mile swims through London in which I participated. After the Olympics in London in 1948, he told me this story: That he owed his great success to swimming. He said to me that after the First World War he was very badly hurt and that his doctor advised him to get into swimming again to get his health back. Not only did he get his health back, but he went into competition again, and it was only at 38 he retired from racing. I am enclosing his wonderful record for your perusal.

May I say that I feel perhaps some of your success may be due to the swimming your mother and father taught you at an early age. There is no doubt about it, if you learn to swim when you are young, you get a certain confidence that enables you to feel that you can master other pursuits and life's many challenges.

I am interested in what you say in the last paragraph: "The drownings in the Marine Corps recently were tragic, but I can report that steps are being taken to prevent a recurrence."

This long letter to you is written in the hope—and please excuse the length of it—that society is not too busy to do something to make some permanent achievement along the lines I have called to your attention.

I thank you for your kind interest.

Cordially yours,

MARY MACFADDEN
(Mrs. Mary Macfadden).

The American Flag

EXTENSION OF REMARKS
OF
HON. JAMES B. BOWLER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. BOWLER. Under leave granted to extend my remarks, I include a tribute to the American flag given by the late mayor of St. Paul, Minn., the Honorable Lawrence C. Hodgson, 39 years ago today, June 14, 1917. It was delivered following ceremonies of the naturalization of a large number of new citizens. I have read and reread his inspiring words and take this occasion to pay honor to this author whose emotions in penning the tribute must surely have come from his heart as a most patriotic American.

The tribute follows:

THE AMERICAN FLAG

(By L. C. Hodgson)

It is no fabric of silk or bunting—no mere beautiful cloth woven by human hands. It is a living thing, pulsing with the throbbing ardors of humanity, glowing with the fervor of immortal hopes, leaping out in ecstacies of love and dream. It is a song—the song of upward-looking men. It is an altar fragrant with sacrifice. It is a garden wherefrom a nation grew, watered by the pure blood of heroes. It is a heaven wherein the sanctified are gathered. It is the home where freemen dwell. It is the battlefield whereon honor strikes its blow for the cause of God. It is a flame springing up to consume injustice and wither the hosts of wrong. It is a voice that speaks with the eloquence of graves where sleep those who died to make it mean purity and righteousness. He who looks upon that flag with ransomed eyes beholds within its folds the valor and the faith of Lexington and Gettysburg—the blazing eyes of the embattled farmers at Concord Bridge—the fierce splendors of the ocean that was the cradle of Paul Jones—the clarion death cry above the ruined Alamo—the prayer of Washington at Valley Forge—the agony of Lincoln as he paced the midnight hours—and, crowning all, the wind-swept faces of boys who die today along the thunder-smitten hills of France. The flag of the United States is the glory of God shining in the faces of those who dream of a world made clean enough to be the dwelling place of God. It turns our sorrows into exultation and our sacrifices into melody of service.

For such a flag true men will always gladly die—for such a flag good men will always nobly live.

Some Homework for Our Secretary of State

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 13, 1956

Mr. MULTER. Mr. Speaker, I have been directing our colleagues' attention to information from time to time appearing in the public press, which apparently had been kept away from our Secretary of State. Some more such information appears in the Wall Street Journal of June 14, 1956, as follows:

TINY KUWAIT, MID-EAST'S TOP OIL PRODUCER, POURS OUT FLOOD OF PETROLEUM FOR WEST WHILE EGYPT FROWNS—SANDY SHEIKDOM FATTENS UP ON TAKE FROM EXPANDING AMERICAN-BRITISH OPERATION

When Colonel Nasser's Egypt says Britain must give up its hold on the Arab Middle East, it has a glittering eye fixed upon one particular plum—a plum which has ripened quickly and to incredible richness: The Sheikdom of Kuwait.

Kuwait is independent, in the sense that its turbaned ruler, His Highness Sheik Sir Abdulah al-Salim al-Subah, governs his 200,000 subjects precisely as he pleases. He has never held an election; he has never so much as published a budget.

But Kuwait is a British-protected state. The United Kingdom runs its foreign relations and protects it from being swallowed by its far larger neighbors. Next door is Saudi Arabia, still just as expansionist in mood as it was in 1921, when King Ibn Saud attacked the little land.

And Kuwait is half American, when it comes to oil—which is what it does come to. Barring war or revolution, Gulf Oil Corp., of Pittsburgh should get 50 percent of all the petroleum that can be taken out of the country during the next 70 years. The concession is operated by Kuwait Oil Co., Ltd., headquarters in London, and jointly owned by Gulf and by British Petroleum Co., the old Anglo-Iranian, each of which has an undivided half interest in the concessions.

It was just 10 years ago this month that Kuwait Oil loaded its first tankship with

crude. What has happened since beggars imagination.

RESERVES TOP UNITED STATES

This tiny patch of sand, with less than 3 percent of the acreage of Texas, today boasts proved oil reserves of some 40 billion barrels, which is about one-third more than those of the entire United States. One thinks of Canada as enjoying an oil boom, but Kuwait is producing more than thrice as much and has 14 times the proved reserves underground.

A late comer to the Middle East oil sweepstakes, Kuwait's galloping production passed Iraq's in 1948, Iran's in 1951, and Saudi Arabia's in 1953. Since then none of the Persian Gulf states has been able to catch up with it; the 398.5 million barrels produced by Kuwait last year was nearly one-third of entire Middle East output.

And still the pace quickens. No official prognostication of Kuwait's 1956 crude production is available, but it is safe to say the figure is likely to pass 444 million barrels, which will be a good deal more than double the flow of just 5 years ago.

Obviously this has been very good business for Gulf. Its foreign production is now about three times its domestic output, and Kuwait is its biggest foreign source of oil. It is a very good deal for British Petroleum and for the British Government, which is part owner of the company, and for the entire British nation, which must depend on petroleum imports during this era when English coal is running short and atomic power has not yet arrived.

It is also pouring undreamed riches into Kuwait. Like all financial facts in the sheikdom, the exact size of payments by the oil company is a secret, but it is certain that the ruler is now being handed something like $300 million annually under a 50–50 profit-splitting pact which was rejuggled last year to his advantage. On top of that come the company's expenditures for local purchases and the spending of some 7,000 employees. Prosperity is evidenced in Kuwait town by a swarm of new American and European autos, making such a tumult that the muezzin must use an amplifier on his minaret to call the populace to prayer. Fluorescent lights dazzle the town at night.

TANKER COMPANY FORMED

And the Kuwaitis see still more riches in sight. Some of the local businessmen, under auspices of the ruler, have founded a tanker company with nominal capital of $10.4 million, and their representatives are expected to arrive in London any day now to begin dickering with the oil company. The intention is to cut into the lucrative business of transporting the petroleum to market; executives of the oil company hope what they have in mind is only 2 or 3 tankships, not a wholesale take-over.

The ruler is also inviting responsible oil companies to bid for offshore drilling rights in the Persian Gulf beyond the 6-mile limit of the present concession areas.

Already he has a side deal, of potential importance, with another oil company, American Independent Oil Co., which is developing the neutral zone between Kuwait and Saudi Arabia—a zone over which the two countries share sovereignty. American Independent has the concession from Kuwait, but it must share the oil with another Yankee firm, Getty Oil, which is the nominee of Saudi Arabia. The former pipes its oil from the Wafra field to a Kuwait terminal, Mina-al-Abdulla; the latter, forbidden by Saudi Arabia to use this exit, pipes its share of the crude to submarine loading lines at a neutral zone terminal, Mina Saud.

Exports began just 2 years ago and last year amounted to only about 8 million barrels for the two companies, but there are indications this may be stepped up sharply. American Independent, incidentally, is itself a combine of a number of companies and individual oil men: Phillips Petroleum, Hancock Oil, Signal Oil & Gas, Ashland Oil & Refining, Sunray Oil, Deep Rock Oil, Globe Oil & Refining, Lario Oil & Gas, Ralph K. Davies, and J. S. Abercrombie.

This wealth, present and potential, is all too apparent a temptation to zealots of the Arab movement who propagandize the anti-colonialism line. By itself it is perhaps sufficient to explain why Britain is doggedly hanging on to Cyprus, the one remaining military base dominating the area. As Prime Minister Anthony Eden has quite candidly told the House of Commons, Cyprus is "a protective guard and staging post" to safeguard Britain's vital interests—"above all, oil." Roughly half of the crude oil feeding United Kingdom refineries comes from Kuwait.

A BENEVOLENT DESPOT

While relying on the British for protection against external attack, the ruling sheik is keeping his little country far more quiet internally, at least for the present, than most Middle Eastern lands. Key government posts are kept in the family; especially important is his uncle, fierce-looking Sheik Abdulla al Mubarak, head of public security. But the ruler's formula is composed at least as much of benevolence as it is of despotism.

He has gone in for school and hospital building on a massive scale; education and medical care is free for all classes. And for a country which is entirely lacking in fresh water to drink (wells, when they strike water at all, produce a brackish liquid) he has established the world's biggest sea-water distillation plant, powered by natural gas piped from the oilfields. It is already producing 1.5 million gallons daily; a new unit will double this by next year and eventually over 20 million gallons daily will be produced.

Still a great deal of cash is left over; it is estimated that about one-quarter of Kuwait's oil revenue is being put away in an investment portifolio which must certainly be building into one of the word's largest. This would mean saving about $375 annually for every man, woman, and child in Kuwait. The securities chosen have not been made public, but reportedly a large part is composed of British Government bonds.

The course pursued by the sensible Sheik is producing short-term stability, but some oilmen are keeping their fingers crossed about the longer run. Kuwaits are within range of Radio Cairo, pouring out its message of "Oil is for the Arabs • • • Remember that the oil that flows from your land is seized by your enemy." Most of the Kuwait youth who go abroad to study are in Egypt; Egyptian teachers are plentiful in Kuwait's own schools.

Many of the workers who have immigrated to the country are Arab refugees from Palestine; others come from Syria. More than 20 suspected Communist agents have been picked up in the last few days in a series of raids which also turned up a large quantity of Communist literature in Arabic. Kuwait may yet be swept by anti-Western passions.

The dangers are quite evidently not great enough, however, to deter Gulf and British Petroleum from continued heavy investment in Kuwait. Kuwait Oil Co. is now buying the equipment for an addition to its refinery at Mina-al-Ahmadi which will increase its capacity more than sixfold, from a present 30,000 barrels daily to 190,000 by early 1958. There will be extensions, too, to the tanker loading system which is already handling far and away the largest tonnage of any oil terminal in the world; over 2,700 ships were loaded last year.

From a technical point of view, Kuwait is an oil man's dream, producing enormous volumes of oil at very low cost.

The gigantic Burgan field, located about two decades ago, is an oval of more than 135 square miles, just a few miles from the coastal tanker terminal. It can be tapped by wells plunging only about one mile deep. It seems to present few technical problems such as a dropping of gas pressure which often trouble operators elsewhere. A single well produces a flood far beyond normal United States standards; the average Kuwait hole yields about 6,200 barrels daily, compared to a 13-barrel average during 1955 in the States. Of course, the United States average is brought down by thousands of small-output wells which now have been producing for nearly half a century.

For wildcatting operations the terrain contrasts favorably with the mountains and marshes encountered in Iran and Iraq. Tall drilling rigs need not be taken down and reassembled to tackle a new site; they are merely hauled across the desert by a team of five or six huge tractors. The whole task is so simple that four drilling rigs are taking care of all Kuwait's needs; in comparison there were 2,673 rotary rigs at work in the United States at latest count.

A rig which had been pulled 99 miles northward from the Ahmadi field hit oil late last year at Raudhatain, and a second well is expected to be completed soon. The pool lies nearly twice as deep as the Burgan field, but in other ways appears remarkably similar. The oil-bearing strata are thick, but the horizontal extent of the field remains to be determined by further drilling; geologic evidence indicates it will not be so large as Burgan. By any standards, however, it rates as a major field. But so plentiful is oil in this land that Kuwait Oil is likely to spend 5 years or so drilling more wells before it will bother to build a pipeline and let them flow.

BRITON HEADS OPERATIONS

Kuwait Oil is run from its big London headquarters with a Briton, C. A. P. Southwell, a veteran of the old Anglo-Iranian company, as managing director, but Americans are plentiful in London and in the field. L. T. Jordan, of Lufkin, Tex., who used to work for Gulf in Venezuela, is general manager in Kuwait. Roy Fuquay, another Texan who worked for Gulf in South America, heads drilling operations.

Gulf Oil has thus far solved with brilliant success the problem of marketing its constantly increasing surge of Kuwait petroleum. To move the biggest chunk of its share it has resorted to contracts with other oil concerns, some of which compete with Gulf in United States markets.

By far the largest deal that Gulf has for the sale of Kuwait oil is its long-term contract with Royal Dutch-Shell. Its exact terms have been kept in a shroud of secrecy but a huge volume is marketed through the worldwide Shell group of companies.

Arrangements with other concerns include contracts with Cities Service and Sinclair.

Socony Mobil, another international oil concern, gets Kuwait crude under contract with British Petroleum. It currently is getting some 68,000 barrels daily. Part of this is used in the United States and part in Socony's foreign operations. Another taker of Kuwait crude from British Petroleum is Sun Oil. It is getting about 40,000 barrels a month.

Parts of its Kuwait production Gulf is able to swallow on its own, of course; during 1955 it imported about 59,000 barrels daily to feed its big Philadelphia refinery. But the United States Office of Defense Mobilization, prodded by domestic oil producers resentful of imports, has been trying to put the lid on. As part of this voluntary program, Gulf actually agreed to a 7-percent cutback in its imports of Middle East crude during the first quarter of this year.

Genocide Day for the People of Estonia, Latvia, and Lithuania

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 14, 1956

Mr. DODD. Mr. Speaker, today, June 14, is genocide day for the people of Estonia, Latvia, and Lithuania.

This is the day 15 years ago that the Russian Communists deported thousands of Estonians, Latvians, and Lithuanians to slave labor camps.

As a member of the Select Committee To Investigate Communist Aggression, I heard firsthand the dreadful story of these mass deportations. It is without doubt one of the blackest pages in all human history.

Mr. Speaker, there are those who would have us forget what happened in these Baltic countries.

There are those who have suggested that the forced occupation of these independent nations is an accomplished fact.

There are those who denounce colonialism.

The free world can never forget what happened to the Baltic countries on June 14, 1941. Nor can the free world ever accept the forced incorporation of these countries into the Soviet Union.

In these days of soft talk from Communist tyrants, it is just and necessary that we should remind ourselves that millions of people have been forced under Communist despotism and that once free and independent countries are now captives of the Communist tyrants.

No amount of soft talk can change these facts. And the conscience of the free world can never be easy until these wrongs have been righted.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

REPRESENTATIVES WITH RESIDENCES IN WASHINGTON

OFFICE ADDRESS: House Office Building, Washington, D. C.

[Streets northwest unless otherwise stated]

Speaker, Sam Rayburn
